## FOREWORD

Housing in Canada is published quarterly, designed to provide factual information which will afford as complete and current a picture of the housing situation as possible.

The first issue, published in October, 1946, provided information on an annual basis for the period 1919-1945. In each subsequent issue the established material has been kept up to date on a quarterly basis and new data added. The present issue covers the period 1945 to the third quarter, 1951, providing monthly or quarterly data for 1950 and the more recent period. Each issue is arranged in three parts. The first part comprises a brief factual summary highlighting the results of the statistical material. The second part consists of the tabular material itself and is arranged in eight sections: (1) population trends; (2) house-building activity; (3) publicly-assisted house building; (4) real estate lending; (5) building materials; (6) building labour; (7) building costs; (8) building industry. The third and final part of this report provides sources of the factual material and explanatory notes where interpretation of the series seems appropriate.

Commencing with the April, 1950, issue of Housing in Canada, data on Newfoundland were shown separately in Section 9 of Part II. This separation was made partly in the interest of continuity of the tabular material for the rest of Canada and partly because of the immediate scarcity of statistical information for the Province of Newfoundland. Beginning with the second quarter issue all statistical series have been revised to include data that are available for the Province of Newfoundland since March 31, 1949, when Newfoundland became part of Canada.

Some of the material incorporated in this report is obtained from original sources with other data submitted by various Federal Government departments, including the Department of Finance, Department of Trade and Commerce, Department of Labour, Department of Veterans' Affairs, Department of Citizenship and Immigration, Department of National Defence, the Superintendent of Bankruptcy, the Foreign Exchange Control Board, the Dominion Bureau of Statistics and the Department of Defence Production. Data are also provided by the Quebec Government through its Farm Credit Bureau.

Housing in Canada concentrates on major trends in the housing field only and provides all available information of substance. As new and improved statistical series become available, they will be incorporated in future issues.

Economic Research Department<br>Central Mortgage and Housing Corporation

Ottawa, September, 1951.

## LIST OF TABLES

Table Page

1. Net Family Formation, Canada, 1945 - June, 1951 ..... 27
2. Number of Births, Deaths, and Marriages, and Total Population, Canada, 1945 - June, 1951 ..... 28
3. Number of Immigrants to Canada, by Sex, Marital Status and Age Group, 1945 - June, 1951 ..... 29
4. Number of Emigrants from Canada, by Sex, Marital Status and Age Group, 1945 - June, 1951 ..... 30
5. Number of Immigrants to and Emigrants from Canada, by Country, 1945 - June, 1951 ..... 31
6. Number of New Dwellings Started, Completed, and Under Construction, Canada, 1945 - August, 1951 ..... 32
7. Number of New Permanent Dwellings Started by Urban and Rural Areas, Canada, 1947 - August, 1951. ..... 33
8. Number of New Permanent Dwellings Completed by Urban and Rural Areas, Canada, 1947-August, 1951 ..... 34
9. Number of New Permanent Dwellings Completed, by Type of Unit, Canada, 1947 - August, 1951 ..... 35
10. Gross and Net Residential Capital Formation, Canada, 1945 - June, 1951 ..... 36
11. Expenditures of New Construction, Major Improvements, Repair and Maintenance, Residential and Other, Canada, 1945 - June, 1951 ..... 37
12. New Residential Construction, Building Permits Issued in 204 Municipalities, Canada, 1945 - June, 1951 ..... 38
13. New Residential Construction, Construction Contracts Awarded, Canada, 1945 - July, 1951 ..... 39
14. Number of New Permanent Dwellings Started, Publicly-Initiated Housing and Privately- Initiated Housing With and Without Federal Government Financial Assistance, Canada, 1947 - June, 1951 ..... 40
15. Lending Operations Under the National Housing Act, 1944, Number and Amount of Gross Loans Approved and Number of Dwellings Financed, Canada, February, 1945 - August, 1951 ..... 41
16. Lending Operations Under The National Housing Act, 1944, Gross Loans Approved by Type of Loan, Canada, First Half, 1950 and 1951 ..... 42
17. Lending Operations Under The National Housing Act, 1944, Analysis of Gross Loans Approved, Showing Average Estimated Cost, Lending Value, Amount of Loan, Floor Area and Construction Cost per Square Foot by Type of Dwelling, Canada, First Half, 1950 and 1951 ..... 43
18. Operations Under the National Housing Act, 1944, Home Extension Loan Guarantees Approved, Canada, April, 1946 -- June, 1951 ..... 44
19. Veterans' Rental Housing Projects by Central Mortgage and Housing Corporation, Number of New Dwellings Started, Completed, and Under Construction, and Actual Expenditure, Canada, 1941 - June, 1951 ..... 45
20. Veterans' Rental Housing Projects by Central Mortgage and Housing Corporation, Construction Under Contract, By Units, Canada, 1945 - July, 1951 ..... 46
21. Veterans' Rental Housing Projects by Central Mortgage and Housing Corporation, Dwellings Under Contract, by Twenty-Three Stages of Construction, Canada, June, 1948-1951 ..... 47
22. Armed Service Married Quarters, Construction Operations By the Department of National Defence, Permanent and Temporary Housing, Number of Dwellings Started, Completed, and Under Construction, and Expenditures, Canada, 1947 - June, 1951. ..... 48
23. Armed Service Married Quarters, Construction Operations by Central Mortgage and Housing Corporation, Number of Dwellings Started, Completed and Under Construc- tion, and Actual Expenditures, Canada, January, 1949 - June, 1951 ..... 49
24. Housing Operations by Defence Construction Limited, Canada, November, 1950 - June, 1951 ..... 50
25. Construction Operations Under the Veterans' Land Act, 1942, Number of New Dwellings Started, Completed and Under Construction, and Expenditure, by Type of Project, Canada, September 23, 1943 - June, 1951 ..... 51
26. Lending Operations Under the Canadian Farm Loan Act, 1927, Canada, 1929 - June, 1951 ..... 52
27. Lending Operations Under the Farm Improvement Loans Act, 1944, Canada, March, 1945 - June, 1951 ..... 53

28. Operations Under The National Housing Act, 1944, Rental Insurance Plan, Net Number of Projects, Dwellings, and Total Estimated Cost, Approved with Loans Under the National Housing Act and with Conventional Loans, Canada, July, 1948 - July, 1951.
29. Operations Under The National Housing Act, 1944, Rental Insurance Plan, Average Number of Rooms, Floor Area, Estimated Cost, and Maximum Monthly Rent Per Unit, for Gross Projects Approved, Canada, July, 1948 - July, 1951
30. Operations Under The Quebec Housing Act, Number and Amount of Loans Approved, Number of Dwellings Involved, and Provincial Committments, January, 1948 - June, 1951.

31. Gross Mortgage Loans Approved on New Non-Farm Housing Construction, by Type
of Lending Institution, and by Type of Housing Unit, Canada, $1947 \ldots$ June, $1951 \ldots$. .. 59

PART I
FACTUAL SUMMARY

## SECTION 1.-POPULATION TRENDS <br> (See Tables 1-5)

Net family formation, a measure of current additions to existing families was higher during the first six months of 1951 than in the comparable period of 1950, mainly as a result of increased immigration. New families formed in the first half of 1951 , at 29,900 , were 7,000 more than in the comparable period of 1950 . New families added through immigration after allowing for emigration numbered 11,600 for the period, 7,200 more than in the first half of 1950.

## Immigration and Emigration

Immigration of persons into Canada in the first six months of 1951, totalled $79,800,8$ per cent more than during the entire year of 1950 . Emigration at 14,600 was about 300 more for the period than in the first half of 1950 , leaving a net migration of 65,200 during the first half, 1951.

## SECTION 2.-HOUSE-BUILDING ACTIVITY (See Tables 6-13)

For the first time in the post-war period the volume of house-building activity showed an appreciable decline during the first eight months of 1951. Dwellings completed remained high at 50,800 units, 1 per cent below the level a year earlier owing to a large carry over from 1950, but starts of new dwellings were down 16 per cent to 52,000 units in the eight month period, 1951, from the corresponding period of 1950.

A changing pattern developed between the urban and rural sectors of the program in the first eight months of 1951. In the urban areas, a marked downward trend occurred in units started, reflecting in part steadily rising land and construction costs, some curtailment in new mortgage commitments by lending institutions, and higher down payment requirements under the National Housing Act, 1944. In urban areas, starts numbered 39,700 , down 22 per cent from the first eight months in 1950. In rural areas, starts numbered 12,400, an increase of 10 per cent from the first eight months of 1950.

## Residential and Other Types of New Construction

Although the slackening in house-building activity and the diversion of labour and material resources into defence and defence supporting industrial construc-tion was more apparent in July and August, some indication of this shift is revealed by data on capital expenditures on new residential construction in the first half of 1951. In this period, new residential construction put in place, including major alterations and repairs amounted to $\$ 421$ million, representing 34 per cent of total new construction put in place, valued at $\$ 1.2$ billion. In the first six months of 1950 , new residential construction, including major alterations and repairs, was valued at $\$ 354$ million representing 36 per cent of total new construction put in place.

## Gross and Net Residential Capital Formation

Gross residential capital formation which represents the value of current additions to the housing stock through new construction and major improvements and alterations, together with the value of installed non-moveable equipment and service costs of landscaping, etc. was placed at $\$ 429$ million in the first half of
1951. This compares with $\$ 361$ million in the same period a year earlier. Most of the increase in value is associated with higher building costs between the two periods (see p. 21).

Residential capital consumption which represents a reduction in the value of existing housing stock through an allowance for wear, and tear and obsolescence (depreciation) together with the value of dwellings currently damaged and destroyed accidently was put at $\$ 194$ million for the first half of 1951 . In the corresponding period of 1950 , the value of residential capital used up was $\$ 167$ million.

Net residential capital formation which is the difference between gross residential capital formation and residential capital consumption thus amounted to $\$ 235$ million in the first half of 1951 compared with $\$ 194$ million in the same period a year earlier.

## SECTION 3.-PUBLICLY-ASSISTED HOUSE-BUILDING

(See Tables 14-31)
Publicly-assisted housing construction declined in the first six months of 1951 from the same period in 1950, mainly as a result of a drop in loans approved under the National Housing Act, 1944. Dwelling units started with government financial assistance during the first half of 1951 numbered 13,400 , down 11 per cent from the first half of 1950. Starts under the various publicly-initiated programs including veterans' rental, armed service married quarters and dominionprovincial projects totalled 1,100 units 40 per cent below the level in the first six months of 1950 (see Figure 1).
-FICURE I.-

## The National Housing Act, 1944

Lending operations under the National Housing Act, 1944, were at a reduced level during the first eight months of 1951, as the impact of higher down payments required under the Act after February 5, 1951, together with some tightening in the supply of institutional mortgage funds ${ }^{(1)}$ induced postponements in housebuilding plans. While the number of dwellings approved for loans in the first quarter, 1951 , at 7,900 were slightly up from the first quarter, 1950, a downward trend during the five successive months to the end of August resulted in approvals for 18,600 dwelling units, a drop of 43 per cent from the first eight months of 1950. The loans involved were valued at $\$ 123$ million compared with $\$ 216$ million in 1950.

Loans to individual home-owners under the National Housing Act, 1944 declined sharply in the first half, 1951. Dwellings approved for loans under this part of the Act numbered 3,213 during the period, a drop of 44 per cent from 5,775 dwellings approved in the first half, 1950. Loans to builders for sale numbered 9,361 dwellings in the first half, 1951, 25 per cent less than the number approved in the corresponding period of 1950.

Activity under the rental provisions of the Act declined 31 per cent to 3,163 units approved for loans, owing to a notable contraction in rental insurance loans. Dwellings approved under the rental insurance plan which provides for controlled rentals, numbered 1,052 in the first half, 1951, 63 per cent down from the same period a year earlier. In contrast, loans to individuals for construction of rental dwellings, showed a marked increase in the first half, 1951. Rental units approved for loans to individuals numbered 2,081 , a rise of 24 per cent for the period.

## Federal-Provincial Projects

Section 35 of the National Housing Act, 1944, provides that, following an agreement between a provincial government and the Government of Canada, Central Mortgage and Housing Corporation might undertake jointly with the province, projects for the assembly of land and its development, or for the construction of houses for sale or for rent.

On April 7, 1951, the Government of the Province of Nova Scotia passed the Housing and Rentals Act ${ }^{(2)}$ enabling the province to participate under Section 35 of the National Housing Act, 1944. On August 23, 1951, a joint agreement was entered into between the Government of Canada, the Government of the Province of Nova Scotia, Central Mortgage and Housing Corporation and the City of Halifax, for the construction of 200 apartment type dwelling units for rental to families of low income in Halifax.

Under the land assembly provisions of Section 35, an agreement was entered into at the end of July between the Province of British Columbia, the Federal Government and Central Mortgage and Housing Corporation for the servicing of 55 acres of land in Trail for residential use.

## Veterans' Rental Projects Under Central Mortgage and Housing Corporation

By the end of June, 1951, 438 units in 4 projects under the Veterans' Rental Program were in the final stages of construction. The completion of these units will bring to an end the federal-municipal agreements which were initiated in 1941 to house war workers and continued in the post-war period to accommodate returning veterans. During the period 1941 to 1951 , over 50,000 rental units have been completed under the agreements.

[^0]Starts and completions of new dwellings under the Veterans' Land Act, at 635 and 1,025 units respectively declined slightly during the first half of 1951, from 776 and 1,236 units in the same period of 1950. Settlements on small holdings of the individual project type and on full-time farming projects accounted for the slight decrease.

## Armed Service Permanent Married Quarters

During the first half of 1951 completions of servicemen's rental units by the construction division of Central Mortgage and Housing Corporation for the Department of National Defence were at about double the rate of the corresponding period of 1950 . 1,300 units were completed in the first six months of 1951, as against 700 units in 1950. Starts during the 1951 period totalled 700 leaving 3,000 units under construction at the end of June, 1951, 200 less than at the end of June, 1950.

## Defence Construction Limited

Housing operations by Defence Construction Limited, using the facilities of the Corporation, consisted of 400 dwelling units started during the first six months of 1951, these units being constructed in connection with defence projects. Contracts awarded for new units numbered 550 during the period.

Canadian Farm Loan Act, 1927
Loans valued at $\$ 49,000$ for the construction of 21 new farm homes were approved during the first six months of 1951 and 33 loans with a value of $\$ 15,000$ were approved for the alteration and improvement of existing farm homes.

In the first six months of 1950 , loans with a value of $\$ 46,000$ for 24 new farm homes and 41 loans with a value of $\$ 15,000$ were approved for residential alterations and improvements.

## Farm Improvement Loans Act, 1944

Guarantees under the Farm Improvement Loans Act, 1944, were made in connection with 320 loans for new farm homes and 539 loans for the improvement and alteration of existing farm residential property during the first half of 1951. The value of loans for the new units amounted to $\$ 523,000$ and for improvement and alterations $\$ 531,000$.

In the first six months of 1950, loans for new farm houses numbered 224 valued at $\$ 351,000$ and for improvements and alterations 366 , valued at $\$ 330,000$.

## Property Management Operations, Central Mortgage and Housing Corporation

The number of rental units under management of the Corporation decreased from 41,400 at the end of June, 1950, to 30,900 at the end of June, 1951, as the sales program of war workers' houses and veterans' houses together with the transfer of Home Conversion units to their owners, continued to exceed the number of new rental units coming under management.

The vacancy rate on these dwellings at the end of June, 1951, at .5 remained at a low level.

## Rental Insurance Plan

Approvals under the Rental Insurance Plan during the first half of 1951, declined notably from the corresponding period of 1950. Loans were made
with respect to 14 projects involving 625 units, at an estimated cost of $\$ 5.6$ million in the 1951 period, as compared with 31 projects covering 2,500 units at an estimated cost of $\$ 17.9$ million in the 1950 period. Average estimated cost per unit amounted to $\$ 8,429$, having an average monthly rental of $\$ 76$ for the units approved in the first half of 1951. In the corresponding period of 1950 the average estimated cost per unit amounted to $\$ 6,722$ having an average monthly rental of $\$ 63$. The higher average rental and unit costs in the 1951 period reflect the increased proportion of fully-serviced dwelling units approved. In 1950, the lower rentals and costs are associated with heavy approvals in Montreal where commitments were confined to semi-serviced and "cold" duplexes and apartments.

## The Province of Quebec Farm Credit Bureau

Lending operations under the "Act to improve housing conditions in the Province of Quebec" which authorizes the Quebec government to pay mortgage interest charges in excess of 2 per cent under certain conditions, increased during the first half of 1951 compared with the same period of 1950 . Loans approved numbered 3,000 for the first six months of 1951 , 66 per cent more than in the comparable period of 1950. The number of dwellings involved totalled 3,700 for the period an increase of 82 per cent over the first half of 1950 . The interest subsidy amounted to $\$ 6.4$ million in the 1951 period, double the commitment in the same period a year earlier.

SECTION 4.--REAL ESTATE LENDING<br>(See Tables 32-34)<br>\section*{Real Estate Lending}

The pattern of institutional mortgage lending was changing in the first half of 1951. For the first time in recent years the trend of mortgage lending on new non-farm residential dwellings was on the decline in the first six months of 1951. This downturn is associated with the reduction in lending operations under the National Housing Act, 1944. ${ }^{(1)}$ This in turn, was attributable in part to the shortage of institutional mortgage funds and in part to reduced demand for residential mortgages in some areas owing to higher down payments required under the National Housing Act, 1944, since February 5, 1951.

During the early months of the year, the relatively low statutory interest rate under the National Housing Act, 1944, tended to further reduce joint-lending activity by lending institutions under the Act. As a result of the rise in mortgage interest rates, in common with other interest rates, the interest rate payable under the National Housing Act, 1944, was changed from $4 \frac{1}{2}$ per cent to 5 per cent on joint loans approved by Central Mortgage and Housing Corporation on or after June 21, 1951, conditional upon enabling legislation being passed. ${ }^{(2)}$

The number of all types of institutional mortgage loans approved in the first six months of 1951 at 33,700 was 8 per cent down from the same period in 1950 , and the value of loans at $\$ 260.2$ million was up 6 per cent; in the second quarter of 1951 the total number of mortgage loans approved was down 23 per cent to 17,600 , and the value of loans approved decreased 13 per cent to $\$ 132.5$

[^1]million from the second quarter of 1950. This decline in the second quarter, 1951, was entirely accounted for by the contraction of loans for new non-farm residential dwellings.

The number of institutional loans extended on new non-farm residential dwellings during the first six months of 1951 at 18,600 was 14 per cent below the same period in 1950. The value of loans approved decreased 4 per cent to $\$ 144$ million in the first half of 1951. In the second quarter of 1951 the number and value of loans on new non-farm residential dwellings were down 32 and 24 per cent respectively to 9,800 units and $\$ 75.2$ million from the second quarter of 1950 .

The number of loans approved on existing non-farm residential dwellings in the first half of 1951 was up 4 per cent to 12,900 while the value of these loans increased 21 per cent to $\$ 64.4$ million from the same period in 1950.

The number of loans for new non-farm non-residential construction in the first six months of 1951, at 492, approximated the 1950 figure. The value of these loans at $\$ 23.5$ million was 30 per cent higher in 1951 than in 1950. The number of loans on existing property in this sector dropped from 940 to 820 in number but at the same time increased in value from $\$ 20.8$ million to $\$ 23.9$ million in the periods compared.

Farm loans during the first half of 1951 numbering 800 and valued at $\$ 4.3$ million were 3 per cent higher in number and 20 per cent up in value from the first half of 1950.

## Mortgages Registered and Discharged

Mortgage registrations on new and existing property in two Registry offices and one Land Titles office serving Greater Toronto numbered 21,300 in the first half of 1951,11 per cent above the corresponding period of 1950. The large number of mortgages registered reflects in part the sustained high level of residential construction in Greater Toronto. Dwelling units started in that city numbered 6,300 in the first six months of 1951,63 per cent more than in the same period of 1950.

Mortgage discharges increased from 13,100 to 14,400 in the periods under review.

## SECTION 5.-BUILDING MATERIALS <br> (See Tables 35-44)

Beginning July 1, 1951, the Controlled Materials Plan was introduced in the United States to cover the allocation of steel and copper and aluminum mill forms to defence and defence supporting industries. Effective October 1, 1951, the plan was extended to include the allocation of these materials to producers of consumer goods. Under the plan, Canadian firms participate on an equal footing with American manufacturers.

Effective October 1, 1951, the procedure in buying and selling of copper wire and certain forms of nickel is amended. Order NFM-3 which was issued by the Department of Defence Production on May 21, 1951, and which related to domestic distribution and inventory limitations of copper wire rod and wire has been amended by Order NFM-9, dated September 19, 1951. Under the amending order departmental approval is required on orders for copper wire and cable placed with wholesale distributors as well as those placed with manufacturers.

## PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS CANADA.

QUARTERLY, 1947-JUNE, 1951.

Purchases of copper wire or cable by authorized purchasers who have not previously used these copper products are also provided for in the amended order. In addition, stock limitations are changed. Order M-1, which was effective May 1, 1951, and provided for departmental approval of the purchases and sales of primary nickel and electrical resistance alloys has been superseded by Order NFM-10, dated September 18, 1951. Order NFM-10 requires official approval of the sale or purchase of nickel anodes as well as the primary nickel and electrical resistance alloys mentioned in the previous Order.

## Production of Building Materials

To meet the unprecedented material requirements of the construction program, building material firms were advancing their peak production schedules forward from the fall months into the first six months of the year. As a result the composite index of production of 41 construction materials excluding lumber averaged $297(1939=100)$ for the period, an advance of 21 per cent from the level for the corresponding period of 1950. The index of domestic disappearance, reflecting market demand at the distributor and consumer level, averaged 314 ( $1939-100$ ), a new high for the period, 21 per cent above the average for the first half of 1950 .

Although heavy construction projects associated with utility development and defence construction brought about temporary delays in deliveries of some materials such as cement and structural steel, and a tight supply situation existed in domestic range boilers, on balance, supplies of building materials were sufficient to enable an expansion in construction operations (see Figure 2).

During the first six months of 1951, the physical volume of production of 31 principal building materials showed increases and 4 showed minor declines, compared with the same period in 1950. Output of 2 materials increased over 50 per cent, 6 increased between 40 and 50 per cent, 5 advanced between 30 and 39 per cent, 4 increased between 20 and 29 per cent, 7 rose between 10 and 19 per cent and 7 increased between 1 and 9 per cent. The declines ranged between 8 and 14 per cent. Cast-iron pressure pipe and fittings and cement pipe and tile registered the biggest gains with 85 and 65 per cent respectively. In the group registering increases from 40 to 50 per cent were cast-iron soil pipe and fittings, structural steel, warm air furnaces, builders' hardware, duplex receptacles and wood fibre insulating board. Among the materials with gains of between 30 and 39 per cent were domestic heating boilers, electric hot water tank heaters, steel pipe and fittings, non-metallic sheathed cable and tar and asphalt felts. Those with increases from 20 to 29 per cent were sawn lumber, cast-iron radiators, concrete blocks and gysum lath. In the group registering gains of 10 to 19 per cent were building brick, flue linings, gypsum plaster asphalt shingles, mineral wool batts, single pole switches, and outlet boxes. In the remaining category with increases from 1 to 10 per cent were cement, wire nails and spikes, hardwood flooring, structural tile, gypsum wallboard, wash basins and bath tubs. Declines of 8 to 14 per cent were registered in vitrified sewer pipe, granulated and loose mineral wool, hot water storage tanks and sinks.

## Supply of Primary Iron and Steel Products

The output of pig iron, steel ingot and rolling mill products increased during the first half of 1951. Pig iron and steel ingot production advanced 13 and 7 per cent respectively to 1.3 million and 1.8 million tons during the period. The
amount of finished rolling mill products convertible from domestic ingot increased 10 per cent to 1.3 million tons. Imports of primary iron and steel shapes at .8 million tons, rose 60 per cent reflecting in part the allocation of United States steel to the Canadian defence program and in part an increase in shipments from Europe. Exports of finished rolling mill products, subject to control since January 1, 1951, were at a low level. Estimated domestic disappearance of rolling milling products representing the end result of domestic production plus imports less exports totalled 1.9 million tons in the first half, 1951, an increase of 19 per cent over the 1.6 million tons made available to Canadian industry in the first half of 1950.

Shipments from Canadian steel mills to domestic consuming industries of primary iron and steel shapes amounted to 1.6 million tons in the first half of 1951. The construction industry received 13 per cent substantially the same share of total direct shipments as in the first half of 1950. In addition, a portion of shipments of 207,000 and 177,000 tons shipped to the merchant trade products industry and wholesale and warehouse industry respectively would be used in construction work.

## Supply and Demand for Building Materials

Reflecting strong demand and increased levels of output, factory sales of 15 out of 18 building materials were higher in the first half, 1951 , than in the same period of 1950. Three items namely, steel pipe and fittings, hot water storage tanks and sinks showed slight declines. During the period the flow of materials out of building material plants were holding close to current output. In relation to production, factory sales in the case of 9 materials were slightly less, 6 were the same and 3 were up fractionally.

The factory stock position was lower for 8 of the 18 materials at the end of June, 1951, than a year earlier, 4 were at the same level and 6 were higher. Among the materials with lower stocks were steel pipe and fittings, cast-iron soil pipe and fittings, hot water storage tanks, bath tubs, sinks, single pole switches and outlet boxes.

## Imports

Adding to the supply of materials required for the expanding construction program, imports of seventeen selected building materials increased substantially in the first half of 1951. Two items, namely wallboard building board and skelp declined slightly.

In the iron and steel products group, wire nails at 5,400 tons increased three times the quantity imported in the first six months of 1950. More moderate increases were registered in structural steel shapes and galvanized sheets which rose 87 and 20 per cent to 141,000 tons and 4,100 tons respectively. Skelp imports declined 16 per cent to 65,400 tons in the periods compared.

Cement imports increased four times to 889,000 barrels, mineral wool increased nine times to 146,000 square feet and gypsum plaster and sanitary ware imports were about twice the quantities in the first six months of 1950.

Imports of common colorless window glass rose 11 per cent to 32.3 millions of square feet and building brick increased 42 per cent to 10.1 million bricks.

Hardwood flooring was up 49 per cent to 4.8 million feet and wallboard building board was down 14 per cent to 11.1 million square feet.

Imports of materials in the plumbing and heating equipment group, while not large in absolute terms registered gains. Compared with the first half of 1950, warm air furnaces at 1,200 units were up eight times, domestic heating boilers increased ten times to $\$ 83,000$, cast-iron radiators were ten times greater at 21,800 square feet and electric hot water tank heaters were up three times to 3,900 units.

## Exports

Exports of 9 of the 14 building materials on which data are available showed increases, 3 showed decreases and 2 remained at the same level in the first half, 1951, as in the corresponding period in 1950.

Exports of sawn lumber, sustained by contracts with the United Kingdom calling for the delivery of about 880 million board feet before June, 1952, at 1.7 billion board feet were higher by 13 per cent during the period. Foreign sales of wood fibre insulating board were three times higher at 17.5 million square feet while hardwood flooring and wood shingles at 4.4 million feet and 1.4 millions of squares were at about the same levels as in 1950. Wood lath exports were down 11 per cent to 30 millions of laths. Foreign shipments of building brick and cement were at low levels registering 1.3 millions of bricks and .8 thousand barrels. Exports of paints, pigments and varnishes increased to $\$ 3.2$ million in the first half, 1951 , from $\$ 1.9$ million in the same period in 1950 . Reexport of common colorless window glass amounted to 474 thousand square feet. Exports of iron and steel products consisted of token shipments. Cast-iron soil pipe, steel pipe and tubing and structural steel shipments amounted to 600 tons, 1,100 tons and 1,100 tons respectively. Wire nails and spikes, processed in Canadian mills from imported material for re-export totalled 7 tons for the period.

## Non-Seasonal Lay-offs in Building Material Establisbments

During the period January to July, 1951, the number of employees in building material establishments laid off totalled $1,300,400$ less than the number laid off in the first seven months of 1950. The bulk of these were laid off for production reasons, 500 because of lack of material, and 300 because of machinery breakdowns or plant damage. Lay offs because of lack of orders, at 450, were slightly lower than in the corresponding period of 1950.

## SECTION 6.-BUILDING LABOUR

(See Tables 45-55)
Owing to a notable expansion in defence, industrial and utility construction more than offsetting a decline in house-building, employment in the construction industry climbed to a peak level in the first week of June, 1951. Results of the quarterly Labour Force survey carried out by the Dominion Bureau of Statistics indicate that the number employed in the construction industry at June 2, 1951, totalled 357 thousand, 4 per cent above the total in the first week of June, 1950. Similar percentage increases occurred in the non-agricultural and all industries to 4.2 and 5.2 million persons respectively at June 2, 1951.

As a result of a program of extension in industrial capacity, employment in the building industry showed a substantial increase during the first six months of 1951 over the corresponding period of 1950 . The index of employment in the building industry based on reports from employers with 15 or more employees representing about one-third of the construction labour force, moved up to an average of $352(1939=100)$ for the first half of 1951 , 11 per cent above the average for the same period of 1950.

Despite a shorter work week on the average in the building industry sector of the construction industry during the first half of 1951, construction labour income for the period reached $\$ 207$ million from $\$ 192$ million in the first half of 1950 , reflecting higher employment and increased wage rates.

The Labour Market
Unemployment in the construction industry declined to a low level in the first six months of 1951 as major projects in industrial plant, defence and natural resources development were initiated. In the first week of June, 1951, the number of unemployed in the construction industry was reported at 14,000 , less than half the number in the same period in 1950. The shift in emphasis from residential to non-residential construction which will probably become more apparent later in the year, suggests an employment situation in which surpluses of some construction workers may occur in localities where residential construction ordinarily predominates, and temporary shortages arise in outlying areas where the supply of skilled and unskilled tradesmen is insufficient to meet demand. Up to June, 1951, however, the supply of construction workers was not a limiting factor on the construction program.

## Supply of Construction Workers

The highest immigration of skilled construction workers in the post-war period took place during the first six months of 1951. In the period, 3,200 skilled tradesmen entered Canada almost equalling the twelve month total for 1948, the previous peak year. On the other hand, emigration of skilled construction workers in the first six months of 1951 at about 200 was slightly down from the corresponding period of 1950 .

Construction trade apprentices in training under the Federal-provincial scheme numbered 5,500 at the end of June, 1951, 200 more than a year earlier.

## Strikes in the Building and Building Material Industry

Time lost in labour disputes in the building industry which totalled 27,700 man-working days in the first seven months of 1950 , increased to 38,000 manworking days in the first half of 1951 , of which 25,000 man-working days were in July. Time lost in the building material industry was at a low level during the period, amounting to 24,200 man-working days as against 36,800 man-working days lost in the comparable period of 1950 . Working days lost in all industries numbered $343,000,16$ per cent higher than in the first seven months of 1950.

## SECTION 7.-BUILDING COSTS

(See Tables 56-59)
House-building costs continued to rise during the first seven months of 1951. Although the rise in costs of building materials was tempered somewhat in the latter months of the period, hourly wage rates in construction trades moved up consequent upon renegotiation of contracts in the late spring months. At the end of July, 1951, the combined index of wholesale prices of residential building materials and hourly wage rates in construction trades stood at $256(1939=100)$ 15 per cent above the index at the end of July, 1950 (see Figure 3).

## Residential Building Material Prices

Reflecting current pressures on the supply of building materials exerted by an expanding construction program, wholesale prices of residential building

materials increased sharply during the first five months of 1951, then levelled off in June and July. The composite index of wholesale prices of residential building materials advanced to 283 in July, 1951, 18 per cent higher than the index at July, 1950.

Only in the case of the roofing materials group index was there a drop in prices during the 12 month period preceding July, 1951. The wholesale price index of cedar shingles fell from $707(1939=100)$ in July, 1950 to 450 at July, 1951, as the wood shingle industry was faced with uncertain markets in the United States and Canada. The group index for lumber and its products remained at the high level of 411 at July, 1951, an advance of 21 per cent over the period as prices were sustained mainly by contracts from the United Kingdom negotiated in early 1951. Building material group indexes including paint and glass, plumbing and heating equipment, electrical equipment and "other materials" increased about 18 per cent during the 12 month period to July, 1951. The brick, tile and stone, and lath, plaster and insulation material groups showed gains of 9 per cent while the cement, gravel and sand group index rose 6 per cent.

## Wage Rates in the Construction Trades

Seasonal strength in construction wage rates between May and July, 1951, moved the index for all construction workers (including holiday pay allowances) to 217 at the end of July, 1951, as the momentum of construction operations bid up demands for construction tradesmen. At 217, the index was 10 per cent higher than in July, 1950.

## Rent and the Cost-of-Living

The rent index remained relatively stable during the 12 month period from July, 1950, to July, 1951, increasing only 4 per cent to $135(1939=100)$. Since the index represents average changes in a matched sample of rental units it does not reflect higher rents paid on rental dwellings constructed since January, 1947.

The cost-of-living index increased to $185(1939-100)$ in July, 1951, 12 per cent above the level in July, 1950. The major part of the increase took place between January and July, 1951, when the index rose 9 per cent.

## Rent Control Provisions

The provisions of the Wartime Prices and Trade Board Orders which imposed special regulations relating to the fixation of rents and the termination and renewal of leases expired on April 30, 1951. While in force these orders had the effect of a statute and superseded the provincial law of Landlord and Tenant. By April 30, 1951, when legislative authority was transferred to the provinces, each of the provincial governments had enacted acts enabling them to continue emergency rent control provisions as conditions warranted. When, as in New Brunswick, Nova Scotia or Prince Edward Island, the council of any city, town, incorporated village or county does not elect to make by-laws regulating maximum rentals, tenancy on leasehold estates will fall under the established provincial laws of Landlord and Tenant.

The provisions of rental acts have been recently amended in four provinces. Alberta: An Act to amend the Rental Control Act, 1950 (Chapter 75, 1951) assented to April 7, 1951, provides that the Rent Control Board may designate any area within the province as a rental control zone within which accommodation is subject to rental control. The Board may also designate any area as a decontrolled zone within which accommodation is not subject to rental control.
Saskatchewan: An Act to amend the Leasehold Regulation Act, 1950 (Chapter 83, 1951) assented to March 30, 1951, provides that the Provincial Mediation Board must determine leases of rental dwellings before a landlord may take proceedings to dispossess and the Board may determine any lease of a rental dwelling irrespective of any existing lease.
Ontario: Regulations made under the Leasehold Regulations Act, 1951, dated July 26, 1951, amends and revokes selected sections of Wartime Prices and Trade Board Orders No. 753, 800 and 813, which had been incorporated in The Leasehold Regulations Act, 1951, of the Province of Ontario.

Under the new regulations, existing leases remain valid for the rest of their term. When they expire one of two things may happen: the landlord and tenant may agree on a new lease, details of which are to be filed with the Ontario Rentals Administration; or if they cannot agree on a new lease the Ontario Rentals Administration must fix a rental.

When there is no existing lease the landlord and tenant must either come to terms on the basis of a two-year lease or have their rent set by the Ontario Rentals Administration.

Dwellings which were decontrolled under the Federal rental regulations are now controlled on the new Provincial basis. Dwellings constructed since January 1, 1947, continue under decontrolled rentals.

In the case of weekly, monthly or term leases the landlord must give the tenant six months' notice to vacate. The accommodation must be occupied by himself and family or by specified relatives for a term not less than one year.
Quebec: Order-in-Council No. 774 dated July 25, 1951, repeals the provision of the "Act respecting the regulation of rentals" whereby tenants must give notice to the landlord before August 1, 1951, of his intention to apply for a prolongation of a lease.
Except for minor changes, rental acts in the remaining provinces have not been amended since April 30, 1951.

## SECTION 8.-BUILDING INDUSTRY <br> (See Tables 60-61)

## Bankruptcies in the Construction Industry, Building Materials Industry and All Industries

As a measure of the trend of business activity, data on bankruptcies indicate more favourable conditions in the first half of 1951 than in the first half of 1950. Of the three classifications on which data are collected, bankruptcies in the building material industry showed the sharpest decline with 10 recorded in the first six months of 1951 , less than half the number in the first six months of 1950. Liabilities of these firms were valued at $\$ 280,000$, as compared with $\$ 880,000$ in the corresponding period of 1950. Declines of 41 and 26 per cent in terms of liabilities were recorded in all industries and in the construction industry respectively for the two periods compared.

## Common Stock Prices

Strengthened by increased sales volumes and an assured domestic market the common stock price index of 16 selected building material companies averaged 49 per cent higher for the first seven months of 1951 than the comparable period of 1950. Reflecting generally buoyant market conditions in the first seven months of 1951, the common stock price index of eighty-two industrial companies averaged 39 per cent higher than in the same period a year earlier.

## Section 4

## REAL ESTATE LENDING

Table 32.-Gross Mortgage Loans on Real Estate Approved by Lending Institutions,
By Type of Loan, Canada, 1947 - June, 1951.

(1) The figure shown here is slightly larger than the sum of the number of loans for single units and the number of multiple units shown in Table 33 because in two instances one loan covered several single dwellings (see footnotes 1, page 59, and 3, page 60, of Table 33)
(2) Revised.

PART III
SOURCES AND EXPLANATORY NOTES

## SOURCES AND EXPLANATORY NOTES

Sources and explanatory notes are organized in the order of the factual material referred to in Parts I and II. Where figures are rounded to the nearest thousand or million, totals do not necessarily equal the sum of their constituent items. Frequent references are made to the Dominion Bureau of Statistics and to the Central Mortgage and Housing Corporation. In the following notes these organizations are designated by the abbreviations, "D.B.S." and "C.M.H.C." respectively.

Chart based on data shown in Table 14.
FIGURE 2.-PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS, CANADA, QUARTERLY, 1947-JUNE, 1951.
Chart based on data shown in Table 36.
FIGURE 3.-INDEXES OF RESIDENTIAL BUILDING MATERIAL PRICES, WAGE RATES OF CONSTRUCTION WORKERS AND COMBINED INDEX OF MATERIAL PRICES AND WAGE RATES, CANADA, JANUARY, 1948JULY, 1951.
Chart based on data shown in Tables 56-58.

## PART II <br> TABULAR MATERIAL

TABLE 1.-NET FAMILY FORMATION, CANADA, 1945-JUNE, 1951.
Net family formation is the total number of new families formed minus the number of existing families dissolved. The number of families formed is taken as the sum of marriages and married female immigrants. Dissolutions represent the sum of deaths to married persons, emigration of married females and divorces.

Data on marriages for the period 1945-June, 1951, deaths to married persons for the period 1945-1949 and data on divorces for the period 1945-1950 obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Quarterly data on deaths to married persons during 1949 and annual and quarterly data for 1950 and first half, 1951, estimated by the Economic Research Department, C.M.H.C., on the basis of total deaths during the corresponding periods. Quarterly data on divorces during 1949 and 1950 have been averaged from annual totals and will be revised when actual data become available. The figure for the first half, 1951, is estimated on the basis of trend for the period 1945-1950.
TABLE 2.-NUMBER OF BIRTHS, DEATHS AND MARRIAGES AND TOTAL POPULATION, CANADA, 1945-JUNE, 1951.
Population data for the period 1945-1948 obtained from Population of Canada by Province 1921-1950, estimated as of June 1, for Intercensal Years, D.B.S. Data for births, deaths, and marriages for the period 1949-June, 1951, obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S.

Population data for the second, third and fourth quarters, 1949, and the first, second and fourth quarters, 1950, estimated by the D.B.S. Population data for the first quarter, 1949, the third quarter, 1950, and the first quarter, 1951, estimated by the Economic Research Department, C.M.H.C.

TABLE 3.-NUMBER OF IMMIGRANTS TO CANADA, BY SEX, MARITAL STATUS AND AGE GROUP, 1945-JUNE, 1951.
Data compiled by courtesy of D.B.S. from data supplied by the Immigration Branch, Department of Citizenship and Immigration.
TABLE 4.-NUMBER OF EMIGRANTS FROM CANADA, BY SEX, MARITAL STATUS AND AGE GROUP, 1945-JUNE, 1951.
Figures are estimated by the Economic Research Department, C.M.H.C., on the basis of data supplied by D.B.S., and the Foreign Exchange Control Board. For the period July 1948 to December 1950, basic data have been revised in accordance with Statistics of Emigration from Canada, D.B.S. Reference Paper No. 26, May, 1951. All data are provisional and subject to adjustment following the 1951 Census.

Estimates of total emigration are based on the number of Canadian immigrants entering the United States as supplied by the Immigration and Naturalization Service of the United States Department of Justice for the period 1945 to December, 1949. Data were also available on the number of Canadian immigrants entering the United Kingdom during the period, 1945 to December, 1950, as obtained from periodic issues of the British Board of Trade Journal. An allowance was made for emigration to other countries. Estimates for 1950 and 1951, are based on the number of persons who applied to the Foreign Exchange Control Board for change of status from resident to non-resident, with the intention of leaving the country permanently. An allowance was made for emigrants leaving Canada without making application to the Foreign Exchange Control Board.

Estimates for emigration of married females and children under eighteen years of age are based on data supplied by the Foreign Exchange Control Board as indicated above.
TABLE 5.-NUMBER OF IMMIGRANTS TO AND EMIGRANTS FROM CANADA, BY COUNTRY, 1945-JUNE, 1951.
Data compiled by the Economic Research Department, C.M.H.C. Sources are the same as for Tables 3 and 4.

TABLE 6.-NUMBER OF NEW DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, CANADA, 1945-AUGUST, 1951.
Sources of data shown in Table 6 are as follows:
1945 Housing Statistics, 1946, D.B.S.
1946 Data for completions obtained from Dwelling Units and New Buildings Containing Dwelling Units Reported by Municipalities and other Areas as Completed in the Nine Months Ending September 30, 1947, D.B.S. Data for units under construction at the end of 1946 obtained from Housing Bulletin No. 1, March, 1948, D.B.S.
1947 Data for completions obtained from Supplement to Housing Statistics, 1947, D.B.S. Data for units under construction at the end of 1947 obtained from Housing Bulletin No. 1, March, 1948, D.B.S. Data for starts during 1947 estimated by Economic Research Department, C.M.H.C. from figures supplied by Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-August, 1951 Data obtained from monthly issues New Residential Construction, D.B.S.
Data for housing units completed in Canada during 1945, 1946 and 1947 are based on returns received from 623 municipalities out of a total of 3,845 or approximately 66 per cent of the total population of incorporated municipalities. For detailed explanation of coverage and statistical technique used see Housing Statistics, 1946, D.B.S.

Estimates for 1948, 1949 and 1950-August, 1951 are based on the results of a nationwide survey carried out each month by D.B.S. with the co-operation of C.M.H.C. All metropolitan areas and urban centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

The number of units under construction as shown for the end of August, 1951, does not equal the number shown as under construction at the end of 1950 plus starts less completions during the first 8 months of 1951 . The figures for units under construction are subject to adjustment each month because of errors in the designation of starts between single and multiple units, and also because of the cancellation of some starts reported in previous months.

TABLE 7.-NUMBER OF NEW PERMANENT DWELLINGS STARTED BY URBAN AND RURAL AREAS, CANADA, 1947-AUGUST, 1951.
The data on dwellings started in metropolitan areas and in other cities and towns with population of 5,000 and over are obtained by direct count by C.M.H.C. Dwellings started in other areas are estimates prepared by D.B.S. based on sample surveys. Sources of data are:
1947 Data compiled by the Economic Research Department, C.M.H.C., from figures supplied by the Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-August, 1951 Data obtained from monthly issues New Residential Construction, D.B.S.
TABLE 8.-NUMBER OF NEW PERMANENT DWELLINGS COMPLETED BY URBAN AND RURAL AREAS, CANADA, 1947-AUGUST, 1951.
Sources are the same as for Table 7.

## TABLE 9.-NUMBER OF NEW PERMANENT DWELLINGS COMPLETED BY TYPE

 OF UNIT, CANADA, 1947-AUGUST, 1951.1947 Data obtained from Supplement to Housing Statistics, 1947, Dwelling units-Types of Buildings and Types of Construction for Individual Municipalities and Otber Areas, D.B.S. 1948-August, 1951 Sources are the same as for Table 7.

TABLE 10.--GROSS AND NET RESIDENTIAL CAPITAL FORMATION, CANADA, 1945-JUNE, 1951.
Data for this publication for the years 1945-1948 were obtained from Residential Real Estate in Canada, by O. J. Firestone, University of Toronto Press, 1951, Tables 77 and 78, pp. 281 and 283. Annual data shown in Residential Real Estate for 1949 were preliminary and have been revised. The quarterly estimates for 1950 and 1951 were made by the Economic Research Department, C.M.H.C. Data for 1949-1951 include an allowance for Newfoundland.

Gross residential capital formation represents an estimate of expenditures on new construction and on major improvements and alterations to existing structures. It includes also, supplementary housebuilding expenses of installed non-moveable equipment and payments for professional land and repair services such as architectural and legal fees.

Capital consumption represents an estimate of depreciation and accidental losses to the stock of residential capital such as may be caused by fire, flood, or storm.

Both gross residential capital formation and gross capital consumption are net of raw land and relate to the value of assets created by construction activity only.

Information on the services and methods of estimation may be found in detail in Residential Real Estate, pp. 418-430.

TABLE 11.-EXPENDITURES ON NEW CONSTRUCTION, MAJOR IMPROVEMENTS, REPAIR AND MAINTENANCE, RESIDENTIAL AND OTHER, CANADA, 1945-JUNE, 1951.
Data for total construction obtained from Economics Division, Department of Trade and Commerce. Housing data estimated by the Economic Research Department, C.M.H.C. The quarterly distribution for housing for 1948-June, 1951 estimated on the basis of quarterly data on starts, completions, the number of dwellings under construction and the trend of material prices and wage rates.

TABLE 12.-NEW RESIDENTIAL CONSTRUCTION, BUILDING PERMITS ISSUED IN 204 MUNICIPALITIES, CANADA, 1945-JUNE, 1951.
Data for $1945-$ February, 1947, obtained from annual and monthly issues of Building Permits Issued in Canada, Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. Data for March-December, 1947, compiled by the Economic Research Department, C.M.H.C., from returns made to D.B.S. Data for 1948-June, 1951, provided by courtesy the Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S.

The number of new dwelling units includes conversions. The 204 municipalities reporting to D.B.S. represented some $5,257,000$ persons or 46 per cent of the total population of Canada as at the date of the 1941 census.

Data for May-November 1948, January-April 1949, and November-December 1950, based on returns from 203 municipalities, December 1948, 202 municipalities.
TABLE 13.-NEW RESIDENTIAL CONSTRUCTION, CONSTRUCTION CONTRACTS AWARDED, CANADA, 1945-JULY, 1951.
Data obtained from monthly issues of The Building Reporter, published by Hugh C. Maclean Publications Limited, Toronto.

Contracts awarded may be used as an indicator of trends but they are liable to misinterpretation if used as indicators of total volume of residential activity. They relate only to projected work which may or may not be commenced. Coverage is apt to vary over a period of time.

Data on the number of new housing units estimated to be involved in contract awards for apartments which replace the series on apartment blocks shown in The Building Reporter have been derived by the application of a conversion factor to the value of contract awards for apartments made during the periods shown. This has been done to make the data more comparable with the series on building permits issued.

The conversion factor used is simply the average construction cost per dwelling unit of an apartment of the solid masonry type (brick facing and masonry blocks) prevailing throughout Canada during the first six months of 1946 as outlined in the study Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 40-41. 1946 construction costs for the units are estimated at $\$ 6,053$, of which $\$ 3,178$ are material costs, $\$ 2,270$ are on-site labour costs and $\$ 605$ are overhead and profits. This conversion factor was adjusted according to variations in the composite index of wholesale prices of residential building materials and wage rates in the construction industry as contained in Table 58.

## TABLE 14.-NUMBER OF NEW PERMANENT DWELLINGS STARTED, PUBLICLYINITIATED HOUSING AND PRIVATELY-INITIATED HOUSING WITH AND WITHOUT FEDERAL GOVERNMENT FINANCIAL ASSISTANCE, CANADA, 1947-JUNE, 1951.

Data compiled by Economic. Research Department, C.M.H.C. Publicly-initiated housing comprises starts under the Veterans' Rental Housing Program of C.M.H.C. and Defence Construction Limited, and the Armed Service Married Quarters' Program of the Department of National Defence. Privately-initiated housing with Federal Government financial assistance in the form of loans covers starts under the National Housing Act, 1944, The Farm Loan Act, 1927, and the Veterans' Land Act, 1942. Privately-initiated housing with Federal Government financial assistance in the form of guarantees comprises starts under the Farm Improvement Loans Act, 1944, and the rental insurance plan, except those rental insurance units approved for National Housing Act loans.

National Housing Act starts for 1947 and 1948 were distributed by quarter according to the pattern established by the number of housing units approved for loans. Starts under the rental insurance plan, the Farm Loan Act, 1927, and the Farm Improvement Loans Act, 1944, were considered to be equal to the number of units approved under these provisions.

As this tabulation covers new permanent houses only, Federal Government guarantees under the home extension provisions of The National Housing Act, 1944, financial assistance for Emergency Shelter units, and construction of temporary units by the Department of National Defence, are excluded.

Data on "publicly-assisted housing starts" for 1950 as shown in this table differ from those shown in Mortgage Lending in Canada, 1950, C.M.H.C., Table 38, under the title "Dwellings Started and Completed by Principal Source of Financing and Province, Canada". The latter table includes starts of dwellings constructed for government employees but excludes dwellings started, on which double depreciation benefits have been extended. This table on the other hand, excludes starts on dwellings built for Government employees and includes dwellings built under the double depreciation assistance. An additional difference between data in the two tables is due to the fact
that only permanent dwellings are covered in this table whereas starts on temporary dwellings are included in Table 38, Mortgage Lending in Canada, 1950.
TABLE 15.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, NUMBER AND AMOUNT OF GROSS LOANS APPROVED AND NUMBER OF DWELLINGS FINANCED, CANADA, FEBRUARY, 1945AUGUST, 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 16.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, GROSS LOANS APPROVED BY TYPE OF LOAN, CANADA, FIRST HALF, 1950 AND 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 17.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, ANALYSIS OF GROSS LOANS APPROVED SHOWING AVERAGE ESTIMATED COST, LENDING VALUE, AMOUNT OF LOAN, FLOOR AREA, AND CONSTRUCTION COST PER SQUARE FOOT, BY TYPE OF DWELLING, CANADA, FIRST HALF, 1950 AND 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 18.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, HOME EXTENSION LOAN GUARANTEES APPROVED, CANADA, APRIL, 1946-JUNE, 1951.
Data compiled by the Mortgage Department, C.M.H.C.
TABLE 19.-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF NEW DWELL INGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, AND ACTUAL EXPENDITURE, CANADA, 1941-JUNE, 1951.
Data to the end of 1946 compiled by Wartime Housing Limited.
Financial data for 1947-June, 1951 compiled by the Accounting Division, C.M.H.C. For the years 1947 and 1948, data on the number of housing units started, completed and under construction compiled by the Program Section, Construction Division, and for 1949-June, 1951 by the Statistics. Department, C.M.H.C.

TABLE 20.-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, CONSTRUCTION UNDER CONTRACT, BY UNITS, CANADA, 1945-JULY, 1951.
Data to the end of 1948 compiled by the Program Section, Construction Division, and for 1949-July, 1951 by the Statistics Department, C.M.H.C.

TABLE 21.-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, DWELLINGS UNDER CONTRACT BY TWENTY-THREE STAGES OF CONSTRUCTION, CANADA, JUNE, 1948-1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 22.-ARMED SERVICE MARRIED QUARTERS, CONSTRUCTION OPERATIONS BY THE DEPARTMENT OF NATIONAL DEFENCE, PERMANENT AND TEMPORARY HOUSING, NUMBER OF DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, AND EXPENDITURES, CANADA, 1947-JUNE, 1951.
Data obtained by courtesy the Joint Services Accommodation Committee, Department of National Defence. Figures compiled by the construction branches of the Department of National Defence.

No land costs are shown because the units were constructed on crown-owned property.

The designation "temporary units" refers to conversions but excludes emergency conversions.

TABLE 23.-ARMED SERVICE MARRIED QUARTERS, CONSTRUCTION OPERATIONS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, AND ACTUAL EXPENDITURES, CANADA, JANUARY, 1949-JUNE, 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 24.-HOUSING OPERATIONS BY DEFENCE CONSTRUCTION LIMITED, CANADA, NOVEMBER, 1950-JUNE, 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 25.-CONSTRUCTION OPERATIONS UNDER THE VETERANS' LAND ACT, 1942, NUMBER OF NEW DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, AND EXPENDITURE, BY TYPE OF PROJECT, CANADA, SEPTEMBER 23, 1943-JUNE, 1951.
Data compiled by the Economic Research Department, C.M.H.C. from information obtained by courtesy of the Research and Statistics Division, Department of Veterans' Affairs. Data on expenditures for 1950-June, 1951 are not comparable with data for previous years as excess costs borne by the veterans and certain improvements included in previous years are not available for 1950-June, 1951.

TABLE 26.-LENDING OPERATIONS UNDER THE CANADIAN FARM LOAN ACT, 1927, CANADA, 1929-JUNE, 1951.
Data obtained by courtesy of the Canadian Farm Loan Board, Department of Finance.
TABLE 27.-LENDING OPERATIONS UNDER THE FARM IMPROVEMENT LOANS ACT, 1944, CANADA, MARCH, 1945-JUNE, 1951.
Data obtained by courtesy of the Supervisor, The Farm Improvement Loans Act, Department of Finance.

TABLE 28.--PROPERTY MANAGEMENT OPERATIONS UNDER CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF RENTAL UNITS UNDER ADMINISTRATION, AND PER CENT VACANT, BY TYPE OF UNIT, CANADA, 1947-JUNE, 1951.
Data compiled by Statistics Department from data supplied by the Property Management Section, Real Estate Division, C.M.H.C.

TABLE 29.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, RENTAL INSURANCE PLAN, NET NUMBER OF PROJECTS, DWELLINGS, AND TOTAL ESTIMATED COST APPROVED WITH LOANS UNDER THE N.H.A. AND WITH CONVENTIONAL LOANS, CANADA, JULY, 1948JUNE, 1951.
Data compiled by the Statistics Department, C.M.H.C. on a net basis. As a result allowances for cancellations, adjustments and reinstatements have been made in the month they were reported and negative figures may appear in a particular month, during which there were more cancellations reported than approvals made.

Whereas the data under the heading "Loans under N.H.A." comprise all Rental Insurance projects with N.H.A. loans approved at time of compilation, the data under the classification "with conventional loans" are residual and in addition to Rental Insurance. Projects without N.H.A. loans may include cases where an N.H.A. loan may be approved in a subsequent quarter. The distribution between N.H.A. loans and conventional loans are preliminary for the last quarter shown and are subject to revision in the Fourth Quarter, 1951 issue of Housing in Canada.

TABLE 30.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, RENTAL INSURANCE PLAN, AVERAGE NUMBER OF ROOMS, FLOOR AREA, ESTIMATED COST, AND MAXIMUM MONTHLY RENT PER UNIT, FOR GROSS PROJECTS APPROVED, CANADA, JULY, 1948-JUNE, 1951.
Data compiled by the Statistics Department, C.M.H.C.

TABLE 31.-OPERATIONS UNDER THE QUEBEC HOUSING ACT, NUMBER AND AMOUNT OF LOANS APPROVED, NUMBER OF DWELLINGS INVOLVED AND PROVINCIAL COMMITMENTS, JANUARY, 1948JUNE, 1951.
Data obtained by courtesy of the Quebec Farm Credit Bureau.
TABLE 32.-GROSS MORTGAGE LOANS ON REAL ESTATE APPROVED BY LENDING INSTITUTIONS, BY TYPE OF LOAN, CANADA, 1947JUNE, 1951.
Data compiled by the Economic Research Department, C.M.H.C. from monthly reports submitted by 114 lending institutions comprising 40 life insurance companies, 36 trust companies, 21 loan companies, 8 fire insurance companies, and 9 fraternal societies. These companies advanced 96 per cent of the total cash disbursements on mortgage loan account for Canadian real-estate made by all companies of these types in 1949.

TABLE 33.-GROSS MORTGAGE LOANS APPROVED ON NEW NON-FARM HOUSING CONSTRUCTION BY TYPE OF LENDING INSTITUTION, AND BY TYPE OF DWELLING UNIT, CANADA, 1947-JUNE, 1951.
Data compiled by Economic Research Department, C.M.H.C. Source is the same as for Table 32.

TABLE 34.-NUMBER OF MORTGAGES REGISTERED AND DISCHARGED, GREATER TORONTO AREA AND PROVINCE OF ONTARIO, 1945JUNE, 1951.
Data compiled by the Economic Research Department, C.M.H.C. The number of mortgages registered, Greater Toronto Area, 1945-June, 1951 were obtained from the Toronto Registry Office, York East and West Registry Office and Toronto and York Land Titles Office.

The number of mortgages discharged, Greater Toronto Area, 1945-June, 1951 were obtained from the Toronto Registry Office, York East and West Registry Office and estimates of discharges from Toronto and York Land Titles Office.

The number of mortgages registered and discharged in the Province of Ontario reflect mortgage activity as recorded in the 65 registry and the 16 land titles offices of the province. Data for the 65 registry offices and one land titles office are based on original records made available by courtesy of the Inspector of Legal Offices, Province of Ontario. Coverage of the remaining 15 land titles offices were obtained by means of a sample survey of the mortgage registrations and discharges during the month of September, 1950, recorded in 10 land titles offices. This information was used in conjunction with the data mentioned above to produce estimates for the province as a whole. For further details of the sample survey see Mortgage Lending In Canada, 1950, p. 100.

TABLE 35.-INDEXES OF PRODUCTION OF CONSTRUCTION MATERIALS, BY LUMBER, OTHER CONSTRUCTION MATERIALS, AND TOTAL, AND INDEX OF DOMESTIC DISAPPEARANCE OF CONSTRUCTION MATERIALS EXCLUDING LUMBER, CANADA, 1945-JUNE, 1951.
Data compiled by Economic Research Department, C.M.H.C. from information provided by courtesy of D.B.S.

The combined index of construction material production is based on the total value of outpur of the more important construction materials in terms of 1946 prices. It is designed to measure the overall trend in the physical output of construction materials. Because of the high degree to which producers of construction materials, with the exception of lumber, are responsive mainly to the requirements of the domestic market, the output index provides a rough indication of trends in domestic construction activity.

A closer indication of trends in domestic construction activity however, can be obtained from the index of domestic disappearance, designed to measure the rate at which the construction industry absorbs materials. To obtain this index, the production index was adjusted, where possible, by the addition of imports, the deduction of exports, and the replacement of the original production data with data on factory sales of materials to take account of producers' inventory changes. The series on domestic disappearance
is subject to the limitation that it does not reflect changes in the level of dealers' inventories. This means that in respect to materials such as lumber, where dealers' inventories represent a comparatively high proportion of yearly output or factory shipments, the series shown here cannot be relied on to give an accurate short term indication of the actual absorption of materials on the site. For this reason, lumber was excluded from the series on domestic disappearance shown in this tabulation.

The indexes are based on 23 materials, including lumber, for 1945 , and on 41 materials for the period 1946-June, 1951. The lumber index in the production series is shown separately because of its heavy weight in relation to the other materials.

TABLE 36.-PRODUCTION OF SELECTED BUILDING MATERIALS, CANADA, 1945JUNE, 1951.
Sources of data for building materials listed in Table 36 are as follows:

## Sawn Lumber:

1945-1949 Annual issues The Lumber Industry in Canada, D.B.S.
1950-June, 1951 Monthly issues Production, Shipments and Stocks on Hand of Sawmills, D.B.S.

Hardwood Flooring:
1946-June, 1951 By courtesy the Timber Controller, Department of Trade and Commerce. The unit measure, square feet, represents a surface measure, plus an allowance for waste and tongue irrespective of thickness.

Wood Fibre Building Board:
1945-1948 By courtesy the Forer $c$ Products Statistics Section, D.B.S.
1949-June, 1951 Monthly issues Rigid Insulating Board Industry, D.B.S.
Building Brick: Data relate to face and common clay brick.
1945-June, 1951 Estimates prepared by Economic Research Department, C.M.H.C., based on actual production reported to D.B.S. by 55 producers accounting for approximately 97 per cent of brick shipments during 1945.

Data on production of brick, 1946-June, 1951 shown in Canadian Statistical Review, D.B.S. represent production of these firms only.

Flue Linings:
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Vitrified Sewer Pipe:
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Structural Tile:
1945-June, 1951 Monthly issues of Report on Clay Products Made from Canadian Clays, D.B.S.

Cast-Iron Soil Pipe and Fittings:
1945 Iron and Steel and Tbeir Products in Canada, 1943-1945, D.B.S.
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Cast-Iron Pressure Pipe and Fittings:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Steel Pipe and Fittings:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

## Structural Steel:

1945-June, 1951 By courtesy the Steel Controller, Department of Trade and Commerce. Structurals include T-bars, Z-bars, H-beams, I-beams, uprights, angles, etc., where any one leg of the section is 3 inches or over.

Wire Nails and Spikes:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1949 The Hardware, Tools and Cutlery Industry in Canada, 1949, D.B.S.
1950-June, 1951 Monthly issues Nails, Tacks and Staples, D.B.S.
Mineral Wool Batts:
1945-1949 Annual issues The Stone Industry in Canada, D.B.S.
1950-June, 1951 Monthly issues Mineral Wool, D.B.S.
Granulated and Loose Mineral Wool:
1945-1949 Annual issues The Stone Industry in Canada, D.B.S. 1950-June, 1951 Monthly issues Mineral Wool, D.B.S.

Cement:
1945-1949 Annual issues The Cement Manufacturing Industry in Canada, D.B.S.
1950-June, 1951 Monthly issues Cement, D.B.S.
Concrete Blocks:
1945-1947 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
1948-June, 1951 Estimates prepared by the Economic Research Department, C.M.H.C. based on monthly issues Concrete Building Blocks and Cement Pipe, D.B.S. which accounts for 82 per cent of total production.

Cement Pipe and Tile:
1946 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. 1947-June, 1951 Monthly issues Concrete Building Blocks and Cement Pipe, D.B.S.

Single Pole Switches:
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Duplex Receptacles:
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Outlet Boxes:
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Non-Metallic Sheathed Cable:
1946-June, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Gypsum Wallboard:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-June, 1951 Monthly issues Production, Shipments and Stocks of Gypsum Products, D.B.S.

Gypsum Lath:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-June, 1951 Monthly issues Production, Sbipments and Stocks of Gypsum Products, D.B.S.

Gypsum Plaster:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-June, 1951 Estimates prepared by the Economic Research Department, C.M.H.C. Production data shown in monthly issues of Production, Shipments and Stocks of Gypsum Products include sundry plasters such as moulding plaster, etc. These were excluded in the figures shown in this table.
Builders' Hardware:
1945 Iron and Steel and Their Products 1943-1945, D.B.S.
1946-1949 Annual issues The Hardware, Tools and Cutlery Industry in Canada, D.B.S.
1950-June, 1951 Estimates prepared by Economic Research Department, C.M.H.C. based on factory sales reported to D.B.S. by firms accounting for about 58 per cent of total sales in 1949.

TABLE 37.-SALES AND STOCKS OF SELECTED BUILDING MATERIALS, CANADA 1949-JUNE, 1951.
Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

TABLE 38.-IMPORTS OF SELECTED BUILDING MATERIALS, CANADA, 1945JUNE, 1951.
Data obtained from monthly issues of Trade of Canada-Imports Entered for Consumption, Department of Trade and Commerce.

The data on wallboard building board for the period 1945-1947 include insulating board. The data for the period 1948-June, 1951 exclude insulating board as the Emergency Exchange Conservation Act prohibits the importation of this type of building board.

TABLE 39.-EXPORTS OF SELECTED BUILDING MATERIALS, CANADA, 1945JUNE, 1951.
Data obtained from monthly issues of Trade of Canada-Exports-Canadian Produce, Department of Trade and Commerce.

Data on lumber exports include planks, boards and squared timber.
Data for Iumber in monthly issues of the Canadian Statistical Review, D.B.S. include planks and boards only.
TABLE 40.-PRODUCTION OF PIG IRON AND STEEL INGOTS AND ESTIMATED DOMESTIC DISAPPEARANCE OF ROLLING MILL PRODUCTS, CANADA, 1945-JUNE, 1951.
Data on production of domestic pig iron and steel ingots and on exports of rolling mill products are obtained from annual issues of The Primary Iron and Steel Industry in Canada, D.B.S., and monthly issues of Primary Iron and Steel, D.B.S. Annual and quarterly revisions for the period 1945-1950 have been made by the Steel Division, Department of Defence Production. Data on production of rolling mill products made from Canadian ingot are estimated by applying a conversion factor of .725 to steel ingot processed in Canada. The conversion factor of .725 allows for the estimated weight loss involved in turning iron and steel shapes out of the ingot form. Data on imported rolling mill products are derived by reducing the total of imported steel, including ingots, by the estimated production loss sustained in processing its ingot content.

Domestic disappearance of rolling mill products is the sum of domestic production and imports less exports.

The volume of rolling mill products being made available to Canadian consuming industries as indicated in "domestic disappearance" exceeds that of "net total domestic shipments" of primary iron and steel shapes from Canadian rolling mills as shown in Table 41. This difference is accounted for by the fact that a portion of imports of primary iron and steel shapes is shipped direct to consuming industries without being processed in Canadian mills. Another factor is that data on production of rolling mill products from Canadian ingot as shown in this table do not show actual production but represent output of iron and steel shapes that would be forthcoming from current ingot production.
TABLE 41.--SHIPMENTS OF PRIMARY IRON AND STEEL SHAPES TO CONSUMING INDUSTRIES, CANADA, 1946-JUNE, 1951.
Data obtained from monthly issues of Canadian Statistical Review, D.B.S. Monthly revisions for the first quarter, 1951, provided by the Steel Division, Department of Defence Production.

The classification "Merchant Trade Products" refers to items produced in integrated mills and covers wire and wire products. The "miscellaneous" category includes all steel used in the following: agricultural and other farm implements, machinery and tools, mining and lumbering industries, pressing, forming and stamping industries, public works and utilities, shipbuilding and steel specifically marked for National Defence purposes. During the year 1949 the amount of steel used for National Defence purposes amounted to .3 per cent of the total miscellaneous category. The classification "Producers' Interchange" represents the amount of steel shipped to producers' own plants or to other
plants within the primary industry for further processing e.g. black sheet to galvanizing department; hot rolled bars to make railway track material. See also explanatory note to Table 40.

TABLE 42.-VOLUME OF SELECTED BUILDING MATERIALS UNLOADED AT RAILWAY STATIONS IN CANADA, 1945-JUNE, 1951.
1945-1948 Data obtained from annual issues of Summary of Monthly Railway Traffic Reports, D.B.S.
1949--June, 1951 Data obtained from issues of Monthly Traffic Report of Railways of Canada, D.B.S.
This series replaces the data on "Movement by Rail of Building Materials" appearing in previous issues of Housing in Canada which were based on freight loadings at stations in Canada. Whereas the present series covers only freight unloaded for domestic use, thereby including imports and excluding exports, the former series covered freight loaded at Canadian stations and thereby included exports and excluded imports. The present series more closely reflects the use of materials by the construction industry in Canada.

TABLE 43.-EMPLOYMENT AND WEEKLY PAYROLLS IN THE BUILDING MATERIAL INDUSTRIES, CANADA, 1946-JUNE, 1951.
Data compiled by the Economic Research Department, C.M.H.C. from information supplied by courtesy of the Employment and Payrolls Statistics Section, D.B.S.

Data are based on monthly reports from employers with 15 or more employees. The materials covered include: lumber, brick, tile, paints, pigments, varnishes, building blocks, roofing and sheathing paper, prefabricated houses, stoves, heaters, furnaces, iron pipe, sheet metal, wallboards, structural iron and steel fabrication, builders' hardware, glass, gypsum products, asbestos building materials, sanitary ware, mineral wool, sand and gravel.
TABLE 44.-NON-SEASONAL LAYOFFS IN BUILDING MATERIAL PRODUCING INDUSTRIES, NUMBER OF ESTABLISHMENTS AND NUMBER OF EMPLOYEES, BY REASON FOR LAYOFF, CANADA, MARCH, 1948JULY, 1951.
Data obtained by courtesy the Economics and Research Branch, Department of Labour.
The figures are compiled on the basis of information submitted through day to day layoff reports and monthly summary reports made by local offices of the National Employment Service. Layoffs that are occasioned by normal seasonal factors are excluded from the compilation as far as possible. For the most part, reports are not received for layoffs involving less than ten workers or for those of less than two weeks' duration.

The layoffs cover manufacturing industries only, and are classified by their cause into three categories: lack of orders; lack of material; and other. The category "other" to a large extent represents non-economic factors such as flood and fire, but it includes some factors that are at least partly economic such as bankruptcies, strikes, and plant closures for repairs or retooling. The latter factors however do not directly reflect the immediate demand and supply conditions of the businesses concerned. The factors which have an immediate bearing on the supply side (lack of material) and on the demand side (lack of orders) of the businesses concerned are shown separately.

TABLE 45.-EMPLOYMENT BY OCCUPATION AND INDUSTRY, UNEMPLOYMENT AND THE LABOUR FORCE, BY INDUSTRY, CONSTRUCTION, NON-AGRICULTURAL, AND TOTAL, CANADA, QUARTERLY, NOVEMBER, 1945-JUNE, 1951.
The data in this table are based on the results of sample surveys undertaken by D.B.S. on an approximate quarterly basis. Results of these samples are published in periodic issues of The Labour Force Bulletin, D.B.S.

The estimates in Table 45 are subject to sampling error. In general the smaller the estimate the larger the relative sampling error. In the case of unemployment estimates in the construction industry, the percentage error is apt to be quite high, and reliance can be placed on these figures only with careful reservations. The coefficient of variation for estimates of employment in the construction industry is estimated at 6 per cent.

Roughly this means that there are about two chances out of three that the sampling error will be less than 6 per cent; and about one chance in twenty that it will amount to more than 12 per cent.

The construction industry referred to in Table 45 includes engineering as well as building construction, whereas Table 47 covers the building industry only.

The industry classification used in Table 45 is that contained in the Standard Industrial Classification Manual, D.B.S. and has the establishment as a basis whereas the Occupational class shown is based on the Standard Summary of Occupational Classes, D.B.S. where the basis is the actual job performed. Force account employees of non-construction firms are classified by occupation as construction workers if they are employed in construction work but are classified by industry according to the industrial classification of the employing firm. Conversely, non-construction employees in construction firms are classified by industry as construction employees but by occupation according to the work performed e.g. clerical, managerial. The province of Manitoba was excluded from the June Labour Force Survey, 1950, because of flood conditions. To achieve comparability with preceding periods in this series, the Economic Research Department of C.M.H.C. made rough estimates of the probable Manitoba components and included them with the data provided in the Labour Force Survey Bulletin for June, 1950.

## TABLE 46.-EMPLOYMENT IN THE CONSTRUCTION INDUSTRY, PERCENTAGE DISTRIBUTION OF CONSTRUCTION WORKERS BY NUMBER OF HOURS WORKED PER WEEK, CANADA, JUNE, 1949-JUNE, 1951.

Data based on a distribution of employed male construction workers by number of hours worked per week, provided by courtesy the Special Surveys Division, D.B.S. The average number of hours worked per week is shown to indicate overall seasonal variations and longer term trends. It is calculated from a frequency distribution, somewhat more detailed than that shown in the Table, on the assumption that the mid-point of each class interval is representative of the group falling therein. The averages shown are subject to sampling error and should be interpreted with caution. The total number of hours worked per week represents the product of the average number of hours worked per. week and the number of male workers employed in the construction industry.

TABLE 47.-EMPLOYMENT AND WEEKLY PAYROLLS IN THE BUILDING INDUSTRY AND INDEXES OF EMPLOYMENT IN THE BUILDING AND NON-AGRICULTURAL INDUSTRIES, CANADA, 1945-JUNE, 1951.
Data represent a new series compiled by the Employment Section of the Labour and Prices Division, D.B.S. from reports made by employers with 15 or more employees and published in Employment, Payrolls and Average Weekly Earnings 1947-1950, D.B.S. and monthly issues of Employment and Payrolls D.B.S. For differences between these series and those published in previous issues of Housing in Canada see Employment, Payrolls and Average Weekly Earnings 1947-1950, D.B.S. pp. 3-7.

TABLE 48.-NUMBER OF HOURLY WAGE-EARNERS, AVERAGE AND TOTAL NUMBER OF HOURS WORKED PER WEEK, AVERAGE HOURLY AND WEEKLY EARNINGS, BUILDING INDUSTRY, CANADA, 1945JUNE, 1951.
Data compiled by the Employment Statistics Section, D.B.S., from reports made by employers with 15 or more employees. Data are published monthly in Statistics of Average Hours Worked and Average Hourly Earnings, D.B.S.

The number of hourly wage-earners comprises workers who are employed by the hour and excludes salaried personnel and other employees whose earnings are not directly dependent on the number of hours worked. Consequently the total number of hourly wage-earners shown in this table is smaller than the number of persons employed as shown in Table 47.

The statistics on hours worked include overtime as well as the hours put in by parttime and casual workers. Hours credited to persons on leave with pay are also included.

The average hourly and weekly earnings shown represent gross earnings before deduction for taxes, unemployment insurance, etc.

Data are obtained from monthly issues of Estimates of Labour Income, D.B.S. The estimates are based on 1945 and 1946 figures projected according to a monthly index of payrolls as obtained from returns from firms with 15 or more employees. The base figures for 1945 and 1946 are from National Accounts, Income and Expenditure, 1941-1948 and Supplementary Tables, D.B.S.

A series on total construction outlay is shown in Table 11 and a comparison of the two series shows trends that are similar but not identical. There are two reasons for some variation in trend. First, the labour component of construction expenditure does not vary exactly as the other components because of changes in labour output per man hour and different rates of change in wage rates and construction material prices or management and overhead expenses. Second, in the case of labour income estimates a different coverage of the construction industry is made than for estimates of total construction expenditure. Whereas Table 11 is intended to cover all construction expenditures, the estimates in Table 49 do not include: 1) expenditures by unincorporated own account contractors and builders, 2) construction outlay by railway and telephone companies, 3) repair and maintenance construction outlay on force account by nonconstruction companies, 4) construction outlay by Federal, provincial or municipal governments.

TABLE 50.-UNFILLED VACANCIES AND UNPLACED APPLICANTS IN CONSTRUCTION TRADES, CANADA, DECEMBER, 1944-JUNE, 1951.
Compiled by the Unemployment Insurance Section, Labour and Prices Division, D.B.S., based on weekly reports submitted by local offices of the Unemployment Insurance Commission.

TABLE 51.- NUMBER OF MALE WORKERS IN CONSTRUCTION TRADES APPLYING FOR UNEMPLOYMENT INSURANCE BENEFITS AND ESTABLISHING BENEFIT YEARS, CANADA, 1945-JUNE, 1951.
Data compiled by the Unemployment Insurance Statistics Section, D.B.S.
A person who has made at least 180 contributions into the Unemployment Insurance Fund, during the two year period immediately preceding a claim for benefits and has made 60 contributions in the year preceding the claim or 45 contributions in the 6 months preceding the claim establishes a benefit year. The series on the number of male workers in the construction industry applying for unemployment insurance benefits and establishing benefit years may be used as an index of unemployment supplementary to data shown in Tables 45 and 50.

The chief limitations of the data in Table 51 as an index of unemployment are as follows: (1) coverage is confined to male workers in construction occupations who come under the terms of the Unemployment Insurance Act, 1941; to the end of 1947 these comprise employees on salary who earn less than $\$ 2,400$ annually, employees paid by the hour or by the day, and employees paid by the week unless they earn more than $\$ 3,120$ annually and apply for exemption from the Act. From January 1, 1948, to June 30, 1950, salaried personnel earning less than $\$ 3,120$ have come under the Act and since July 1, 1950, the ceiling on insurability for salaried employees is raised from $\$ 3,120$ to $\$ 4,800$ a year. There are therefore, a number of construction workers not covered in this tabulation. (2) not all unemployed workers have made 180 days' contribution prior to their period of unemployment. (3) a worker who is unemployed twice during a 12 month period does not as a rule establish a benefit year the second time. (4) the establishment of a benefit year does not give an indication of the duration of unemployment.

TABLE 52.-VOCATIONAL AND APPRENTICESHIP TRAINING IN CONSTRUCTION TRADES, BY NUMBER IN TRAINING, CANADA, 1947-JUNE, 1951.

Data compiled by the Vocational Training Branch, Department of Labour.

TABLE 53.-IMMIGRATION OF CONSTRUCTION WORKERS, BY TRADE, CANADA, 1945-JUNE, 1951.
Data compiled by the Economic Research Department, C.M.H.C., from data supplied by courtesy of D.B.S. and the Immigration Branch, Department of Citizenshp and Immigration.

TABLE 54.-EMIGRATION OF SKILLED CONSTRUCTION WORKERS, BY TRADE, CANADA, 1948-JUNE, 1951.
This series shows the number of persons who applied to the Foreign Exchange Control Board for change of status from resident to non-resident with the intention of leaving the country permanently. The data cover skilled construction workers only, with no separate information available on semi-skilled and unskilled construction workers who are lumped with "general labour". The monthly figures are by "date of application" and there is usually a time lag of a month or two between this date and the actual date of departure of the emigrant. This series is currently in the process of being checked and developed further. As revised data become available, they will replace the preliminary series shown here. The data are supplied by courtesy of D.B.S. and the Foreign Exchange Control Board, the compilations being prepared by D.B.S. on the basis of information supplied by the Foreign Exchange Control Board.

TABLE 55.-STRIKES AND LOCKOUTS IN THE BUILDING INDUSTRY, BUILDING MATERIALS INDUSTRY, AND IN ALL INDUSTRIES, CANADA, 1945JULY, 1951.
Data obtained from monthly issues of The Labour Gazette, Department of Labour.

## TABLE 56.-INDEXES OF WHOLESALE PRICES OF RESIDENTIAL BUILDING MATERIALS, AND COMPOSITE INDEX OF ALL CONSTRUCTION MATERIALS, CANADA, 1945-JULY, 1951.

Revised composite index of wholesale prices of all construction materials obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. These indexes replace the series formerly published in previous issues of Housing in Canada on wholesale prices of construction materials in general. For differences between this index and that published in previous issues of Housing in Canada see Wholesale Price Indexes 1913-1950, D.B.S. p. 4.

Indexes of wholesale prices of residential building materials obtained from Prices and Price Index Numbers of Residential Building Materials, March, 1948, D.B.S. and from Prices and Price Indexes, April, 1951, D.B.S. Indexes are converted from a 1935-1939 to a 1939 base. The composite index in this series is weighted according to the value of each listed group of materials entering into residential construction as estimated in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 60-67. Insofar as possible the price index for each group of materials is based on the component items shown in the above publication, and weighted accordingly. In some cases however, where the specific material components listed in the publication covered a wide variety of individual items, representative material items were chosen and weighted according to total production in Canada.

The trend of residential building material prices does not vary to a significant extent from the trend for construction materials in general over the period 1926-July, 1951. At July, 1951, the index for residential materials stood at 283 on the 1939 base, or 11 points lower than the index for construction materials which was at 284 in July, 1951.

The purpose of these group indexes is to reflect the average movement of prices of building materials having a characteristic use. In interpreting these indexes certain qualifications should be observed before drawing general conclusions from them. First, the price of each building material in a group rises or falls either independently of the other or possibly in an inter-related fashion depending on the extent of their homogeneity. Changes in prices of each material may also occur at varying rates from another. Consequently a group index provides no information with respect to price changes experienced by a specific building material within a group. Attention is drawn to Price Index Numbers of Residential Building Materials 1926 to 1948, Labour and Prices Division, D.B.S., March, 1949, which sets out in detail the building materials comprising each group.

Secondly, though the indexes are designed, by applying appropriate weighting technique, to express national averages of price changes, they may be modified by regional cost differentials. This problem of regional differentials in housing construction costs is treated at length in Chapters 1 and 2, Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946.

## TABLE 57.-INDEXES OF AVERAGE HOURLY WAGE RATES IN CONSTRUCTION TRADES AND IN ALL INDUSTRIES, CANADA, 1945-JULY, 1951.

Data obtained from the Department of Labour.

Indexes for the individual trades other than sheet metal workers, obtained by courtesy of the Economics and Research Branch for the years 1945-1950 and for the month of March, 1951. Monthly interpolations on these indexes for the year 1950 and the first two quarters of 1951 were made on the basis of wage rate schedules for 15 cities supplied by courtesy of the Industrial Relations Branch. Each city in these calculations was weighted according to the number of housing unit completions in 1950. The weights used in calculating the index for all construction workers in these interpolations are based on the value of the on-site labour for each trade engaged in residential building as established in The Labour Value of the Building Dollar, Housing Administration, Department of Finance, Ottawa, 1943, p. 29. The indexes for 1945-1950 do not properly represent annual averages as they are based on surveys relating to pay periods which vary somewhat from year to year. The index for 1946 relates to December; for 1944-1945 October; 1947, July; 1948 and 1949, September and 1950, March and September.

The index for sheet metal workers was calculated by the Economic Research Department, C.M.H.C., on the basis of rates for 15 cities obtained from annual issues of $W^{\text {Wages }}$ and Hours of Labour in Canada, Department of Labour, for the years 1945-1950, and by courtesy of the Industrial Relations Branch for 1951.

The index for all industries was estimated by the Economic Research Department, C.M.H.C., on the basis of the General Average Index as contained in annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 1945-1949 and as supplied courtesy of the Economics and Research Branch for March and September, 1950 and March, 1951. Monthly interpolations on this index for the year 1950 and first quarter 1951 were made on the basis of average hourly earnings in principal industries as published in monthly issues of Man Hours and Hourly Earnings, D.B.S. weighted by relative employment weights in these industries as contained in monthly issues of The Employment Situation, D.B.S. Monthly index numbers for the second quarter, 1951, estimated by the Economic Research Department on the basis of trend during 1949 and 1950.

The indexes for both all construction workers and all industries, including holiday pay allowances, include a percentage allowance to cover holiday pay assessments effective in most cities in Canada.

TABLE 58.-COMPOSITE INDEX OF WAGE RATES IN THE CONSTRUCTION INDUSTRY WITH WHOLESALE PRICES OF RESIDENTIAL BUILDING MATERIALS, AND WITH WHOLESALE PRICES OF ALL CONSTRUCTION MATERIALS, WHOLESALE PRICE INDEX OF ALL COMMODITIES, AND INDEXES OF COST OF LIVING AND RENT, 1945JULY, 1951.
Composite index of residential building material wholesale prices and wage rates in the construction trades based on the composite material index shown in Table 56 and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 57. Composite index of all construction material wholesale prices and wage rates in the construction trades based on the composite material index obtained from Wholesale Price Indexes 1913-1950, D.B.S. and monthly issues of Prices and Price Indexes D.B.S., and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 57. The weights are based on the proportions established in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, p. 36. The materials are weighted 58.3 in percentage terms, and the wage rates 41.7.

Revised index of wholesale prices of all commodities obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. For
differences between this index and that published in previous issues of Housing in Canada see Wholesale Price Indexes 1913-1950 D.B.S. p. 4.

Remaining data obtained from issues of Prices and Price Indexes, D.B.S., and converted to a 1939 base.

TABLE 59.-PERCENTAGE DISTRIBUTION OF NEW COMPLETED DWELLINGS BY NUMBER OF MONTHS UNDER CONSTRUCTION, AND AVERAGE NUMBER OF MONTHS UNDER CONSTRUCTION, BY MONTH OF COMPLETION, CANADA, 1946-JULY, 1951.
Data for 1946 and 1947 obtained from Annual Report, 1947, C.M.H.C., p. 18. Data for 1948 and 1949 obtained from monthly issues of Housing Bulletin, D.B.S. Data for 1950-July, 1951 obtained from monthly issues of New Residential Construction, D.B.S.

TABLE 60.-BANKRUPTCIES IN THE CONSTRUCTION INDUSTRY, BUILDING MATERIALS INDUSTRY, AND IN ALL INDUSTRIES, CANADA, 1945JUNE, 1951.
Tabulation based on data obtained by courtesy the Superintendent of Bankruptcy, Department of Justice. The data on bankruptcies in all industries do not correspond exactly with the series published in the D.B.S. quarterly Commercial Failures, chiefly because the latter publication includes closures under the Winding Up Act, whereas the series in Table 61 covers the Bankruptcy Act only. There is the additional factor that the D.B.S. series excludes certain assignments and receiving orders under the Bankruptcy Act where the debtor makes a composition of assets and continues in business, whereas all receiving orders and assignments are covered in Table 60.

The series on building materials industry is designed to cover firms engaged in the production of: lumber, wallboard, bricks, flue linings, vitrified sewer pipe, structural tile, drain tile, cement, concrete brick, concrete building blocks, cement drain pipe and culvert tile, warm air furnaces, cast-iron radiators, hot water storage tanks, hot water tank heaters, domestic heating boilers, asphalt shingles, asphalt rolls, tar and asphalt felts, cast-iron soil pipe, sanitary ware, wrought iron pipes, lead pipe water service, structural steel, steel pipe, wire nails and spikes, mineral wool insulation, gypsum wallboard, gypsum lath, gypsum plaster, gypsum block and tile, electrical equipment, and wood fibre insulating board.

The classification of bankruptcies in the construction industry, covers general and trade contractors and small builders classed as "wage earners in the construction trades".

TABLE 61.-INDEXES OF STOCK PRICES OF COMMON SHARES OF SIXTEEN BUILDING MATERIAL COMPANIES AND EIGHTY-TWO INDUSTRIAL COMPANIES, CANADA, 1945-JULY, 1951.
Data for period 1945-1946 obtained from Prices and Price Indexes, December, 1946, D.B.S.

Data for 1947-July, 1951 obtained from monthly issues of Prices and Price Indexes, D.B.S.
(1) Building materials index based on 16 stocks.
(2) All industrial index based on 74 stocks during 1945-1947, 76 during 1948 and 82 during 1949 and 1950-July, 1951.
(3) Data converted from a $1935-1939$ to a 1939 base.

## INDEX OF CONTENTS
