## FOREWORD

Housing in Canada is published quarterly, designed to provide factual information which will afford as complete and current a picture of the housing situation as possible.

The first issue, published in October, 1946, provided information on an annual basis for the period 1919-1945. In each subsequent issue the established material has been kept up to date on a quarterly basis and new data added. The present issue covers the period 1945 to the third quarter, 1952, providing monthly or quarterly data for 1951 and the more recent period. Each issue is arranged in three parts. The first part comprises a brief factual summary highlighting the results of the statistical material. The second part consists of the tabular material itself and is arranged in eight sections: (1) population trends; (2) house-building activity; (3) publicly-assisted house building; (4) real estate lending; (5) building materials; (6) building labour; (7) building costs; (8) building industry. The third and final part of this report provides sources of the factual material and explanatory notes where interpretation of the series seems appropriate.

Commencing with the April, 1950, issue of Housing in Canada, data on Newfoundland were shown separately in Section 9 of Part II. This separation was made partly in the interest of continuity of the tabular material for the rest of Canada and partly because of the immediate scarcity of statistical information for the Province of Newfoundland. Beginning with the second quarter issue, 1951, all statistical series have been revised to include data that are available for the Province of Newfoundland since March 31, 1949, when Newfoundland became part of Canada.

Some of the material incorporated in this report is obtained from original sources with other data submitted by various Federal Government departments, including the Department of Finance, Department of Trade and Commerce, Department of Labour, Department of Veterans' Affairs, Department of Citizenship and Immigration, the Superintendent of Bankruptcy, the Dominion Bureau of Statistics, the Department of Defence Production and the Department of the Secretary of State. Data are also provided by the Quebec Government through its Farm Credit Bureau.

Housing in Canada concentrates on major trends in the housing field only and provides all available information of substance. As new and improved statistical series become available, they will be incorporated in future issues.

## PART I

## FACTUAL SUMMARY

## SECTION 1.-POPULATION TRENDS

(See Tables 1-6)
Net family formation in Canada, which provides an indication of the growth of the country's housing requirements, increased notably in the first half of 1952, as compared with the corresponding period of 1951. This was mainly occasioned by heavier immigration. Net migration of married females rose by 47 per cent from 11,600 in the first half of 1951 to 17,000 in the first half of 1952; on the other hand, there was little change in the marriage and death rate of the resident population.

The intensity of a family's requirement for separate living accommodation is affected by the number of children. Probably the greatest change in a family's requirements in this respect comes with the arrival of the first child. Total births in Canada increased by 2 per cent from 188,800 in the first half of 1951 to 192,000 in the corresponding period of 1952. First births also increased by two per cent from 49,300 to 50,100 during the period.

## Immigration and Emigration

Following a large increase in the number of new arrivals entering Canada during the first four months of 1952 , immigration fell off during May and June of the current year relative to the same months of 1951. The net result, however, was still an increase in immigration of 23 per cent to 98,000 in the first six months of 1952 from 80,000 in the corresponding months of 1951 . The rise was most pronounced with respect to the number of arrivals from the United Kingdom which totalled 23,000 persons in the first half of 1952 , an increase of 63 per cent from the corresponding period of 1951.

## SECTION 2.-HOUSE-BUILDING ACTIVITY <br> (See Tables 7-16)

Housing starts in Canada during May, June and July of 1952, showed an improvement from the levels of the corresponding months of 1951. This upward shift is related to increased flows of institutional mortgage money, to increased lending activity under the National Housing Act and to the levelling off of overall building costs during the past year (see Sections 3, 4 and 7).

Dwellings started in new structures during the first seven months of 1952 numbered 44,050 units, about the same number as in the same period of 1951 . Considering only the months May through July, starts were up 8 per cent to 29,700 in 1952 as compared to 27,300 in 1951.

Completions in the first seven months of 1952 numbered 33,100 , a decrease of 24 per cent from 1951, and the number of dwellings under construction on July 31,1952 , at 54,300 , was 9 per cent lower than a year earlier.

An indication of continued improvement in the number of starts is provided by data for August, 1952, in cities and towns of 5,000 population and over. In this month starts of new dwellings totalled 6,500 units as compared with 3,900 units in August, 1951. A small part of the increase in August, 1952, is accounted for by the inclusion of some areas on the fringe of metropolitan centres which were formerly counted in urban centres under 5,000 population and in rural non-farm areas.

## Completed Unsold Houses

There was a slight lengthening in the period required to sell completed dwellings in urban centres in the first six months of 1952. Representing highpriced properties in newly developed locations for the most part, 90 per cent of 1,100 completed dwellings in December, 1951, were unsold for less than 3 months and 9 per cent were unsold for less than 6 months. In June, 1952, 53 per cent of 1,100 completed dwellings were unsold for less than 3 months and 34 per cent for less than 6 months.

## Residential and Other Types of New Construction

During the first six months of 1952 capital investment in the form of new construction rose to a new peak level for the period. In terms of 1951 dollars the value of total new construction work put in place totalled $\$ 1.21$ billion as compared with $\$ 1.18$ billion a year earlier, a volume increase of 3 per cent. In this period an increasing proportion of construction resources was devoted to non-residential building purposes, mainly defence, defence supporting industrial construction and resource development. Non-residential construction comprised 73 per cent of total new construction in the 1952 period as compared with 65 per cent in the 1951 period.

Gross and Net Residential Capital Formation
Net residential capital formation representing the growth in physical value of national housing stock (on the basis of 1939 dollars), was on a declining trend in 1951 and 1952 from the peak reached in 1950. During the first six months of 1952 , net capital formation was valued at $\$ 65$ million as compared with $\$ 81$ and $\$ 92$ million in the comparable periods of 1951 and 1950.

This slowing down in the rate of accumulation in housing stock was associated with the lower levels of starts and completions of new dwellings in 1951, even though as indicated earlier, the trend turned upward again in May, 1952. As a result, gross capital formation representing the value of new residential construction, major improvements and alterations, the installation of non-moveable equipment such as landscaping etc. and supplementary costs decreased. The value of gross capital formation (in 1939 dollars) totalled $\$ 147$ million in the first half of 1952 as compared with $\$ 160$ million in the 1951 period.

As the housing stock increased cumulatively, capital consumption in the form of depreciation of existing stock and accidental damages increased. In the first half of 1952 , capital consumption was valued at $\$ 83$ million (in 1939 dollars). This compares with $\$ 79$ million in the corresponding period of 1951.

## SECTION 3.-PUBLICLY-ASSISTED HOUSE BUILDING <br> (See Tables 17-39)

Publicly-assisted housing declined relative to privately-financed house building in the first six months of 1952. During the period, dwellings started with public financial assistance numbered 11,400 units or 32 per cent of total starts. In the first half of 1951, publicly-assisted housing starts totalled 15,600 or 41 per cent of total starts. The lower level of government-assisted starts in the first half of the current year is associated with reduced lending operations under the National Housing Act in the fall and winter months of 1951-1952. Again there has been a change in the trend more recently as indicated below.

## The National Housing Act, 1944

Reversing the marked downward trend of the late months of 1951 , lending operations under the National Housing Act were on a progressively rising scale during the first eight months of 1952. Beginning with April, 1952, when the number of dwellings approved for loans equalled those of April, 1951, relative monthly gains continued in the current year until in August, 1952, the number of dwellings approved for loans were two and one-half times the total for August, 1951. Cumulatively, approvals during the first eight months of 1952 involved 23,607 dwellings or 25 per cent more than in the comparable period of 1951 but 27 per cent below the total in the same period of 1950. The value of loans approved under the Act during the first eight months of 1952 amounted to $\$ 173$ million. This compares with total loans valued at $\$ 125$ million during the corresponding period of 1951 and $\$ 216$ million in the first eight months of 1950.

Direct loans approved by the Corporation on residential mortgages doubled from $\$ 8.8$ million in the 1951 period to $\$ 18.9$ million in the 1952 period as operations under the Rental Insurance Plan increased notably (see p. 17).

The sustained rise in mortgage lending under the Act during the summer months, reflects in part the easing in down payment requirements introduced in October, 1951, ${ }^{(1)}$ a strong market for rental dwellings in metropolitan areas and some improvement in the availability of funds from private lending institutions (see p. 17).

Data on loan approvals by type of loan during the first six months of 1952 indicate that dwellings for home-ownership declined 4 per cent to 12,077 in

[^0]the current period while the number of rental dwellings increased 57 per cent to 4,975 units from the first half of 1951.

Reflecting increased costs per square foot and more liberal lending values introduced under the Act in October, 1951, average loans on one-storey dwellings increased 16 per cent to $\$ 7,906$ in the first half of 1952 from $\$ 6,808$ in the same period of 1951 . Average construction costs per square foot on one-storey dwellings which account for about 44 per cent of dwellings financed, moved up 3 per cent from $\$ 9.02$ in the first half of 1951 to $\$ 9.32$ in the same period of 1952. Down payments decreased by $\$ 650$ on one-storey dwellings to $\$ 3,154$ in the first six months of 1952.

Under authority of the National Housing Act, 1944 as amended, ${ }^{(1)}$ the interest rate of new joint loans was raised by $\frac{1}{4}$ of 1 per cent to $5 \frac{1}{4}$ per cent calculated semi-annually, effective from September 1, 1952.(2) The interest rates on new loans of other types under the Act were also increased by $\frac{1}{4}$ of 1 per cent. This change of $\frac{1}{4}$ of 1 per cent in the interest rate on residential mortgage loans under the Act, reflects the upward movement in the interest yield on long-term Government bonds, which during the past year, has increased by about $\frac{1}{2}$ of 1 per cent.

Prior to September, 1952, when joint loans under the National Housing Act were not available through lending institutions, Central Mortgage and Housing Corporation made direct loans available in centres having a population of less than 5,000 . By a change in policy the population band has been widened to cover centres having a population of less than 50,000 . Where possible the direct loans will be made through the agency of a lending institution, the lending institution having an option to purchase a joint loan participation in any loan pursuant to the terms of the agency contract.

## Federal-Provincial Housing Agreements

Under Section 35 of the National Housing Act which empowers the Federal Government to enter joint partnership agreements with provincial governments for the development of rental housing projects and residential land assembly projects, two agreements were completed in September, 1952.

At Dunnville, Ontario, a rental housing project under joint sponsorship of the Government of Canada and the Province of Ontario was concluded for the development of 25 serviced lots and the construction of 25 houses, which will comprise 18 three-bedroom units and 7 two-bedroom dwellings. The administration of the houses when completed will be assigned to a local housing authority.

Under the land assembly provisions of Section 35 an agreement was negotiated for the servicing of 202 building lots at Cornerbrook, Newfoundland. The total cost of the project is estimated at $\$ 266,700$ which will be fully recovered through the sale of the serviced lots. The average selling price of the lots will be about $\$ 1,700$.

## Federal-Provincial Housing and Land Assembly Projects

Housing operations under joint Federal-provincial agreements involved 431 starts and 105 completions during the first half of 1952, a marked increase over the first half of 1951 when only 4 units were started and 84 completed. At the end of June, 1952, 517 units were under construction compared with 60 one

[^1]year earlier. Projects involved are located at Saint John, New Brunswick, St. John's, Newfoundland, Prince Rupert, B.C., Moose Jaw, Saskatchewan and Windsor, Saint Thomas, Fort William and Midland in Ontario. Expenditures in the period amounted to $\$ 1,485,000$.

Under the land assembly provisions of the Federal-provincial scheme 809 building lots were started, 144 were completed, and 165 lots were sold or placed under option in the first half of 1952. At the end of June, 1952, 2,318 lots were under construction, as compared with 1,757 one year earlier. Total expenditures rose to $\$ 480$ thousand from $\$ 297$ thousand in the same period of 1951.

> Land Assembly Projects Under Section 11B of the National Housing Act, 1944

Land assembly projects sponsored by lending institutions under Section 11B of the National Housing Act, 1944, were in a sales position with respect to 212 lots at the end of June, 1952. During the first half of 1952, 7 lots were sold as compared to 158 lots in the corresponding period of 1951. Expenditures in the current period amounted to $\$ 47$ thousand, about onc-half the total for the first half of 1951.

## Veterans' Rental Housing Projects Under Central Mortgage and Honsing Corporation

The construction of rental units for veterans under Federal-municipal agrecments continued in three municipalities during the first half of 1952 . During the period 463 dwellings were started and 213 units were completed leaving 364 dwellings under construction at the end of June, 1952. In the first half of 1951 completions numbered 475 units and 438 dwellings were in various stages of construction at the end of June, 1951. Fxpenditures totalled $\$ 1.7$ million in the 1952 period, relatively the same amount cxpended in the preceding year.

## Veterans' Land Act, 1942

House building under the Veterans' Land Act declined in the first half of 1952 owing mainly to reduced activity under the "small holdings" and "full-time farming" provisions of the Act. New dwellings started numbered 369 in the first six months of 1952, a decrease of 42 per cent from the 635 units initiated in the preceding year. Completions were also lower, numbering 899 units or 12 per cent less than in the first half of 1951. Expenditures decreased 33 per cent to $\$ 3.1$ million during the current period.

## Armed Service Permanent Married Quarters

The construction of armed service married quarters by the construction division of Central Mortgage and Housing Corporation was on an increasing scale of operations during the first half of 1952. In this period dwellings started numbered 1,234 units or 85 per cent above the number started in the first half of 1951. Dwellings completed increased by 21 per cent to 1,610 units for the current period while expenditures declined 21 per cent to $\$ 9.9$ million in the 1952 period.

## Defence Construction Limited

During the first seven months of 1952, armed service married quarters started by Defence Construction Limited numbered 289 units which compares with starts of 462 units in the first seven months of 1951. Completions totalled 292 units in the 1952 period.

The value of contracts awarded or
of construction by Defence Construction Limited totalled $\$ 89.5$ million ... the first seven months of 1952 as compared with $\$ 110.7$ million in the same period of 1951.

## Department of National Defence Schools

Ten new schools were completed by Central Mortgage and Housing Corporation for the Department of National Defence during the first six months of 1952. Schools under construction at various camp sites numbered 8 at the end of June, 1952. During the first half of 1952 expenditures totalled $\$ .5$ million as compared with $\$ 2.9$ million in the same period of 1951.

## Defence Workers' Housing

During the first half of 1952, defence workers' housing approved by the Department of Defence Production involved the completion of 22 units and the initiation of 39 dwellings. Expenditures for the period totalled $\$ .8$ million. By the end of June, 1952, one of the three projects approved in 1951 was completed.

## Canadian Farm Loant Act, 1927

The Canadian Farm Loan Board established in 1929 under the Canadian Farm Loan Act is engaged in mortgage lending to Canadian farmers for all productive farm purposes including the construction and repair of farm houses. The Board was formerly limited to lending not more than 50 per cent of valuation and $\$ 5,000$ on first mortgage and not more than $66 \frac{2}{3}$ per cent of valuation and $\$ 6,000$ on combined first and second mortgage loans. By virtue of an amendment ${ }^{(1)}$ to the Act passed on June 18, 1952 these limitations were changed and the Board now lends up to 60 per cent of valuation and $\$ 10,000$ on first mortgage and up to 70 per cent of valuation and $\$ 12,000$ on combined first and second mortgage loans. First mortgage loans are repayable on an amortized plan for 25 years or less and the current rate of interest on first mortgages, in effect since April 1,1952 , is 5 per cent per annum. Prior to this date, the interest rate on first mortgages was $4 \frac{1}{2}$ per cent per annum.

New farm dwellings approved for loans under the Canadian Farm Loan Act in the first half of 1952 , involved 10 units. The value of these 10 loans totalled $\$ 36,000$. 36 loans valued at $\$ 32,000$ were approved for the alteration and improvement of existing farm residential dwellings.

In the first half of 1951, 21 new farm dwellings were approved for loans totalling $\$ 49,000$; and 33 loans were approved amounting to $\$ 15,000$ for the alteration and improvement of existing farm dwellings.

## Farm Improvement Loans Act, 1944

Lending operations under the Farm Improvement Loans Act were slightly lower in the first six months of 1952 than a year earlier. Approvals for the period involved 246 loans for the construction of new farm dwellings amounting to $\$ 413,000$ and 593 loans for alterations and improvements of existing dwellings amounted to $\$ 587,000$.

During the first half of 1951, 320 loans for new farm houses were approved involving $\$ 523,000$, and 539 loans for the alteration and improvement of existing dwellings amounting to $\$ 531,000$.

[^2]
## Property Murmaz went Operations, Central Mortgage

 and Housing CorporationThe number of rental dwellings under management of the Corporation decreased from 30,900 at the end of June, 1951, to 21,800 at the end of June, 1952, as the sales program of war workers' and veterans' units together with the return of leases on home conversion rental units to their owners, continued to exceed the number of new rental units coming under management.

The vacancy rate on these dwellings at the end of June, 1952 was 0.4 per cent compared with 0.5 per cent a year earlier.

## Rental Insurance Plan

With the resumption of direct mortgage lending by the Corporation on Rental Insurance projects after October 9, 1951, ${ }^{(1)}$ net approvals under the Rental Insurance Plan increased notably in the first six months of 1952. During the period loans were made with respect to 26 projects involving 2,072 rental units at an estimated cost of $\$ 16.8$ million. This compares with loan approvals on 13 projects covering 603 units at an estimated cost of $\$ 5.5$ million in the 1951 period.

## The Province of Quebec Farm Credit Bureau

Authorizations by the Quebec Farm Credit Bureau for interest subsidies on residential mortgage interest charges in excess of 3 per cent, were on a declining trend in the first six months of 1952.

In the first half of 1952 3,070 applications for interest subsidies were approved, exceeding slightly the 2,979 approved in the 1951 period. The number of dwellings for which interest subsidies were approved in the first half of 1952 totalled 3,511 units, a decrease of 6 per cent from the preceding year. The interest subsidy committed amounted to $\$ 6.3$ million in the 1952 period, as compared with $\$ 6.4$ million in the 1951 period.

## SECTION 4.-REAL ESTATE JENDING <br> (See Tables 40-42)

## Real Estate Lending

Institutional mortgage lending for the months of May and Junc in 1952 was notably above the level of the corresponding period of 1951. While this increase was not sufficient to make up for the lower level of lending in the first four months of the year, the rising trend during May and June of 1952 indicates a recovery from the reduced level of lending during the corresponding months of 1951. This recovery was most cvident in the new residential construction loan sector.

During the first half of 1952 the value of mortgage loans approved on all types of property amounted to $\$ 232.8$ million or 12 per cent less than in the same period of 1951. Reflecting an upward movement in May and June, 1952, the value of all loans approved for this period totalled $\$ 99.4$ million or 17 per cent higher than in the same period of 1951. Correspondingly, the number of loans approved in the first six months of 1952 , at 28,251, was 18 per cent below the number approved in the first six months of 1951, while in May and June of 1952 the number of loans approved, at 11,400 was down 1 per cent.

[^3]The value of mortgage loans approved on new non-farm residential construction comprising 56 per cent of the total value of approvals in the 1951 period and 60 per cent in the 1952 period, amounted to $\$ 137.7$ million in the first half of 1952, or 6 per cent lower than in the preceding year. For the first six months of the year the number of dwellings approved decreased relatively more than the value of loans, 12 per cent as compared with 6 per cent. Also the increase in the number of dwellings approved in May and June, from 7,500 in 1951 to 8,800 in 1952 was less than the corresponding increase in value, 18 per cent as compared with 28 per cent.

Loans for new construction of non-residential non-farm property, which characteristically account for under 10 per cent of institutional mortgage lending, showed a similar trend. The amount of these loans approved was lower for the whole of the first half of 1952 than in the same period of 1951, but was higher in the months of May and Junc. The demand for loans of this type has been moderated by the effects of the deferred depreciation provisions ${ }^{(1)}$ which aim to defer non-essential capital projects by making these types of investment ineligible for capital cost allowances under the Income Tax Regulations.

Mortgage loans approved on both existing residential and non-residential property, declined in number and amount from the first half of 1951 to the corresponding period of 1952. In the residential sector the number of dwellings approved declined 18 per cent and in the non-residential sector the value of loans approved declined by 15 per cent. For the second quarter of 1952, these loans were close to the level of 1951. This level in itself however represents a substantial decline from 1950 when real estate activity in existing property was intense. The number of new non-farm dwellings on which loans were approved totalled 20,989 units or 12 per cent less than in the first half of 1951. Of these 20,989 units, rental dwellings as roughly measured by multiple units numbered 6,688 , an increase of 11 per cent and single dwellings numbered 14,301 , a decrease of 19 per cent.

Loans were approved on 15,970 existing non-farm dwellings representing a decrease of 18 per cent, and the value of loans at $\$ 55.2$ million, represented a decrease of 16 per cent from the first six months of 1951.

## Mortgages Registered and Discharged

Mortgage registrations on new and existing real estate in the Greater Toronto Area numbered 20,234 in the first half of 1952 or 5 per cent below the corresponding period in 1951. Dwelling units started in the area numbered 4,240 in the first half of 1952, a decline of 33 per cent from the same period in 1951. In view of the sharp decline in new starts, the moderate falling off in registrations suggests a continued buoyancy in the market for existing real estate.

The number of mortgage discharges remained at relatively the same level in the periods under review totalling 14,500 in the first half of 1952 as against 14,400 a year earlier.

# SECTION 5.-BUILDING MATERIALS 

(See Tables 43-55)
Production of Building Materials
Overall output of building materials in the first six months of 1952, as compared with the same period 1951, declined even though there were increases in

[^4]some fields, notably iron and steel items. There were several reasons for the overall decline. Production of building materials during most of 1951 had risen quite rapidly, a great deal of it to meet the specific requirements of the housebuilding industry. But as house-building activity declined, notably in the second half of 1951, with the decline continuing on a reduced scale into early 1952, inventories of building materials piled up, leading to a reduction in current production.

Within the construction industry the emphasis on power development, railroads, pipelines and defence supporting projects continue to create special demands from specific structural materials such as cement, heavy timbers and iron and steel forms. Although cement production rose 4 per cent to 8.7 million barrels during the first half of 1952, the supply situation was tight owing to above normal requirements in power projects. Structural timbers were in adequate supply despite a slight decline of 9 per cent to 3.1 million board feet in the first six months of 1952 owing in part to a strike which commenced on June 16, among West Coast loggers and sawmill workers. Production of iron and steel rolling mill products from Canadian ingot increased over the period (see below) as the Canadian steel industry expanded output through improved use of installed capacity. Imports of steel forms from the United States remained at a high level despite the strike in American steel mills which extended from April 29 to July 28.

The extension of municipal land assembly programs for residential and industrial use continued to create a sustained demand for sewer and water pipe during the first half, 1952. Vitrified sewer pipe output reached 2.2 million feet for the period, an increase of 9 per cent and production of cement pipe and tile advanced 7 per cent to 114 thousand tons.

On the strength of a large output in the first quarter of 1952, production of hot water storage tanks at 89 thousand units was 13 per cent higher in the first six months of 1952 than in the same period in 1951, and structural tile output increased 12 per cent to 99 thousand tons. The rising trend in the use of wet wall interior finish which has induced a three-fold advance in gypsum plaster production since 1945, continued in the first half of 1952, as output at 106 thousand tons was up 18 per cent over the 1951 period.

The physical volume of output of 24 other building materials which follow in varying degrees the course of house-building activity, was lower in the first half of 1952 than a year earlier. In the plumbing and heating products group, with the exception of hot water storage tanks, declines ranged from 32 to 71 per cent; and in the sanitary ware group, three items namely sinks, bathtubs and wash basins decreased from 35 to 53 per cent. Electrical wire and wiring devices comprising four items dropped from 32 to 44 per cent; mineral wool insulation products fell 22 per cent; and gypsum wall board and lath were reduced 8 per cent and 29 per cent respectively over the period. Wood fibre building board and hardwood flooring declined 16 and 33 per cent.

Two of the principal structural building products, concrete blocks and building brick decreased 14 and 19 per cent and output of flue linings was down 35 per cent. Asphalt products in the form of shingles and felts also declined, 21 and 29 per cent respectively.

# PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS, CANADA, <br> QUARTERLY. 1948-1952 

ECONOMIC MESEARCH DEPARTMINT, C.M. H.C.

## Supply and Demand for Building Materials

Reflecting the reduced absorptive capacity of the building industry for materials, in association with a reduced scale of residential and commercial building operations during the past year, producers' sales of building products were markedly lower in the first half of 1952. During the period, sales of cement and hot water storage tanks were higher than a year earlier but shipments of thirteen items were lower.

Three products in the electrical wire and wiring devices group, namely non-metallic sheathed cable, single pole switches and outlet boxes declined from 40 to 58 per cent in the period. Hot water tank heaters and domestic heating boilers in the plumbing and heating group were down 26 and 59 per cent respectively while sales of sinks and bathtubs were lower by 26 and 39 per cent. Gypsum products in the form of wallboard, plaster and lath decreased from 9 to 31 per cent and shipments of building brick, mineral wool batts and flue linings were reduced 16 and 19 per cent.

In general, stocks of building materials were higher at the end of June, 1952, than a year earlier though inventories were being worked down during the second quarter of 1952. Stocks of cement, mineral wool batts and gypsum plaster at the end of June, 1952, equalled those of June, 1951 and in the case of domestic heating boilers and non-metallic sheathed cable, inventories were lower at the end of the current period. Stocks of the 10 remaining items on which data are available were from 30 per cent to 9 times higher at the end of June, 1952.

## Imports

Indicative of a greater relative dependence on domestic sources of supply, imports of eleven building products were notably lower in the first half of 1952 than in the same period of 1951. Only in the case of five items, namely hardwood flooring, wallboard building board, mineral wool, hot water tank heaters and cast-iron radiators were shipments higher during the period.

Imports of common colourless window glass and cement, which have been at high levels in the post-war years, declined 49 and 36 per cent respectively during the first six months of 1952 . Two items in the plumbing and heating equipment group, domestic heating boilers and warm air furnaces decreased 35 and 41 per cent while in the sanitary ware group imports of bathtubs, closets, sinks and basins dropped 60 per cent. Foreign shipments of four remaining materials including builders' hardware, paints, pigments and varnishes, building brick and gypsum plaster were also considerably lower in the period under review.

## Exports

Exports of building materials showed a mixed trend during the first six months of 1952 as four items registered gains, six moved to lower levels and two remained at the same level as a year earlier. Shipments of sawn lumber moved up 3 per cent to 1.7 billion board feet in the first half of 1952. After a slow start in the first quarter, 1952, lumber sales to the United States showed increasing strength in the second quarter and by the end of June at 1 billion board feet were only 3 per cent less than in the first half of 1951. Exports of lumber to the United Kingdom in partial fulfillment of contracts signed in 1951 advanced 29 per cent to 6 billion board feet. Wood fibre insulating board continued the
rising trend of 1951 reaching 24 million square feet or 35 per cent above the quantity exported in the first half of 1951. Other lumber products namely wood shingles, wood laths and hardwood flooring declined from 18 to 65 per cent. Decreases were also registered in paints, pigments and varnishes and common colorless window glass, while exports of cement and building brick remained at the same levels as in the preceding year.

## Sbipments of Primary Iron and Stecl Shapes

Total domestic shipments of primary iron and steel shapes from producers to consuming industries totalled 1.6 million net tons during the first six months of 1952, the same level as in the previous year. Currently the pattern of primary distribution to end users was shifting from containers and automotive industries to defence and defence supporting industries such as ship building, railways and utilities.

Direct shipments of iron and steel shapes to the building construction industry in the first half of 1952 at 186 thousand tons were lower by 7 per cent from the previous year. Sales to the automotive industry were sharply reduced by one-third to 91 thousand tons and the containers industry and wholesalers and warehouses each received 17 and 8 per cent less than in the first half of 1951.

The largest increase in shipments of iron and steel shapes during the 1952 period was to the "miscellaneous" group of industries which includes shipbuilding and utilities. Receipts of iron and steel shapes by this group rose 15 per cent to 432 thousand tons. The merchant trade products and railway industries were shipped 218 and 338 thousand tons respectively, representing increascs of 6 and 3 per cent from the first half of 1951.

## Production, Imports and Exports of Rolling Mill Products

Output of steel ingot continued to increase during the first half of 1952 though at a slightly slower rate than in 1951. During the current period production reached 1.85 million tons or 5 per cent above the 1.76 million tons processed in the first half of 1951 which in turn represented an advance of 7 per cent above output in the preceding year. Production of pig iron followed a similar pattern increasing 6 per cent to 1.33 million tons in the first six months of 1952 following a rise of 13 per cent in the 1951 period from the previous year.

Production of rolling mill products from Canadian ingot together with imports of iron and steel forms totalled 2 million net tons, 11 per cent above the corresponding period of 1951. Despite work stoppage in American stecl mills during most of the second quarter, Canadian imports of rolling mill products were at a high level in the first half of 1952. Owing to imports reaching a new peak in the first quarter, equal to 70 per cent of Canadian domestic output, the total for the first six months of 1952 amounted to .9 million net tons, 23 per cent above the comparable period of 1951. Exports of rolling mill products, partly for conversion and re-import, involved 35 thousand tons as compared with 30 thousand tons in the first half of 1951.

## Production, Sales and Stocks of Iron and Steel Building Materials

Of the six iron and steel building materials covered in this review, output of two items was slightly higher in the first half of 1952 and four products were below production levels of a year earlier. Output of galvanized sheets rose 5 per cent to 58 thousand tons and wire nails and spikes at 46 thousand tons were 2 per cent above the record production of the first half of 1951.

Among the materials moving to lower levels of output, steel pipe and fittings declined 6 per cent to 79 thousand tons and structural steel at 87 thousand tons decreased 22 per cent from the first six months of 1951. Cast-iron pressure pipe and soil pipe were down 37 and 43 per cent respectively to 45 thousand tons and 18 thousand tons.

Data on sales and stocks of three iron and steel building materials reflect some easing of current requirements for the building industry. Although sales of wire nails and spikes at 45 thousand tons equalled those of the first half of 1951, stocks at the end of June, 1952, were up 41 per cent to 14 thousand tons. In the case of steel pipe and cast-iron soil pipe producers' shipments declined 14 and 41 per cent respectively to 77 thousand tons and 16 thousand tons in the first half of 1952. Stocks of both items at the end of June, 1952, were at the same levels as a year earlier.

## Imports and Exports of Iron and Steel Building Materials

With the exception of skelp, imports of four iron and steel building materials were lower in the first half of 1952 than in the same period of 1951. Skelp imports reached 84.8 thousand tons in the current period, an increase of 30 per cent. Wire nails led the declines with a decrease of 44 per cent to 3 thousand tons and galvanized sheets and structural steel imports eased off 18 and 7 per cent to 3.4 thousand tons and 131 thousand tons in the first half of 1952.

Exports of iron and steel building products represent only fractional proportions of domestic output. Structural steel exports totalled 3 thousand tons, wire nails 106 tons and cast-iron soil pipe 600 tons during the first half of 1952 while foreign shipments of steel pipe and tubing amounted to 1,000 tons.

## SECTION 6.-BUILDING LABOUR

(See Tables 56-66)

## Employment and Earnings

Although the number of tradesmen engaged on residential construction was lower during the period January-May, 1952, owing to an average decrease of 13,800 units under construction from a year earlier, employment of construction workers on defence projects, defence supporting projects and natural resources development partially counter-balanced the decline in employment on residential building. After a relatively slow start in the early months of 1952 the pace of construction operations increased to about the same proportions by mid-year 1952 as in 1951. According to the quarterly Labour Force survey carried out by the Dominion Bureau of Statistics, the number employed in the construction industry totalled 356,000 during the week ending May 31, 1951, remaining at the same level as the number employed in construction one year earlier. Employment in all non-agricultural industries showed a slight rise of 1 per cent to 4.3 million representing a slower rate of increase than in recent years.

Sample data on the number of hours worked per week suggest that construction workers on the average were putting in a longer work week in the first half of 1952 than in the same period a year earlier. On the basis of sample data for May 31, 1952 the work week averaged 42 hours as against 43 hours a year earlier. Reflecting substantially increased weekly wages, especially among the larger construction firms (see below), labour income in the construction industry during the first half of 1952 increased 25 per cent to $\$ 393$ million.

This rate of increase was markedly higher than the rise in total labour income which was affected by work stoppages in several manufacturing industries (see p. 25). Total labour income advanced 12 per cent to $\$ 5.2$ billion in the more recent period.

Employment in construction firms with 15 or more employees increased more rapidly than total construction employment. Construction firms with 15 or more employees reported an increase of 8 per cent in average monthly employment to 130 thousand workers during the first six months of 1952. At the same time average weekly earnings rose 18 per cent to $\$ 57.46$ in association with a longer average work week of 2 hours per week and higher hourly earnings (see p. 27).

The relatively rapid rise in construction employment in the larger firms is associated with the fact that larger projects in the defence and defence supporting sector make up a greater proportion of the total construction program than last year.

## The Labour Market

With the heavy concentration of larger construction projects in some areas, and a decline of house-building activity in other areas, the labour market for construction workers varied considerably from shortages in some areas to surpluses in others. Overall the number of unemployed workers was higher in the first half of 1952 than in the same period of 1951. The number of persons without jols and seeking work in the construction industry as reported by the Labour Force Survey at May 31, 1952, totalled 20,000 workers, an increase of 6,000 or 43 per cent from the number without jobs a year earlier.

As an indication of employment conditions in urban areas, registrations of unplaced tradesmen in construction trades at National Employment Service offices showed a consistently higher level in the first seven months of 1952, averaging 47,900 per month as against 33,700 per month in the corresponding period of 1951. Unfilled vacancies, mainly for carpenters and unskilled construction workers were only slightly lower in the 1952 period, averaging 2,900 per month as compared with 3,300 per month a year earlier.

## Supply of Construction Workers

Immigration of skilled construction workers was higher during the first six months of 1952 than for any corresponding period in the post-war years, numbering 4,300 tradesmen, or 35 per cent above the number entering Canada in the comparable period of 1951, the previous post-war peak. Carpenters, brick layers and electricians continued to make up the largest of the trade groups representing 37, 22 and 17 per cent respectively of the total skilled construction workers.

A second source of skilled construction workers, the Federal-Provincial Apprenticeship Training Program, was at about the same level of activity in the 1952 period as in the previous year. New data on apprenticeship training show that 544 were graduated as journeymen during the the first six months of 1952 as compared with 571 graduates in the same period of 1951 . New entries registered under the program numbered 831, slightly lower than the 988 new apprentices in the first half of 1951. At the end of June, 1952, the number in training totalled 5,400 as against 5,600 a year earlier.

The levelling-off of overall construction employment in the first half of 1952, coupled with particularly heavy wage demands on the part of construction workers, led to a substantial increase in time lost through strikes.

Labour disputes in the construction industry increased from two strikes in the early months of 1952 to six in June, 1952, three more than in June, 1951. The number of working days lost was also higher in the first six months of 1952. Working days lost in this period, totalled 192,000 as compared with 13,000 in the corrcsponding period of 1951.

Owing to work stoppages through strikes mainly in the textile and clothing industries the number of working days lost in all industries also showed an appreciable increase in 1952. Days lost totalled 1.3 million, nearly six times the total in the first half of 1951.

## Employment and Earnings in the Building Material Industries

Although the number of persons employed in firms of 15 or more employees in building material industries was lower during the first half of 1952 , in line with reduced output of building products, average weekly earnings of employees in these firms increased during the period. Monthly employment averaged 112,200 workers during the first six months of 1952 , or 6 per cent less than a year earlier, while average weekly earnings at $\$ 54.44$ were 10 per cent higher than in the first six months of 1951.

## Non-Seasonal Lay-offs in the Building Material Industries

During the first seven months of 1952, the number of employees in building material industries laid off for non-seasonal reasons totalled 2,050 workers in 35 establishments. This compares with lay-offs of 1,300 workers in 23 establishments during the same period of 1951 . Indicative of some slackening in demand for lumber and lumber products mainly, about 70 per cent of those employees laid off in the 1952 period were released due to "lack of orders" as against 34 per cent in the 1951 period.

The shift in emphasis from problems of material supplies to those of orders, indicates that most building material industries have met the production requirements of the expansion of the last year and a half. "Lack of materials" was the determining factor in lay-offs of only 6 per cent of employees during the first seven months of 1952 while in the 1951 period this factor accounted for 40 per cent. The level of non-seasonal lay-offs for "other" reasons such as fires, repair of machinery etc. was about the same in the periods under review.

## Strikes and Lockouts in the Building Material Industries

There were fewer strikes in the building material industries in the 1952 period than a year earlier and only 10,000 working days were lost, representing a decline of 50 per cent from the number lost in the first six months of 1951.

## Legislation-The Unemployment Insurance Act, 1940

In June, 1952 certain benefits to unemployed persons registered under The Unemployment Insurance Act, 1940, were increased. Bill No. 332(1) "An Act to amend The Unemployment Insurance Act, 1940" was given Royal Assent on

[^5]July 4, 1952, and provides for more liberal terms in unemployment benefits. In general the amendments contained in the Bill encompass five major changes: (1) effective July 14,1952 , the maximum benefits for a person with a dependent is increased to $\$ 24$ a week from $\$ 21$ a week with comparable increases in most other benefit rates; (2) effective July 14, 1952, the period of "waiting days" prior to entitlement of unemployment insurance payments is reduced from 8 days to 5 days, not counting the one non-compensable day; (3) under authority of the Bill, regulations may be made which will provide that, if a claimant starts a second benefit year on termination of a previous benefit year, the waiting days normally served at the beginning of a benefit year may be deferred; (4) effective September 1, 1952, the period of supplementary benefit is extended 15 days permitting it to be paid from January 1 to April 15 in place of to March 31 as formerly authorized and (5) with reference to those seeking work, the principle of fair employment practice has been defined to provide that, in referring workers seeking employment at National Employment Offices, equal opportunities will be afforded applicants regardless of racial origin, colour, religious belief or political affiliations.

## SECTION 7.-BUILDING COSTS

(See Tables 67-70)
The record volume of overall construction activity in the first half of 1952 (see p. 12) was taking place without a corresponding rise in building costs. By the end of July, 1952, the combined index of wholesale prices of residential building materials and hourly wage rates of construction workers stood

at 260 , only 2 points above the index at January, 1952 and 3 points higher than at July, 1951. Hourly wage rates of construction workers continued to increase but the effect of this was partly offset by a decline in the price of some building materials.

## Residential Building Material Prices

Prices of residential building materials moved in a narrow range of increases and decreases during the 12 -month period to July, 1952. Modest increases in some fabricated items were overbalanced by a slow but steady decline in prices of lumber and its products, sufficient to draw the composite index in a downward trend. At July, 1952 the composite index of residential building materials was 278 , or 2 per cent less than at July, 1951.

As the shift in the construction industry continued from housing and commercial buildings to power development, railroads, pipelines and industrial defence supporting structures, the demand for construction materials was concentrated on heavy structural items such as iron and steel products, cement, gravel, sand and stone and brick. Concurrently, the demand for lumber and its products on world markets was at a lower level than a year earlier and prices of this component were being moderately affected. With a decreased output of most fabricated building materials taking place (see p. 18), such price increases as occurred on individual items derived from cost adjustments in input factors such as raw materials and wage rates (see p. 25).

Of the nine sub-groups making up the composite index of residential building materials, price indexes of four were lower at July, 1952 than a year earlier; one was at the same level and four were higher. The group indexes for lumber and its products, paint and glass, and electrical equipment and fixtures each declined 4 per cent over the 12 -month period; roofing materials decreased 8 per cent and plumbing and heating equipment remained at the same level. The price index for brick, tile and stone rose 9 per cent, followed by a 6 per cent advance for cement, gravel and sand. Minor increases of 4 per cent and 1 per cent were recorded for "other materials" and lath, plaster and insulation materials.

## Wage Rates in the Construction Trades

Annual wage agreements negotiated during the spring months of 1952 raised the index of average hourly wage rates for construction workers to 235 $(1939=100)$ at the end of July, 1952. This represents an increase of 6 per cent above the index at December, 1951 and 8 per cent over the index at the end of July, 1951. Electricians, sheet metal workers and painters led the increases with 11 per cent for the 12 -month period; unskilled construction workers followed with 10 per cent and plasterers gained 9 per cent in average rates. Lesser raises of 6 per cent for carpenters and 5 per cent for bricklayers and plumbers were effected during the period under review.

## Rent, the Cost-of-Living and Wholesale Price Index

Reflecting a moderate rate of utilization of rental property associated with high income levels and flexible rent regulations in most provinces, the rent index continued a slow upward trend during the first nine months of 1952. Results of the August survey of rents showed a slight increase in the index of average rents to 143.4 ( $1939=100$ ), or 3 per cent above the level at January, 1952 and 6 per cent higher than a year earlier.

The cost-of-living index which measures average changes in prices of rental accommodation as well as consumer goods and other services, declined slightly in the first 9 months of 1952. At the beginning of September, 1952, the index stood at $184(1939=100)$, a decrease of 4 points from January, 1952, and 3 points lower than at September, 1951.

The wholesale price index which measures changes in average prices of eight major groups of commodities ${ }^{(1)}$ at the producer level, declined to 227 at the beginning of July, 1952. This represents a decrease of 5 per cent from January, 1952 and 8 per cent from July, 1951, when the index reached a post-war peak. The main contributors to the gradual decline during the past year have been the vegetable and fibres groups along with a recent weakening in the price index of chemicals.

## SECTION 8.-BUILDING INDUSTRY <br> (See Tables 71-72) <br> Bankruptcies in the Construction Industry, Building Material Industries and All Industries

The rising trend of total bankruptcies in all industries during 1951 was continued in the first half of 1952; and business failures in the construction industry and building material industries which declined in 1951 turned upward in the first six months of 1952.

Failures in the construction industry numbered 82, averaging \$17,400 in defaulted liabilities for each firm during the first half of 1952. This compares with 69 failures in the same period of 1951 when average liabilities per firm were valued at $\$ 18,680$. In building material industries, 23 failures occurred in the 1952 period having an average of $\$ 21,700$ in defaulted liabilities as compared with 10 failures with an average of $\$ 17,700$ in liabilities per firm in the 1951 period.

Bankruptcies in all industries during the first six months of 1952 increased 60 per cent from 517 in the 1951 period to 825 in the 1952 period. The average of defaulted liabilities per firm decreased to $\$ 14,044$ in the current period from $\$ 25,578$ in the preceding year.

## Conrmon Stock Prices

Market values of common stocks of 16 building material companies and eighty-two industrial companies remained higher in the first seven months of 1952 than in the corresponding months of 1951. In June and July, 1952 the index of stock prices of these companies moved up after faltering in the early spring months. The average of the index of stock prices of sixteen building material companies for the 1952 period stood at 285 ( $1939=100$ ) or 9 per cent higher than the comparable average a year earlier. The composite index for eighty-two industrial companies averaged 9 per cent higher reaching 197 ( $1939=100$ ) in the current period.

(1) Not yet available.
(2) Data shown are net of cancellations, reinstatements and adjustments.
(3) Data represent number and value of contracts taken over from Canadian Commercial Corporation.
(4) Includes 374 units started in defence projects which are in addition to starts shown in Table 21, Annual Reporl, 1951, C.M.H.C. p. 87.

The remaining 404 units were started in remote areas.
(5) Represents units completed in remote areas, 20 of which were in Manitoba and 63 in the Yukon. Excluded are 277 units completed
in remote areas as shown in Table 33, Housing in Canada, First Quarter, 1952, p. 69.
(6) Revised.

| 1st Quarter | 527 | 821 | 580 | 188 | 25 | 743 |
| 2nd Quarter | 582 | 827 | 576 | 279 | 13 | 842 |
| 3rd Quarter | 595 | 801 | 547 | 284 | 11 | 820 |
| 4th Quarter | 612 | 847 | 565 | 326 | 20 | 872 |
| Total, 1950 | 2,316 | 3,296 | 2,268 | 1,077 | 68 | 3,277 |
| 1951 |  |  |  |  |  |  |
| 1st Quarter | 615 | 875 | 627 | 299 | 13 | 913 |
| 2nd Quarter | 643 | 888 | 644 | 432 | 17 | 1,059 |
| 3rd Quarter | 626 | 802 | 592 | 434 | 11 | 1,015 |
| 4th Quarter | 669 | 880 | 627 | 458 | 12 | 1,073 |
| Total, 1951 | 2,553 | 3,445 | 2,490 | 1,623 | 53 | 4,060 |
| 1952 |  |  |  |  |  |  |
| 1st Quarter | 649 | 928 | 664 | 473 | 16 | 1,121 |
| 2nd Quarter | 681 | 918 | 662 | 430 | 19 | 1,073 |

(1) Excludes castings and forgings (see p. 125).
(2) This production is calculated as 72.5 per cent of Canadian ingot production on the basis of an average overall loss of 27.5 per cent in conversion from ingot to finished product (see p. 125).

(1) At beginning of period. The number in training at the beginning of each period does not equal the number in training at the beginning of the previous period plus new entries less (2) Draduates during the period since a number of apprentices withdrew before completion of the apprenticeship training course. 3) Data for 1945 excludes New Brunswick for the year and Alberta, Saskatchewan and Manitoba for the first nine months of the year.

PART III
SOURCES AND EXPLANATORY NOTES

## SOURCES AND EXPLANATORY NOTES

Sources and explanatory notes are organized in the order of the factual material referred to in Parts I and II. Where figures are rounded to the nearest thousand or million, totals do not necessarily equal the sum of their constituent items. Frequent references are made to the Dominion Bureau of Statistics and to the Central Mortgage and Housing Corporation. In the following notes these organizations are designated by the abbreviations, "D.B.S." and "C.M.H.C." respectively.

## PART 1 <br> CHARTS

FIGURE 1.-VOLUME OF GROSS AND NET RESIDENTIAL CAPITAL FORMATION VALUED IN 1939 DOLLARS, CANADA, 1945-JUNE, 1952.
Chart based on data shown in Table 13.
FIGURE 2.-PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS, CANADA, QUARTERLY, 1948-1952.
Chart based on data shown in Tables 44 and 50.
FIGURE 3.-INDEXES OF RESIDENTIAL BUILDING MATERIAL PRICES, WAGE RATES OF CONSTRUCTION WORKERS AND COMBINED INDEX OF MATERIAL PRICES AND WAGE RATES, CANADA, JANUARY, 1948JULY, 1952.
Chart based on data shown in Tables 67-69.

## PART II <br> TABULAR MATERIAL

TABLE 1.-NET FAMILY FORMATION, CANADA, 1945-JUNE, 1952.
Net family formation is the total number of new families formed minus the number of existing families dissolved. The number of families formed is taken as the sum of marriages and married female immigrants. Dissolutions represent the sum of deaths to married persons, emigration of married females and divorces.

Data on marriages for the period 1945-1951, deaths to married persons for the period 1945-1949 and data on divorces for the period 1945-1951, obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Quarterly data on deaths to married persons during 1951 estimated by the Economic Research Department, C.M.H.C., on the basis of total deaths during the corresponding periods of 1950. Quarterly data on divorces during 1949-1951 have been averaged from annual totals and will be revised when actual data become available.

TABLE 2.-NUMBER OF BIRTHS BY SEQUENCE OF ARRIVAL, CANADA, 1945JUNE, 1952.
Data obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Total births in this table do not equal total births in Table 3 as in this table illigitimate and still births are excluded.

TABLE 3.-NUMBER OF BIRTHS, DEATHS, MARRIAGES AND TOTAL POPULATION, CANADA, 1945-JUNE, 1952.
Population data for 1951 represent the census count for that year. Data for births, deaths and marriages for the period 1945-1952 obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S.

Until the end of 1949 , annual and monthly data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1950 and 1951 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review regardless of month of occurrence.

TABLE 4.-NUMBER OF IMMIGRANTS TO CANADA, BY SEX, MARITAL STATUS AND AGE GROUP, 1945-JUNE, 1952.
Data compiled by courtesy of D.B.S. from data supplied by the Immigration Branch, Department of Citizenship and Immigration.
TABLE 5.--NUMBER OF EMIGRANTS FROM CANADA, BY SEX, MARITAL STATUS AND AGE GROUP, 1945-JUNE, 1952.
Figures for the period 1948 to 1951 are estimated by the Economic Research Department, C.M.H.C., on the basis of data supplied by D.B.S., and the Foreign Exchange Control Board. For the period July, 1948, to December, 1950, basic data have been revised in accordance with Statistics of Emigration from Canada, D.B.S. Reference Paper No. 26, May, 1951. All data are provisional and subject to adjustment following the 1951 Census.

Estimates of total emigration are based on the number of Canadian immigrants entering the United States as supplied by the Immigration and Naturalization Service of the United States Department of Justice for the period 1945 to December, 1951. Data were also available on the number of Canadian immigrants entering the United Kingdom during the period 1945 to September, 1951 as obtained from periodic issues of the British Board of Trade Journal. An allowance was made for emigration to other countries. Estimates for 1950 and 1951 are based on the number of persons who applied to the Foreign Exchange Control Board for change of status from resident to non-resident, with the intention of leaving the country permanently. An allowance was made for emigrants leaving Canada without making application to the Foreign Exchange Control Board.

Estimates for emigration of married females and children under eighteen years of age are based on data supplied by the Foreign Exchange Control Board as indicated above.

Data for 1952 are estimated by the Economic Research Department C.M.H.C. on the basis of emigration for the first quarter, 1951 and are provisional.

TABLE 6.-NUMBER OF IMMIGRANTS TO AND EMIGRANTS FROM CANADA, BY COUNTRY, 1945-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C. Sources are the same as for Tables 4 and 5.

TABLE 7.-NUMBER OF NEW DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, CANADA, 1945-JULY, 1952.
Sources of data shown in Table 7 are as follows:
1945 Housing Statistics, 1946, D.B.S.
1946 Data for completions obtained from Dwelling Units and New Buildings Containing Dwelling Units Reported by Municipalities and other Areas as Completed in the Nine, Montbs Ending September 30, 1947, D.B.S. Data for units under construction at the end of 1946 obtained from Housing Bulletin No. 1, March, 1948, D.B.S.
1947 Data for completions obtained from Supplement to Housing Statistics, 1947, D.B.S. Data for units under construction at the end of 1947 obtained from Housing Bulletin No. 1, March, 1948, D.B.S. Data for starts during 1947 estimated by Economic Research Department, C.M.H.C. from figures supplied by Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-1952 Data obtained from monthly isuses New Residential Construction, D.B.S.
Data for housing units completed in Canada during 1945, 1946 and 1947 are based on returns received from 623 mumcipalities out of a total of 3,845 or approximately 66 per cent of the total population of incorporated municipalities. For detailed explanation of coverage and statistical technique used see Housing Statistics, 1946, D.B.S.

Estimates for 1948, 1949 and 1950-April, 1952 are based on the results of a nationwide survey carried out each month by D.B.S. with the co-operation of C.M.H.C. All metropolitan arcas and urban centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

The number of units under construction as shown for the end of July, 1952, does not equal the number shown as under construction at the end of 1951 plus starts less completions during the first 7 months of 1952. The figures for units under construction are subject to adjustment each month because of errors in the designation of starts between single and multiple units, and also because of the cancellation of some starts reported in previous months.

TABLE 8.--NUMBER OF NEW PERMANENT DWELLINGS STARTED BY URBAN AND RURAL, AREAS, CANADA, 1947-AUGUST, 1952.
The data on dwellings started in metropolitan areas and in other cities and towns with population of 5,000 and over are obtained by direct count by C.M.H.C. Dwellings started in other areas are estimates prepared by D.B.S. based on sample surveys. Sources of data are:

1947 Data compiled by the Economic Research Department, C.M.H.C., from figures supplied by the Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-July, 1952 Data obtained from monthly issues New Residential Construction, D.B.S. August, 1952 Statistical Department, C.M.H.C.
TABLE 9.-NUMBER OF NEW PERMANENT DWELLINGS COMPLETED BY URBAN AND RURAL AREAS, CANADA, 1947-JUNE, 1952.
Sources are the same as for Table 7.
TABLE 10--NUMBER OF NEW PERMANENT DWELLINGS COMPLETED, BY TYPE OF UNIT, CANADA, 1947-JUNE, 1952.
1947 Data obtained from Supplement to Housing Statistics, 1947, Dwelling Units-Types of Buildings and Types of Construction for Individual Municipalities and Other Areas, D.B.S. 1948-April, 1952 Sources are the same as for Table 7.

TABLE 11.-DISTRIBUTION OF NEW COMPLETED DWELLINGS UNSOLD, BY NUMBER OF MONTHS UNSOLD, AND AVERAGE NUMBER OF MONTHS UNSOLD, METROPOLITAN AREAS AND OTHER MAJOR CITIES, CANADA, 1950-JUNE, 1952.
Data based on reports compiled by the Statistical Department, C.M.H.C.
TABLE 12.-GROSS AND NET RESIDENTIAL CAPITAL FORMATION, CANADA, 1945-JUNE, 1952.
Data for this publication for the years 1945-1948 were obtained from Residential Real Estate in Canada, by O. J. Firestone, University of Toronto Press, 1951, Tables 77 and 78, pp. 281 and 283. Annual data shown in Residential Real Estate for 1949 were preliminary and have been revised. The quarterly estimates for 1950 and 1951 were made by the Economic Research Department, C.M.H.C. Data for 1949-1952 include an allowance for Newfoundland.

Gross residential capital formation represents an estimate of expenditures on new construction, on major improvements and alterations to existing structures. It includes also supplementary house-building expenses of installed non-moveable equipment and payments for professional land and repair services such as architectural and legal fees.

Capital consumption represents an estimate of depreciation and accidental losses to the stock of residential capital such as may be caused by fire, flood, or storm.

Both gross residential capital formation and gross capital consumption are net of raw land and relate to the value of assets created by construction activity only.

Information on the services and methods of estimation may be found in detail in Residential Real Estate, pp. 418-430.

TABLE 13.-VOLUME OF GROSS AND NET RESIDENTIAL CAPITAL FORMATION VALUED IN 1939 DOLLARS, CANADA, 1945-JUNE, 1952.
Source is the same as for Table 12. Values involved are based on 1939 prices throughout.

TABLE 14.-EXPENDITURES ON NEW CONSTRUCTION, MAJOR IMPROVEMENTS, REPAIR AND MAINTENANCE, RESIDENTIAL AND OTHER CONSTRUCTION, AND GROSS NATIONAL EXPENDITURE, CANADA, 1945-JUNE, 1952.
Data for "other" construction for the period 1945-1950 obtained from Private and Public Investment in Canada 1926-1951, Department of Trade and Commerce, Ottawa, p. 151. Annual data shown in Private and Public Investment in Canada for 1951 were preliminary and have been revised by the Economics Division, Department of Trade and Commerce.

For the period 1945-1952 housing data estimated by the Economic Research Department, C.M.H.C.

Data on gross national expenditure for the period 1945-1951 obtained from National Accounts, Income and Expenditure, 1926-1950, Research and Development Division, D.B.S. and National Accounts, Income and Expenditure, 1951, D.B.S.

TABLE 15.--NEW RESIDENTIAL CONSTRUCTION, BUILDING PERMITS ISSUED IN 204 MUNICIPALITIES, CANADA, 1945-JUNE, 1952.
Data for 1945 -February, 1947, obtained from annual and monthly issues of Building Pernits Issued in Canada, Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. Data for March-December, 1947, compiled by the Economic Research Department, C.M.H.C., from returns made to D.B.S. Data for 1948-1952, provided by courtesy of the Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. The number of new dwelling units includes conversions.

Data for May-November 1948, January-April 1949, and November-December 1950 based on returns from 203 municipalities, December 1951, 202 municipalities. Data for January, February and March, 1952 are based on returns from 203, 202 and 199 municipalities.
TABLE 16.-NEW RESIDENTIAL CONSTRUCTION, CONSTRUCTION CONTRACTS AWARDED, CANADA, 1945-AUGUST, 1952.
Data obtained from monthly issues of The Building Reporter, published by Hugh C. Maclean Publications Limited, Toronto.

Contracts awarded may be used as an indicator of trends but they are liable to misinterpretation if used as indicators of total volume of residential activity. They relate only to projected work which may or may not be commenced. Coverage is apt to vary over a period of time.

Data on the number of new bousing units estimated to be involved in contract awards for apartments which replace the series on apartment blocks shown in The Building Reporter have been derived by the application of a conversion factor to the value of contract awards for apartments made during the periods shown. This has been done to make the data more comparable with the series on building permits issued.

The conversion factor used is simply the average construction cost per dwelling unit of an apartment of the solid masonry type (brick facing and masonry blocks) prevailing throughout Canada during the first six months of 1946 as outlined in the study Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 40-41. 1946 construction costs for the units are estimated at $\$ 6,053$, of which $\$ 3,178$ are material costs, $\$ 2,270$ are on-site labour costs and $\$ 605$ are overhead and profits. This conversion factor was adjusted according to variations in the composite index of wholesale prices of residential building materials and wage rates in the construction industry as contained in Table 67.
TABLE 17.-NUMBER OF DWELLINGS IN NEW STRUCTURES STARTED, PUB-LICLY-INITIATED, AND PRIVATELY-INITIATED, WITH AND WITHOUT FEDERAL GOVERNMENT FINANCIAL ASSISTANCE, CANADA, 1947-JUNE, 1952.
Data compiled by Economic Research Department, C.M.H.C. Publicly-initiated housing comprises starts under the Veterans' Rental Housing Program of C.M.H.C. and the Armed Service Married Quarters' Program of the Department of National Defence, the Federal-provincial housing projects and units built under the Capital Assistance provisions of the Department of Defence Production. Privately-initiated housing with Federal Government financial assistance in the form of loans, covers starts under the National Housing Act, 1944, The Farm Loan Act, 1927, and the Veterans' Land Act, 1942. Privately-initiated housing with Federal Government financial assistance in the form of guarantees comprises starts under the Farm Improvement Loans Act, 1944, and the Rental Insurance Plan, except those rental insurance units approved for National Housing Act loans.

National Housing Act starts for 1947 and 1948 were distributed by quarter according to the pattern established by the number of housing units approved for loans. Starts under the rental insurance plan, the Farm Loan Act, 1927, and the Farm Improvement Loans Act, 1944, were considered to be equal to the number of units approved under these provisions.

As this tabulation covers new permanent houses only, Federal Government guarantees under the home extension provisions of The National Housing Act, 1944, financial assistance for Emergency Shelter units, and construction of temporary units by the Department of National Defence, are excluded.

Data on "publicly-assisted housing starts" for 1950 and 1951 as shown in this table differ from those shown in the 1950 and 1951 issues of Mortgage Lending in Canada, C.M.H.C., Table 36, under the title "Dwellings Started and Completed by Principal Source of Financing and Province, Canada". The latter table includes starts of dwellings constructed for Government employees but excludes dwellings started, on which double depreciation benefits have been extended. This table on the other hand, excludes starts on dwellings built for Government employees and includes dwellings built under the double depreciation assistance. An additional difference between data in the two tables is due to the fact that only permanent dwellings are covered in this table whereas starts on temporary dwellings are included in Table 36 of the above mentioned issues of Mortgage Lending in Canada.

TABLE 18.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, NUMBER AND AMOUNT OF GROSS LOANS APPROVED AND NUMBER OF DWELLINGS FINANCED, CANADA, FEBRUARY, 1945AUGUST, 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 19.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, NUMBER AND AMOUNT OF LOANS APPROVED FOR NONDEFENCE WORKER HOUSES BUILT WITH AGREED SALE OR CONTRACT PRICE, AND NUMBER OF DWELLINGS FINANCED, CANADA, OCTOBER, 1951-AUGUST, 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 20.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, GROSS LOANS APPROVED BY TYPE OF IOAN, CANADA, FIRST HALVES 1951 AND 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 21.-LENDING OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, ANALYSIS OF GROSS LOANS APPROVED, SHOWING NUMBER AND AMOUNT OF LOANS, NUMBER OF DWELLINGS, AVERAGE ESTIMATED COST, LENDING VALUE, AMOUNT OF LOAN, FLOOR AREA, AND CONSTRUCTION COST PER SQUARE FOOT, BY TYPE OF DWELLING, CANADA, FIRST HALVES 1951 AND 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 22.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, HOME EXTENSION LOAN GUARANTEES APPROVED, CANADA, APRIL, 1946-JUNE, 1952.
Data compiled by the Mortgage and Real Estate Division, C.M.H.C.
TABLE 23.--OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, RENTAL INSURANCE PLAN, NET NUMBER OF PROJECTS, DWELLINGS, AND TOTAL ESTIMATED COST, APPROVED WITH LOANS UNDER THE N.H.A. AND WITH CONVENTIONAL LOANS, CANADA, JULY, 1948-JUNE, 1952.
Data compiled by the Statistical Department, C.M.H.C. on a net basis. As a result allowances for cancellations, adjustments and reinstatements have been made in the month they were reported and negative figures may appear in a particular month, during which there were more cancellations reported than approvals made.

Whereas the data under the heading "Loans under N.H.A." comprise all Rental Insurance projects with N.H.A. loans approved at time of compilation, the data under the classification "with conventional loans" are residual and in addition to Rental Insurance. Projects without N.H.A. loans may include cases where an N.H.A. loan may be approved in a subsequent quarter. The distribution between N.H.A. loans and
conventional loans are preliminary for the last quarter shown and are subject to revision in the Fourth Quarter, 1952 issue of Housing in Canada.
TABLE 24.-OPERATIONS UNDER THE NATIONAL HOUSING ACT, 1944, RENTAL INSURANCE PLAN, AVERAGE NUMER OF ROOMS, FLOOR AREA, ESTIMATED COST, AND MAXIMUM MONTHLY RENT PER UNIT, FOR GROSS PROJECTS APPROVED, CANADA, 1948-JUNE, 1952. Data compiled by the Statistical Department, C.M.H.C.
TABLE 25.-FEDERAL-PROVINCIAL HOUSING PROJECTS UNDER SECTION 35 OF THE NATIONAL HOUSING ACT, 1944, CANADA, 1950-JUNE, 1952.
Data compiled by the Economic Research Department C.M.H.C. from reports prepared by the Statistical Department, C.M.H.C.

Data on expenditures are from the records of the Accounting Division, C.M.H.C.
The projects started in 1950 refer to St. John's, Newfoundland; in 1951 to St. John, New Brunswick, and (Ottawa, Windsor and St. Thomas, Ontario; and in 1952 to Prince Rupert, British Columbia, Moose Jaw, Saskatchewan, St. John's, Newfoundland, and Fort William and Midland, Ontario.

TABLE, 26.-FEDERAL-PROVINCIAL LAND ASSEMBLY PROJECTS UNDER SECTION 35 OF THE NATIONAL HOUSING ACT, 1944, CANADA, 1950-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C. from rcports supplied by the Statistical Department and Accounting Division, C.M.H.C.

The construction work involved in each project varies from one to another but in general a complete land assembly project includes surveying of roads and lots, installation of main and lateral sewers, water mains and hydrants, the ditching, grading, gravelling and surfacing of roads and driveways, the installations of street lights and filling and grading of grounds. The completion of improvements means that the lots are ready for sale but not necessarily sold.

TABLE 27.-LAND ASSEMBLY PROJECTS UNDER SECTION 11 B OF THE NATIONAL HOUSING ACT, 1944, CANADA, 1947-JUNE, 1952.
Data compiled by the Property Management Department, Mortgage and Real Estate Division, C.M.H.C.
TABLE 28.-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF NEW DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, AND EXPENDITURE, CANADA, 1941-JUNE, 1952.
Data to the end of 1946 compiled by Wartime Housing Limited.
Financial data for 1947 -December, 1951 compiled by the Accounting Division, C.M.H.C. For the years 1947 and 1948, data on the number of housing units started, completed and under construction compiled by the Program Section, Construction Division, and for $1949-1952$ by the Statistical Department, C.M.H.C.
TABLE 29.--VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, CONSTRUCTION UNDER CONTRACT, BY UNITS, CANADA, 1945-JULY, 1952.
Data to the end of 1948 compiled by the Program Section, Construction Division, and for 1949 -July, 1952 by the Statistical Department, C.M.H.C.
TABLE 30.-VETERANS' RENTAL HOUSING PROJECTS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, DWELLINGS UNDER CONTRACT, BY TWENTY-THREE STAGES OF CONSTRUCTION, CANADA, JUNE, 1949-JUNE, 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 31.--PROPERTY MANAGEMENT OPERATIONS UNDER CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF RENTAL UNITS UNDER ADMINISTRATION, AND PER CENT VACANT, BY TYPE OF UNIT, CANADA, 1947-JULY, 1952.
Data compiled by Statistical Department from data supplied by the Property Management Section, Mortgage and Real Estate Division, C.M.H.C.

TABLE 32.-ARMED SERVICE MARRIED QUARTERS, CONSTRUCTION OPERATIONS BY CENTRAL MORTGAGE AND HOUSING CORPORATION, NUMBER OF DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, AND ACTUAL EXPENDITURES, CANADA, 1949JUNE, 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 33.-CONSTRUCTION OF NEW SCHOOLS BY CENTRAL MORTGAGE AND HOUSING CORPORATION FOR THE DEPARTMENT OF NATIONAL DEFENCE, NUMBER OF SCHOOLS FOR WHICH CONTRACTS HANE BEEN AWARDED, STARTED AND COMPLETED, AND EXPENDITURES, CANADA, 1950-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C., from reports prepared by the Statistical Department, C.M.H.C.

Data on expenditures are from the records of the Accounting Division, C.M.H.C.
TABLE 34.-HOUSING OPERATIONS AND OTHER CONSTRUCTION OPERATIONS BY DEFENCE CONSTRUCTION LIMITED, CANADA, NOVEMBER, 1950-JULY, 1952.
Data compiled by the Statistical Department, C.M.H.C.
TABLE 35.-HOUSING OPERATIONS BY CENTRAL MORTGAGE. AND HOUSING CORPORATION FOR THE DEPARTMENT OF DEFENCE PRODUCTION, NUMBER OF CONTRACTS AWARDED AND DWELLINGS FOR WHICH CONTRACTS HAVE BEEN AWARDED, NUMBER OF DWELLINGS STARTED, COMPLETED, AND UNDER CONSTRUCTION, AND EXPENDITURES, CANADA, 1951-JUNE, 1952.
Data compiled by the Statistical Department and Accounting Division, C.M.H.C.
TABLE 36.-CONSTRUCTION OPERATIONS UNDER THE VETERANS' LAND ACT, 1942, NUMBER OF NEW DWELLINGS STARTED, COMPLETED AND UNDER CONSTRUCTION, AND EXPENDITURE, BY TYPE OF PROJECT, CANADA, SEPTEMBER 23, 1943-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C. from information obtained by courtesy of the Research and Statistics Division, Department of Veterans' Affairs. Data on expenditures for 1950 -June, 1952 are not comparable with data for previous years as excess costs borne by the veterans and certain improvements included in previous years are not available for 1950-June, 1952.

TABLE. 37-LENDING OPERATIONS UNDER THE CANADIAN FARM LOAN ACT, 1927, CANADA, 1929-JUNE, 1952.
Data obtained by courtesy of the Canadian Farm Loan Board, Department of Finance.
TABLE 38.-LENDING OPERATIONS UNDER THE FARM IMPROVEMENT LOANS ACT, 1944, CANADA, MARCH, 1945-JUNE, 1952.
Data obtained by courtesy of the Supervisor, The Farm Improvement Loans Act, Department of Finance.

TABLE 39.--OPERATIONS UNDER THE QUEBEC HOUSING ACT, NUMBER AND AMOUNT OF LOANS APPROVED, NUMBER OF DWELLINGS INVOLVED, AND PROVINCIAL COMMITMENTS, JANUARY, 1948JUNE, 1952.
Data obtained by courtesy of the Quebec Farm Credit Bureau.
TABLE 40.-GROSS MORTGAGE LOANS ON REAL ESTATE APPROVED BY LENDING INSTITUTIONS, BY TYPE OF LOAN, CANADA, 1947JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C. from monthly reports submitted by 114 lending institutions comprising 40 life insurance companies, 36 trust companies, 21 loan companies, 8 fire insurance companies, and 9 fraternal societies. These companies advanced 93 per cent of the total cash disbursements on mortgage loan account for Canadian real estate made by all companies of these types in 1951.

TABLE 41.-GROSS MORTGAGE LOANS APPROVED ON NEW NON-FARM HOUSING CONSTRUCTION, BY TYPE OF LENDING INSTITUTION, AND BY TYPE OF DWELLING, CANADA, 1947-JUNE, 1952.
Data compiled by Economic Research Department, C.M.H.C. Source is the same as for Table 40.

TABLE 42.--NUMBER OF MORTGAGES REGISTERED AND DISCHARGED GREATER TORONTO AREA AND PROVINCE OF ONTARIO, 1945-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C. The number of mortgages registered, Greater Toronto Area, 1945-June, 1952 were obtained from the Toronto Registry Office, York East and West Registry Offices and Toronto and York Land Titles Office.

The number of mortgages discharged, Greater Toronto Area, 1945-June, 1952, were obtained from the Toronto Registry Office, York East and West Registry Office and estimates of discharges from Toronto and York Land Titles Office.

The number of mortgages registered and discharged in the Province of Ontario reflect mortgage activity as recorded in the 65 registry and 16 land titles offices of the province. Data for the 65 registry offices and one land titles office are based on original records made available by courtesy of the Inspector of Legal Offices, Province of Ontario. Coverage of the remaining 15 land titles offices were obtained by means of a sample survey of the mortgage registrations and discharges during the month of September, 1951, recorded in 10 land titles offices. This information was used in conjunction with the data mentioned above to produce estimates for the province as a whole. For further details of the sample survey see Mortgage Lending in Canada, 1951, p. 100.
TABLE 43.-INIDEXES OF PRODUCTION OF CONSTRUCTION MATERIALS, BY LUMBER, OTHER CONSTRUCTION MATERIALS, AND TOTAL, AND INDEX OF DOMESTIC DISAPPEARANCE OF CONSTRUCTION MATERIALS EXCLUDING LUMBER, CANADA, 1945-JUNE, 1952.
Data compiled by Economic Research Department, C.M.H.C. from information provided by courtesy of D.B.S.

The combined index of construction material production is based on the total value of output of the more important construction materials in terms of 1946 prices. It is designed to measure the overall trend in the physical output of construction materials. Because of the high degree to which producers of construction materials, with the exception of lumber, are responsive mainly to the requirements of the domestic market, the output index provides a rough indication of trends in domestic construction activity.

A closer indication of trends in domestic construction activity, however, can be obtained from the index of domestic disappearance, designed to measure the rate at which the construction industry absorbs materials. To obtain this index, the production index was adjusted, where possible, by the addition of imports, the deduction of exports, and the replacement of the original production data with data on factory sales of materials to take account of producers' inventory changes. The series on domestic disappearance is subject to the limitation that it does not reflect changes in the level of dealers' inventories. This means that in respect to materials such as lumber, where dealers' inventories represent a comparatively high proportion of yearly output or factory shipments, the series shown here cannot be relied on to give an accurate short term indication of the actual absorption of materials on the site. For this reason, lumber was excluded from the series on domestic disappearance shown in this tabulation.

The indexes are based on 23 materials, including lumber, for 1945 , and on 41 materials for the period 1946-June, 1952. The lumber index in the production series is shown separately because of its heavy weight in relation to the other materials.
TABLE 44.-PRODUCTION OF SELECTED BUILDING MATERIALS, CANADA, 1945-JUNE, 1952.
Sources of data for building materials listed in Table 44 are as follows:
Sawn Lumber:
1945-1949 Annual issues The Lumber Industry in Canada, D.B.S.
1950-June, 1952 Monthly issues Production, Sbipments and Stocks on Hand of Sawmills, D.B.S.

Hardwood Flooring:
1946-June, 1952 By courtesy The Timber Controller, Department of Trade and Commerce. The unit measure, square feet, represents a surface measure, plus an allowance for waste and tongue irrespective of thickness.
Wood Fibre Building Board:
1945-1948 By courtesy of the Forest Products Statistics Section, D.B.S.
1949-June, 1952 Monthly issues Rigid Insulating Board Industry, D.B.S.
Building Brick: Data relate to face and common clay brick.
1945-June, 1952 Estimates prepared by Economic Research Department, C.M.H.C., based on actual production reported to D.B.S. by 55 producers accounting for approximately 97 per cent of brick shipments during 1945.

Data on production of brick, 1946-December, 1951, shown in Canadian Statistical Review, D.B.S. represent production of these firms only.
Flue Linings:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Vitrified Sewer Pipe:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Structural Tile:
1945-1952 Monthly issues of Report on Clay Products Made from Canadian Clays, D.B.S.
Mineral Wool Batts:
1945-1949 Annual issues The Stone Industry in Canada, D.B.S.
1950-1952 Monthly issues Mineral Wool, D.B.S.
Granulated and Loose Mineral Wool:
1945-1949 Annual issues The Stone Industry in Canada, D.B.S.
1950-1952 Monthly issues Mineral Wool, D.B.S.
Cement:
1945-1949 Annual issues The Cement Manufacturing Industry in Canada, D.B.S.
1950-1952 Monthly issues Cement, D.B.S.
Concrete Blocks:
1945-1947 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
1948-1952 Estimates prepared by the Economic Rescarch Department, C.M.H.C. based on monthly issues Concrete Building Blocks and Cement Pipe, D.B.S. which accounts for 82 per cent of total production.
Cement Pipe and Tile:
1946 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
1947-1952 Monthly issues Concrete Building Blocks and Cement Pipe, D.B.S.
Single Pole Switches:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Duplex Receptacles:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Outlet Boxes:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Non-Metallic Sheathed Cable:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Gypsum Wallboard:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-1952 Monthly issues Production, Shipments and Stocks of Gypsum Products, D.B.S.
Gypsum Lath:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-1952 Monthly issues Production, Shipments and Stocks of Gypsum Products, D.B.S.

## Gypsum Plaster:

1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-1952 Estimates prepared by the Economic Research Department, C.M.H.C. Production data shown in monthly issues of Production, Shipments and Stocks of Gypsumn Products include sundry plasters such as moulding plaster, etc. These were excluded in the figures shown in this table.

Builders' Hardware:
1945 Iron and Steel and Their Products 1943-1945, D.B.S.
1946-1949. Annual issues The Hardware, Tools and Cutlery Industry in Canada, D.B.S.
1950-1952 Estimates prepared by Economic Research Department, C.M.H.C. based on factory sales reported to D.B.S. by firms accounting for about 98 per cent of total sales in 1949.
Bath Tubs:
By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Sinks:

By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Wash Basins:

By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Warm Air Furnaces:
1945-1949 The Heating and Cooking Apparatus Industry, Canada, 1949, D.B.S.
1950-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Domestic Heating Boilers:
1945-1949 Annual issues The Heating and Cooking Apparatus Industry, Canada, D.B.S.
1950--1952 By courtesy the Mining, Metallurgical and Chemical Statisties Section, D.B.S.
Cast-Iron Radiators:
1945-1949 Annual issues The Heating and Cooking Apparatus Industry, Canada, D.B.S.
1950-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Hot Water Storage Tanks:
1945-1949 Annual issues The Sheet Metal Products Industry in Canada, D.B.S.
1950-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Electric Hot Water Tank Heaters:
1945-1948 Annual issues Tbe Electrical Apparatus and Supplies Industry in Canada, D.B.S.
1949 The Heating and Cooking Apparatus Industry, Canada, 1949, D.B.S.
1950-1952 Estimates prepared by Economic Research Department, C.M.H.C. based on returns made to D.B.S. from firms accounting for about 86 per cent of production in 1949.
Asphalt Shingles:
1945-1947 Asphalt Roofing Industry, January, 1949, D.B.S.
1949-1950 Aspbalt Roofing Industry, January, 1951, D.B.S.
1951-1952 Monthly issues Asphalt Roofing Industry, D.B.S.
Tar and Asphalt Felts:
1945 By courtesy the Forest Products Statistics Section, D.B.S.
1946-1947 Asphalt Roofing Industry, March, 1948, D.B.S.
1948-1952 Monthly issues Asphalt Roofing Industry, D.B.S.
TABLE 45.-SALES AND STOCKS OF SFIECTED BUILIDING MATERIALS, CANADA, 1949-JUNE, 1952.
Data based on monthly reports supplied by courtesy the Mining, Mctallurgical and Chemical Statistics Section, D.B.S.

TABLE 46.--IMPORTS OF SELECTED BUIDDING MATERIALS, CANADA, 1945JUNE, 1952.
Data obtained from monthly issues of Trade of Canada-Imports Entered for Consumption, Department of Trade and Commerce.

The data on wallboard building board for the period 1945-1947 include insulating board. The data for the period 1948-December, 1950 exclude insulating board as the Emergency Exchange Conservation Act which was in effect from 1948 to December 31, 1950 prohibited the importation of this type of building board.
TABLE 47.-EXPORTS OF SELECTED BUILDING MATERIALS, CANADA, 1945JUNE, 1952.
Data obtained from monthly issues of Trade of Canada-Exports-Canadian Produce, Department of Trade and Commerce.

Data on lumber exports include planks, boards and squared timber.
Data for lumber in monthly issues of the Canadian Statistical Review, D.B.S. include planks and boards only.

TABLE 48.-PRODUCTION OF PIG IRON AND STEEL INGOT AND ESTIMATED DOMESTIC DISAPPEARANCE OF ROLLING MILL PRODUCTS, CANADA, 1945-JUNE, 1952.
Data on production of domestic pig iron and steel ingots obtained from Iron and Steel and Their Products in Canada, 1943-1945, D.B.S. for 1945, and for subsequent periods from annual issues of The Primary Iron and Steel Industry in Canada, D.B.S., and monthly issues of Primary Iron and Steel, D.B.S. Annual and quarterly revisions for the period 1945-1951 have been made by the Steel Division, Department of Defence Production. Data on production of rolling mill products made from Canadian ingot are estimated by applying a conversion factor of .725 to steel ingot processed in Canada. The conversion factor of .725 allows for the estimated weight loss involved in turning iron and steel shapes out of the ingot form. Data on imported rolling mill products are derived by reducing the total of imported steel, including ingots, by the estimated production loss sustained in processing its ingot content.

Domestic disappearance of rolling mill products is the sum of domestic production and imports less exports.

The volume of rolling mill products being made available to Canadian consuming industries as indicated in "domestic disappearance" exceeds that of "net total domestic shipments" of primary iron and steel shapes from Canadian rolling mills as shown in Table 49. This difference is accounted for by the fact that a portion of imports of primary iron and steel shapes is shipped direct to consuming industries without being processed in Canadian mills. Another factor is that data on production of rolling mill products from Canadian ingot as shown in this table do not show actual production but represent output of iron and steel shapes that would be forthcoming from current ingot production.
TABLE 49.-SHIPMENTS OF PRIMARY IRON AND STEEL SHAPES TO CONSUMING INDUSTRIES, CANADA, 1946-JUNE, 1952.
Data obtained from monthly issues of Canadian Statistical Review, D.B.S. Monthly revisions during 1951, provided by the Steel Division, Department of Defence Production.

The classification "Merchant Trade Products" refers to items produced in integrated mills and covers wire and wire products. The "miscellaneous" category includes all steel used in the following: agricultural and other farm implements, machinery and tools, mining and lumbering industries, pressing, forming and stamping industries, public works and utilities, shipbuilding and steel specifically marked for National Defence purposes. During the year 1949 the amount of steel used for National Defence purposes amounted to .3 per cent of the total miscellaneous category. The classification "Producers' Interchange" represents the amount of steel shipped to producers' own plants or to other plants within the primary industry for further processing e.g. black sheet to galvanizing department; hot rolled bars to make railway track material. See also explanatory note to Table 48.

TABLE 50.-PRODUCTION OF SELECTED IRON AND STEEL BUILDING MATERIALS, CANADA, 1945-JUNE, 1952.
Cast-Iron Soil Pipe and Fittings:
194: Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Cast-Iron Pressure Pipe and Fittings:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Scction, D.B.S.
Steel Pipe and Fittings:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Structural Steel:
1945--1952 By courtesy the Steel Division, Department of Defence Production. Structurals include T-bars, Z-bars, H-beams, I-beams, uprights, angles, etc., where any one leg of the section is 3 inches or over.
Wire Nails and Spikes:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1949 The Hardware Tools and Cutlery Industry in Canada, 1949, D.B.S.
1950-1952 Monthly issues Nails, Tacks and Staples, D.B.S.

## Galvanized Sheets:

1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1945-1949 Primary Iron and Steel Products, December issues, 1945-1949, D.B.S.
1950-1952 Monthly issues, Primary Iron and Steel, D.B.S.
TABLE 51.-SALES AND STOCKS OF SELECTED IRON AND STEEL BUILDING MATERIALS, CANADA, 1949-JUNE, 1952.
Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

TABLE 52.--IMPORTS AND EXPORTS OF SELECTED IRON AND STEEL BUILDING MATERIALS, CANADA, 1945-JUNE, 1952.
Data on imports obtained from monthly issues of Trade of Canada--Imports Entered for Consumption, Department of Trade and Commerce.

Data on exports obtained from monthly issues of Trade of Canada-ExportsCanadian Produce, Department of Trade and Commerce.

TABLE 53.-VOLUME OF SELECTED BUILDING MATERIALS UNLOADED AT RAILWAY STATIONS IN CANADA, 1945-JUNE, 1952.
1945-1948 Data obtained from annual issues of Summary of Montbly Railway Traffic Reports, D.B.S.
1949-1952 Data obtained from issues of Montlly Traffic Report of Railways of Canada, D.B.S.
This series replaces the data on "Movement by Rail of Building Materials" appearing in Housing in Canada, prior to the October, 1950, issue which were based on freight loadings at stations in Canada. Whereas the present series covers only freight unloaded for domestic use, thereby including imports and excluding exports, the former series covered freight loaded at Canadian stations and thereby included exports and excluded imports. The present series more closely reflects the use of materials by the construction industry in Canada.

TABLE 54.--EMPLOYMENT AND WEEKLY PAYROLLS IN THE BUILDING MATERIAL INDUSTRIES, CANADA, 1946-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C. from information supplied by courtesy of the Employment and Payrolls Statistics Section, D.B.S.

Data are based on monthly reports from employers with 15 or more employees. The materials covered include: lumber, brick, tile, paints, pigments, varnishes, building blocks, roofing and sheathing paper, prefabricated houses, stoves, heaters, furnaces, iron pipe, sheet metal, wallboards, structural iron and steel fabrication, builders' hardware, glass, gypsum products, asbestos building materials, sanitary ware, mineral wool, sand and gravel.

TABLI: 55.-NON-SEASONAL LAYOFFS IN BUILDING MATERIAL PRODUCING INDUSTRIES, NUMBER OF ESTABLISHMENTS AND NUMBER OF EMPLOYEES BY REASON FOR LAYOFF, CANADA, MARCH, $1948-$ JULY, 1952.
Data obtained by courtesy the Economics and Research Branch, Department of Labour.

The figures are compiled on the basis of information submitted through day to day layoff reports and monthly summary reports made by local offices of the National Employment Service. Layoffs that are occasioned by normal seasonal factors are excluded from the compilation as far as possible. For the most part, reports are not received for layoffs involving less than ten workers or for those of less than two weeks' duration.

The layoffs cover manufacturing industries only, and are classified by their cause into three categories: lack of orders; lack of material; and other. The category "other" to a large extent represents non-economic factors such as flood and fire, but it includes some factors that are at least partly economic such as bankruptcies, strikes, and plant closures for repairs or retooling. The latter factors however do not directly reflect the immediate demand and supply conditions of the businesses concerned. The factors which have an immediate bearing on the supply side (lack of material) and on the demand side (lack of orders) of the businesses concerned are shown separately.

TABLE 56.-EMPLOYMENT, UNEMPLOYMENT, AND THE LABOUR FORCE BY INDUSTRY, CONSTRUCTION, NON-AGRICULTURAL AND ALL INDUSTRIES, CANADA, 1945-JUNE, 1952.
Data for 1945 on employment and unemployment in non-agricultural industries and for the Canadian labour force obtained from Canadian Labour Force Estimates, 1931-1950, Reference Paper No. 23, 1951, Labour and Prices Division, D.B.S. Data on employment in the construction industry for 1945 prepared by the Economic Research Department, C.M.H.C. from estimates of paid-workers in the construction industry as contained in Canadian Labour Force Estimates 1931-1950, p. 18.

The data in this table for the period 1946-1950 are based on the results of sample surveys undertaken by D.B.S. on an approximate quarterly basis. Results of these samples are published in periodic issues of The Labour Force Bulletin, D.B.S.

The estimates for this period are subject to sampling error. In general the smaller the estimate the larger the relative sampling error. In the case of unemployment estimates in the construction industry, the percentage error is apt to be quite high, and reliance can be placed on these figures only with careful reservations. The coefficient of variation for estimates of employment in the construction industry is estimated at 6 per cent. Roughly this means that there are about two chances out of three that the sampling error will be less than 6 per cent; and about one chance in twenty that it will amount to more than 12 per cent.

The construction industry referred to in Table 66 includes engineering as well as building construction, whereas Table 61 covers the building industry only.

The industry classification used in Table 66 is that contained in the Standard Industrial Classification Manual, D.B.S. and has the business of the establishment as a basis whereas the Occupational class shown is based on the Standard Summary of Occupational Classes, D.B.S. where the basis is the actual job performed. Force account employees of non-construction firms are classified by occupation as construction workers if they are employed in construction work but are classified by industry according to the industrial classification of the employing firm. Conversely, non-construction employees in construction firms are classified by industry as construction employees but by occupation according to the work performed e.g. clerical, managerial. The Province of Manitoba was excluded from the June Labour Force Survey, 1950, because of flood conditions. To achieve comparability with preceding periods in this series the Labor and Prices Division, D.B.S. made estimates of the probable Manitoba components for non-agricultural industries and the Canadian labour force and included them with data appearing in the Canadian Labour Force Estimates 1931-1950. Estimates of the Manitoba component of the construction industry at June, 1950, were prepared by the Economic Research Department, C.M.H.C. and were included with the data provided in the Labour Force Survey, June, 1950.

TABLE 57.-FMPLOYMENT IN THE CONSTRUCTION INDUSTRY, PERCENTAGE DISTRIBUTION OF CONSTRUCTION WORKERS, BY NUMBER OF HOURS WORKED PER WEEK, CANADA, MARCH, 1949-JUNE, 1952.
Data based on a distribution of employed male construction workers by number of hours worked per week, provided by courtesy the Special Surveys Division, D.B.S. The average number of hours worked per week is shown to indicate overall seasonal variations and longer term trends. It is calculated from a frequency distribution, somewhat more detailed than that shown in this table, on the assumption that the mid-point of each class interval is representative of the group falling therein. The averages shown are subject to sampling error and should be interpreted with caution. The total number of hours worked per week represents the product of the average number of hours worked per week and the number of male workers employed in the construction industry.

TABLE 58.-EMPLOYMENT AND WEEKLY PAYROLLS IN THE BUILDING INDUSTRY AND INDEXES OF EMPLOYMENT IN THE BUILDING AND NON-AGRICULTURAL INDUSTRIES, CANADA, 1945-JUNE, 1952.
Data represent new series compiled by the Employment Section of the Labour and Prices Division, D.B.S. from reports made by employers with 15 or more employees. Indexes of employment in the building industry for the period 1945-1946 obtained by courtesy the Employment Section of the Labour and Prices Division, D.B.S.; for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings, 1947-1950,

1951, Employment Section of the Labour and Prices Division, D.B.S. and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S. Indexes of employment in the non-agricultural industries for the period 1945-1946 obtained from Employment, Payrolls and Average Weekly Earnings, 1936-1946, with Index Numbers of Employment, 19211938, 1951, Employment Section of the Labour and Prices Division, D.B.S.; for the period 1947-1950 from Employment, P'ayrolls and Average Weekly Earnings, 1947-1950, 1951, D.B.S. and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S.

Data for the period 1945-1949 obtained from annual issues of Annual Review of Employment and Payrolls, Employment Section of the Labour and Prices Division, D.B.S.; monthly data for 1950 from The Employment Situation, D.B.S. and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S.

Data on average weekly earnings in the building industry for the period 1945-1946 obtained by courtesy of the Employment Section of the Labour and Prices Division, D.B.S., for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings 1947-1950, and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S.

Data on the aggregate weckly payroll in the building industry are the product of the number of persons employed and the average weekly earnings.

TABLE 59.- NUMBER OF HOURLY WAGE-EARNERS, AVERAGE AND TOTAL NUMBER OF HOURS WORKED PER WEEK, AVERAGE HOURLY AND WEEKLY EARNINGS, BUILDING INDUSTRY, CANADA, 1945-JUNE, 1952.
Data compiled by the Employment Statistics Section, D.B.S., from reports made by employers with 15 or more employecs. Data are published monthly in Statistics of Average Hours Worked and Average Hourly Earnings, D.B.S.

The number of hourly wage-earners comprises workers who are employed by the hour and excludes salaried personnel and other employees whose earnings are not directly dependent on the number of hours worked. Consequently the total number of hourly wage-earners shown in this table is smaller than the number of persons employed as shown in Table 58.

The statistics on hours worked include overtime as well as the hours put in by parttime and casual workers. Hours credited to persons on leave with pay are also included.

The average hourly and weekly earnings shown represent gross earnings before deduction for taxes, unemployment insurance, etc.

TABLE 60.-LABOUR INCOME IN THE CONSTRUCTION INDUSTRY AND TOTAL LABOUR INCOME, CANADA, 1945-JUNE, 1952.
Data for the period 1945-1950 obtained from National Accounts, Income and Expenditure, 1926-1950, 1951, Research and Development Division, D.B.S. Monthly data for 1951-1952 obtained from Estimates of Labour Income, D.B.S.

A series on total construction outlay is shown in Table 14 and a comparison of the two series shows trends that are similar but not identical. There are two reasons for some variation in trend. First, the labour component of construction expenditure does not vary exactly as the other components because of changes in labour output per man hour and different rates of change in wage rates and construction material prices or management and overhead expenses. Second, in the case of labour income estimates a different coverage of the construction industry is made than for estimates of total construction expenditurc. Whereas Table 14 is intended to cover all construction expenditures ,the estimates in Table 60 do not include: 1) expenditures by unincorporated own account contractors and builders, 2) construction outlay by railway and telephone companics, 3) repair and maintenance construction outlay on force account by nonconstruction companies, 4) construction outlay by Federal, provincial or municipal governments.

TABLE 61.-UNFILLED VACANCIES AND UNPLACED APPLICANTS IN CONSTRUCTION TRADES, CANADA, DECEMBER, 1944-JULY, 1952.
Compiled by the Unemployment Insurance Section, Labour and Prices Division, D.B.S., based on weekly reports submitted by local offices of the Unemployment Insurance Commission.

TABLE 62.-NUMBER OF MALE WORKERS IN CONSTRUCTION TRADES APPLYING FOR UNEMPLOYMENT INSURANCE BENEFITS AND ESTABLISHING BENEFIT YEARS, CANADA, 1945-JUNE, 1952.
Data compiled by the Unemployment Insurance Statistics Section, D.B.S.
A person who has made at least 180 contributions into the Unemployment Insurance Fund, during the two year period immediately preceding a claim for benefits and has made 60 contributions in the year preceding the claim or 45 contributions in the 6 months preceding the claim establishes a benefit year. The series on the number of male workers in the construction industry applying for unemployment insurance benefits is supplementary to data shown in Tables 56 and 61.

The chicf limitations o fthe data in Table 62 as an index of unemployment are as follows: (1) coverage is confined to male workers in construction occupations who come under the terms of the Unemployment Insurance Act, 1941; to the end of 1947 these comprise employees on salary who earn less than $\$ 2,400$ annually, employees paid by the hour or by the day, and employees paid by the week unless they earn more than $\$ 3,120$ annually and apply for exemption from the Act; from January 1, 1948, to June 30, 1950 , salaried personnel earning less than $\$ 3,120$ have come under the Act and since July 1, 1950, the ceiling of insurability for salaried employees is raised from $\$ 3,120$ to $\$ 4,800$ a year; there are therefore, a number of construction workers not covered in this tabulation; (2) not all unemployed workers have made 180 days' contribution prior to their period of unemployment; (3) a worker who is unemployed twice during a 12 month period does not as a rule establish a benefit year the second time; (4) the establishment of a benefit year does not give an indication of the duration of unemployment.

TABLE 63.-APPRENTICESHIP TRAINING IN CONSTRUCTION TRADES, BY NUMBER IN TRAINING, NEW ENTRIES AND GRADUATES, CANADA, 1945-SECOND QUARTER, 1952.
Data compiled by the Vocational Training Branch, Department of Labour.
TABLE 64.-IMMIGRATION OF CONSTRUCTION WORKERS, BY TRADE, CANADA, 1945-JUNE, 1952.
Data compiled by the Economic Research Department, C.M.H.C., from data supplied by courtesy of D.B.S. and the Immigration Branch, Department of Citizenship and lmmigration.

TABLE 65.-EMIGRATION OF SKILLED CONSTRUCTION WORKERS, BY TRADE, CANADA, 1948-JUNE, 1952.
This series shows the number of persons who applied to the Foreign Exchange Control Board for change of status from resident to non-resident with the intention of leaving the country permanently. The data cover skilled construction workers only, with no separate information available on semi-skilled and unskilled construction workers who are lumped with "general labour". The monthy figures are by "date of application" and there is usually a time lag of a month or two between this date and the actual date of departure of the emigrant. This series is currently in the process of being checked and developed further. As revised data become available, they will replace the preliminary series shown here. The dara are supplied by courtesy of D.B.S. and the Foreign Exchange Control Board, the compilations being prepared by D.B.S. on the basis of information supplied by the Foreign Exchange Control Board to December, 1951. Data for 1952 estimated by the Economic Research Department, C.M.H.C.

TABLE 66.-STRIKES AND LOCKOUTS IN THE BUILDING INDUSTRY, THE BUILDING MATERIAL INDUSTRIES, AND IN ALL INDUSTRIES, CANADA, 1945-JUNE, 1952.
Data obtained from monthly issues of The Labour Gazette, Department of Labour.
TABLE 67.-INDEXES OF WHOLESALE PRICES OF RESIDENTIAL BUILDING MATERIALS, AND COMPOSITE INDEX OF ALL CONSTRUCTION MATERIALS, CANADA, 1945-JULY, 1952.
Revised composite index of wholesale prices of all construction materials obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. These indexes replace the series formerly published the first quarter, 1951
and preceding issues of Housing in Canada on wholesale prices of construction materials in general. For differences between this index and that published in previous issues of Housing in Canada see Wholesale Price Indexes 1913-1950, D.B.S. p. 4.

Indexes of wholesale prices of residential building materials obtained from Prices and Price Index Numbers of Residential Building Materials, March, 1948, D.B.S. and from Prices and Price Indexes, April, 1951, D.B.S. Indexes are converted from a 1935-1939 to a 1939 base. The composite index in this series is weighted according to the value of each listed group of materials entering into residential construction as estimated in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 60-67. Insofar as possible the price index for each group of materials is based on the component items shown in the above publication, and weighted accordingly. In some cases however, where the specific material components listed in the publication covered a wide varicty of individual items, representative material items were chosen and weighted according to total production in Canada.

The trend of residential building material prices does not vary to a significant extent from the trend for construction materials in gencral over the period 1926-1952. At July, 1952, the index for residential materials stood at 278 on the 1939 base, while the construction material index rose to 282.

The purpose of these group indexes is to reflect the average movement of prices of building materials having a characteristic use. In interpreting these indexes certain qualifications should be observed before drawing gencral conclusions from them. First, the price of each building material in a group rises or falis either independently of the other or possibly in an inter-related fashion depending on the extent of their homogeneity. Changes in prices of each material may also occur at varying atios from another. Consequently a group index provides no information with respect to price changes experienced by a specific building material within a group. Attention is drawn to Price Index Numbers of Residential Building Materials 1926 to 1948, Labour and Prices Division, D.B.S., March 1949, which sets out in detail the building materials comprising each group. Secondly, though the indexes are designed, by applying appropriate weighting techniques, to express national averages of price changes, they may be modified by regional cost differentials. This problem of regional differentials in housing construction costs is treated at length in Chapters 1 and 2, Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946.
TABLE 68.-INDEXES OF AVERAGE HOURLY WAGE RATES IN CONSTRUCTION TRADES AND IN ALL INDUSTRIES, CANADA, 1945-JULY, 1952.
Data obtained from the Department of Labour.
Indexes for the individual trades other than sheet metal workers, obtained by courtesy of the Economics and Research Branch for the years 1945-1950 and for the months of March and September, 1951. Monthly interpolations on these indexes for the year 1951 and January, 1952 were made on the basis of wage rate schedules for 15 cities supplied by courtesy of the Industrial Relations Branch. Each city in these calculations was weighted according to the number of housing unit completions in 1950. The weights used in calculating the index for all construction workers in these interpolations are based on the value of the on-site labour for each trade engaged in residential building as established in The Labour Value of the Building Dollar, Housing Administration, Department of Finance, Ottawa, 1943, p. 29. The indexes for 1945-1951 do not properly represent annual averages as they are based on surveys relating to pay periods which vary somewhat from year to year. The indexes for 1945 relate to October; 1946, Decenıber; 1947, July; 1948 and 1949, September; 1950 and 1951, March and September.

The index for sheet metal workers was calculated by the Economic Research Department, C.M.H.C., on the basis of rates for 15 cities obtained from annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 1945-1950 and by courtesy of the Industrial Relations Board for 1951 and 1952.

The index for all industries was estimated by the Economic Research Department, C.M.H.C., on the basis of the General Average Index as contained in annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 19451949 and as supplied by courtesy of the Economics and Research Branch for March and September, 1951 and March, 1952. Monthly index numbers for the last nine months, 1951, first seven months, 1952, estimated by the Economic Research Department on the basis of trend during 1950 and 1951.

The indexes for both all construction workers and all industries, including holiday pay allowances, include a percentage allowance to cover holiday pay assessments effective in most cities in Canada.

TABLE 69.-COMPOSITE INDEX OF WAGE RATES IN THE CONSTRUCTION INDUSTRY WITH WHOLESALE PRICES OF RESIDENTIAL BUILDING MATERIALS, AND WITH WHOLESALE PRICES OF ALL CONSTRUCTION MATERIALS, WHOLESALE PRICE INDEX OF ALL COMMODITIES, AND INDEXES OF COST OF LIVING AND RENT, CANADA, 1945-SEPTEMBER, 1952.
Composite index of residential building material wholesale prices and wage rates in the construction trades is based on the composite material index shown in Table 67 and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 68. Composite index of all construction material wholesale prices and wage rates in the construction trades is based on the composite material index obtained from Wholesale Price Indexes 1913-1950, D.B.S. and monthly issues of Prices and Price Indexes D.B.S., and the index of wage rates of all construction workers, insluding holiday pay allowances, shown in Table 68. The weights are based on the proportions established in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, p. 36. The materials are weighted 58.3 in percentage terms, and the wage rates 41.7.

Revised index of wholesale prices of all commodities obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. For differences between this index and that published in Housing in Canada, First Quarter, 1951, and previous issues, see Wholesale Price Indexes 1913-1950 D.B.S. p. 4.

Remaining data obtained from issues of Prices and Price Indexes, D.B.S., and converted to a 1939 base.

TABLE 70.--PERCENTAGE DISTRIBUTION OF NEW COMPLFTED DWELLINGS BY NUMBER OF MONTHS UNDER CONSTRUCTION, AND AVERAGE NUMBER OF MONTHS UNDER CONSTRUCTION, BY MONTH OF COMPLETION, CANADA, 1946-JUNE, 1952.
Data for 1946 and 1947 obtained from Annual Report, 1947, C.M.H.C., p. 18. Data for 1948 and 1949 obtained from monthly issues of Housing Bulletin, D.B.S. Data for 1950-1952 obtained from monthly issues of New Residential Construction, D.B.S.

TABLE 71.-BANKRUPTCIES IN THE CONSTRUCTION INDUSTRY, BUILDING MATERIAL INDUSTRIES, AND IN ALL INDUSTRIES, CANADA, 1945-JUNE, 1952.
Tabulation based on data obtained by courtesy the Superintendent of Bankruptcy, Department of Justice. The data on bankruptcies in all industries do not correspond exactly with the series published in the D.B.S. quarterly Commercial Failures, chiefly because the latter publication includes closures under the Winding Up Act, whereas the series in Table 71 covers the Bankruptcy Act only. There is the additional factor that the D.B.S. series excludes certain assignments and receiving orders under the Bankruptcy Act where the debtor makes a composition of assets and continues in business, whereas all receiving orders and assignments are covered in Table 71.

The series on building materials industry is designed to cover firms engaged in the production of: lumber, wallboard, bricks, flue linings, vitrified sewer pipe, structural tile, drain tile, cement, concrete brick, concrete building blocks, cement drain pipe and culvert tile, warm air furnaces, cast-iron radiators, hot water storage tanks, hot water tank heaters, domestic heating boilers, asphalt shingles, asphalt rolls, tar and asphalt felts, cast-iron soil pipe, sanitary ware, wrought iron pipes, lead pipe water service, structural steel, steel pipe, wire nails and spikes, mineral wool insulation, gypsum wallboard, gypsum lath, gypsum plaster, gypsum block and tile, electrical equipment, and wood fibre insulating board.

The classification of bankruptcies in the construction industry, covers general and trade contractors and small builders classed as "wage earners in the construction trades".

TABLE 72.-INDEXES OF STOCK PRICES OF COMMON SHARES OF SIXTEEN BUILDING MATERIAL COMPANIES AND EIGHTY-TWO INDUSTRIAL COMPANIES, CANADA, 1945-JULY, 1952.
Data for period 1945-1946 obtained from Prices and Price Indexes, December, 1946, D.B.S.

Data for 1947-1952 obtained from monthly issues of Prices and Price Indexes, D.B.S.
(1) Building materials index based on 16 stocks.
(2) All industrial index based on 74 stocks during 1945-1947, 76 during 1948 and 82 during 1949-1952.
(3) Data converted from a $1935-1939$ to a 1939 base.
