

HOUSING MARKET OUTLOOK

Quebec Region Highlights

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2016

Housing Market Forecast

Overview

A gradual acceleration of Quebec's economic growth will provide some stimulus to housing demand in 2016 and 2017. As a result, the province's resale markets will continue to tighten and prices will remain sustained. Meanwhile, the effects of population aging will provide impetus to residential construction, in particular to the apartment market segment.

In the next two years, economic growth will stem from consumer spending and net exports. Meanwhile, private investment and public expenditure growth will be limited by the higher relative value of the US dollar and by balanced budget objectives respectively. Thus, Quebec GDP growth will increase from 1.2 per cent in 2015 to 1.4 per cent this year and pick up to 1.7 per cent in 2017. The impact on labour markets will be felt more substantially in 2017. As a result, employment will grow at a rate of 0.6 per cent this year and of 0.9 per cent in 2017.

Figure 1

Source: CMHC, (F): Forecast

Figure 2

Source: CREA, (F): Forecasts by CMHC

The forecasts and historical data included in this document reflect information available as of April 29, 2016.

The moderately growing job market and the relative weakening of labour markets in parts of western Canada will help retain some workers in the province and possibly attract others back. Moreover, with the help of rising immigration targets, total net migration in 2016 will reach 35,000 this year and 38,000 in 2017. Such levels will have a stimulative impact on demand in Quebec's rental markets especially.

In Detail

Single Starts

It is unlikely that the moderate employment growth and the tightening of the resale market will have a significant impact on demand for new single-detached homes in the forecast horizon. Both demand and market share in this market segment will continue their downward trends as demand and supply continue to shift toward apartments. Starts will be situated within the 9,500 and 9,900 levels in 2016 and within the 9,600 and 10,000 levels next year.

Multiple Unit Starts

While condominium starts continue to be held back by relatively high levels of supply, renewed activity in the retirement home segment and

in the purpose built rental market in some areas of the province will sustain multi-family starts in both 2016 and 2017. Starts in this segment will lie within a range of 24,900 to 26,100 units this year. The forecast range for 2017 is similar and includes lower bound of 24,500 starts and upper bound of 26,100 units.

Resales

In the next two years, sales of existing houses should be fuelled by employment growth. In 2016, sales recorded by Centris® should lie within a range of between 75,000 and 80,000 transactions. Next year, the forecast range will move up slightly (76,000 to 82,000 transactions).

Prices

Despite relatively high supply levels in certain market segments, the gradual tightening of resale markets will sustain prices during the forecast horizon. In this context, the average resale price will lie within the \$278,000 and \$285,000 band in 2016 and between the \$283,000 and \$290,000 marks next year.

Regional Overview

Housing starts in the Montréal census metropolitan area (CMA) should range between 16,000 and

18,000 units this year. The new home market will once again be supported by the construction of many rental apartment projects. On the existing home market, demand will be on the rise in 2016, and sales registered through the Centris® system will increase, reaching between 38,500 and 48,500 units. With many new units being added to the rental housing stock and demand staying relatively modest, the vacancy rate in the Montréal CMA will stay fairly high this year (4.3 per cent).

In 2016 and 2017, the economic and demographic environment will be relatively stable in the Québec census metropolitan area (CMA), such that housing demand will remain comparable to the level observed in 2015. After a very strong year in 2015, housing starts will fall rather significantly, reaching between 3,250 and 3,850 units in 2016 and between 2,850 and 3,400 in 2017. The resale market will post small gains over the next two years, as Centris® sales will range between 6,600 and 7,000 units this year and then between 6,800 and 7,200 next year. The rental market, for its part, will see the vacancy rate increase, rising from 4.0 per cent in 2015 to 5.0 per cent in 2016 and then to 5.5 per cent in 2017.

In the Gatineau CMA, the new home market will post renewed growth in 2016 and 2017, but activity levels will remain below the historical average. Resale market conditions will tighten further, with the market moving closer to balanced territory in 2017. The rental housing vacancy rate will dip to 5.5 per cent in 2016 and then to 5.0 per cent in 2017. Economic and demographic conditions will continue to support housing demand.

In the Sherbrooke CMA, housing starts are forecast to stabilize at a lower level in 2016 and 2017 as demand recedes slightly and builders direct buyers to existing inventories of new homes. Building on recent gains in employment,

Note to readers

In an effort to align itself with the various needs of those seeking information about the housing market, CMHC's Market Analysis Centre has undertaken a complete review of its products and services. As a part of this review, the CMHC's *Housing Market Outlook* publication will be undergoing a series of modifications. The general objective is to provide a range of possible outcomes that, in a context of

economic and financial uncertainty, will better help users in their decision-making process.

As a first step in this ongoing process, the present edition incorporates forecast ranges for housing variables as well as an expanded discussion on the risks to the forecast. A more detailed description of the forecast range methodology is provided at the end of the publication.

Centris® sales of existing homes are expected to increase over the next two years; however, the resale market will continue to favour buyers. Rental apartment vacancy rates, although high by historical standards, will remain stable in both 2016 and 2017 as both demand and supply moderate at a similar pace. Economic and demographic fundamentals will support a stable housing market through the forecast horizon.

Risks to the forecast

While the probability of significant shifts in starts of single detached homes remains relatively low, there are greater risks associated with the supply of multi-family units, namely of apartments. Despite clear signals of high inventory levels in relation to demand, there is renewed interest in the promotion and construction of mid to high-end rental apartments. This is explained by several factors, among which the relative popularity of new buildings among renters and retirees who are considering downsizing. Already in 2015, the Montréal and Québec CMAs recorded sharp rises in the starts of such structures. There is a risk that this pace will continue throughout the forecast horizon. On the other hand, the current market signals together with uncertainty regarding future demand may prompt suppliers to reduce significantly the pace of such starts in the coming years. These scenarios warrant the addition of alternate, wider, ranges for starts. In 2016, multi-unit starts could surpass the 28,000 mark or descend below the 23,000 level. In 2017 multi starts could lie within 20,000 and 30,000 units.

Risks related to home prices are also noteworthy. In its latest spring update, CMHC's *Housing Market Assessment (HMA)*, an analytical framework designed to identify

Figure 3

Source: CMHC, (F): Forecast

Figure 4

Source: QFREB, (F): Forecasts by CMHC

Figure 5

Source: QFREB, (F): Forecasts by CMHC

problematic conditions in the housing market, signaled significant evidence of overvaluation in the housing markets of Montréal and of Québec. According to the HMA, this assessment stems from the fact that the fundamental economic and demographic factors in these markets have not kept pace with that of prices. Currently, the resale markets of Montréal and Québec are classified as balanced to buyers. Should the gap between prices and fundamentals increase, an event such as a further pick-up in supply (as a result of possible sustained apartment supply) could drive prices down somewhat. On the other hand, in the event of

more pronounced market tightening, price growth could, in fact accelerate. Taking these scenarios into account yields a wider range for prices which includes an interval of between \$267,000 and \$292,000 in 2016 and between \$265,000 and \$305,000 next year.

Mortgage rates are expected to rise moderately from current levels in 2017

Mortgage rates are expected to stay near current levels until the end of 2016, supporting housing

demand. Consistent with the view of Canadian economic forecasters, CMHC expects interest rates to gradually start rising from current levels in the first half of 2017. This expected profile for mortgage rates is in line with the Bank of Canada's view of the economy returning to its full capacity by the end of 2017, according to its April 2016 Monetary Policy Report.

According to CMHC's base case scenario, the five-year mortgage rate is expected to be within the 4.4 to 5.0 per cent range in 2016 and within the 4.7 to 5.3 per cent range in 2017.

Methodology for forecast ranges

The present edition of *Housing Market Outlook* incorporates forecast ranges for housing variables. Despite this change, all analyses and forecasts of market conditions continue to be conducted using the full range of quantitative and qualitative tools currently available. Two sets of ranges are presented in the publication:

- An inner range, which provides more precise guidance to readers on the outlook while recognizing the small random components of the relationship between the housing market and its drivers. This inner range is based on the coefficient of variation* of historical data and on past forecast accuracy. This range provides precision and direction for forecasts of housing variables, given a

specific set of assumptions for the market conditions and underlying economic fundamentals.

- An outer range, which reflects potential risks to the forecast due to, for example, the impact of economic shocks. The outer range is based on a broader coefficient of variation of

historical data and on past forecast accuracy. This range includes some low-probability events that could have a significant impact on the forecast.

Downward (or upward) adjustments to the ranges may be applied based on local market intelligence if there are more sources of risks (upside or downside) for that specific market.

* The coefficient of variation in this case is the standard deviation divided by the mean of that series. A higher coefficient of variation would produce wider ranges due to the higher volatility of the data, while a lower coefficient of variation would produce tighter ranges.
