## FOREWORD

Housing in Canada is published quarterly, designed to provide factual information which will afford as complete and current a picture of the housing situation as possible.

The first issue, published in October, 1946, provided information on an annual basis for the period 1919-1945. In each subsequent issue the established material has been kept up to date on a quarterly basis and new data added. The present issue covers the period 1939 to the first quarter, 1952, providing monthly or quarterly data for 1950 and the more recent period. Each issue is arranged in three parts. The first part comprises a brief factual summary highlighting the results of the statistical material. The second part consists of the tabular material itself and is arranged in eight sections: (1) population trends; (2) house-building activity; (3) publicly-assisted house building; (4) real estate lending and loans for building purposes; (5) building materials; (6) building labour; (7) building costs; (8) building industry. The third and final part of this report provides sources of the factual material and explanatory notes where interpretation of the series seems appropriate.

Commencing with the April, 1950, issue of Housing in Canada, data on Newfoundland were shown separately in Section 9 of Part II. This separation was made partly in the interest of continuity of the tabular material for the rest of Canada and partly because of the immediate scarcity of statistical information for the Province of Newfoundland. Beginning with the second quarter issue, 1951, all statistical series have been revised to include data that are available for the Province of Newfoundland since March 31, 1949, when Newfoundland became part of Canada.

Some of the material incorporated in this report is obtained from original sources with other data submitted by various Federal Government departments, including the Department of Finance, Department of Trade and Commerce, Department of Labour, Department of Veterans' Affairs, Department of Citizenship and Immigration, Department of National Defence, the Superintendent of Bankruptcy, the Foreign Exchange Control Board, the Dominion Bureau of Statistics, the Department of Defence Production and the Bank of Canada. Data are also provided by the Quebec Government through its Farm Credit Bureau.

Housing in Canada concentrates on major trends in the housing field only and provides all available information of substance. As new and improved statistical series become available, they will be incorporated in future issues.

Ottawa, March, 1952.

## LIST OF TABLES

Table Page

1. Net Family Formation, Canada, 1939-1951 ..... 37
2. Number of Births, Deaths, Marriages, Divorces, and Total Population, Canada, 1939 - 1951. ..... 38
3. Birth, Death, Marriage and Divorce Rates, Canada, 1939-1951 ..... 39
4. Number of Immigrants to Canada, By Sex, Marital Status and Age Group, 1939-1951 ..... 40
5. Number of Emigrants from Canada, By Sex, Marital Status and Age Group, 1939-1951 ..... 41
6. Number of Immigrants to and Emigrants from Canada By Country, 1939-1951 ..... 42
7. Number of New Housing Units Started, Completed, and Under Construction, Canada, 1945 - January, 1952 ..... 43
8. Number of New Permanent Dwellings Started By Urban and Rural Areas, Canada, 1947 - March, 1952 ..... 44
9. Number of New Permanent Dwellings Completed By Urban and Rural Areas, Canada, 1947 - January, 1952 ..... 45
10. Number of New Permanent Dwellings Completed, By Type of Unit, Canada, 1947 - January, 1952 ..... 46
11. Distribution of New Completed Dwellings Unsold, By Number of Months Unsold andAverage Number of Months Unsold, Metropolitan Areas and Other Major Cities,Canada, 1950-195147
12. Gross and Net Residential Capital Formation, Canada, 1939-1951 ..... 48
13. Expenditures on New Construction, Major Improvements, Repair and Maintenance, Residential and Other Construction, and Gross National Expenditure, Canada, 1939 - 1951. ..... 49
14. New Residential Construction, Building Permits Issued in 204 Municipalities, Canada, 1940-1951 ..... 50
15. New Residential Construction, Construction Contracts Awarded, Canada, 1939 - January, 1952 ..... 5116. Number of New Permanent Dwellings Started, Publicly-Initiated Housing and Privately-Initiated Housing With and Without Federal Government Financial Assistance,Canada, 1947-195152
16. Lending Operations Under the National Housing Act, 1944, Number and Amount of Gross Loans Approved and Number of Dwellings Financed, Canada, February, 1945 - February, 1952 ..... 53
17. Lending Operations Under the National Housing Act, 1944, Number and Amount of Loans Approved for Non-Defence Worker Houses Build with Agreed Sale or Contract Price, and Number of Dwellings Financed, Canada, October, 1951 - February, 1952.
18. Lending Operations Under the National Housing Act, 1944, Gross Loans Approved, By Type of Loan, Canada, 1950-1951
19. Lending Operations Under the National Housing Act, 1944, Analysis of Gross Loans Approved, Showing Number and Amount of Loans, Number of Dwellings and Average Estimated Cost By Type of Dwelling, Canada, 1950 and 1951
20. Operations Under the National Housing Act, 1944, Home Extension Loan Guarantees Approved, Canada, April, 1946 - 1951 ..... 57
21. Operations Under the National Housing Act, 1944, Rental Insurance Plan, Net Number of Projects, Dwellings, and Total Estimated Cost, Approved With Loans Under the National Housing Act, and With Conventional Loans, Canada, July, 1948 - January, 1952.
22. Operations Under the National Housing Act, 1944, Rental Insurance Plan, Average Number of Rooms, Floor Area, Estimated Cost, and Maximum Monthly Rent Per Unit, For Gross Projects Approved, Canada, July, 1948 - January, 1952 ..... 59
23. Approved Applications for Double Depreciation on Rental Housing Projects, Number of Projects and Units and Total Estimated Cost, Canada, June, 1947-1951 ..... 60
24. Federal-Provincial Housing Projects Under Section 35 of the National Housing Act, 1944, By Central Mortgage and Housing Corporation, Canada, 1950 - 1951 ..... 61
25. Federal-Provincial Land Assembly Projects Under Section 35 of the National Housing Act, 1944, Canada, 1950 - 1951 ..... 62
26. Land Assembly Projects Under Section 11 B of the National Housing Act, 1944, Canada, 1947-1951 ..... 63
27. Veterans' Rental Housing Projects By Central Mortgage and Housing Corporation, Number of New Dwellings Started, Completed, and Under Construction, and Actual Expenditure, Canada, 1941 - 1951. ..... 64
28. Veterans' Rental Housing Projects By Central Mortgage and Housing Corporation, Construction Under Contract, By Units, Canada, 1945 - January, 1952. ..... 65
29. Veterans' Rental Housing Projects By Central Mortgage and Housing Corporation, Dwellings Under Contract, By Twenty-Three Stages of Construction, Canada, Year Ends, 1948-1951 ..... 66
30. Property Management Operations Under Central Mortgage and Housing Corporation, Number of Rental Units Under Administration, and Per Cent Vacant, By Type of Unit, Canada, 1947-1951. ..... 67
31. Armed Service Married Quarters, Construction Operations By Central Mortgage and Housing Corporation, Number of Dwellings Started, Completed and Under Construction, and Actual Expenditures, Canada, January, 1949-1951
32. Armed Service Married Quarters, Construction Operations By the Department of
National Defence, Permanent and Temporary Housing, Number of Dwellings Started,
Completed, and Under Construction, and Expenditures, Canada, 1947-1951.
33. Housing Operations By Central Mortgage adn Housing Corporation for the Department of Defence Production, Number of Contracts Awarded, and Dwellings for whcih Contracts have been Awarded, Number of Dwellings Started, Completed, and Under Construction, and Expenditures, Canada, January - December, 1951.
34. Construction Operations under the Veterans' Land Act, 1942, Number of New I wellings
Started, Completed and Under Construction, and Expenditure, By Type of Project,
Canada, September 23, 1943-1951.
35. Lending Operations Under The Canadian Farm Loan Act, 1927, Canada, 1929-1951
36. Lending Operations Under The Farm Improvement Loans Act, 1944, Canada, March, 1945-1951
37. Operations Under The Quebec Housing Act, Number and Amount of Loans Approved, Number of Dwellings Involved, and Provincial Commitments, January, 1948-1951
38. Gross Mortgage Loans on Real Estate Approved By Lending Institutions, By Type of
Loan, Canada, 1947-1951.
39. Gross Mortgage Loans Approved on New Non-Farm Housing Construction, By Type of Lending Institution, and By Type of Dwelling, Canada, 1947-1951
40. Number of Mortgages Registered and. Discharged, Greater Toronto Area, and Province of Ontario, 1939-1951
41. Loans for Building Purposes and Other Loans Made By Chartered Banks, Canada, 1939-1951.

42. Production of Selected Building Materials, Canada, 1939-1951.
43. Sales and Stocks of Selected Building Materials, Canada, 1939-1951................. 87
44. Imports of Selected Building Materials, Canada, 1939-1951

90
48. Exports of Selected Building Materials, Canada, 1939 - $1951 \ldots \ldots . .$.
49. Production of Pig Iron and Steel Ingot and Estimated Domestic Disappearance of Rolling Mill Products, Canada, 1939 - 1951.

50. Shipments of Primary Iron and Steel Shapes to Consuming Industries, Canada, 1946
1951 ..... 96
51. Production of Selected Iron and Steel Building Materials, Canada, 1939-1951 ..... 97
52. Sales and Stocks of Selected Iron and Steel Building Materials, Canada, 1939 - 1951. ..... 98
53. Imports and Exports of Selected Iron and Steel Building Materials, Canada, 1939-1951. ..... 99
54. Volume of Selected Building Materials Unloaded at Railway Stations in Canada, 1939- 1951 ..... 100
55. Employment and Weekly Payrolls in the Building Material Industries, Canada, 1946 - 1951 ..... 101
56. Non-Seasonal Layoffs in Building Material Producing Industries, Number of Estab- lishments and Number of Employees By Reason for Layoff, Canada, March, 1948 - January, 1952 ..... 102
57. Capital Expenditures in Building Material Industries, Canada, 1945 - 1951. ..... 103
58. Employment, Unemployment and the Labour Force, By Industry, Construction, Non- Agricultural and All Industries, Canada, 1939-1951 ..... 104
59. Employment in the Construction Industry, Percentage Distribution of Construction Workers, By Number of Hours Worked per Week, Canada, March, 1949-1951 ..... 105
60. Employment and Weekly Payrolls in the Building Industry and Indexes of Employment in the Building and Non-Agricultural Industries, Canada, 1939-1951 ..... 106
61. Number of Hourly Wage-Earners, Average and Total Number of Hours Worked per Week, Average Hourly and Weekly Earnings, Building Industry, Canada, 1945 - 1951. ..... 107
62. Labour Income in the Construction Industry and Total Labour Income, Canada, 1939 - 1951. ..... 108
63. Unfilled Vacancies and Unplaced Applicants in Construction Trades, Canada, December, 1944 - January, 1952. ..... 109
64. Number of Male Workers in Construction Trades Applying for Unemployment Insurance Benefits and Establishing Benefit Years, Canada, 1942-1951. ..... 110
65. Vocational and Apprenticeship Training in Construction Trades, By Number in Training, Canada, 1945-1951 ..... 111
66. Immigration of Construction Workers, By Trade, Canada, 1939-1951. ..... 112
67. Emigration of Skilled Construction Workers, By Trade, Canada, 1948-1951 ..... 113
Table Page
68. Strikes and Lockouts in the Building Industry, The Building Material Industries, and in All Indurtries, Canada, 1939-1951 ..... 114
69. Indexes of Wholesale Prices, of Residential Building Materials, and Composite Index of All Construction Materials, Canada, 1939 - January, 1952 ..... 115
70. Indexes of Average Hourly Wage Rates in Construction Trades and in All Industries, Canada, 1939 - January, 1952 ..... 116
71. Composite Index of Wage Rates in The Construction Industry with Wholesale Prices of Residential Building Materials, and with Wholesale Prices of All Construction Materi- als, Wholesale Price Index of All Commodities and Indexes of Cost of Living and Rent, 1939 - January, 1952 ..... 117
72. Percentage Distribution of New Completed Dwellings By Number of Months Under Construction, and Average Number of Months Under Construction, By Month of Completion, Canada, 1946 - January, 1952 ..... 118
73. Bankruptcies in the Construction Industry, Building Material Industries and in All Industries, Canada, 1939-1951 ..... 119
74. Indexes of Stock Prices of Common Shares of Sixteen Building Material Companies and Eighty-two Industrial Companies, Canada, 1939 - January, 1952 ..... 120

## PART I

FACTUAL SUMMARY

# SECTION 1.-POPULATION TRENDS <br> (See Tables 1-6) 

Net family formation in Canada showed a pronounced increase in 1951, after undergoing moderate declines in 1949 and 1950. A slight rise in natural increase during 1951 was supplemented by a substantial increase in the number of immigrant married females. Net family formation totalled 96,500 in 1951, an increase of 31 per cent from the number of families formed in 1950. Marriages numbered 128,100 in the 1951 period, 2 per cent more than in 1950 and deaths to married persons increased 2 per cent to 54,100 from 1950. Immigration of new families as represented by married females, at 37,000 was over double the number in 1950 and emigration of families from Canada totalled 9,300, an increase of 900 over the previous year.

## Immigration and Emigration

Immigration into Canada reached 194,400 in 1951, over two and one-half times the number entering Canada in 1950. Of this total, males of 18 years and over constituted the largest group at 95,800 and females of 18 years and over numbered 53,200 .

As in the past twelve years there were more persons leaving Canada to take up residence in the United States in 1951, than United States citizens immigrating to Canada. During 1951 emigration to the United States from Canada totalled 28,200 persons, over three times the number of Americans inımigrating to Canada. For population movements between Canada and the United Kingdom the situation was the reverse. Immigration from the United Kingdom to Canada totalled 31,100 persons in 1951, over seven times the number of persons emigrating from Canada to the United Kingdom. Immigration into Canada from all other countries numbered 155,600 during 1951 and emigration from Canada to these countries amounted to 2,300 persons.

## SECTION 2.-HOUSE-BUILDING ACTIVITY <br> (See Tables 7-15)

In 1951, the volume of house-building declined for the first time in the post-war years to a level below the rate prevailing in the period 1948 to 1950. Although completions of new permanent dwellings remained relatively high in 1951 owing to a large carryover of 59,400 units at the end of 1950 , starts of new dwellings slackened off in 1951 leaving a carryover of 47,500 units at the end of the year for completion in 1952.

Completions of new dwellings in 1951 declined 8 per cent from 91,800 units in 1950 to 84,800 units in 1951. Starts of new dwellings in 1951, after running ahead of 1950 for the first four months of the year, began to decline in May and dropped progressively for the remainder of the year. In 1951, 72,100 new dwellings, including conversions, were started, a decrease of 24 per cent from the 95,300 started in 1950.

In January and February, 1952 starts continued at a lower rate than those prevailing a year earlier. But in March, 1952 starts were at about the same level as in 1951. This is indicated by the number of dwellings started in cities and towns with population of 5,000 and over which numbered 3,400 in March, 1952 as compared with 3,300 in March, 1951.

In 1951, starts declined more rapidly in urban centres. In cities and towns of 5,000 population and over starts decreased 30 per cent from 68,600 in 1950 to 47,400 in 1951. In towns of less than 5,000 population and in rural areas starts declined 10 per cent from 23,900 in 1950 to 21,200 in 1951.

A number of factors varying in importance from one locality to another but generally present across the country contributed to the decline in housing starts in 1951. Most important among these factors were increased down payment requirements and carrying charges for new houses, a relative shortage of institutional mortgage funds and shortages of serviced land. ${ }^{(1)}$

Higher down payments and increased carrying charges were associated with rising construction costs (see p. 29) and municipal taxes, higher interest rates on mortgage loan account (see p. 14) and the withdrawal of the one-sixth additional loan under the National Housing Act, 1944 in February, 1951 (see p. 13). Down payment requirements were modified later in the year when the government announced on October 5, 1951 a relaxation of housing credit terms, making possible purchases of homes under an agreed end sale plan with a down payment of 20 per cent, and in the case of defence workers with a down payment of 10 per cent (see p. 14). The relative shortage of institutional mortgage funds developed mainly as a result of the limited funds available to lending institutions for residential mortgage investment and attractive alternative investment opportunities (see Section 4). The shortage of serviced land was associated with the rapid rate of urban house building in the post-war period and the strain on municipal budgets imposed by higher costs of installation of new water, sewer, road and school facilities.

## Completed Unsold Houses

As an indicator of the pressure of purchaser demand for new houses a series is shown in Table 11 giving the number of completed dwellings that are unsold in 25 major cities and metropolitan areas in Canada.

At the end of 1951, there were about 1,200 such dwellings in these centres or nearly 4 times as many as at the end of 1950 . The unsold dwellings at the end of 1951 however represented for the most part recent completions, as about 90 per cent had been on the market for three months or less. At the end of 1950, only 78 per cent of the unsold dwellings had been completed within the previous 3 months. The sudden accretion to the stock of unsold dwellings in these centres during the last quarter of 1951 is attributable mainly to developments in Toronto where completions in 1951 were higher than ever before, and where the number of unsold dwellings which had been at an insignificant level up until October of 1951, increased to about 400 at the end of the year.

## Residential and Other Types of New Construction

A smaller share of gross national expenditure was invested in housing during 1951 than in 1950. In 1951, expenditures on the construction of new housing including major alterations and repair totalled $\$ 836$ million or 3.9 per cent of gross national expenditure. In 1950 new residential construction outlay represented 4.7 per cent of gross national expenditure.

Capital investment in the form of new non-residential construction claimed a slightly larger portion of gross national expenditure in 1951 than in 1950. In
(1) For a fuller discussion see Annual Report, 1951, Central Mortgage and Housing Corporation, March, 1952, pp. 3-4.

1951, expenditures on these categories of new construction totalled $\$ 1.8$ billion or 8.7 per cent of the gross national expenditure as against 8.4 per cent of gross national expenditure in 1950. The increase occurred however in the defence and defence supporting industrial sector, as other types of non-residential construction fell off in 1951 (see p. 21).

The decline in house-building activity during 1951 is greater when expressed in terms of volume instead of value. On the basis of an average increase of 15 per cent in house-building costs in 1951 the value of residential construction put in place during the year in terms of 1950 dollars was $\$ 727$ million. This represents a decrease of 14 per cent from $\$ 843$ million expended on new housing in 1950.

## Gross and Net Residential Capital Formation

The rate of growth of residential capital formation was at a slower pace in 1951 than in 1950.

Gross residential capital formation which represents the value of current additions to the housing stock through new construction and major improvements and alterations, together with the value of installed non-moveable equipment and service costs of landscaping, etc., was placed at $\$ 854$ million in 1951. In 1950 dollar terms this represents an addition of $\$ 743$ million to the housing stock. In 1950, actual gross residential capital formation amounted to $\$ 861$ million.

Residential capital consumption which represents a reduction in the value of existing housing stock through an allowance for wear and tear and obsolescence (depreciation), together with the value of dwellings currently damaged and destroyed accidentally, is estimated at $\$ 423$ million for 1951. In 1950, the value of residential capital used up was estimated at $\$ 349$ million. These estimates are in terms of the prices prevailing in 1950 and 1951.

Net residential capital formation which is the difference between gross residential capital formation and residential capital consumption thus amounted to $\$ 431$ million on a current dollar basis and $\$ 375$ million on a constant dollar basis in 1951. This compares with a net addition to the housing stock of $\$ 512$ million in 1950.

## SECTION 3.-PUBLICLY-ASSISTED HOUSE BUILDING

 (Sce Tables 16-39)Publicly-assisted house building which had been characterized by continuing increases in the post-war years owing to rising levels of loan approvals under the National Housing Act, declined markedly in 1951. Dwelling units started with government financial assistance during 1951 numbered 26,400, down 41 per cent from 1950. This decrease is associated with a drop of 41 per cent in starts of dwellings financed under the National Housing Act during the year (see below), and a decline of 42 per cent in dwellings started under various publicly-initiated programs including veterans' rental housing and armed service married quarters.

The National Housing Act, 1944
During 1951 three major changes were introduced in housing measures under the National Housing Act, 1944. The first change occurred in February, 1951 when the one-sixth loan which was in addition to the basic joint loan
provided for home-ownership building under the Act, was discontinued. ${ }^{(1)}$ At the same time direct loan assistance by Central Mortgage and Housing Corporation on rental insurance projects was suspended. In addition, the amount of rentals guaranteed on projects financed by lending institutions formerly calculated on the basis of an 85 per cent mortgage was to be calculated on the basis of an 80 per cent mortgage. These changes were introduced to permit an accelerated flow of construction resources into the developing defence and defence supporting construction program, and to contain the housing program within the limits of prospective total resources.

The second change occurred in June when the National Housing Act was amended to authorize the Governor in Council to prescribe the maximum rate of interest that may be charged to the borrower under the Act. ${ }^{(2)}$ Under authority of the amendment the rate of interest payable by a borrower on joint loans was increased from $41 / 2$ per cent to 5 per cent per annum calculated semiannually. ${ }^{(3)}$ Increases of $1 / 2$ of 1 per cent in the interest rate were also effected with respect to rental insurance loans, primary producer housing loans and limited-dividend corporation housing loans. These changes in the interest rates payable under the National Housing Act came as a result of the rise which took place early in the year in conventional mortgage interest rates, and other longterm interest rates. The changes were made to restore the relative attraction of these loans to institutional investors.

The third change occurred in October, 1951 when down payment requirements under the National Housing Act were reduced to 20 per cent for prospective home owners and for builders of dwellings for sale, provided there is an agreed sale or contract price. ${ }^{(4)}$ In order to co-ordinate new housing with defence worker needs, special provisions were also made for loans on dwellings for defence workers on the basis of a down payment of 10 per cent under the terms of the National Housing Act, 1944. ${ }^{(5)}$ With respect to rental housing, the regulations provide that failing financing from lending institutions, Central Mortgage and Housing Corporation will again consider applications for direct loans under the Rental Insurance Plan on an 80 per cent basis. Also, for approved rental insurance projects for defence workers, direct loans of 85 per cent of the estimated project cost and guarantees on the basis of such an 85 per cent loan may be approved. In such cases the stipulation of a maximum return of rentals to the owner is extended to 5 years rather than 3 years as on other rental insurance projects, and priority of occupancy must be given to prospective defence worker tenants.

Lending operations under the National Housing Act, following a progressive increase from 1945 to 1950, declined in 1951. During 1951 the total number of housing units for which gross loans were approved under the Act, at 23,000, was 49 per cent lower than in 1950. The value of gross loans approved in 1951 totalled $\$ 152$ million, one-half the $\$ 306$ million approved for loans in 1950.

In overall terms the decline in the number of dwellings approved for loans, in 1951 was most pronounced in home-ownership housing. In this group loans to prospective home owners involved 4,647 dwellings in 1951, a drop of 60 per

[^0]cent from 1950. The number of dwellings approved for loans to builders for sale also decreased notably from 26,100 in 1950 to 13,500 in 1951, a decrease of 49 per cent from 1950.

Activity under the rental provisions of the Act declined 37 per cent to 4,846 units approved for loans, owing to a contraction in rental insurance loans in 1951. Apartment units approved under the Rental Insurance Plan numbered 1,213 in 1951, a decrease of 72 per cent from a year earlier. Loans to individuals for construction of rental dwellings without guarantees under the Rental Insurance Plan showed an increase of 7 per cent to 3,451 units in 1951. Increased interest was also reflected in long-term low-interest rate loans to limited dividend corporations. Rental dwellings approved for construction by limited dividend corporations increased from 94 in 1950 to 174 units in 1951.

Loan approvals under the National Housing Act in 1951 reflect increased construction and land costs and higher down payment requirements in effect during the period February to October, 1951. Average construction costs per dwelling, as estimated by builders operating under the National Housing Act, increased 13 per cent from $\$ 7,896$ in 1950 to $\$ 8,952$ in 1951. Average finished floor area per dwelling remained relatively stable in 1951, increasing only 2 per cent from 1,037 square feet in 1950 to 1,055 square feet in 1951. Land costs showed a marked increase rising 23 per cent from $\$ 758$ per dwelling in 1950 to $\$ 933$ per dwelling in 1951. Reflecting increased construction costs for the year and the withdrawal of the one-sixth additional loan in February, 1951, down payment requirements on dwellings approved under the Act increased from an average of $\$ 2,200$ in 1950 to $\$ 3,600$ in 1951.

One-siorey single family dwelling units continued to account for the largest proportion of dwellings approved under the Act, representing 43 per cent of units approved in 1951 as against 39 per cent in 1950. Apartments represented 18 per cent in 1951 compared with 14 per cent in 1950.

## Federal-Provincial Housing Agreements

Section 35 of the National Housing Act, 1944 provides that following agreements between a provincial government and the Government of Canada, Central Mortgage and Housing Corporation may undertake jointly with the province the development of a housing or land assembly project. Under the legislation three main types of housing agreement have evolved; (1) the construction of houses for rent on an economic or sub-economic basis, (2) a combined rental housing and land assembly project in which serviced land not used for the rental housing project is made available for sale to builders and prospective home-owners, and (3) the assembly and servicing of residential lots for sale to builders and prospective home-owners.

During 1951 seven rental housing agreements were approved for a total of 1.225 dwellings including the construction of 935 rental units in Windsor, St. Thomas, Fort William and Hamilton in Ontario, 50 units in Prince Rupert, British Columbia, 88 units in St. John, New Brunswick and 152 units at St. John's, Newfoundland. In 1950, one rental housing project consisting of 140 units was initiated in St. John's, Newfoundland.

Four combined land assembly and rental housing agreements were entered into between Central Mortgage and Housing Corporation and the Province of Ontario during 1951. Projects at Brockville, Guelph, Kitchener, and Trenton
will consist of 225 rental units and an additional 1,855 serviced residential lots for sale to builders and prospective home-owners.

Land assembly agreements were approved in respect to four projects for the acquisition and installation of services on 1,211 lots in Atikokon, Ontario, Trail, British Columbia and St. John's and Cornerbrook, Newfoundland. In 1950 four land assembly projects were negotiated for the servicing of 2,082 residential lots in Windsor, St. Thomas, London and Ottawa, Ontario.

At the end of 1951 negotiations were underway on four proposed rental projects at Lindsay, Sarnia and Prescott in Ontario, involving 115 units and for 100 dwellings in St. John's, Newfoundland. The agreement for this latter project was approved January 17, 1952.

Combined land assembly and rental projects were under consideration at the end of the year for 138 dwellings and 374 supplementary residential lots in North Bay, Sault Ste. Marie and Stratford, Ontario.

## Federal-Provincial Housing and Land Assembly Projects

House-building operations under Federal-provincial agreements involved starts of 191 rental units and completion of 140 units in 1951. Units under construction at the end of December, 1951, numbered 191. Total expenditures for housing during the year amounted to $\$ 1.1$ million.

Land assembly programs in five communities involved completions of 460 residential lots in 1951 with 1,700 lots under construction at the end of the year. Of the completed lots, 175 were sold or under option during the 1951 period. Expenditures totalled $\$ 1.6$ million for the year.

## Land Assembly Projects Under Section 11B of the National Housing Act, 1944

Section 11 B of the National Housing Act guarantees to approved lending institutions the recovery of their investment, together with 2 per cent interest per annum, when such investment is for the acquisition and development of land for housing purposes.

Up to the end of 1951 lots completed under this section of the Act numbered 1,200 of which 237 were not sold or optioned at the end of the year.
Vetcrans' Rental Projects Under Central Mortgage and Housing Corporation
The Veterans' Rental Housing Program was in a stage of completion by December, 1951. During 1951, 707 rental dwellings were completed and 8 units were started. At the end of December, 1951, 314 units were under contract of which 214 were under construction. Expenditures for the year amounted to $\$ 4.4$ million.

The Federal-municipal housing agreements which were initiated in 1941 for munitions workers and continued in the post-war period to accommodate returning veterans, involved 50,700 dwellings in 526 projects located in 306 municipalities and total expenditures including supplementary buildings and land improvement of $\$ 273$ million during the period 1941-1951.

## Veterans' Land Act, 1942

House-building activity under the Veterans' Land Act during 1951 was lower than in 1950. Although completions of new dwellings numbered 2,165 units in 1951 as against 2,149 completed in 1950, starts of new dwellings declined

20 per cent to 1,845 units in 1951. Units under construction at the end of December, 1951 totalled 2,500, a decrease of 300 from one year earlier.

Since the inception of the program in 1943, 12,800 units have been conspleted of which 7,800 were on individual small-holding projects, 2,700 were on sub-division projects, 1,000 on full-time farming projects and 1,300 were completed in other projects.

## Armed Service Permanent Married Quarters

The housing program undertaken by the construction division of Central Mortgage and Housing Corporation in 1949 for the Department of National Defence declined in 1951. During the year 1,432 dwellings were started, less than half the number started in 1950. Completions numbered 2,640 units during 1951, slightly more than in 1950, and dwellings under construction at the end of 1951 totalled 2,400 units.

The housing program which was initiated in 1947 by the Department of National Defence itself for the accommodation of married personnel was virtually completed in 1951. The 277 units under construction in remote areas at the beginning of 1951 were completed during the year.

Total completions of armed service permanent married quarters under the two programs for the period 1947-1951 numbered 8,200 dwellings.

## Defence Construction Limited

The construction of armed service married quarters by Defence Construction Limited in connection with defence projects initiated by the Department of National Defence involved 800 starts and 80 completed dwellings during 1951. Total expenditures amounted to $\$ 13$ million for the year.

## Defence Workers' Housing

During 1951 three projects were approved for capital assistance from the Deparment of Defence Production for the construction of houses in centres where the expansion of defence industry was conditional upon the supply of more dwellings. The approved projects consisted of 130 units, 91 of which were started during the year and 32 were completed. Construction of these dwellings is under the supervision of Central Mortgage and Housing Corporation.

## Canadian Farm Loan Act, 1927

Lending operations under the Act for the construction, alteration and improvement of farm houses declined during 1951. During the year 64 loans with a value of $\$ 136,000$ were approved for new farm houses. The average loan for these houses amounted to $\$ 2,125$. For the alteration and improvement of existing farm houses, 89 loans were approved with a value of $\$ 43,000$.

During 1950, 71 loans with a value of $\$ 123,000$ were approved for new farm houses and the average loan for these houses amounted to $\$ 1,730$. For the alteration and improvement of existing farm houses 161 loans were approved with a value of $\$ 62,000$.

## Farm Improvement Loans Act, 1944

Guarantees approved under the Act for the construction or improvement of farm houses increased during 1951 reflecting mainly the higher level of loans during the first six months of the year. During the year 587 loans valued at $\$ 944,000$ were approved for new farm houses. The average amount of these
loans was $\$ 1,610$. For improvement and alteration of existing farm residential property 1,155 loans were approved valued at $\$ 1.1$ million.

During 1950, 511 loans with a value of $\$ 798,000$ were approved for new farm houses and the average loan for these houses amounted to $\$ 1,561$. For improvement and alteration of existing farm residential property, 967 loans were approved with a value of $\$ 850,000$.

## Property Management Operations, Central Mortgage and Housing Corporation

The sales program of munitions workers' and veterans' rental units and the return of leases on home conversion rental units to their owners was accelerated in 1951. By the end of December, 1951 rental units under management of Central Mortgage and Housing Corporation numbered 24,700, a reduction of 13,800 units during the year. The reduction in units under management during 1950 numbered 2,800 units.

The vacancy rate on these dwellings at the end of December, 1951 was 0.4 per cent compared with 0.6 per cent a year earlier.

## Rental Insurance Plan

Net approvals under the Rental Insurance Plan during 1951 were made in respect to 14 projects consisting of 749 rental dwellings, one-sixth the number approved in 1950. In 1951 average estimated cost per unit amounted to $\$ 8,560$ having an average monthly rental of $\$ 80.76$. In 1950 , the average estimated cost per unit amounted to $\$ 7,020$, having an average monthly rental of $\$ 67.81$. The average floor area per unit remained relatively the same in 1951 as in 1950, averaging 868 square feet in 1951 and 902 square feet in 1950. The higher average rental and unit costs in 1951 reflect the higher proportion of fullyserviced dwelling units approved during the year. The lower rentals and costs in 1950 were related to the large volume of approvals in Montreal of semiserviced and "cold" duplexes and apartments.

## Double Depreciation for Rental Housing Projects

Applications were approved for double depreciation on 120 rental units in 6 projects during 1951. Since 1947 when the plan was instituted to stimulate rental housing, over 6,000 rental units were approved for accelerated depreciation of which 4,940 were under the Rental Insurance Plan.

## The Province of Quebec Farm Credit Bureau

Approvals for mortgage interest subsidies on single and double dwellings under "The Quebec Housing Act, 1948" increased substantially during 1951. Applications numbering 5,200 were approved in 1951, an increase of 25 per cent over 1950. The average interest rebate in 1951 amounted to $\$ 2,144$ as compared with $\$ 1,860$ per approval in 1950.

The number of dwellings for which interest subsidies were approved totalled 6,437 or 29 per cent of the 22,000 dwellings started in the Province of Quebec in 1951. During 1950, the number of dwellings approved for interest subsidies totalled 4,912 or 17 per cent of the 28,500 dwellings started in 1950.

## Housing Legislation ${ }^{(1)}$-Province of Ontario

During April, 1952 the Ontario Legislature ${ }^{(2)}$ approved five Bills designed to promote the building of new houses in urban and rural farm and non-farm areas throughout the province.

Bill No. 94, an Act to amend "The Housing Development Act" ${ }^{(3)}$ was assented to April 10, 1952 and will be cited as The Housing Development Amendment Act, 1952. The Act empowers the province and a municipality to enter into joint housing projects. The Act also authorizes municipalities to contribute to the cost of a housing project or to issue debentures for the purpose of a housing project without reference to the Municipal Board or the assent of the electors. For industries locating in rural areas and in small communities the Act authorizes the province and municipality to participate with a Corporation in the development of a joint housing project, part of the cost of which will be borne by the Corporation. Under certain conditions the new Act empowers the province to expropriate land in municipalities for the purpose of a housing project. The Act came into force on April 10, 1952.

Bill No. 95, an Act to amend "The Planning Act" ${ }^{(4)}$ was assented to April 10, 1952 and will be cited as The Planning Amendment Act, 1952. This Act comes into force on May 1, 1952. Under the new Act, municipalities with an approved official plan may designate an area within the city as a redevelopment area and upon the passage of a by-law and with ministerial approval may acquire land within the redevelopment area, and clear and prepare the area for residential, commercial, industrial and other designated purposes.

Bill No. 96, an "Act to provide Financial Assistance in the Building of Houses in Rural Villages and Hamlets and in Other Rural Areas", was assented to April 10, 1952 and will be cited as The Rural Housing Assistance Act, 1952. The new Act provides for the establishment of a Crown Company with the name "The Rural Housing Finance Corporation." By virtue of the Act, the Company is authorized to lend and invest mortgage money in order to provide financial assistance in the building of new houses in rural villages and in other rural areas. The Company may lend money independently or in co-operation with Central Mortgage and Housing Corporation under the terms of the National Housing Act, 1944 or with any approved lending institution. The Act came into force on April 10, 1952.

Bill No. 97, an "Act to Incorporate the Ontario Junior Farmer Establishment Loan Corporation for the Purpose of Assisting Young Farmers" was assented to April 10, 1952 and will be cited as The Junior Farmer Establishment Act, 1952. The new Act empowers the province to establish a Corporation for the purpose of making loans to assist young qualified farmers in the establishment, development and operation of their farms. Under authority of the Act the Corporation may make loans for the erection and improvement of farm houses. Loans shall be secured by a first mortgage on the farm property and are not to exceed $\$ 15,000$ repayable in 25 years. The Act came into force on April 10, 1952.

Bill No. 145, an "Act to Authorize Provincial Grants to Assist in the Erection of Housing Units for Elderly Persons" was assented to April 10, 1952 and will be cited as The Elderly Persons Housing Aid Act, 1952. By virtue of

[^1]the Act, the province may make grants to any municipality to assist in the construction and equipment of low-rental housing units for elderly persons. The amount of any grant will be based on the lower of $\$ 500$ for each dwelling or of 50 per cent of the capital cost of the project to the municipality. The terms and conditions under which grants will be made is subject to approval by the Lieutenant-Governor in Council. The Act came into force on April 10, 1952.

## SECTION 4.-REAL ESTATE LENDING AND LOANS FOR BUILDING PURPOSES

(See Tables 40-43)
Real Estate Lending ${ }^{(1)}$
The number and value of mortgage loans approved by private lending institutions on new and existing real estate declined in 1951. The number of loans on all types of real estate decreased 24 per cent to 57,500 in 1951 from 75,950 in 1950. Loans approved in 1951 were valued at $\$ 431$ million, as against $\$ 523$ million in 1950, a decline of 18 per cent for the year. Although the value of loans approved in 1951 was lower than in 1950, the total in 1951 exceeded by 10 per cent the $\$ 393$ million approved for loans in 1949 and the number of loans approved in 1951 was 7 per cent below the 62,000 loans approved in 1949.

The number of loans approved for non-farm new construction on both residential dwellings and non-residential buildings in non-farm areas totalled 31,500 in 1951, a decrease of 33 per cent from 46,850 loans approved in 1950. Loans approved on non-farm new construction in 1951 were valued at $\$ 272$ million, 24 per cent below the $\$ 358$ million approved in 1950 . New dwellings approved for loans in 1951 numbered 38,500 , a decline of 30 per cent from 55,400 dwellings approved for loans in 1950. The value of these loan approvals for new dwellings decreased 24 per cent from $\$ 310$ million in 1950 to $\$ 237$ million in 1951. For new non-farm non-residential construction, the number of loans approved declined 22 per cent to 800 in 1951 , and were valued at $\$ 34.8$ million, a decrease of 27 per cent.

Institutional lending on existing non-farm residential real estate and nonresidential property in 1951 showed a less pronounced reduction than lending for new construction. Loans approved on existing residential real estate in nonfarm areas, decreased 10 per cent to 23,200 during 1951 and involved a decrease in value of 4 per cent to $\$ 112$ million. Loan approvals on existing non-residential property in non-farm areas numbered 1,400, or 17 per cent less than in 1950 and the value of these loans showed a decrease of 4 per cent to $\$ 41$ million.

Farm loans declined 14 per cent in number from 1,550 in 1950 to 1,300 in 1951 and 4 per cent in value from $\$ 7.1$ million to $\$ 6.8$ million.

The decline in volume of institutional mortgage lending in 1951 was partly attributable to a reduced supply of mortgage funds made available to the real estate market. This lesser availability of funds was associated in part with the rise in interest rates during 1950 and 1951. When interest rates rose, the value of bond portfolios held by lending institutions was reduced, and the practice of liquidating bond holdings for investment in new mortgages was arrested. ${ }^{(2)}$

[^2]In addition to this aspect of reduced availability of funds, the strengthening in interest rates during 1950 and 1951 placed mortgage loans under the National Housing Act, 1944 in a relatively less attractive position as a long-term investment. Up to June, 1951, the gross yield on mortgage loans under the National Housing Act was fixed at 5 per cent to the lending institutions. On June 26, 1951 the gross yield was increased to $51 / 2$ per cent. ${ }^{(1)}$

Aside from the conditions during the year which reduced the supply of mortgage funds available from the lending institutions and other sources generally and under the National Housing Act in particular, there were other factors tending to reduce the overall demand for new housing such as availability of serviced land, higher prices for houses, increased monthly payments including municipal taxes and larger down payments (see p. 12).

The higher level of new construction in the non-residential sector which took place in Canada in 1951 ( $\sec$ p. 12) was accompanied by a decrease in institutional mortgage lending in that sector. This decline in institutional mortgage lending was attributable partly to a shortage of mortgage funds, but mainly because a large part of the expansion in non-residential construction in 1951 was in defence and defence supporting industrial construction and utility development which was financed mainly by corporate funds and some of it from governmental sources. An additional factor was the discouragement of capital outlays other than those of a defence or defence supporting type and those made by basic industries, through deferred depreciation provisions introduced by the Government in April, 1951, ${ }^{(2)}$ and through the curtailment of steel supplies for non-cssential purposes.

Institutional lending in 1951 on farm property and existing non-farm property while relatively small was close to the 1950 level. In these sectors lending was sustained by a rising interest rate and continuing demand.

## Mortgages Registered and Discharged

Mortgage registrations on new and existing residential and non-residential property in Greater Toronto reflect a high level of real estate transactions in 1951. Mortgages registered totalled 41,600 during the year, the same level as in' 1950 despite a decline of 26 per cent in the number of new residential dwellings started from 12,800 units in 1950 to 9,500 units in 1951.

Mortgage discharges were slightly higher in 1951 than in 1950 numbering 27,900 in 1951 as against 27,300 in 1950. Data on mortgage discharges reflect the volume of mortgages liquidated at maturity or through prepayment as well as refinancing of existing mortgages.

## Loans for Building Purposes

Bank loans for the purpose of providing construction contractors with working capital averaged $\$ 140$ million a month in 1951 , an increase of 19 per cent over a monthly average of $\$ 118$ million in 1950 . Construction cost increases (see p. 29) accounted for the major portion of the rise in loans for building purposes, indicating that only a slightly larger physical volume of construction work was financed by banks in 1951 than in 1950. Total bank loans for all purposes averaged $\$ 3.1$ billion in 1951 as compared with $\$ 2.6$ billion in 1950 .
(1) See Housing in Canada, Second Quarter, 1951, p. 13.
(2) See Housing in Canada, Second Quarter, 1951, p. 12.

# SECTION 5.-BUILDING MATERIALS 

(See Tables 44-57)

## Production of Building Materials ${ }^{(1)}$

The output of construction materials, after rising to a peak in the fourth quarter of 1950 , levelled off at a high rate in 1951 and declined markedly in the final quarter of the year. The absorption of materials by the construction industry followed a similar pattern. Heavy inventory holdings at the contractor and dealer level in the fourth quarter of 1950 , were absorbed by a large physical volume of construction work put in place in 1951. In the final quarter of 1951 demand at the contractor and dealer level slackened off notably.

The composite index of production of 41 construction materials, excluding lumber averaged $274(1939=100)$ in 1951 , the same level as the average for 1950. At the end of December, 1951 the index stood at 157 , or 43 per cent below the average for the year and 39 per cent less than at the end of December, 1950. The index of domestic disappearance which measures the physical flow of construction materials from manufacturers to contractors and distributors averaged $286(1939=100)$ for the year, 3 per cent below the average for 1950. At the end of December, 1951 the index of domestic disappearance stood at 142 , or 50 per cent below the average for the year and 45 per cent less than at the end of December, 1950.

Additional evidence of the decline in domestic disappearance of building materials during the fourth quarter, 1951 is shown by data on railway car unloadings. Although the volume of building materials unloaded in 1951 at 14.5 million tons was 7 per cent higher than in 1950, unloadings in the fourth quarter, 1951 at 3.3 million tons were 10 per cent below the 3.6 million tons unloaded during the fourth quarter, 1950.

The transition taking place in the composition of the construction program in 1951, with the shift in emphasis from residential building to defence and defence supporting industrial construction and resource development, had a pronounced effect on the output of various groups of building materials. The cement and cement products group and steel products group (see p. 25) experienced a general increase in output during 1951. Production of the lumber and lumber products group was at near capacity levels for most of the year except for hardwood flooring which fell off in the last quarter. On the other hand, output of sanitary ware and plumbing and heating equipment which is closely related to new residential construction declined in 1951, especially in the last quarter.

Overall, the physical volume of production of 15 principal building materials showed increases in 1951, 3 remained at the same level and 12 showed declines as compared with 1950 (for iron and steel items see below). In the fourth quarter of 1951, 24 items declined from output levels in the fourth quarter of 1950, one remained the same and 5 showed increases.

Cement pipe and tile led the increases in 1951 with 78 per cent followed by electric hot water tank heaters and wood fibre insulating board with 28 per cent. Gains of 12 and 17 per cent were registered in flue linings and builders' hardware.

[^3]Cement blocks, building brick, cast-iron radiators and duplex receptacles each rose 6 per cent. Smaller increases of from 1 to 4 per cent were shown in gypsum plaster, gypsum wallboard, gypsum lath, cement, outlet boxes and structural tile.

Production of sawn lumber, supported by a strong export market in 1951 (see p. 25), was placed at 6.5 billion board feet, fractionally higher than in 1950 despite the $\log$ shortage which occurred as a result of severe forest fires in British Columbia during the summer. Rock wool batts and tar and asphalt felts also remained at virtually the same level of output in 1951 as in 1950.

Reduced output was reported for sinks and vitrified sewer pipe with declines of 30 and 20 per cent respectively. Decreases of 11 to 18 per cent were also registered in asphalt shingles, hot water storage tanks, non-metallic sheathed cable and granulated and loose rock wool. Production of bath tubs, warm air furnaces and domestic heating boilers was down 8 and 6 per cent respectively and wash basins, hard wood flooring and single pole switches dropped 3 to 5 per cent.

## Supply and Demand for Building Materials

Market demand for 15 building materials as reflected in sales data was selective in 1951 in view of the marked change in the type of construction work put in place during the year. Of the 15 materials reviewed, 1 showed a substantial gain in sales, 4 registered slight increases and 3 remained at the same level as in 1950. Notable decreases were shown in 6 materials and sales of 1 item declined slightly.

Sales of electric hot water tank heaters were up 9 per cent in 1951 and gypsum products and flue linings rose 2 per cent while sales of cement, outlet boxes and mineral wool batts were at the same levels as in 1950.

Sales of bath tubs and sinks were down 22 and 38 per cent in the sanitary ware group; shipments of single pole switches and non-metallic sheathed cable declined 17 per cent in the electrical wire and wiring devices group and domestic heating boilers and hot water storage tanks decreased 7 and 13 per cent in the plumbing and heating group. Sales of building brick eased off 1 per cent in 1951 from 1950.

The supply of construction materials as indicated by stocks on hand at the producer level at the end of December, 1951 was improved from a year earlier. Of the 15 materials reviewed, inventories of 12 items at the end of December, 1951 were above the level a year earlier and 3 were at the same level.

## Imports

In general, imports of building materials were considerably higher in 1951 than in 1950. Only two items, wallboard building board and gypsum plaster were lower in 1951.

Imports of common colorless window glass, rose 1 per cent to 70 million square feet in 1951 and cement imports increased 68 per cent to 2.3 million barrels. Hardwood flooring mainly of special types was up 39 per cent to 9.7 million feet and building brick shipments totalled 19 million brick, or 14 per cent above imports in 1950. Sizeable increases of from 28 per cent to 200 per cent were registered in the remaining 6 items on which data are available.

## PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS <br> CANADA. QUARTERLY. 1947-1951.

economic resemach dephtiment. Ghhe

## Exports

Except for wood fibre insulating board, exports of which tripled to 55 million square feet, foreign shipments of lumber and lumber products declined in 1951 from the high levels of 1950. Sawn lumber exports were affected by a log shortage in British Columbia due to forest fires in the summer of 1951 and declined 4 per cent to 3.4 billion board feet. Exports of sawn lumber to the United Kingdom in 1951 totalled .9 billion board feet, over three times the quantity shipped in 1950. Exports to the United States declined 30 per cent to 2.2 billion board feet in 1951 from 3.0 billion board feet in 1950. Hardwood flooring exports were down 62 per cent to 6.1 million feet and wood shingle and lath dropped 11 and 23 per cent to 2.6 millions of squares and 73.9 millions of laths.

Paints, pigments and varnish shipments abroad totalled $\$ 8$ million in 1951, double the value in 1950 and building brick, gypsum plaster and common colorless window glass exports showed increases of from 36 to 150 per cent. Cement exports at 3 thousand barrels represented token shipments.

## Supply of Primary Iron and Steel Products

Effective January 10, 1952, Steel Order SD-1 of the Department of Defence Production replaced Minister's Order No. 2 dated December 1, 1950 which designated primary iron and steel products as essential materials. Steel Order SD-1 relates permissible inventory stocks of steel users to past consumption or future needs, whichever is lower. On or after April 1, 1952 maximum inventory stocks will be limited to the lower of two-thirds of the amount used in the calendar quarter preceding the placing the order, or of anticipated requirements for 60 days from the date of delivery of new supplies. Stocks of larger quantities are subject to certification by the Department. A second requirement of Order SD-1 provides that purchasers must certify the intended use on purchase orders.

A second steel order SD-2, effective January 10, 1952 replaced Minister's Order No. 3 dated February 9, 1951. The new order continues to prohibit the acquisition of steel for use in construction of a less essential nature such as for amusement purposes, or commercial buildings without approval of the Department. The new order prohibits steel purchases for use in the construction of buildings which are to be sold or leased or used in part for less essential purposes unless a permit is granted by the Department.

## Production, Imports and Exports of Rolling Mill Products

The production of pig iron and steel ingot moved up 10 per cent and 4 per cent to 2.6 million net tons and 3.4 million net tons respectively in 1951. Rolling mill products representing for the most part the intermediate stage in processing steel ingot to steel shapes for use by domestic processors, advanced 22 per cent to 4 million tons as compared with 3.3 million tons in 1950. Imports of iron and steel products, under control since January 1, 1951 rose 44 per cent to 1.6 million tons. Allotments made to the Canadian defence program by the United States under the Controlled Materials Plan in effect since July 1, 1951, and increased shipments from Europe account for the higher level of imports during the year. Exports of finished rolling mill products, which mainly represent conversion arrangements between American and Canadian steel processors, are under control and remained at the relatively low level of 53,000 tons during 1951, 15,000 tons less than in 1950.

## Shipments of Primary Iron and Steel Sbapes

Shipments of primary iron and steel shapes from Canadian mills to domestic consuming industries, exclusive of producers' interchange, totalled 3 million tons in 1951, an increase of over 400 thousand tons or 17 per cent above total shipments in 1950. The "building construction" industry absorbed 384 thousand tons or 13 per cent of total shipments in 1951 as compared with 358 thousand tons or 14 per cent of the total in 1950. "Building construction" received 7 per cent more steel in 1951 than in 1950.

All of the remaining 7 steel consuming categories received increased shipments in 1951. The "miscellaneous group" registered the largest gain with receipts of 820 thousand tons, an increase of 32 per cent from 1950. The automotive industries obtained 250 thousand tons in 1951, an increase of 25 per cent from 1950, followed by the merchant trade products and container groups with an increase of 15 per cent to 413 thousand and 301 thousand tons respectively. The railway and railway car shops received 556 thousand tons in 1951, a gain of 11 per cent from 1950 and wholesalers and warehouses were shipped 326 thousand tons in 1951, an increase of 4 per cent from 1950.

## Production, Sales and Stocks of Iron and Steel Building Materials

Output of six iron and steel building products showed a general increase in 1951. Cast-iron pressure pipe registered the largest increase of 49 per cent, reaching 130,000 tons in 1951, followed by structural steel with an increase of 36 per cent to 215,000 tons for the year. Galvanized sheet production advanced 14 per cent to 112,600 tons and steel pipe gained 7 per cent to 163,000 tons. Wire nails and spikes were up 6 per cent to 90,300 tons, and output of cast-iron soil pipe at 53,400 tons was at the same level as in 1950 .

In 1951, sales from the producer level of wire nails and spikes were slightly above the 1950 total and sales of cast-iron soil pipe and steel pipe declined. Sales of wire nails and spikes at 88,300 tons were up 4 per cent for the year. Sales of cast-iron soil pipe fell in the late months of 1951 and total sales for the year at 44,500 tons were 10 per cent below the 1950 figure. Steel pipe sales dropped 20 per cent to 167,300 tons during 1951, a level which approximated production during the period.

Stocks at the producer level of steel pipe and fittings at the end of December, 1951 totalled 11,500 tons, about half the inventory on hand at the end of December, 1950. Cast-iron soil pipe stocks held to the same level at December, 1951 as a year earlier, amounting to 4,800 tons at year-end 1951, as compared to 4,600 tons at year-end 1950 . Stocks of wire nails and spikes increased during the last quarter of 1951 and stood at 14,900 tons in December, 1951 as compared with 9,400 tons a year earlier.

## Imports and Exports of Iron and Steel Building Materials

Reflecting a difficult situation in domestic supplies, imports of structural steel especially in the larger sizes registered a substantial increase in 1951. Galvanized sheet imports were higher than a year earlier and imports of wire nails and spikes rose notably in 1951 . Imports of skelp declined 10 per cent to 147,300 tons from 167,100 tons in 1950.

Structural steel imports, inclusive of all sizes doubled to 328,700 tons and galvanized sheet imports rose 10 per cent to 7,800 tons in 1951. Wire nails imports
increased three times to 10,100 tons equal to 11 per cent of domestic production in 1951.

Domestic requirements held exports of iron and steel building products to a low level in 1951. Steel pipe exports at 1,700 tons was less than one-third of exports in 1950 and shipments abroad of cast-iron soil pipe totalled 940 tons, 31 per cent less than in 1950. Exports of structural steel and wire nails remained at comparatively small quantities.

## SECTION 6.-BUILDING LABOUR

(See Tables 58-68)
The number employed in the construction industry during the week of November 3, 1951 according to the Labour Force Survey of the Dominion Bureau of Statistics, totalled 367 thousand, the same number as was employed one year earlier, but more men were working in the non-housing fields as compared with the situation one year earlier. The number of building tradesmen engaged in housing at the beginning of November, 1951 declined as dwellings under construction in November, 1951 were 13,000 lower than in November, 1950.

Throughout 1951, the construction industry employed an average of about 355 thousand persons, an increase of 5 per cent over the average of 338 thousand for 1950. During the year some shift of construction workers into larger building projects took place. Firms with 15 or more employees reported an average monthly employment of 134 thousand persons during 1951, an increase of 10 per cent from the monthly average of 122 thousand in 1950.

Average weekly earnings of tradesmen in building firms of 15 or more employees during 1951 increased 12 per cent to $\$ 50.27$ from the average for 1950. The average number of hours worked per week by these tradesmen was 39.6 hours, the same level as in 1950.

Labour income of construction workers rose 19 per cent from $\$ 612$ million in 1950 to $\$ 727$ million in 1951 . Total labour income in Canada during the same periods rose 17 per cent from $\$ 8.3$ billion to $\$ 9.6$ billion.

## The Labour Market

The number of persons without jobs and seeking work in the construction industry averaged 22,000 workers during 1951. This compares with an average of 36,000 workers seeking employment during 1950.

In the building industry sector of the construction industry an uneven distribution in employment opportunities appeared during the latter months of 1951. Although firms with 15 or more employees engaged an average of 150 thousand persons in the fourth quarter, 1951, an increase of 10 per cent from the corresponding average for 1950 , registrations of unplaced tradesmen at National Employment Service offices also increased during the last quarter of 1951 from the last quarter of 1950 . Registrations of unplaced building tradesmen averaged 28,300 in the fourth quarter, 1951, or 26 per cent above the average for the same period in 1950. Unfilled vacancies for building tradesmen, representing the demand side of the building labour market, averaged 2,100 during the fourth quarter, 1951, the same level as the comparable average for 1950.

The number of construction workers applying for unemployment insurance benefits and establishing benefit years were slightly lower during the first nine
months of 1951 as compared with the first nine months of 1950. During the fourth quarter, 1951 the number of construction workers applying for unemployment insurance benefits averaged 8,100 per month, or 60 per cent more than the monthly average for the fourth quarter, 1950.

## Supply of Construction Workers

Of two sources of new tradesmen for the construction industry, immigration and apprenticeship training under the Federal-provincial training scheme, immigration provided the larger number in 1951 for the first time in the post-war period. Immigration of skilled construction workers totalled 9,600 during 1951, over 5 times the number entering Canada in 1950. Carpenters comprised the largest group in 1951, numbering 3,100 , followed by 2,400 electricians, 1,900 bricklayers and masons and 1,000 painters. Plumbers, sheet metal workers and plasterers entered in smaller numbers.

Emigration of skilled construction workers totalled 740 during 1951, the same level as in 1950.

Apprenticeship trainees in construction trades under the Federal-provincial training scheme at December, 1951 numbered 5,500, a slight increase of 200 from December, 1950.

## Strikes in the Building and Building Material Industries

Work stoppage through strikes in the building industry was higher in 1951 than in any year since 1939. Working days lost totalled 63,600 in 1951, over double the number lost in 1950 and over 50 per cent more than during 1947, the previous peak year since 1939. In the building material industries 31,300 manworking days were lost, 50 per cent below the number of days lost in 1950. In all industries in Canada working days lost through strikes in 1951 declined 37 per cent to 872,000 days from the total in 1950.

## Employment and Earnings in the Building Material Industries

Employment in building material firms employing 15 or more employees averaged 121,500 a month in 1951 as compared with 114,400 in 1950.

Average weekly earnings of employees in these larger building material firms increased 17 per cent from $\$ 48.50$ in December, 1950 to $\$ 56.58$ in December, 1951.

## Non-Seasonal Layoffs in the Building Material Industries

Sustained by a high level of construction operations in 1951, employment was less affected by non-seasonal layoffs in 1951 than in 1950. Although nonseasonal layoffs took place in 58 building material firms in 1951, 1 more than in 1950, the number of employees released declined 16 per cent to 2,800 for the year.

Indicating the continued high demand for building materials, the number of employees laid off by reason of "lack of orders" decreased 51 per cent from 1,300 in 1950 to 700 in 1951. As in 1950 most of these layoffs occurred in west coast shingle mills mainly as the result of the softening in the American and domestic markets. In the early fall, the impact of the drop in housing starts in 1951 was felt in firms producing sanitary ware as some workers were released from these establishments, and in January, 1952 some heating and plumbing equipment firms were forced to temporarily release a number of employees owing to lack of orders.

The number of employees laid off by reason of "lack of materials" decreased from 800 in 1950 to 750 in 1951. These layoffs were caused for the most part by shortages in primary products in the form of logs for sawmills and steel for processors of structural steel forms. Layoffs caused by other factors decreased by 33 per cent from 1,200 in 1950 to 800 in 1951. Most of these layoffs were associated with shutdowns of sawmills owing to high operating costs.

## Capital Expenditures in the Building Material Industries

One of the factors contributing to generally high levels of employment and income in the post-war years has been the large volume of investment in plant and equipment. During 1950 and 1951, in response to an accelerated expansion in construction operations in defence supporting industrial plant and resource development, building material industries further expanded productive capacities. Revised data for 1950 on capital expenditures for replacement and extension of plant and machinery in building material industries show an increase of 5 per cent from $\$ 38.8$ million in 1949 to $\$ 40.8$ million in 1950.

Preliminary data for 1951 on total capital outlay by building material industries indicate an increase of 45 per cent from $\$ 40.8$ million in 1950 to $\$ 59.3$ million in 1951 . Of this amount $\$ 39.9$ million was invested in machinery and equipment, 35 per cent more than in 1950 , and $\$ 19.4$ million was expended on the construction of plant, 72 per cent above the $\$ 11.3$ million expended in 1950.

Reflecting increased requirements for steel in heavy construction the iron and steel products industry invested $\$ 9.8$ million on plant and machinery in 1951, more than four times its outlay in 1950. Similarly the cement and cement products industry doubled its investment from $\$ 6.4$ million in 1950 to $\$ 14.2$ million in 1951. Paint and paint materials, electrical equipment and plumbing and heating equipment industries also doubled their capital investments in 1951 from those in 1950. The lath, plaster, roofing and insulation materials industry expended $\$ 2.7$ million in 1951 an increase of 31 per cent from 1950. A decline in capital expenditures of 3 per cent occurred in the sawn lumber and hardwood flooring industry which invested $\$ 21.5$ million in 1951 , and of 40 per cent in the clay products industry which expended $\$ 1.5$ million in 1951.

## SECTION 7.-BUILDING COSTS

(See Tables 69-72)
House-building costs, after rising steadily from the first quarter of 1950 to the second quarter of 1951 , in line with accelerated demands for construction resources by defence and defence supporting construction projects, levelled off during the second half of 1951 with this trend continuing early in 1952.

At the end of December, 1951 the combined index of wholesale prices of residential building materials and wage rates in construction trades stood at 258 ( $1939=100$ ), the same level as at July, 1951 and 11 per cent above the index at the end of December, 1950. The rise reflects an increase of 12 per cent in construction wage rates and 10 per cent in material prices during the year. The monthly average of the combined index for 1951 was 15 per cent higher than the corresponding average for 1950.

## Residential Building Material Prices

The index of wholesale prices of residential building materials rose to a peak level during the second quarter of 1951, and remained stable for the remainder of the year as supply of most materials was brought more closely into balance with current increased demand. In December, 1951 the index at 283 represented an increase of 10 per cent from December, 1950. The monthly average of the residential building material wholesale price index for 1951 was 18 per cent higher than the average for 1950.

The lumber products group index, representing the largest single materials cost group in house construction, averaged 405 points in 1951 or 22 per cent above the average in 1950. In the latter months of 1951 there was some softening in regional prices of cedar siding, birch and oak. More generally, prices of fir, hemlock, cedar and white pine, which constitute the principal export timbers, remained strong as the American and United Kingdom markets absorbed a near-record volume of sawn lumber in 1951 (see p. 25).

Except for the roofing materials group index which fell to 211 in December, 1951 from 226 in December, 1950 owing to a drop in cedar shingle prices, the price movement of other building material groups continued upward during 1951. Prices of plumbing and heating equipment, electrical equipment and fixtures, paint and glass and "other materials" advanced 15 per cent to a monthly average of 204 for each of the groups in 1951. Brick, tile and stone followed with a rise of 10 per cent to a monthly average of 186 and a lesser increase of 7 per cent was recorded for cement, gravel and sand at 150 and lath, plaster and insulation materials at 127.

## Wage Rates in the Construction Trades

Reflecting a generally high level of activity in industrial plants employing skilled tradesmen as well as a large construction program, wage rates of construction workers were bid up during 1951. The index of hourly wage rates of all construction workers (including holiday pay allowances) reached 223 at the end of December, 1951 or 12 per cent above the index at the end of December, 1950. The monthly average of the wages index for 1951 was 9 per cent higher than the average for 1950.

## Rent and the Cost-of-Living

With a controlled relaxation of rentals taking place in Ontario during August following the termination of the rent freeze in that province, together with a general upward adjustment in other provinces, the November survey of rents revealed a slight rise in the rent index. By November, 1951 the rent index stood at $140(1939=100)$, or 6 per cent above the index for November, 1950. The monthly average of the index for 1951 was 5 per cent above that for 1950 .

The rate of increase of the cost-of-living index fell off to fractional monthly gains during the last six months of 1951 from monthly increases of over 2 points during the first six months of 1951. By December, 1951 the index reached 188 ( $1939=100$ ), or 12 per cent above the index at December, 1950. The monthly average of the index for 1951 was 11 per cent higher than the average for 1950.

## Rent Control Provisions

Ontario. The Leasehold Regulations Act, 1951, proclaimed April 13, 1951 adopted the Wartime Leasehold Regulations of the Federal Government. Under authority of the Act, rentals on all self-contained dwellings and shared accommodation in effect April 17, 1951 were frozen until August 1, 1951 regardless of any change in tenancy. On July 26, 1951 regulations made under the Leasehold Regulations Act, 1951 amended and revoked selected sections of the Wartime Leasehold Regulations and on February 25, 1952 the Act was consolidated as the Rentals Regulations, Ontario.

Under the Regulations dwellings constructed since January 1, 1947 continue under decontrolled rentals.

In respect to dwellings decontrolled under the Wartime Leasehold Regulations between the period November 1, 1948 and April 17, 1951 where there was no lease in effect on August 1, 1951, the landlord had two alternatives, one of which was obligatory: (1) come to terms with the tenant on the basis of a two-vear lease, details of which were to be filed with the Ontario Rentals Administration or (2) in the absence of an agreement for a two-year lease, file an application for a rental fixation.

In respect to dwellings under rent control at April 17, 1951 when rents were frozen in Ontario and where there was no lease in effect on August 1, 1951, the landlord had three alternatives: (1) Continue on a month to month basis at the present rent, (2) offer the tenant a two-year lease at a mutually agreed rental, details of which are to be filed with the Rentals Administration, and (3) in the absence of an agreement for a two-year lease, apply for an increase in rent to the Rental Administration.

All leases in effect as of August 1, 1951 remained in effect until the date of expiry except in the case of a lease for two or more years expiring before October 1, 1951. Such leases remained in effect until October 1, 1951.

When leases expire after August 1, 1951 on dwellings decontrolled between the period November 1, 1948 and April 17, 1951 the landlord must (1) come to terms with the tenant on the basis of a two-year lease, details of which are to be filed with the Ontario Rentals Administration or (2) in the absence of an agreement for a two-year lease, file an application for a rental fixation.

When leases expire after August 1, 1951 on dwellings under control at April 17, 1951 the landlord has three alternatives: (1) allow the tenancy to revert to a month to month basis at the present rent, (2) offer the tenant a two-year lease at a mutually agreed rental, details of which are to be filed with the Rentals Administration, and (3) in the absence of an agreement for a two-year lease, apply for an increase in rent to the Rental Administration.

In the case of a new tenant taking possession of a self-contained dwelling at any time since August 20, 1951 the landlord and tenant may agree on a maximum rental. Once the tenant is in possession the landlord may offer the tenant a two-year lease at the mutually agreed rental. Should the tenant reject the offer of a two-year lease the landlord must apply for a rental fixation.

With respect to notices to vacate on self-contained dwellings, effective April 22, 1952 the owner of accommodations prior to April 1, 1952 may give a tenant of such accommodation a six-months notice to vacate on a form provided by the Ontario Rentals Administration. The landlord of such self-contained dwellings may recover possession for himself and family and specified relatives for a term not less than one year.

With respect to self-contained dwellings acquired since April 1, 1952 the landlord may file with the Ontario Rentals Administration an application in order to obtain possession. The application will be be heard before a Rental Board.

In the case of a lodging the landlord may recover possession of the accommodation by giving a written six-months notice to vacate.

Under certain conditions the Lieutenant-Governor in Council may exempt a city, town, village or township from these regulations. The effective date of the exemption will be six months from the date of the Order-in-Council unless by resolution the council of the municipality declares that these regulations will continue to apply.

Quebec. Leases on rental dwellings which were extended to April 30, 1952 by a rental administrator or by mutual agreement between landlord and tenant, are automatically extended to May 1, 1953 if no objection is raised by the landlord. ${ }^{(1)}$ Landlords who object to an automatic extension must notify their tenants to this effect and the tenant is allowed until April 16, $1952^{(2)}$ to apply to a rental administrator for extension. Tenants who disapprove the terms of an extended or renewed lease may apply to a rental administrator for a modification of terms prior to April 1, 1952, after notifying the landlord of the application. Tenants who plan to leave their apartments at the time of lease expiration on or after April 30, 1952 are obliged to give a written notice to the landlord prior to April 1, 1952. Tenants whose lease is for 9 months or more and on which there has been no extension or renewal are obliged to apply for an extension 15 days prior to the date of expiration. Applications for extension are to be made 8 days before the expiry of a lease when leases are less than 9 months and 3 days in advance when leases are signed for one month or less.

New Brunswick. Bill No. 67, ${ }^{(1)}$ an "Act to Amend the Municipal Rent Control Act," ${ }^{(2)}$ extends the Act from April 30, 1952 to April 30, 1953.

Nova Scotia. Bill No. $100,{ }^{(3)}$ an "Act to Amend Chapter 10 of the Acts of 1951, The Housing and Rentals Act" ${ }^{(4)}$ extends the Act and any by-law made under it from April 30, 1952 to April 30, 1953.

## SECTION 8.-BUILDING INDUSTRY <br> (See Tables 73-74)

The total number of business failures increased during 1951 but declined in the construction industry and in building material industries from the level of 1950.

Failures in the construction industry in 1951 numbered 138, averaging $\$ 19,500$ in defaulted liabilities for each firm. This compares with 148 failures of construction firms in 1950 having an average of $\$ 19,500$ in defaulted liabilities. In building material industries 28 failures occurred in 1951 having an average of $\$ 98,800$ in defaulted liabilities as compared with 40 failures in 1950 with an average of $\$ 33,200$ in defaulted liabilities per firm.

Failures in all industries during 1951 increased 6 per cent from 1,275 in 1950 to 1,356 in 1951. The average of defaulted liabilities per firm amounted to $\$ 18,000$ in 1951 as compared with $\$ 25,200$ per firm in 1950.

## Common Stock Prices

Market values of common shares of sixteen building material companies were substantially higher in 1951 than in 1950, reflecting in part the favourable situation of a number of firms in the light of the continuing increase in the construction program. The index of stock prices of common shares of these companies averaged 277 for 1951,47 per cent above the comparable average for 1950. The index of stock prices of common shares of eighty-two industrial companies in a variety of industries averaged 189 in 1951, an increase of 35 per cent from the average for 1950 .

(1) Operations during 1941-1947 conducted by Wartime Housing Limited.
(2) Covers war workers' housing built between April, 1941 and December 31, 1945.
(3) Covers expenditures on 200 garages not shown as supplementary buildings in Table 29 (see $p$. 65 ).
(4) Excluding $\$ 1,255,000$ expended in $1949, \$ 1,148,000$ expended in 1950 and $\$ 740,367$ expended in 1951 recoverable from municipalities.
(5) Revised.
(6) Data on expenditures for supplementary buildings in 1950 and 1951 and for land, improvements and other outlay in 1951, exclude municipal development expenditures at Ajax, Ontario, and expenditures on business premises of Central Mortgage and Housing Corporation which are included in tables 10 and 11 of the Annual Report to5t. Central Mortgage and Housing Corporation, pp. 63. 64.

(1) Not yet available.
(2) Data shown are net of cancellations, reinstatements and adjustments.
(3) Data represent number and value of contracts taken over from Canadian Commercial Corporation.
(4) Revised.
(5) Includes 374 units started in defence projects which are in addition to starts shown in Table 21, Annual Report, 1951, C.M.H.C. p.87. The remaining 404 units were started in remote areas.
(6) Represents units completed in remote areas, 20 of which were in Manitoba and 63 in the Yukon. Excluded are 277 units completed in remote areas as shown in Table 33.

PART III
SOURCES AND EXPLANATORY NOTES

## SOURCES AND EXPLANATORY NOTES

Sources and explanatory notes are organized in the order of the factual material referred to in parts I and II. Where figures are rounded to the nearest thousand or million, totals do not necessarily equal the sum of their constituent items. Frequent references are made to the Dominion Bureau of Statistics and to the Central Mortgage and Housing Corporation. In the following notes these organizations are designated by the abbreviations, "D.B.S." and "C.M.H.C." respectively.

## PART I <br> CHARTS

FIGURE 1.-PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS, CANADA, QUARTERLY, 1947-1951.
Chart based on data shown in Tables 45 and 51.
FIGURE 2.-INDEXES OF RESIDENTIAL BUILDING MATERIAL PRICES, WAGE RATES OF CONSTRUCTION WORKERS AND COMBINED INDEX OF MATERIAL PRICES AND WAGE RATES, CANADA, JANUARY, 1948DECEMBER, 1951.
Chart based on data shown in Tables 69-71.

## PART II <br> TABULAR MATERIAL

TABLE 1.-NET FAMILY FORMATION, CANADA, 1939-1951.
Net family formation is the total number of new families formed minus the number of existing families dissolved. The number of families formed is taken as the sum of marriages and married female immigrants. Dissolutions represent the sum of deaths to married persons, emigration of married females and divorces.

Data on marriages for the period 1939-1951, deaths to married persons for the period 1939-1949 and data on divorces for the period 1939-1950 obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Quarterly data on deaths to married persons during 1949 and annual and quarterly data for 1950 and 1951 estimated by the Economic Research Department, C.M.H.C., on the basis of total deaths during the corresponding periods. Quarterly data on divorces during 1949 and 1950 have been averaged from annual totals and will be revised when actual data become available. The figure for 1951, is estimated on the basis of trend for the period 1945-1950.

TABLE 2.-NUMBER OF BIRTHS, DEATHS, MARRIAGES, DIVORCES AND TOTAL POPULATION, CANADA, 1939-1951.
Population data for the period 1939-1940 obtained from Population of Canada by Province 1921-1950, estimated as of June 1, for Intercensal Years, D.B.S. Population data for 1941 and 1951 represent census counts for those years. Data for births, deaths and marriages for the period 1939-1951 and divorces for the period 1939-1950, obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S.

TABLE 3.-BIRTH, DEATH, MARRIAGE AND DIVORCE RATES, CANADA, 1939-1951.
Rates calculated on the bass of data shown in Table 2.
TABLE 4.-NUMBER OF IMMIGRANTS TO CANADA, BY SEX, MARITAL STATUS AND AGE GROUP, 1939-1951.
Data compiled by courtesy of D.B.S. from data supplied by the Immigration Branch, Department of Citizenship and Immigration.

TABLE 5.--NUMBER OF EMIGRANTS FROM CANADA, BY SEX, MARITAL STATUS AND AGE GROUP, 1939-1951.
Figures are estimated by the Economic Research Department, C.M.H.C., on the basis of data supplied by D.B.S., and the Foreign Exchange Control Board. For the period July, 1948, to December, 1950, basic data have been revised in accordance with Statistics of Emigration from Canada, D.B.S. Reference Paper No. 26, May, 1951. All data are provisional and subject to adjustment following the 1951 Census.

Estimates of total emigration are based on the number of Canadian immigrants entering the United States as supplied by the Immigration and Naturalization Service of the United States Department of Justice for the period 1939 to June, 1949. Data were also available on the number of Canadian immigrants entering the United Kingdom during the period, 1939 to September, 1951 as obtained from periodic issues of the British Board of Trade Journal. An allowance was made for emigration to other countries. Estimates for 1950 and 1951, are based on the number of persons who applied to the Foreign Exchange Control Board for change of status from resident to non-resident, with the intention of leaving the country permanently. An allowance was made for emigrants leaving Canada without making application to the Foreign Exchange Control Board.

Estimates for emigration of married females and children under eighteen years of age are based on data supplied by the Foreign Exchange Control Board as indicated above.
TABLE 6.-NUMBER OF IMMIGRANTS TO AND EMIGRANTS FROM CANADA, BY COUNTRY, 1939-1951.
Data compiled by the Economic Research Department, C.M.H.C. Sources are the same as for Tables 4 and 5 .
TABLE 7.-NUMBER OF NEW DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, CANADA, 1939-JANUARY, 1952.
Sources of data shown in Table 7 are as follows:
1945 Housing Statistics, 1946, D.B.S.
1946 Data for completions obtained from Dwelling Units and New Buildings Containing Dwelling Units Reported by Municipalities and other Areas as Completed in the Nine Montbs Ending September 30, 1947, D.B.S. Data for units under construction at the end of 1946 obtained from Housing Bulletin No. 1, March, 1948, D.B.S.
1947 Data for completions obtained from Supplement to Housing Statistics, 1947, D.B.S. Data for units under construction at the end of 1947 obtained from Housing Bulletin No. 1, March, 1948, D.B.S. Data for starts during 1947 estimated by Economic Research Department, C.M.H.C. from figures supplied by Public Finance Statistics Division, D.B.S. 1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-January, 1952 Data obtained from monthly issues New Residential Construction, D.B.S.

Data for housing units completed in Canada during 1945, 1946 and 1947 are based on returns received from 623 municipalities out of a total of 3,845 or approximately 66 per cent of the total population of incorporated municipalitics. For detailed explanation of coverage and statistical technique used see Housing Statistics, 1946, D.B.S.

Estimates for 1948, 1949 and 1950-February, 1952 are based on the results of a nationwide survey carried out each month by D.B.S. with the co-operation of C.M.H.C. All metropolitan areas and urban centres with a population of. 5,000 or more are enumerated completely. Approximately 400 sample arcas lying outside these municipalities are also chosen for complete enumeration.

The number of units under construction as shown for the end of February, 1952, does not equal the number shown as under construction at the end of 1951 plus starts less completions during the first 2 months of 1952. The figures for units under construction are subject to adjustment each month because of errors in the designation of starts between single and multiple units, and also because of the cancellation of some starts reported in previous months.
TABLE 8.-NUMBER OF NEW PERMANENT DWELLINGS STARTED BY URBAN AND RURAL AREAS, CANADA, 1947-MARCH, 1951.
The data on dwellings started in metropolitan areas and in other cities and towns with population of 5,000 and over are obtained by direct count by C.M.H.C. Dwellings started in other areas are estimates prepared by D.B.S. based on sample surveys. Sources of data are:

1947 Data compiled by the Economic Research Department, C.M.H.C., from figures supplied by the Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-March, 1952 Data obtained from monthly issues New Residential Construction, D.B.S.

TABLE 9.-NUMBER OF NEW PERMANENT DWELLINGS COMPLETED BY URBAN AND RURAL AREAS, CANADA, 1947-JANUARY, 1952.
Sources are the same as for Table 7.
TABLE 10.-NUMBER OF NEW PERMANENT DWELLINGS COMPLETED BY TYPE OF UNIT, CANADA, 1947-JANUARY, 1952.
1947 Data obtained from Supplement to Housing Statistics, 1947, Dwelling units--Types of Buildings and Types of Construction for Individual Municipalities and Other Areas, D.B.S. 1948-January, 1952 Sources are the same as for Table 7.
TABLE 11.--DISTRIBUTION OF NEW COMPLETED DWELLINGS UNSOLD, BY NUMBER OF MONTHS UNSOLD, AND AVERAGE NUMBER OF MONTHS UNSOLD, METROPOLITAN AREAS AND OTHER MAJOR CITIES, CANADA, 1950-1951.
Data based on reports compiled by the Statistics Department, C.M.H.C.
TABLE 12.-GROSS AND NET RESIDENTIAL CAPITAL FORMATION, CANADA, 1939-195 1.
Data for this publication for the years 1939-1948 were obtained from Residential Real Estate in Canada, by O. J. Firestonc, University of Toronto Press, 1951, Tables 77 and 78, pp. 281 and 283. Annual data shown in Residential Real Estate for 1949 were prcliminary and have been revised. The quarterly estimates for 1950 and 1951 were made by the Economic Rescarch Department, C.M.H.C. Data for 1949-1951 include an allowance for Newfoundland.

Gross residential capital formation represents an estimate of expenditures on new construction on major improvements and alterations to existing structures. It includes also supplementary house-building expenses of installed non-moveable equipment and payments for professional land and repair services such as architectural and legal fees.

Capital consumption represents an estimate of depreciation and accidental losses to the stock of residential capital such as may be caused by fire, flood, or storm.

Both gross residential capital formation and gross capital consumption are net of raw land and relate to the value of assets created by construction activity only.

Information on the services and methods of estimation may be found in detail in Residential Real Estate, pp. 418-430.
TABLE 13.-EXPENDITURES ON NEW CONSTRUCTION, MAJOR IMPROVEMENTS, REPAIR AND MAINTENANCE, RESIDENTIAL AND OTHER, AND GROSS NATIONAL EXPENDITURE, CANADA, 1939-1951.
Data for "other" construction for the period 1939-1950 obtained from Private and Public Investment in Canada 1926-1951, Department of Trade and Commerce, Ottawa, p. 151. Annual data shown in Private and Public Investment in Canada for 1951 were preliminary and have been revised by the Economics Division, Department of Trade and Commerce.

Housing data for the period 1939-1944 obtained from Residential Real Estate in Canada, by O. J. Firestone, University of Toronto Press, 1951, Table 76, p. 280. For the period $1945-1951$ housing data estimated by the Economic Research Department, C.M.H.C.

Data on gross national expenditure for the period 1939-1951 obtained from National Accounts, Income and Expenditure, 1926-1950, Research and Development Division, D.B.S. and National Accounts, Income and Expenditure, Preliminary 1951, D.B.S.

TABLE 14.-NEW RESIDENTIAL CONSTRUCTION, BUILDING PERMITS ISSUED IN 204 MUNICIPALITIES, CANADA, 1940-1951.
Data for 1940-February, 1947, obtained from annual and monthly issues of Building Permits Issued in Canada, Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. Data for March-December, 1947, compiled by the Economic Research Department, C.M.H.C., from returns made to D.B.S. Data for 1948-December

1951, provided by courtesy the Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. The number of new dwelling units includes conversions.

Data for May-November 1948, January-April 1949, and November-December 1950, based on returns from 203 municipalities, December 1948, 202 municipalities.
TABLE 15.-NEW RESIDENTIAL CONSTRUCTION, CONSTRUCTION CONTRACTS AWARDED, CANADA, 1939-JANUARY, 1952.
Data obtained from monthly issues of The Building Reporter, published by Hugh C. Maclean Publications Limited, Toronto.

Contracts awarded may be used as an indicator of trends but they are liable to misinterpretation if used as indicators of total volume of residential activity. They relate only to projected work which may or may not be commenced. Coverage is apt to vary over a period of time.

Data on the number of new bousing units estimated to be involved in contract awards for apartments which replace the series on apartment blocks shown in The Building Reporter have been derived by the application of a conversion factor to the value of contract awards for apartments made during the periods shown. This has been done to make the data more comparable with the series on building permits issued.

The conversion factor used is simply the average construction cost per dwelling unit of an apartment of the solid masonry type (brick facing and masonry blocks) prevailing throughout Canada during the first six months of 1946 as outlined in the study Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 40-41. 1946 construction costs for the units are estimated at $\$ 6,053$, of which $\$ 3,178$ are material costs, $\$ 2,270$ are on-site labour costs and $\$ 605$ are overhead and profits. This conversion factor was adjusted according to variations in the composite index of wholesale prices of residential building materials and wage rates in the construction industry as contained in Table 69.
TABLE 16.-NUMBER OF NEW PERMANENT DWELLINGS STARTED, PUBLICLYINITIATED HOUSING AND PRIVATELY-INITIATED HOUSING WITH AND WITHOUT FEDERAL GOVERNMENT FINANCIAL ASSISTANCE, CANADA, 1947-1951.
Data compiled by Economic Research Department, C.M.H.C. Publicly-initiated housing comprises starts under the Veterans' Rental Housing Program of C.M.H.C. and the Armed Service Married Quarters' Program of the Department of National Defence, the Federal-provincial housing projects and units built under the Capital Assistance provisions of the Department of Defence Production. Privately-initiated housing with Federal Govermment financial assistance in the form of loans, covers starts under the National Housing Act, 1944, The Farm Loan Act, 1927, and the Veterans' Land Act, 1942. Privately-initiated housing with Federal Government financial assistance in the form of guarantecs comprises starts under the Farm Improvement Loans Act, 1944, and the Rental Insurance Plan, except those rental insurance units approved for National Housing Act loans.

National Housing Act starts for 1947 and 1948 were distributed by quarter according to the pattern established by the number of housing units approved for loans. Starts under the rental insurance plan, the Farm Loan Act, 1927, and the Farm Improvement Loans Act, 1944, were considered to be equal to the number of units approved under these provisions.

As this tabulation covers new permanent houses only, Federal Government guarantees under the home extension provisions of The National Housing Act, 1944, financial assistance for Emergency Shelter units, and construction of temporary units by the Department of National Defence, are excluded.

Data on "publicly-assisted housing starts" for 1950 and 1951 as shown in this table differ from those shown in the 1950 and 1951 issues of Mortgage Lending in Canada, C.M.H.C., Table 36, under the title "Dwellings Started and Completed by Principal Source of Financing and Province, Canada". The latter table includes starts of dwellings constructed for government employees but excludes dwellings started, on which double depreciation benefits have been extended. This table on the other hand, excludes starts on dwellings built for Government employees and includes dwellings built under the double depreciation assistance. An additional difference between data in the two tables is due to the fact that only permanent dwellings are covered in this table whereas starts on temporary dwellings are included in Table 36 of the above mentioned issues of Mortgage Lending in Canada.

TABLE 17.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, NUMBER AND AMOUNT OF GROSS LOANS APPROVED AND NUMBER OF DWELLINGS FINANCED, CANADA, FEBRUARY, 1945FEBRUARY, 1952.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 18.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, NUMBER AND AMOUNTS OF LOANS APPROVED FOR NONDEFENCE WORKER HOUSES BUILT WITH AGREED SALE OR CONTRACT PRICE, AND NUMBER OF DWELLINGS FINANCED, CANADA, OCTOBER, 1951-FEBRUARY, 1952.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 19.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, GROSS LOANS APPROVED BY TYPE OF LOAN, CANADA, 1950 AND 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 20.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, ANALYSIS OF GROSS LOANS APPROVED SHOWING AVERAGE ESTIMATED COST, LENDING VALUE, AMOUNT OF LOAN, FLOOR area, and construction cost per square foot, by Type OF DWELLING, CANADA, 1950 AND 1951.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 21.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, HOME EXTENSION LOAN GUARANTEES APPROVED, CANADA, APRIL, 1946-1951.
Data compiled by the Mortgage Department, C.M.H.C.
TABLE 22.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, RENTAL INSURANCE PLAN, NET NUMBER OF PROJECTS, dWELLINGS, AND TOTAL ESTIMATED COST APPROVED WITH LOANS UNDER THE N.H.A. AND WITH CONVENTIONAL LOANS, CANADA, JULY, 1948-JANUARY, 1952.
Data compiled by the Statistics Department, C.M.H.C. on a net basis. As a result allowances for cancellations, adjustments and rcinstatements have been made in the month they were reported and negative figures may appear in a particular montih, during which there were more cancellations reported than approvals made.

Whereas the data under the heading "Loans under N.H.A." comprise all Rental Insurance projects with N.H.A. loans approved at time of compilation, the data under the classification "with conventional loans" are residual and in addition to Rental Insurance. Projects without N.H.A. loans may include cases where an N.H.A. loan may be approved in a subsequent quarter. The distribution between N.H.A. loans and conventional loans are preliminary for the last quarter shown and are subject to revision in the Second Quarter, 1952 issuc of Housing in Canada.

TABLLE 23.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, RENTAL INSURANCE PLAN, AVERAGE NUMER OF ROOMS, FLOOR AREA, ESTIMATED COST, AD MAXIMUM MONTHLY RENT PER UNIT, FOR GROSS PROJECTS APPROVED, CANADA, JULY, 1948JANUARY, 1952.
Data compiled by the Statistics Department, C.M.H.C.
ГABLE 24.-APPROVED APPLICATIONS FOR DOUBLE DEPRECIATION ON RENTAL HOUSING PROJECTS, NUMBER OF PROJECTS AND UNITS, AND TOTAL ESTIMATED COST, CANADA, JUNE, 1947-1951.
Data compiled by Statistics Department, C.M.H.C. In June, 1948, one project comprised 18 housing units, 8 stores and 1 garage. In this month estimated costs are based on dwellings, stores and garages.

TABLE 25.-FEDERAL-PROVINCIAL HOUSING PROJECTS UNDER SECTION 35 OF THE NATIONAL HOUSING ACT, 1944, BY CENTRAL MORTGAGE AND HOUSING CORPORATION, CANADA, 1950-1951.
Data conpiled by the Economic Research Department C.M.H.C. from reports prepared by the Statistical Department, C.M.H.C.

Data on expenditures are from the records of the Accounting Division, C.M.H.C.
TABLE 26.--FEDERAL-PROVINCIAL LAND ASSEMBLY PROJECTS UNDER SECTION 35 OF THE. NATIONAL HOUSING ACT, 1944, CANADA, 1950-1951.
Data compiled by the Ficonomic Research Department C.M.H.C. from reports supplied by the Statistical Department and Accounting Division, C.M.H.C.

The construction work involved in each project varies from one to another but in general a complete land assembly project includes surveying of roads and lots, installation of main and lateral sewers, water mains and hydrants, the ditching, grading, gravelling and surfacing of roads and driveways, the installations of strect lights and filling and grading of grounds. The completion of improvements means that the lots are ready for sale but not necessarily sold.

TABLE 27.-LAND ASSEMBLY PROJECTS UNDER SECTION 11B OF THE NATIONAL HOUSING ACT, 1944, CANADA, 1947-1951.
Data compiled by the Property Management Department, Mortgage and Real Estate Division, C.M.I.C.

TABLE 28.-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE: AND HOUSING CORPORATION, NUMBER OF NEW DWELLINGS SIARTED, COMPLETED, ANI UNDER CONSTRUCTION, ANI) ACTUAL EXPENDI'TURE, CANADA, 1941-1951.
Data to the end of 1946 compiled by Wartime Housing Limited.
Financial data for 1947-Deccmber, 1951 compiled by the Accounting Division, C.M.H.C. For the ycars 1947 and 1948, data on the number of housing units started, completed and under construction compiled by the Program Section, Construction Division, and for 1949-1951 by the Statistics Department, C.M.H.C.

TABLE 29,-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, CONSTRUCTION UNDER CONTRACT, BY UNITS, CANADA, 1945-JANUARY, 1952.
Data to the end of 1948 compiled by the Program Section, Construction Division, and for 1949-January, 1952 by the Statistics Department, C.M.H.C.

TABLE 30.-VETERANS' RIENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, DWELLINGS UNDER CONTRACT BY TWENTY-THREE STAGES OF CONSTRUCTION, CANADA, YEAR ENDS, 1948-1951.
Data compiled by the, Statistics Department, C.M.H.C.
TABLE 31.-PROPERTY MANAGEMENT OPERATIONS UNDER CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF RENTAL UNITS UNDER ADMINISTRATION, AND PER CENT VACANT, BY TYPE OF UNIT, CANADA, 1947-1951.
Data compiled by Statistics Department from data supplied by the Property Management Section, Real Estate Division, C.M.H.C.

TABLE 32.-ARMED SERVICE MARRIED QUARTERS, CONSTRUCTION OPERATIONS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, AND ACTUAL EXPENDITURES, CANADA, JANUARY, 1949-1951.
Data compiled by the Statistics Department, C.M.H.C.

TABLE 33.-ARMED SERVICE MARRIED QUARTERS CONSTRUCTION OPERATIONS BY THE DEPARTMENT OF NATIONAL DEFENCE, PERMANENT AND TEMPORARY HOUSING, NUMBER OF DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, AND EXPENDITURES, CANADA, 1947-1951.
Data obtained by courtesy the Joint Services Accommodation Committee, Department of National Defence. Figures compiled by the construction branches of the Department of National Defence.

No land costs are shown because the units are constructed on crown-owned property.
The designation "temporary units" refers to conversions but excludes emergency conversions.
TABLE 34.-HOUSING OPERATIONS AND OTHER CONSTRUCTION OPERATIONS BY DEFENCE CONSTRUCTION LIMITED, CANADA, NOVEMBER, 1950-JANUARY, 1952.
Data compiled by the Statistics Department, C.M.H.C.
TABLE 35.-HOUSING OPERATIONS BY CFNTRAL MORTGAGE AND HOUSING CORPORATION FOR THE DEPARTMENT OF DEFENCE PRODUCTION, NUMBER OF CONTRACTS AWARDED AND DWELLINGS FOR WHICH CONTRACTS HAVE BEEN AWARDED, NUMBER OF DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, AND EXPENDITURES, CANADA, JANUARY-DECEMBER, 1951.
Data compiled by the Statistics Department and Accounting Department, C.M.H.C.
TABLE 36.-CONSTRUCTION OPFRATIONS UNDER THE VETERANS' LAND ACT, 1942, NUMBER OF NEW DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, AND EXPENDITURE, BY TYPE OF PROJECT, CANADA, SEPTEMBER 23, 1943-1951.
Data compiled by the Economic Rescarch Department, C.M.H.C. from information obtained by courtesy of the Research and Statistics Division, Department of Veterans' Affairs. Data on expenditures for 1950-December, 1951 are not comparable with data for previous years as excess costs borne by the veterans and certain improvements included in previous years are not available for 1950-December, 1951.

TABLE. 37.-LENDING OPERATIONS UNDER THE CANADIAN FARM LOAN ACT, 1927, CANADA, 1929-1951.
Data obtained by courtesy of the Canadian Farm Loan Board, Department of Finance.
TABLE 38.--LENDING OPERATIONS UNDER THE FARM IMPROVEMENT LOANS ACT, 1944, CANADA, MARCH, 1945-1951.
Data obtained by courtesy of the Supervisor, The Farm Improvement Loans Act, Department of Finance.
TABLE 39.-OPFRATIONS UNDER THE QUEBF:C HOUSING ACT, NUMBER AND AMOUNT OF LOANS APPROVED, NUMBER OF DWELLINGS INVOLVED AND PROVINCIAL COMMITMENTS, JANUARY, 1948-1951.
Data obtained by courtesy of the Quebec Farm Credit Burcau.
TABLE 40 .-GROSS MORTGAGE LOANS ON REAL ESTATE APPROVED BY LENDING INSTITUTIONS, BY TYPE OF LOAN, CANADA, 1947-1951.
Data compiled by the Economic Research Department, C.M.H.C. from monthly reports submitted by 114 lending institutions comprising 40 life insurance companies, 36 trust companies, 21 loan companies, 8 fire insurance companies, and 9 fraternal societies. These companies advanced 93 per cent of the total cash disbursements on mortgage loan account for Canadian real-estate made by all companies of these types in 1950.

TABLE 41.-GROSS MORTGAGE LOANS APPROVED ON NEW NON-FARM HOUSING CONSTRUCTION BY TYPE OF LENDING INSTITUTION, AND BY TYPE OF DWELLING, CANADA, 1947-1951.
Data compiled by Economic Research Department, C.M.H.C. Source is the same as for Table 40.

TABLE 42.-NUMBER OF MORTGAGES REGISTERED AND DISCHARGED, GREATER TORONTO AREA AND PROVINCE OF ONTARIO, 1939-1951.
Data compiled by the Economic Research Department, C.M.H.C. The number mortgages registered, Greater Toronto Area, 1939-December, 1951 were obtained from the Toronto Registry Office, York East and West Registry Offices and Toronto and York Land Titles Office.

The number of mortgages discharged, Greater Toronto Area, 1945-December, 1951, werc obtaincd from the Toronto Registry Office, York East and West Registry Office and estimates of discharges from Toronto and York Land Titles Office.

The number of mortgages registered and discharged in the Province of Ontario reflect mortgage activity as recorded in the 65 registry and 16 land titles offices of the province. Data for the 65 registry offices and one land titles office are based on original records made available by courtesy of the Inspector of Legal Offices, Province of Ontario. Coverage of the remaining 15 land titles offices were obtained by means of a sample survey of the mortgage registrations and discharges during the month of September, 1950, recorded in 10 land titles offices. This information was used in conjunction with the data mentioned above to produce estimates for the province as a whole. For further details of the sample survey see Mortgage Lending in Canada, 1950, p. 100.
TABLE 43.-LOANS FOR BUILDING PURPOSES AND OTHER LOANS MADE BY CHARTERED BANKS, CANADA, 1939-195 1.
Data obtaincd from monthly issues of Statistical Summary, Bank of Canada.
This classification of bank loans in Canada was commenced in 1934 in pursuance of an amendment to the Bank Act of 1934, and is prepared on the basis of loans outstanding as at October 31 of each ycar during the period 1939-1946, and as at September 30 in 1947-1949 and at the end of March, June, September and December for 1950 and 1951.
"Building Loans" refers to loans to building contractors and other persons or firms for building purposes.
TABLE: 44.--INDEXES OF PRODUCTION OF CONSTRUCTION MATERIALS, BY LUMBER, OTHER CONSTRUCTION MATERIALS, AND TOTAL, AND INDEX OF DOMESTIC DISAPPEARANCE OF CONSTRUCTION MATERIALS EXCLUDING LUMBER, CANADA, 1939-1951.
Data compiled by Economic Research Department, C.M.H.C. from information provided by courtesy of D.B.S.

The combined index of construction material production is based on the total value of output of the more important construction materials in terms of 1946 prices. It is designed to measure the overall trend in the physical output of construction materials. Because of the high degree to which producers of construction materials, with the exception of lumber, are responsive mainly to the requirements of the domestic market, the output index provides a rough indication of trends in domestic construction activity.

A closer indication of trends in domestic construction activity, however, can be obtained from the index of domestic disappearance, designed to measure the rate at which the construction industry absorbs materials. To obtain this index, the production index was adjusted, where possible, by the addition of imports, the deduction of exports, and the replacement of the original production data with data on factory sales of materials to take account of producers' inventory changes. The series on domestic disappearance is subject to the limitation that it does not reflect changes in the level of dealers' inventories. This means that in respect to materials such as lumber, where dealers' inventories represent a comparatively high proportion of yearly output or factory shipments, the series shown here cannot be relied on to give an accurate short term indication of the actual absorption of materials on the site. For this reason, lumber was excluded from the serics on domestic disappearance shown in this tabulation.

The indexes are based on 23 materials, including lumber, for 1945, and on 41 materials for the period 1946-December, 1951. The lumber index in the production series is shown separately because of its heavy weight in relation to the other materials.

TABLE 45.-PRODUCTION OF SELECTED BUILDING MATERIALS, CANADA, 1939-1951.
Sources of data for building materials listed in Table 45 are as follows:
Sawn Lumber:

1939-1949 Annual issues The Lumber Industry in Canada, D.B.S.
1950-December, 1951 Monthly issues Production, Shipments and Stocks on Hand of Sawmills, D.B.S.
Hardwood Flooring:
1946 -December, 1951 By courtesy The Timber Controller, Department of Trade and Commerce. The unit measure, square feet, represents a surface measure, plus an allowance for waste and tongue irrespective of thickness.
Wood Fibre Building Board:
1945-1948 By courtesy of the Forest Products Statistics Section, D.B.S.
1949-December, 1951 Monthly issues Rigid Insulating Board Industry, D.B.S.
Building Brick: Data relate to face and common clay brick.
1939-1944 Annual issues The Clay and Clay Products Industry in Canada, D.B.S.
1945-Dccember, 1951 Estimates prepared by Economic Research Department, C.M.H.C., based on actual production reported to D.B.S. by 55 producers accounting for approximately 97 per cent of brick shipments during 1945.

Data on production of brick, 1946-December, 1951, shown in Canadian Statistical Review, D.B.S. represent production of these firms only.
Flue Linings:
1946-December, 1951 By courtesy the Mining, Metallurgy and Chemical Statistics Section, D.B.S.

Vitrified Sewer Pipe:
1946-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Structural Tile:
1939—December, 1951 Monthly issues of Report on Clay Products Made from Canadian Clays, D.B.S.
Mineral Wool Batts:
1939-1949 Annual issucs The Stone Industry in Canada, D.B.S.
1950-December, 195 I Monthly issues Mineral Wool, D.B.S.
Granulated and Loose Mineral Wool:
1939-1949 Annual issues The Stone Industry in Canada, D.B.S.
1950-December, 1951 Monthly issues Mineral Wool, D.B.S.
Cement:
1939-1949 Annual issues The Cement Manufacturing Industry in Canada, D.B.S. 1950-December, 1951 Monthly issues Cement, D.B.S.
Concrete Blocks:
1945-1947 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
1948-December, 1951 Estimates prepared by the Economic Research Department, C.M.H.C. based on monthly issues Concrete Building Blocks and Cement Pipe, D.B.S. which accounts for 82 per cent of total production.
Cement Pipe and Tile:
1946 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. 1947-December, 1951 Monthly issues Concrete Building Blocks and Cement Pipe, D.B.S.
Single Pole Switches:
1946 -December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Duplex Receptacles:
1946-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Outlet Boxes:
1946-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Non-Metallic Sheathed Cable:
1946-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Gypsum Wallboard:
1939-1949 Annual issues The Gypsum Industry in Canada, D.B.S.

1950——December, 1951 Monthly issues Production, Shipments and Stocks of Gypsum Products, D.B.S.

Gypsum Lath:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-December, 1951 Monthly issues Production, Shipments and Stocks of Gypsum Products, D.B.S.

Gypsum Plaster:
1939-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-December, 1951 Estimates prepared by the Economic Research Department, C.M.H.C. Production data shown in monthly issucs of Production, Shipments and Stocks of Gypsum Products include sundry plasters such as moulding plaster, etc. These were excluded in the figures shown in this table.
Builders' Hardware:
1939-1942 Iron and Steel and Their Products 1940-1942, D.B.S.
1943-1945 Iron and Steel and Their Products 1943-1945, D.B.S.
1946-1949 Annual issues The Hardware, Tools and Cutlery Industry in Canada, D.B.S.
1950-December, 1951 Estimates prepared by Economic Research Department, C.M.H.C. based on factory sales reported to D.B.S. by firms accounting for about 98 per cent of total sales in 1949.
Bath Tubs:
By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Sinks:
By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Wash Basins:
By courtesy the Mining, Mctallurgical and Chemical Statistics Section, D.B.S.
Warm Air Furnaces:
1945-1949 The Heating and Cooking Apparatus Industry, Canada, 1949, D.B.S.
1950-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Domestic Heating Boilers:
1939-1949 Annual issues The Heating and Cooking Apparatus Industry, Canada, D.B.S.
1950-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Cast-Iron Radiators:
1939-1949 Annual issues The Heating and Cooking Apparatus Industry, Canada, D.B.S.
1950-December, 1951 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Hot Water Storage Tanks:
1939-1949 Annual issues The Sheet Metal Products Industry in Canada, D.B.S.
1950-December, 1951. By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Electric Hot Water Tank Heaters:
1939-1943 Manufacture of the Non-Ferrous Metals in Canada, 1939-1943, D.B.S.
1944-1948 Annual issucs The Electrical Apparatus and Supplies Industry in Canada, D.B.S.
1949 The Heating and Cooking Apparatus Industry, Canada, 1949, D.B.S.
1950-December, 1951 Estimates prepared by the Econonic Research Department, C.M.H.C. based on returns made to D.B.S. from firms accounting for about 86 per cent of production in 1949.
Asphalt Shingles:
1939 By courtesy the Forest Products Statistics Section, D.B.S.
1940-1942 Aspbalt Roofing Industry, December, 1945, D.B.S.
1943-1944 Aspbalt Roofing Industry, March, 1948, D.B.S.
1945-1947 Aspbalt Roofing Industry, January, 1949, D.B.S.
1949-1950 Asphalt Roofing Industry, January, 1951, D.B.S.
1951 Monthly issues Asphalt Roofing Industry, D.B.S.
Tar and Asphalt Felts:
1941-1945 By courtesy the Forest Products Statistics Section, D.B.S.
1946-1947 Asphalt Roofing Industry, March, 1948, D.B.S.
1948-December, 1951 Monthly issues Aspbalt Roofing Industry, D.B.S.

TABLE 46.-SALES AND STOCKS OF SELECTED BUILDING MATERIALS, CANADA, 1939-1951.
Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
TABLE 47.--IMPORTS OF SELECTED BUILDING MATERIALS, CANADA, 1939-1951.
Data obtained from monthly issues of Trade of Canada-Imports Entered for Consumption, Department of Trade and Commerce.

The data on wallboard building board for the period 1939-1947 include insulating board. The data for the period 1948-December, 1950 exclude insulating board as the Emergency Exchange Conservation Act which was in effect from 1948 to December 31,1950 prohibited the importation of this type of building board.
TABLE, 48.-EXPORTS OF SELECTED BUILDING MATERIALS, CANADA, 1939-1951.
Data obtained from monthly issucs of Trade of Canada-Exports-Canadian Produce, Department of Trade and Commerce.

Data on lumber exports include planks, boards and squared timber.
Data for lumber in monthly issues of the Canadian Statistical Review, D.B.S. include planks and boards only.
TABLE 49.--PRODUCTION OF PIG IRON AND STEEL INGOTS AND ESTIMATED DOMESTIC DISAPPEARANCE OF ROLLING MILL PRODUCTS, CANADA, 1939-1951.
Data on production of domestic pig iron and steel ingots obtained from Iron and Steel and Their Products in Canada, 1943-1945, D.B.S. for the period 1939-1945, and for subsequent periods from annual issues of The Primary Iron and Steel Industry in Canada, D.B.S., and monthly issues of Primary Iron and Steel, D.B.S. Annual and quarterly revisions for the period 1945-1951 have been made by the Steel Division, Department of Defence Production. Data on production of rolling mill products made from Canadian ingot are estimated by applying a conversion factor of .725 to steel ingot processed in Canada. The conversion factor of .725 allows for the estimated weight loss involved in turning iron and steel shapes out of the ingot form. Data on imported rolling mill products are derived by reducing the total of imported steel, including ingots, by the estimated production loss sustained in processing its ingot content.

Domestic disappearance of rolling mill products is the sum of domestic production and imports less exports.

The volume of rolling mill products being made available to Canadian consuming industries as indicated in "domestic dsappearance" exceeds that of "net total domestic shipments" of primary iron and steel shapes from Canadian rolling mills as shown in Table 50. This difference is accounted for by the fact that a portion of imports of primary iron and steel shapes is shipped direct to consuming industries without being processed in Canadian mills. Another factor is that data on production of rolling mills products from Canadian ingot as shown in this table do not show actual production but represent output of iron and stecl shapes that would be forthcoming from current ingot production.
TABLE, 50.-SHIPMENTS OF PRIMARY IRON AND STEEL SHAPES TO CONSUMING INDUSTRIES, CANADA, 1946-1951.
Data obtained from monthly issues of Canadian Statistical Review, D.B.S. Monthly revisions during 1951, provided by the Steel Division, Department of Defence Production.

The classification "Merchant Trade Products" refers to items produced in integrated mills and covers wire and wire products. The "miscellancous" category includes all steel used in the following: agricultural and other farm implements, machinery and tools, mining and lumbering industries, pressing, forming and stamping industries, public works and utilities, shipbuilding and steel specifically marked for National Defence purposes. During the year 1949 the amount of steel used for National Defence purposes amounted to .3 per cent of the total miscellaneous category. The classification "Producers' Interchange" represents the amount of steel shipped to producers' own plants or to other plants within the primary industry for further processing e.g. black sheet to galvanizing department; hot rolled bars to make railway track material. See also explanatory note to Table 49.

TABLE 51.-PRODUCTION OF SELECTED IRON AND STEEL BUILDING MATERIALS, CANADA, 1939-1951.

'YABLE 52.--SALES AND STOCKS OF SELECTED IRON AND STFEL BUILDING MATERIALS, CANADA, 1949-1951.
Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statisties Section, D.B.S.

TABIE 53.--IMPORTS AND FXPORTS OF SELECTED IRON AND STEEL BUILDING MATERIALS, CANADA, 1939-1951.
Data on imports obtained from monthly issues of Trade of Canada-lmports Entered for Consumption, Department of Trade and Commerce.

Data on exports obtained from monthly issues of Trade of Canada-ExportsCanadian Produce, Department of Trade and Commerce.
TABLE 54.—VOLUME, OF SELECTED BUILDING MATERIALS UNIOADI:I) AT RAILWAY STATIONS IN CANADA, 1939-1951.
1939-1948 Data obtained from annual issues of Summary of Monthly Railway Traffic Reports, D.B.S.
1949-December, 1951 Data obtained from issues of Monthly Traffic Report of Railzuys of Canada, D.B.S.
This series replaces the data on "Movement by Rail of Building Materials" appearing in Housing in Canada, prior to the October, 1950, issue which were based on freight loadings at stations in Canada. Whereas the present series covers only freight unloaded for domestic use, thereby including imports and excluding exports, the former series covered freight loaded at Canadian stations and thereby included exports and excluded imports. The present series more closely reflects the use of materials by the construction industry in Canada.
TABLE 55.-EMPLOYMENT AND WEEKLY PAYROLLS IN THE BUILDING MATERIAL INDUSTRIES, CANADA, 1946-1951.
Data compiled by the Economic Research Department, C.M.H.C. from information supplied by courtesy of the Employment and Payrolls Statistics Section, D.B.S.

Data are based on monthly reports from employers with 15 or more employees. The materials covered include: lumber, brick, tile, paints, pigments, varnishes, building blocks, roofing and sheathing paper, prefabricated houses, stoves, heaters, furnaces, iron pipe, sheet metal, wallboards, structural iron and steel fabrication, builders' hardware, glass, gypsum products, asbestos building materials, sanitary ware, mineral wool, sand and gravel.

TABLE 56.-NON-SEASONAL LAYOFFS IN BUILDING MATERIAL PRODUCING INDUSTRIES, NUMBER OF ESTABLISHMENTS AND NUMBER OF EMPLOYEES, BY REASON FOR LAYOFF, CANADA, MARCH, 1948JANUARY, . 1952.
Data obtained by courtesy the Economics and Rescarch Branch, Department of Labour.

The figures are compiled on the basis of information submitted through day to day layoff reports and monthly summary reports made by local offices of the National Employment Service. Layoffs that are occasioned by normal seasonal factors are excluded from the compilation as far as possible. For the most part, reports are not received for layoffs involving less than ten workers or for those of less than two wecks' duration.

The layoffs cover manufacturing industrics only, and are classified by their cause into three categories: lack of orders; lack of material; and other. The category "other" to a large extent represents non-economic factors such as flood and fire, but it includes some factors that are at least partly economic such as bankruptcies, strikes, and plant closures for repairs or retooling. The latter factors however do not directly reflect the immediate demand and supply conditions of the businesses concerned. The factors which have an immediate bcaring on the supply side (lack of material) and on the demand side (lack of orders) of the businesses concerned are shown separately.

## TABLE 57.-CAPITAL EXPENDITURES IN BUILDING MATERIAL INDUSTRIES, CANADA, 1945-1951.

Data prepared by the Economics Division, Department of Trade and Commerce, from information collected by D.B.S.

The estimates of capital expenditure were based on returns from a selected group of establishments covering in the main those with an annual gross value of output equal to on in excess of $\$ 50,000$.

Some of the reporting establishments which are in the building materials field produce other commodities as well, which are not classed as building materials. In such cases of joint production the proportion of investment allocated to the building materials field is estimated on the basis of the proportion of the gross value of output deriving from building material production. In terms of gross value of output a significant degree of joint production occurs in only 16 per cent of the establishments covered.

The building material industries comprise firms producing the following items: cement, building brick, flue linings, vitrified sewer pipe, sawn lumber, hardwood flooring, wood fibre insulating board, builders' hardware, warm air furnaces, domestic heating boilers, cast-iron radiators, hot water storage tanks, electric hot water tank heaters, asphalt shingles, asphalt rolls, cast-iron soil pipe, stcel pipe, wire nails and spikes, gypsum wall board, gypsum lath, gypsum plaster, single-pole switches, duplex and single receptacles, outlet boxes, non-metallic sheathed cable, bath tubs, sinks, wash basins, concrete brick, concrete building blocks, cement sewer pipe, drain pipe and culvert tilc, structural tile, drain tile, sand lime brick, granulated mineral wool, bulk or loose mineral wool, gypsum block and tile, tar and asphalt felts, tar and asphalt sheathings, wrought iron pipes and fittings, lead pipe ( $3^{\prime \prime}$ water service), copper tubing (water service), closet bowls, closet tanks, toilet seats, structural steel shapes, cast-iron water pipe, mineral wool batts, paints, pigments and varnishes.
TABLE 58.-EMPLOYMENT, UNEMPLOYMENT AND THE LABOUR FORCE, BY INDUSTRY, CONSTRUCTION, NON-AGRICULTURAL AND ALL INDUSTRIES, CANADA, 1939-1951.
Data for the period 1939-1945 on employment and unemployment in non-agricultural industries and for the Canadian labour force obtained from Canadian Labour Force Estimates, 1931-1950, Reference Paper No. 23, 1951, Labour and Prices Division, D.B.S. Data on employment in the construction industry for the period 1939-1945 prepared by
the Economic Research Department, C.M.H.C. from estimates of paid-workers in the construction industry as contained in Canadian Labour Force Estimates 1931-1950, p. 18.

The data in this table for the pcriod 1946-1950 are based on the results of sample surveys undertaken by D.B.S. on an approximate quarterly basis. Results of these samples are published in periodic issues of The Labour Force Bulletin, D.B.S.

The estimates for this period are subject to sampling error. In general the smaller the estimate the larger the relative sampling error. In the case of unemployment estimates in the construction industry, the percentage error is apt to be quite high, and reliance can be placed on these figures only with careful reservations. The coefficient of variation for estimates of employment in the construction industry is estimated at 6 per cent. Roughly this means that there are about two chances out of three that the sampling error will be less than $\sigma$ per cent; and about one chance in twenty that it will amount to more than 12 per cent.

The construction industry referred to in Table 58 includes engineering as well as building construction, whereas Table 60 covers the building industry only.

The industry classification used in Table 58 is that contained in the Standard Industrial Classification Manual, D.B.S. and has the business of the establishment as a basis whereas the Occupational class shown is based on the Standard Summary of Occupational Classes, D.B.S. where the basis is the actual job performed. Force account employees of non-construction firms are classificd by occupation as construction workers if they are employed in construction work but are classified by industry according to the industrial classification of the employing firm. Conversely, non-construction employees in construction firms arc classificd by industry as construction employces but by occupation according to the work performed c.g. clerical, managerial. The Province of Manitoba was excluded from the June Labour Force Survey, 1950, because of flood conditions. To achieve comparability with preceding periods in this series the Labor and Prices Division, D.B.S. made cstimates of the probable Manitoba components for non-agricultural industrics and the Canadian labour force and included them with data appearing in the Canadion Labour Force Estimates 1931-1950. Fstimates of the Manitoba component of the construction industry at June, 1950, were prepared by the Economic Research Department, C.M.H.C. and were included with the data provided in the Labour Force Survey, Junc, 1950.
TABLE 59.-FMPLOYMENT IN THE CONSTRUCTION INDUSTRY, PERCENTAGE DISTRIBUTION OF CONSTRUCTION WORKERS BY NUMBER OF HOURS WORKED PER WEEK, CANADA, MARCH, 1949-1951.

#### Abstract

Data based on a distribution of employed male construction workers by number of hours worked per week, provided by courtesy the Special Surveys Division, D.B.S. The average number of hours worked per week is shown to indicate overall seasonal variations and longer term trends. It is calculated from a frequency distribution, somewhat more detailed than that shown in this table, on the assumption that the mid-point of each class interval is representative of the group falling therein. The averages shown are subject to sampling error and should be interpreted with caution. The total number of hours worked per weck represents the product of the average number of hours worked per week and the number of male workers employed in the construction industry.

TABLE 60.-EMPLOYMENT AND WEEKLY PAYROLLS IN THE BUILDING INDUSTRY AND INIDEXLS OF EMPLOYMENT IN THE BUILDING AND NON-AGRICULTURAL INDUSTRIES, CANADA, 1939-1951.
Data represent new series compiled by the Employment Section of the Labour and Prices Division, D.B.S. from reports made by employers with 15 or more employees. Indexes of employment in the building industry for the period 1939-1946 obtained by courtesy the Employment Section of the Labour and Prices Division, D.B.S.; for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings, 1947-1950, 1951, Employment Section of the Labour and Prices Division, D.B.S. and for 1951 from monthly issues of Employment and Payrolls, D.B.S. Indexes of employment in the non-agricultural industries for the period 1936-1946 obtained from Employment, Payrolls and Average Weekly Earnings, 1936-1946, with Index Numbers of Employment, 19211938, 1951, Employment Section of the Labour and Prices Division, D.B.S.; for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings, 1947-1950, 1951, D.B.S. and for 1951 from monthly issues of Employment and Payrolls, D.B.S.

Data on the number of persons employed in the building industry for the period 1939-1944 estimated by the Economic Research Department, C.M.H.C. from indexes of employment in the building industry; data for the period 1945-1949 obtained from annual issues of Annual Review of Employment and Payrolls, Employment Section of the Labour and Prices Division, D.B.S.; monthly data for 1950 from The Employment Situation, D.B.S. and for 1951 from monthly issues of Employment and Payrolls, D.B.S.

Data on average weekly earnings in the building industry for the period 1940-1946 obtained by courtesy of the Employment Section of the Labour and Prices Division, D.B.S., for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings 1947-1950, and for 1951 from monthly issues of Employment and Payrolls, D.B.S.

Data on the aggregate weekly payroll in the building industry are the product of the number of persons employed and the average weekly earnings.
TABLE 61.-NUMBER OF HOURLY WAGE-EARNERS, AVERAGE AND TOTAL NUMBER OF HOURS WORKED PER WEEK, AVERAGE HOURLY AND WEEKLY EARNINGS, BUILDING INDUSTRY, CANADA, 1945-1951.
Data compiled by the Employment Statistics Section, D.B.S., from reports made by employers with 15 or more employees. Data are published monthly in Statistics of Average Hours Worked and Average Hourly Earnings, D.B.S.

The number of hourly wage-earners comprises workers who are employed by the hour and excludes salaried personnel and other employees whose earnings are not directly dependent on the number of hours worked. Consequently the total number of hourly wage-earners shown in this table is smaller than the number of persons employed as shown in Table 60.

The statistics on hours worked include overtime as well as the hours put in by parttime and casual workers. Hours credited to persons on leave with pay are also included.

The average hourly and weekly earnings shown represent gross earnings before deduction for taxes, unemployment insurance, etc.
TABLE 62.-LABOUR INCOME IN THE CONSTRUCTION INDUSTRY ANI) TOTAL LABOUR INCOME, CANADA, 1939-1951.
Data for the period 1939-1950 obtained from National Accounts, Income and Expenditure, 1926-1950, 1951, Research and Development Division, D.B.S.Monthly data for 1951 obtained from Estimates of Labour Income, D.B.S.

A series on total construction outlay is shown in Table 13 and a comparison of the two series shows trends that are similar but not identical. There are two reasons for some variation in trend. First, the labour component of construction expenditure does not vary exactly as the other components because of changes in labour output per man hour and different rates of change in wage ratcs and construction material prices or management and overhead expenses. Second, in the case of labour income estimates a different coverage of the construction industry is made than for cstimates of total construction expenditure. Whereas Table 13 is intended to cover all construction expenditures, the estimates in Table 62 do not include: 1) expenditures by unincorporated own account contractors and builders, 2) construction outlay by railway and telephone companics, 3) repair and maintenance construction outlay on force account by nonconstruction companies, 4) construction outlay by Federal, provincial or municipal governments.

TABLE 63.-UNFILLED VACANCIES AND UNPLACED APPLICANTS IN CONSTRUCTION TRADES, CANADA, DECEMBER, 1944-195I.
Compiled by the Unemployment Insurance Section, Labour and Prices Division, D.B.S., based on weekly reports submitted by local offices of the Unemployment Insurance Commission.
TABLE 64.-NUMBER OF MALE WORKERS IN CONSTRUCTION TRADES APPLYING FOR UNEMPLOYYMENT INSURANCE BENEFITS AND ESTABLISHING BENEFIT YEARS, CANADA, 1942-1951.
Data compiled by the Unemployment Insurance Statistics Section, D.B.S.
A person who has made at least 180 contributions into the Unemployment Insurance Fund, during the two year period immediately preceding a claim for benefits and has made 60 contributions in the year preceding the claim or 45 contributions in the 6 months
preceding the claim establishes a benefit year. The series on the number of male workers in the construction industry applying for unemployment supplementary to data shown im Tables 58 and 63.

The chief limitations of the data in Table 64 as an index of unemployment are as follows: (1) coverage is confined to male workers in construction occupations who come under the terms of the Unemployment Insurance Act, 1941; to the end of 1947 these comprise employees on salary who earn less than $\$ 2,400$ annually, employees paid by the hour or by the day, and employees paid by the week unless they earn more than $\$ 3,120$ annually and apply for exemption from the Act. From January 1, 1948, to June 30, 1950, salaried personnel earning less than $\$ 3,120$ have come under the Act and since July 1, 1950, the ceiling of insurability for salaried employees is raised from $\$ 3,120$ to $\$ 4,800$ a year. There are therefore, a number of construction workers not covered in this tabulation. (2) not all unemployed workers have made 180 days' contribution prior to their period of unemployment. (3) a worker who is unemployed twice during a 12 month period does not as a rule establish a benefit year the second time. (4) the establishment of a benefit year does not give an indication of the duration of unemployment.
TABLE 65.-VOCATIONAL AND APPRENTICESHIP TRAINING IN CONSTRUCTION TRADES, BY NUMBER IN TRAINING, CANADA, 1945-1951.
Data compiled by the Vocational Training Branch, Department of Labour.
TABLE 66.--IMMIGRATION OF CONSTRUCTION WORKERS, BY TRADE, CANADA, 1939-1951.
Data compiled by the Economic Research Department, C.M.H.C., from data supplied by courtesy of D.B.S. and the Immigration Branch, Department of Citizenship and Immigration.

TABLE 67.-EMIGRATION OF SKILLED CONSTRUCTION WORKERS, BY TRADE, CANADA, 1948-1951.
This series shows the number of persons who applied to the Foreign Exchange Control Board for change of status from resident to non-resident with the intention of leaving the country permanently. The data cover skilled construction workers only, with no separate information available on semi-skilled and unskilled construction workers who are lumped with "general labour". The monthy figures are by "date of application" and there is usually a time lag of a month or two between this date and the actual date of departure of the emigrant. This series is currently in the process of being checked and developed further. As revised data become available, they will replace the prelminary series shown here. The data are supplied by courtesy of D.B.S. and the Foreign Exchange Control Board, the compilations being prepared by D.B.S. on the basis of information suppled by the Foreign Exchange Control Board.

TABLE 68.-STRIKES AND LOCKOUTS IN THE BUILDING INDUSTRY, BUILDING MATERIAL INDUSTRIES, AND IN ALL INDUSTRIES, CANADA, 1939-1951.
Data obtained from monthly issues of The Labout Gazette, Department of Labour.
TABLE. 69.-INDEXES OF WHOLESALE PRICES OF RESIDENTIAL BUILDING MATERIALS, AND COMPOSITE INDEX OF ALL CONSTRUCTION MATERIALS, CANADA, 1939-JANUARY, 1952.
Revised composite index of wholesale prices of all construction materials obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. These indexes replace the series formerly published the first quarter, 1951 and preceding issues of Housing in Canada on wholesale prices of construction materials in general. For differences between this index and that published in previous issues of Housing in Canada see Wholesale Price Indexes 1913-1950, D.B.S. p. 4.

Indexes of wholesale prices of residential building materials obtained from Prices and Price Index Numbers of Residential Building Materials, March, 1948, D.B.S. and from Prices and Price Indexes, April, 1951, D.B.S. Indexes are converted from a 1935-1939 to a 1939 base. The composite index in this series is weighted according to the value of each listed group of materials entering into residential construction as estimated in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 60-67. Insofar as possible the price index for each
group of materials is based on the component items shown in the above publication, and weighted accordingly. In some cases however, where the specific material components listed in the publication covered a wide variety of individual items, representative material items were chosen and weighted according to total production in Canada.

The trend of residential building material prices does not vary to a significant extent from the trend for construction materials in general over the period 1926-January, 1952. At January, 1952, the index for residential materials stood at 285 on the 1939 base, the same level as the construction material index at that date.

The purpose of these group indexes is to reflect the average movement of prices of building materials having a characteristic use. In interpreting these indexes certain qualifications should be observed before drawing general conclusions from them. First, the price of each building material in a group rises or falls either independently of the other or possibly in an inter-related fashion depending on the extent of their homogeneity. Changes in prices of each material may also occur at varying rates from another. Consequently a group index provides no information with respect to price changes experienced by a specific building material within a group. Attention is drawn to Price Index Numbers of Residential Building Materials 1926 to 1948, Labour and Prices Division, D.B.S., March 1949, which sets out in detail the building materials comprising each group. Secondly, though the indexes are designed, by applying appropriate weighting techniques, to express national averages of price changes, they may be modified by regional cost differentials. This problem of regional differentials in housing construction costs is treated at length in Chapters 1 and 2, Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946.
TABLE 70.-INDEXES OF AVERAGE HOURLY WAGE RATES IN CONSTRUCTION TRADES AND IN ALL INDUSTRIES, CANADA, 1939-JANUARY, 1952.

## Data obtained from the Department of Labour.

Indexes for the individual trades other than sheet metal workers, obtained by courtesy of the Economics and Research Branch for the years 1945-1950 and for the months of March and September, 1951. Monthly interpolations on these indexes for the year 1951 and January, 1952 were made on the basis of wage rate schedules for 15 cities supplied by courtesy of the Industrial Relations Branch. Each city in these calculations was weighted according to the number of housing unit completions in 1950. The weights used in calculating the index for all construction workers in these interpolations are based on the value of the on-site labour for each trade engaged in residential building as established in The Labour Value of the Building Dollar, Housing Administration, Department of Finance, Otatwa, 1943, p. 29. The indexes for 1945-1951 do not properly represent annual averages as they are based on surveys relating to pay periods which vary somewhat from year to year. The indexes for 1939-1941 relate to June; for 19421943, December; for 1944-1945, October; 1946, December; 1947, July; 1948 and 1949, September; and 1950 and 1951, March and September.

The index for sheet metal workers was calculated by the Economic Research Department, C.M.H.C., on the basis of rates for 15 cities obtained from annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 1939-1950 and by courtesy of the Industrial Relations Board for 1951.

The index for all industries was estimated by the Economic Research Department, C.M.H.C., on the basis of the General Average Index as contained in annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 19451949 and as supplied by courtesy of the Economics and Research Branch for March and September, 1950 and 1951. Monthly interpolations on this index for the year 1950 and first quarter 1951 were made on the basis of average hourly earnings in principal industries as published in monthly issues of Man Hours and Hourly Earnings, D.B.S. weighted by relative employment weights in these industries as contained in monthly issues of The Employment Situation, D.B.S. Monthly index numbers for the last three quarters, 1951, estimated by the Economic Research Department on the basis of trend during 1949 and 1950.

The indexes for both all construction workers and all industries, including holiday pay allowances, include a percentage allowance to cover hoiday pay assessments effective in most cities in Canada.

TABLE 71.-COMPOSITE INDEX OF WAGE RATES IN THE CONSTRUCTION INDUSTRY WITH WHOLESALE PRICES OF RESIDENTIAL BUILDING MATERIALS, AND WITH WHOLESALE PRICES OF ALL CONSTRUCTION MATERIALS, WHOLESAE PRICE INDEX OF ALL COMMODITIES, AND INDEXES OF COST OF LIVING AND RENT, 1939-JANUARY, 1952.
Composite index of residential building material wholesale prices and wage rates in the construction trades based on the composite material index shown in Table 69 and the index of wage rates of all construction workers, nicluding holiday pay allowances, shown in Table 70. Composite index of all construction material wholesale prices and wage rates in the construction trades based on the composite material index obtained from Wholesale Price Indexes 1913-1950, D.B.S. and monthly issues of Prices and Price Indexes D.B.S., and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 70. The weights are based on the proportions established in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, p. 36. The materials are weighted 58.3 in percentage terms, and the wage rates 41.7.

Revised index of wholesale prices of all commodities obtained from Wbolesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. For differences between this index and that published in Housing in Canada, First Quarter, 1951, and previous issues, see Wholesale Price Indexes 1913-1950 D.B.S. p. 4.

Remaining data obtained from issues of Prices and Price Indexes, D.B.S., and converted to a 1939 base.

TABLE 72.-PERCENTAGE DISTRIBUTION OF NEW COMPLETED DWELLINGS BY NUMBER OF MONTHS UNDER CONSTRUCTION, AND AVERAGE NUMBER OF MONTHS UNDER CONSTRUCTION, BY MONTH OF COMPLETION, CANADA, 1946-JANUARY, 1952.
Data for 1946 and 1947 obtained from Annual Report, 1947, C.M.H.C., p. 18. Data for 1948 and 1949 obtained from monthly issues of Housing Bulletin, D.B.S. Data for 1950-January, 1952 obtained from monthly issues of New Residential Construction, D.B.S.

TABLE 73.-BANKRUPTCIES IN THE CONSTRUCTION INDUSTRY, BUILDING MATERIAL INDUSTRIES, AND IN ALL INDUSTRIES, CANADA, 1939-1951.
Tabulation based on data obtained by courtesy the Superintendent of Bankruptcy, Department of Justice. The data on bankruptcies in all industries do not correspond exactly with the series published in the D.B.S. quarterly Commercial Failures, chiefly because the latter publication includes closures under the Winding Up Act, whereas the series in Table 73 covers the Bankruptcy Act only. There is the additional factor that the D.B.S. series excludes certain assignments and receiving orders under the Bankruptcy Act where the debtor makes a composition of assets and continues in business, whereas all receiving orders and assignments are covered in Table 73.

The series on building materials industry is designed to cover firms engaged in the production of: lumber, wallboard, bricks, flue linings, vitrified sewer pipe, structural tile, drain tile, cement, concrete brick, concrete building blocks, cement drain pipe and culvert tile, warm air furnaces, cast-iron radiators, hot water storage tanks, hot water tank heaters, domestic heating boilers, asphalt shingles, asphalt rolls, tar and asphalt felts, cast-iron soil pipe, sanitary ware, wrought iron pipes, lead pipe water service, structural steel, steel pipe, wire nails and spikes, mineral wool insulation, gypsum wallboard, gypsum lath, gypsum plaster, gypsum block and tile, electrical equipment, and wood fibre insulating board.

The classification of bankruptcies in the construction industry, covers general and trade contractors and small builders classed as "wage earners in the construction trades".

TABLE 74.-INDEXES OF STOCK PRICES OF COMMON SHARES OF SIXTEEN BUILDING MATERIAL COMPANIES AND EIGHTY-TWO INDUSTRIAL COMPANIES, CANADA, 1939-JANUARY, 1952.
Data for the period 1939-1943 obtained from Prices and Price Indexes, 1913-1943, D.B.S.

Data for period 1944-1946 obtained from Prices and Price Indexes, December, 1946, D.B.S.

Data for 1947-January, 1952 obtained from monthly issues of Prices and Price Indexes, D.B.S.
(1) Building materials index based on 16 stocks.
(2) All industrial index based on 74 stocks during 1945-1947, 76 during 1948 and 82 during 1949 and 1950-January, 1952.
(3) Data converted from a $1935-1939$ to a 1939 base.
