## FOREWORD

Housing in Canada is published quarterly, designed to provide factual information which will afford as complete and current a picture of the housing situation as possible.

The first issue, published in October, 1946, provided information on an annual basis for the period 1919-1945. In each subsequent issue the established material has been kept up to date on a quarterly basis and new data added. The present issue covers the period 1945 to the fourth quarter, 1952, providing monthly or quarterly data for 1951 and the more recent period. Each issue is arranged in three parts. The first part comprises a brief factual summary highlighting the results of the statistical material. The second part consists of the tabular material itself and is arranged in eight sections: (1) population trends; (2) house-building activity; (3) publicly-assisted house building; (4) real estate lending; (5) building materials; (6) building labour; (7) building costs; (8) building industry. The third and final part of this report provides sources of the factual material and explanatory notes where interpretation of the series seems appropriate.

Commencing with the April, 1950, issue of Housing in Canada, data on Newfoundland were shown separately in Section 9 of Part II. This separation was made partly in the interest of continuity of the tabular material for the rest of Canada and partly because of the immediate scarcity of statistical information for the Province of Newfoundland. Beginning with the second quarter issue, 1951, all statistical series have been revised to include data that are available for the Province of Newfoundland since March 31, 1949, when Newfoundland became part of Canada.

Some of the material incorporated in this report is obtained from original sources with other data submitted by various Federal Government departments, including the Department of Finance, Department of Trade and Commerce, Department of Labour, Department of Veterans' Affairs, Department of Citizenship and Immigration, the Superintendent of Bankruptcy, the Dominion Bureau of Statistics, and the Department of Defence Production. Data are also provided by the Quebec Government through its Farm Credit Bureau.

Housing in Canada concentrates on major trends in the housing field only and provides all available information of substance. As new and improved statistical series become available, they will be incorporated in future issues.

Ottawa, December, 1952.

## LIST OF TABLES

Table ..... Page

1. Net Family Formation, Canada, 1945 - September, 1952 ..... 29
2. Number of Births by Sequence of Arrival, Canada, 1945 - September, 1952 ..... 30
3. Number of Births, Deaths, Marriages and Total Population, Canada, 1945 - September, 1952 ..... 31
4. Number of Immigrants to Canada, by Sex, Marital Status and Age Group, 1945 - September, 1952 ..... 32
5. Number of Immigrants to and Emigrants from Canada, by Country, 1945 - September, 1952 ..... 33
6. Number of New Dwellings Started, Completed, and Under Construction, Canada, 1945 - October, 1952 ..... 34
7. Dwellings Started and Completed in New Structures, Actual and Seasonally Adjusted Annual Rates, by Quarter, Canada, Excluding Newfoundland, 1948 - September, 1952 ..... 35
8. Number of New Permanent Dwellings Started by Urban and Rural Areas, Canada, 1947 - November, 1952 ..... 36
9. Number of New Permanent Dwellings Completed by Urban and Rural Areas, Canada, 1947 - September, 1952 ..... 37
10. Number of New Permanent Dwellings Completed, by Type of Unit, Canada, 1947 - September, 1952 ..... 38
11. Distribution of New Completed Dwellings Unsold, by Number of Months Unsold and Average Number of Months Unsold, Metropolitan Areas and Other Major Cities, Canada, 1950 - September, 1952 ..... 39
12. Value of Gross and Net Residential Capital Formation, Canada, 1945 - September 1952 ..... 40
13. Volume of Gross and Net Residential Capital Formation, Valued in 1939 Dollars, 1945 - September, 1952 ..... 41
14. Expenditures on New Construction, Major Improvements, Repair and Maintenance, Residential and Other Construction, and Gross National Expenditure, Canada, 1945 - September, 1952 ..... 42
15. New Residential Construction, Building Permits Issued in 204 Municipalities, Canada, 1945 - September, 1952 ..... 43
16. New Residential Construction, Construction Contracts Awarded, Canada, 1945 - November, 1952 ..... 44
17. Number of Dwellings in New Structures Started, Publicly-Initiated, and Privately- Initiated, With and Without Federal Government Financial Assistance, Canada, 1947 - September, 1952 ..... 45
18. Lending Operations Under the National Housing Act, 1944, Number and Amount of Gross Loans Approved and Number of Dwellings Financed, Canada, February, 1945 - November, 1952 ..... 46
19. Lending Operations Under the National Housing Act, 1944, Number and Amount of Loans Approved for Non-Defence Worker Houses Built with Agreed Sale or Contract Price, and Number of Dwellings Financed, Canada, October, 1951 - November, 1952 ..... 47
20. Lending Operations Under the National Housing Act, 1944, Gross Loans Approved, by Type of Loan, Canada, First Nine Months, 1951 and 1952 ..... 48
21. Lending Operations Under the National Housing Act, 1944, Analysis of Gross Loans Approved, Showing Number and Amount of Loans, Number of Dwellings, Average Estimated Cost, Lending Value, Amount of Loan, Floor Area and Construction Cost per Square Foot, by Type of Dwelling, Canada, First Nine Months, 1951 and 1952. ..... 49
22. Operations Under the National Housing Act, 1944, Home Extension Loan Guarantees Approved, Canada, April, 1946 - September, 1952 ..... 50
23. Operations Under the National Housing Act, 1944, Rental Insurance Plan, Net Number of Projects, Dwellings and Total Estimated Cost, Approved with Loans Under the National Housing Act and with Conventional Loans, Canada, July, 1948 - September, 1952 ..... 51
24. Operations Under the National Housing Act, 1944, Rental Insurance Plan, Average Number of Rooms, Floor Area, Estimated Cost, and Maximum Monthly Rent Per Unit, for Gross Projects Approved, Canada, July, 1948 - September, 1952 ..... 52
25. Federal-Provincial Housing Operations Under Section 35 of the National Housing Act, 1944, Canada, 1950 - September, 1952 ..... 53
26. Federal-Provincial Land Assembly Operations Under Section 35 of the National Housing Act, 1944, Canada, 1950 - September, 1952 ..... 54
27. Expenditures Under Section 35 of the National Housing Act, 1944, Canada, 1950 - September, 1952 ..... 55
28. Land Assembly Projects Under Section 11B of the National Housing Act, 1944, Canada, 1947 - September 1952 ..... 5629. Veterans' Rental Housing Projects by Central Mortgage and Housing Corporation,Number of New Dwellings Started, Completed, and Under Construction, andExpenditure, Canada, 1941 - September, 195257

59. Unfilled Vacancies and Unplaced Applicants in Construction Trades, Canada, December, 1944 - October, 1952 ..... 98
60. Number of Male Workers in Construction Trades Applying for Unemployment Insurance Benefits and Establishing Benefit Years, Canada, 1945 - October, 1952. ..... 99
61. Apprenticeship Training in Construction Trades, New Entries and Graduates, by Number in Training, Canada, March, 1947 - October, 1952 ..... 100
62. Immigration of Construction Workers, by Trade, Canada, 1945 - October, 1952. ..... 101
63. Strikes and Lockouts in the Building Industry, the Building Material Industries, and in All Industries, Canada, 1945 - September, 1952 ..... 102
64. Indexes of Wholesale Prices of Residential Building Materials, and Composite Index of All Construction Materials, Canada, 1945 - October, 1952 ..... 103
65. Indexes of Average Hourly Wage Rates in Construction Trades and in all Industries, Canada, 1945 - October, 1952. ..... 104
66. Composite Index of Wage Rates in the Construction Industry with Wholesale Pricesof Residential Building Materials, and with Wholesale Prices of All ConstructionMaterials, Wholesale Price Index of All Commodities and Indexes of Cost of Livingand Rent, 1945 - November, 1952105
67. Percentage Distribution of New Completed Dwellings by Number of Months UnderConstruction, and Average Number of Months Under Construction, by Month ofCompletion, Canada, 1946 - September, 1952106
68. Bankruptcies in the Construction Industry, Building Material Industries, and in All Industries, Canada, 1945 - September, 1952 ..... 107
69. Indexes of Stock Prices of Common Shares of Sixteen Building Material Companies and Eighty-two Industrial Companies, Canada, 1945 - October, 1952 ..... 108

## PART I

FACTUAL SUMMARY

## SECTION 1.-POPULATION TRENDS

(See Tables 1-5)
Net family formation in Canada during the first three quarters of 1952, at 67,000 , continued close to the 1951 rate. Slightly more than one quarter of this was attributable to immigration, as indicated by net migration of married females into Canada.

Net family formation provides an indication of the growth in the housing requirements of the population as they are affected by the creation of new families, the dissolution of families, and migration into and out of the country.

The need for a family to obtain separate dwelling accommodation depends among other things on whether the family has children. For this reason a supplementary indication of the requirements of the population for new housing is provided by data on the birth of first children. These numbered 77,000 in the first nine months of 1952 , as compared with 74,000 in the corresponding period of 1951 .

Also affecting the housing requirements of the population, but not reflected in the net family formation series, or in the birth series, is the amount of internal migration within the country, particularly that associated with urbanization.

## Immigration and Emigration

Despite a decrease in the number of new immigrants in the third quarter of 1952, the large number entering in the first half of the year was sufficient to bring the nine month total to 135,000 , an increase of 4 per cent over 1951. Immigration from the United Kingdom accounted for the increase, the number of arrivals numbering 32,800 , or 50 per cent more than the 1951 period. A somewhat larger proportion of the 1952 immigration was composed of females and children under 18. These immigrants accounted for 70 per cent of the total as compared with 62 per cent in the 1951 period. Total emigration from Canada in the first six months of 1952 increased 63 per cent to 20,700 .

## SECTION 2.-HOUSE-BUILDING ACTIVITY <br> (See Tables 6-16)

The third quarter of 1952 saw a continuation of the rising trend in starts that became apparent earlier in the year. Starts of new dwellings, excluding conversions, which were running at a seasonally adjusted annual rate of 68,000 in the first quarter of 1952 , and 74,000 in the second quarter, rose to a rate of 83,000 in the third quarter (see Table 7). The annual rate of starts in the third quarter of 1952 was 40 per cent higher than in the corresponding period of 1951. A further increase in the rate of starts for the fourth quarter of the year is suggested by data covering the centres of 5,000 population and over. In these centres starts numbered 12,500 in October and November, over twice the number started in the same months of 1951.

Total starts for the first ten months of 1952 numbered 71,850 , as against 62,560 in the first ten months of 1951 . Completions were lower for the period, numbering 56,300 in 1952, compared with 66,000 for 1951 ; this decline reflects the smaller carryover of dwellings under construction at the beginning of 1952.

The rising volume of house building during 1952 reflects buoyant demand conditions supported by rising incomes, easier lending terms introduced under
-FICURE I-
DWELLINGS STARTED IN NEW STRUCTURES, ANNUAL RATES, ACTUAL AND SEASONALLY

The National Housing Act in October of 1951, ${ }^{(1)}$ and a greater availability of institutional mortgage funds. The progress that was being made was slowed down somewhat by the mounting shortage of serviced land.

## Residential Capital Formation

Reflecting the decline in completions during the first three quarters of 1952, and the smaller number of dwellings under construction, the value of new residential construction put in place declined by 6 per cent from $\$ 571$ million in the first nine months of 1951 to $\$ 537$ million in 1952. As costs were higher by about 4 per cent in the 1952 period, the decline reflects a drop of about 10 per cent in volume of construction.

The rising trend of construction during 1952 is indicated by the fact that in the third quarter the value of new residential construction, at $\$ 229$ million, was 14 per cent higher than in the third quarter of 1951.

Gross residential capital formation, which includes the value of major improvements and supplemental house building costs together with new residential construction, amounted to $\$ 598$ million in the first nine months of 1952. Capital consumption, including depreciation and accidental damage, is estimated at $\$ 336$ million for the corresponding period, yielding a value of $\$ 262$ million for net residential capital formation.

## Residential and Otber Types of New Construction

The demand for construction resources remained high in the first nine months of 1952 despite a lower volume of residential construction. The decline in the value of residential construction was more than offset by the increased level of non-residential construction investment. Total new construction put in place at $\$ 2,160$ million for the first three quarters of 1952 was 10 per cent higher than in 1951. Non-residential construction put in place, supported by increased outlays for defence, defence supporting and utility construction, rose 16 per cent from $\$ 1,340$ million in the 1951 period to $\$ 1,650$ million in the first nine months of 1952. The ratio of new residential construction to total new construction declined from 32 per cent for the first nine months of 1951 to 27 per cent in the corresponding months of 1952.

## SECTION 3._PUBLICLY-ASSISTED HOUSE BUILDING (See Tables 17-38)

Housing starts under various publicly-assisted programs numbered 22,000 during the first three quarters of 1952, about the same level as in 1951. During the third quarter however, publicly-assisted starts increased sharply to 10,600, an increase of 39 per cent from the number started in the same quarter of 1951. The third quarter increase is related to greatly expanded lending under The National Housing Act (see below).

The National Housing Act, 1944
By the end of November, 1952, over 50 per cent more dwellings had been approved for loans under The National Housing Act than in the same period of 1951. In the eleven month period, loans were approved for 33,400 dwellings as compared with 22,000 in 1951. The amount of loans approved rose from $\$ 145$ million in the 1951 period to $\$ 243$ million in the 1952 period.
(1)See Housing in Canada, First Quarter, 1952, p. 15.

The higher level of operations under the Act was in part an outcome of the lower down payment requirements announced in October of 1951, and was supported by strong demand conditions together with a greater supply of funds from private lending institutions (see p. 17).

The average loan on one storey dwellings increased from $\$ 6,770$ in the first 9 months of 1951 to $\$ 7,980$ in the same period of 1952. The average down payment on one storey dwellings was reduced proportionately by 19 per cent, from $\$ 3,940$ in the 1951 period to $\$ 3,175$ in the first three quarters of 1952. Average construction costs per square foot for this type of dwelling rose by 3 per cent from $\$ 9.10$ in the first nine months of 1951 to $\$ 9.35$ in the same months of 1952.

Of particular interest was the relatively greater increase in lending under the rental provisions of the Act. In the first nine months, 8,000 rental dwellings were financed under the Act, nearly double the number approved in the same months of 1951. The increase stemmed from expanding operations under the Rental Insurance Plan, and Section 8 of the Act.

The agreement with lending institutions, whereby direct Corporation loans may be made through the agency of a lending institution, ${ }^{(1)}$ provides for the payment of processing fees to the institutions for their services. The rates of payment for the fee arrangement have been announced and are as follows: $\$ 50.00$ for each loan in a project development up to and including five; $\$ 40.00$ for each of the next five loans and $\$ 30.00$ for each loan thereafter in the said project. For individual loans the rate is set at $\$ 50.00$.

## New Terms of Financing for Rental Housing

Changes in regulations designed to encourage increased activity in the construction of various types of rental housing accommodation were announced in October. ${ }^{(2)}$ The new regulations increase the maximum joint loans which may be made under Section 8 of The National Housing Act. For semi-detached or row housing, the maximum loan per unit is $\$ 8,500$; the maximum being scaled down according to the number of rooms and floor area per unit. The previous maximum loan per unit was $\$ 6,700$ for semi-detached dwellings and $\$ 8,500$ for one family dwellings in rental projects. The changes bring loans for semi-detached and row housing types into line with individual houses.

Increases were also announced for loans on multiple family dwellings under Section 8 , the maximum per unit being raised from $\$ 6,700$ to $\$ 7,200$ for a fully serviced unit of fireproof construction. Where the rental project includes elevators, the loan may be increased by as much as 80 per cent of the estimated costs of such elevators. Previously this type of increase had been allowed only for garages and other commercial buildings, or where the municipal services for the project were fully paid for at the date of completion.

## Federal-Provincial Housing and Land Assembly Projects

House-building activity under the Federal-provincial arrangements of Section 35 was at an increased level during 1952. During the first nine months 990 units were started and 230 were completed compared with 88 starts and 140 completions
(1) See Housing in Canada, Third Quarter, 1952, p. 14.
(2) Order-in-Council P.C. 4272, dated October 30, 1952.
in the same months of 1951. Units under construction at the end of September numbered 951. Expenditures during the period for housing and improvements together with land acquisition totalled $\$ 3.7$ million.

Under the land assembly provisions of the scheme, 870 lots were started, 1,070 completed and 350 sold or placed under option during the nine month period. At the end of September, 1,455 lots were under construction. Expenditures on land assembly projects during the period totalled $\$ 772,000$.

From the beginning of the program in 1950 until the end of September, 1952, Federal-provincial agreements have been signed covering 11,274 lots, 1,586 economic rental units and 816 subsidized rental units. Total expenditures including both federal and provincial shares amount to $\$ 7.4$ million.

## Land Assembly Projects Under Section 11B of the <br> National Housing Act, 1944

Section 11B of The National Housing Act guarantees the recovery of investment by lending institutions when such investment is for the acquisition and development of land for housing purposes. Under this section, 105 lots were sold in the first nine months of 1952, and 114 lots were unsold at the end of September. Expenditures by developers during the first nine months totalled $\$ 52,000$ compared with $\$ 333,000$ in the corresponding months of 1951.

Veterans' Rental Housing Projects Under Central Mortgage and Housing Corporation

During the first nine months of 1952, 505 housing units for veterans were started by Central Mortgage and Housing Corporation under Federal-municipal agreement. In the same period, 227 units were completed, leaving 492 under construction at the end of September. In the corresponding 1951 period, 580 units were completed and 330 remained under construction at the end of September. Expenditures totalled $\$ 2.5$ million compared with $\$ 3.0$ million in the first nine months of 1951.

## Veterans' Land Act

Housing operations under the Veterans' Land Act continued to decline in the third quarter, reducing total housing starts in the first nine months to 924 units compared with 1,300 units in the same period of 1951. This drop resulted from a decline in starts under the full time farming and small holding provisions of the Act. Expenditures on new construction declined 26 per cent to $\$ 5.6$ million from the same period of 1951.

## Armed Service Permanent Married Quarters

House building for the armed services by the construction division of Central Mortgage and Housing Corporation continued at a high level in 1952. Housing starts under the program in the first nine months numbered 2,250 , nearly double the number started in the same months of 1951. Completions during the period were slightly lower at 1,983 units.

Expenditures under the program totalled $\$ 19.5$ million, 20 per cent higher than in the first three quarters of 1951.

## Defence Construction Limited

In the first ten months of 1952, housing operations by Defence Construction Limited involved 334 starts and 439 completions. In the corresponding months of 1951 there were 640 units started and 36 completed.

The value of contract awards for all types of construction by the crown company totalled $\$ 151$ million in the first ten months of 1952 , about the same amount as in the same months of 1951.

## Department of National Defence Schools

By the end of September, 1952, 17 schools had been completed by Central Mortgage and Housing Corporation on behalf of the Department of National Defence. Contracts were awarded for two additional schools in 1952 and six schools remained under construction at the end of September. During the nine month period expenditures totalled $\$ 890,000$.

## The Canadian Farm Loan Act, 1927

Under this Act, the Canadian Farm Loan Board provides assistance in the form of mortgage loans to farmers for the construction and repair of farm homes and for other agricultural purposes. Loans approved for new residential construction in the first nine months of 1952 totalled 116 for $\$ 138,000$, including 28 for the construction of new farm dwellings. In the same period of 1951, 122 loans valued at $\$ 150,000$ were approved for new residential construction.

## Farm Improvement Loans Act

Lending for residential construction under the Farm Improvement Loans Act continued at about the same level as in 1951. While loans for the construction of new farm dwellings were slightly lower at 446 loans for $\$ 756,000$, loans for alterations of existing residential property were higher, numbering 1,000 for \$976,000.

The average amount of loan for farm houses was $\$ 1,700$ in the 1952 period compared with $\$ 1,600$ in the first nine months of 1951.

## Property Management Operations, Central Mortgage and Housing Corporation

As the sales program of war workers' and veterans' units continued, the number of rental dwellings under the management of the Corporation was reduced to 19,900 at the end of October, 6,000 fewer than one year earlier. Leases covering 217 units under the home conversion plan were returned to their owners during the period leaving only 8 units under Corporation management at the end of October.

The vacancy rate on dwellings under management was negligible at .2 per cent compared with .5 per cent during October, 1951.

## Rental Insurance Plan

Net approvals under the plan increased markedly during 1952, owing to a resumption of direct mortgage lending by the Corporation on Rental Insurance projects in October, $1951 .^{(1)}$ During the first nine months, 41 projects comprising 2,930 units were approved compared with 13 projects covering 600 units in the corresponding period of 1951.

The floor area of Rental Insurance units in 1952 averaged 931 square feet for 4 rooms, compared with 868 square feet and 3.6 rooms in 1951. Despite the larger size of units in 1952, the average estimated cost per unit dropped from $\$ 8,863$ in 1951 to $\$ 7,900$ in the first nine months of 1952.

[^0]
## The Province of Quebec Farm Credit Bureau

Bill No. 4, ${ }^{(1)}$ an Act to amend the "Act to improve housing conditions", ${ }^{(2)}$ was assented to the 10th of December, 1952. The bill empowers the government to pay a subsidy on interest charges in excess of 3 per cent on new dwellings built between January 15, 1948 and June 1, 1955. Formerly the Act applied to dwellings completed before January 15, 1953. The amendment also authorizes the government to appropriate for the purposes of this Act a total sum of $\$ 40$ million.

From January 15, 1948 to September 30, 1952, 15,000 applications covering 17,800 dwelling units have been approved by the Quebec Farm Credit Bureau. These have involved an interest subsidy commitment of $\$ 29.5$ million or an average contribution of $\$ 1,900$ per loan.

SECTION 4.-REAL ESTATE LENDING<br>(See Tables 39-41)

Real Estate Lending
Institutional mortgage lending on all types of property was 59 per cent higher in amount in the third quarter of 1952 than in the same quarter of 1951. The higher volume of lending in the third quarter brought the total value of mortgage loan approvals for the nine month period to $\$ 371.2$ million, 5 per cent greater than in the same months of 1951.

The volume of mortgage lending on new non-farm residential property was 15 per cent greater at $\$ 226$ million, comprising 61 per cent of the value of all approvals compared with 55 per cent in the 1951 period. The number of dwellings for which loans were approved showed a smaller increase of 5 per cent totalling 33,660 in the first nine months of 1952.

A similar trend was shown in mortgage lending on new non-residential property during 1952. In this category, the third quarter total was 85 per cent above the third quarter figure for 1951 , although the nine month total of $\$ 24.5$ million was 17 per cent below the total for the same months of 1951.

Mortgage lending on all types of existing property was higher in the third quarter although loans approved in the first nine months of 1952 declined in number and value from the same period of 1951. The number of loans on existing property dropped 7 per cent to 19,100 and the value of loan approvals declined 5 per cent to $\$ 116.4$ million. Mortgage loans on existing residential property covered 24,800 dwellings in the 1952 period and were valued at $\$ 86.9$ million.

## Mortgages Registered and Discharged and Real Estate Transfers Registered

Mortgage registrations on new and existing real estate in the Greater Toronto area numbered 32,000 in the first nine months of 1952 , about the same level as in the same months of 1951 . In the same period housing starts in the area dropped 13 per cent, an indication that a larger proportion of mortgage lending in Greater Toronto was being placed on existing property. Mortgage discharges were 5 per cent lower, numbering 21,100 during the period.

Real estate transfers in the Greater Toronto area numbered 31,160 in the first three quarters of 1952, a decline of 8 per cent from the same period of 1951. This marks the first time that mortgage registrations have exceeded the number of real estate transfers, which suggests a smaller proportion of mortgage loans associated with the sale of property, and possibly more second mortgages.
(1)1-2 Elizabeth II, Bill 4. Statutes of Quebec.
(2) See Housing in Canada, January 1950, pp. 16-17.

# SECTION 5.-BUILDING MATERIALS 

(See Tables 42-54)

## Production of Building Materials

Output of most building materials declined during the first three quarters of 1952, partly as a result of reduced foreign demand and partly because of the high level of inventories early in the year. The composite index of production of building materials other than lumber, which in the first nine months of 1951 averaged 295, was at a monthly average of 201 in the same period of 1952. Much of the decline occurred in the earlier months of the year when inventories of building materials were at a high level following heavy production in 1951. The reduction in output was also associated with a lower level of housing starts in the first half of the year. With rapidly increasing residential construction in the third quarter, inventories of building materials were reduced and production levels rose.

The decline in overall production was by no means general in the industry. Output of materials such as cement and structural steel increased to meet the heavy requirements of defence construction, transportation and resource development. Output of sawn lumber, which was sharply reduced in June by a strike of West Coast loggers and sawmill workers, was slightly higher in the third quarter of 1952 than in the same period of 1951. Gypsum plaster production was 30 per cent higher at 173,000 tons than in the first three quarters of 1951. Output of structural tile was also higher at 152,000 tons.

The extension of municipal services in new suburban developments created a sustained demand for sewer and water pipe in 1952. Production of vitrified sewer pipe rose to 3.3 million feet, 8 per cent higher than in the first nine months of 1951. In the same period production of cement pipe and tile was slightly higher at 178,000 tons.

Output of materials which are directly related to house building declined in 1952 although in most cases production had risen by the third quarter to meet the needs of an expanding residential construction volume. In this category, production of electrical materials dropped off 30 to 40 per cent and plumbing and heating products such as radiators, water heaters and furnaces, registered decreases up to 48 per cent. In the lumber products group, production of hardwood flooring and wood fibre insulating board declined 35 and 21 per cent respectively. Production of mineral wool insulation declined by 10 per cent. The output of asphalt shingles and concrete blocks continued at 1951 levels.

## Supply and Demand for Building Materials

Renewed demand for building materials, arising from increased activity in the building industry, resulted in higher sales in the third quarter of 1952 than in the same period of 1951. However, reduced factory sales during the first five months of the year held total sales for the nine month period below the level in the same months of 1951.

Sales of cement, which are less dependent on residential construction, were higher during the period but sales of 14 other items were lower. Decreases in sales were most pronounced in the case of electrical supplies which decreased 20 to 46 per cent in the period, and in sales of domestic heating boilers which dropped 45 per cent. Other materials in the plumbing and heating and sanitary ware groups registered lesser decreases. Shipments of gypsum and clay products were only slightly below 1951 levels.

Non-Seasonal Lay-offs in the Building Material Industries
As building material production fell off in 1952, non-seasonal lay-offs in the building material industry increased. The number of employees laid off for non-seasonal reasons totalled 2,530 in the first ten months compared with 2,216 in the corresponding period of 1951.
"Lack of orders" as a determining factor in lay-offs was of increasing importance in 1952. Non-seasonal lay-offs resulting from lack of orders accounted for 68 per cent of employees released for non-seasonal reasons compared with 29 per cent in 1951. Slackening demand for lumber and lumber products was responsible for most of the lay-offs in this category. Lack of materials, a problem accounting for 33 per cent of non-seasonal lay-offs in the 1951 period, was of no significant importance in 1952.

Reflecting decreased output in the first part of the year and increased sales in the third quarter, stocks of building materials were substantially lower at the end of September than one year earlier. Single pole switches and outlet boxes were the only major exceptions with stocks over 3 times higher at the end of the period. Stocks of gypsum and clay products were at about the same level as in September, 1951.

## Exports

Sales abroad of eight of the ten building materials for which export data are available registered decreases in the first nine months of 1952 from exports in the similar 1951 period. Exports of sawn lumber, Canada's principal building material export, were 3 per cent lower, owing to a decline in third quarter shipments to the United Kingdom. Sawn lumber exports however, amounted to one-half current production, the same proportion as in 1951. With the exception of wood laths, which remained at the same level, exports of lumber products, including hardwood flooring, wood shingles, and wood fibre insulating board, all declined in the nine month period.

Exports of cement were 77 per cent higher at 2.3 million barrels while sales abroad of building brick and paints were down 14 per cent and 47 per cent respectively from the 1951 period.

## Imports

Imports of building materials were at a reduced level during the first nine months of 1952. Of the fifteen materials reviewed only plumbing and heating products, comprising warm air furnaces, cast iron radiators and hot water tank heaters, were significantly higher than in the 1951 period.

Imports of common colourless window glass, Canada's principal building material import, dropped 52 per cent in 1952. Similar decreases occurred in imports of building brick and sanitary ware. Cement imports were at slightly higher levels despite increased domestic production. Hardwood flooring and building board were up slightly over 1951 levels. Imports of paints and varnishes, gypsum plaster, and builders' hardware, were all substantially lower than in the first nine months of 1951.

## Supply of Primary Iron and Steel Products

Steel order SD-3 of the Department of Defence Production, dated December 15, 1952, removed the limitation on steel inventories enforced by steel order SD-1 of January 9, 1952. The new order, which is effective January 1, 1953,

PRODUCTION OF TWELVE SELECTED BUILDING MATERIALS, CANADA,
QUARTERLY. $1948-1952$

MHOUSNDSS WARM AIR FURNACES

also revoked steel order SD-2 ${ }^{(1)}$ of the same date which restricted the purchase of steel materials for non-essential purposes, such as amusement or commercial buildings, without approval of the department. Under the new order, end use certification on purchase orders for steel materials is still required and the power to direct steel to defence contractors is retained.

The relaxation of control stems from a steadily improving supply position and reflects a considerable expansion in the Canadian steel industry.

## Shipments of Primary Iron and Steel Shapes

Net total domestic shipments of primary iron and steel shapes from Canadian mills to consuming industries totalled 2.3 million tons during the first nine months of 1952, remaining unchanged from the volume in the same period of 1951. The building construction industry, absorbing 280,000 tons, continued to receive 12 per cent of total shipments.

The pattern of distribution to end users remained much the same as in 1951. The only major change occurred in shipments to the automotive industry which dropped to 144,000 tons, 26 per cent less than in the first three quarters of 1951. In addition there were slight decreases in shipments to the containers industry and to wholesalers and warehouses.

The miscellaneous group, which includes implement and machinery industries, utilities, and steel for national defence purposes, received 624,000 tons, 12 per cent more than in the 1951 period. Shipments to the railway industry and to merchant trade groups were slightly heavier at 471,000 tons and 320,000 tons respectively.

## Production, Imports and Exports of Rolling Mill Products

Production of rolling mill products from Canadian ingot, together with imports of iron and steel forms, was at the same level as in 1951, totalling 3 million tons in the nine month period. This production was maintained despite a third quarter drop in imports resulting from work stoppages in American steel mills during June and July. Although third quarter imports were sharply reduced, total imports during the first nine months at 1.1 million tons were equal to the volume imported in the 1951 period. Exports of finished rolling mill products, mainly for the purpose of conversion and reimport, were slightly higher at 52,000 tons.

## Production, Sales, and Stocks of Iron and Steel Building Materials

None of the six materials covered in this review were at higher production levels during 1952. Output of galvanized sheets and wire nails continued at the same level totalling 85,000 tons and 65,000 tons respectively during the first nine months. Production fell off most sharply in the case of cast iron soil pipe and pressure pipe, each of which dropped 35 per cent to 28,000 tons and 64,000 tons respectively. Output of steel pipe dropped 17 per cent and structural steel production was 14 per cent lower than in the first nine months of 1951.

Producers' sales of iron and steel building materials were at lower levels throughout the first nine months of 1952. Only in the case of wire nails and spikes were sales equal to 1951 levels with sales totalling 64,000 tons in the first three quarters. Sales of steel pipe and cast iron soil pipe were down 15 per cent and 26 per cent to 107,000 tons and 28,000 tons respectively. Despite lower sales, stocks of these items at the end of September were nearly 50 per cent lower than

[^1]one year earlier, owing to decreased production. Stocks of wire nails and spikes, however, were nearly double at 22,000 tons.

## Imports and Exports of Iron and Steel Building Materials

The effect of the American steel strike was noticeable in third quarter imports of iron and steel building materials. The third quarter reduction brought total imports during the nine month period to substantially lower levels. Skelp imports at 107,000 tons were equal to imports in the same period of 1951, but imports of wire nails and spikes were 38 per cent lower. Imports of structural steel and galvanized sheets were both 24 per cent below imports in the 1951 period.

Exports of iron and steel building materials continued at nominal levels during 1952.

## SECTION 6.-BUILDING LABOUR

(See Tables 55-64)

## Employment and Earnings

Employment in the construction industry during the week ending August 16, 1952, was at the highest level ever recorded. According to the Dominion Bureau of Statistics Labour Force survey, employment in the industry reached 400,000, an increase of 4,000 over the previous high at August, 1951. This level was attained as a result of expanding house-building activity, increased construction associated with resources and utility development, and the defence construction program.

Sample data indicate that the average work week in the construction industry in September was 42 hours, unchanged from September, 1951. There is considerable evidence however that the 40 hour week is increasingly common in the industry. Of 107 recent collective agreements covering the building trades in the larger cities, nearly 80 per cent provided for the five day, 40 hour week.

By September, 1952, the average weekly wage in the building industry had risen to $\$ 61.11$, an increase of 12 per cent from September, 1951. The increased weekly wage resulted partly from a slightly longer work week but mainly from increased hourly earnings (see p. 96).

Increased employment together with higher weekly wages, combined to bring construction labour income to a new high of $\$ 261$ million in the third quarter of 1952, 23 per cent higher than in the same period of 1951. Total labour income, affected somewhat by labour stoppages, advanced more slowly, rising 12 per cent to $\$ 2,800$ million in the same period.

Employment in construction firms with 15 or more employees increased more rapidly than total construction employment. Employment in these firms numbered 159,000 in September, 1952, 4 per cent above the September, 1951 level. The rising employment in the larger firms is an indication of the higher proportion of the construction industry being devoted to large scale defence and development projects.

## The Labour Market

Despite the record level of employment in the construction industry referred to earlier, unemployment in the construction industry showed little change during August. The number of persons without work and seeking employment in the
construction industry as reported by the August Labour Force survey was 13,000, about the same number reported in August, 1951.

The low level of residential construction activity in the early part of the year was reflected in registrations of unplaced tradesmen at National Employment Service offices during the first ten months of the year. The monthly average of registrations during this period was 37,500 compared with an average of 26,600 in the 1951 period. Unfilled vacancies in the construction trades, mainly for carpenters and unskilled tradesmen, averaged 3,400 per month in 1952, compared with a monthly average of 3,800 in the same period of 1951.

## Supply of Construction Workers

As total immigration declined in the third quarter, immigration of skilled construction workers fell off accordingly. Over 1,000 tradesmen came to Canada during the third quarter of 1952, less than half the number entering in the third quarter of 1951. In the first nine months of the year, 5,400 tradesmen entered the country, 7 per cent fewer than in the corresponding period of 1951. Carpenters, bricklayers and electricians comprised the largest trade groups.

The Federal-Provincial Apprenticeship Training Program, a second source of skilled construction workers, turned out fewer graduates in 1952. In the first three quarters of the year, 815 journeymen were graduated compared with 929 in the 1951 period. At the end of September there were 5,000 apprentices in training, 450 fewer than at September, 1951.

## Strikes in the Building and Building Materials Industries

More time was lost through strikes in the building industry during the first nine months of 1952 than in any twelve month period in the post-war years, The number of working days lost totalled 326,000 , compared with 63,600 in the full year 1951. Relatively little time was lost in the building materials industries where 22,200 working days were lost, compared with 30,200 in the first nine months of 1951.

Time lost through strikes in all industries also rose sharply in 1952. In the first nine months, 2.6 million working days were lost, nearly four times the total in the same period of 1951 . This time amounted to .31 per cent of the estimated working time of wage and salary workers compared with .08 per cent in the first nine months of 1951.

## Employment and Earnings in the Building Material Industries

In line with a reduced output of building materials in 1952, employment in the industry fell off accordingly. Monthly employment in the building material industries averaged 112,300 in the first nine months of 1952,8 per cent less than the average employment in the first three quarters of 1951. Average weekly earnings in the industry at $\$ 54.90$ were 9 per cent higher than in the first nine months of 1951.

## SECTION 7.-BUILDING COSTS

(See Tables 65-68)
Wage rates of building tradesmen continued to rise moderately in the first three quarters of 1952 as construction employment reached record levels (see Section 6). Prices of residential building materials on the other hand showed very little change, with output for most items declining (see Section 5). As a
net result the combined index of wage rates and material prices at 261.8 in October, 1952, was only 3 points, or less than 2 per cent higher than a year earlier.

## Residential Building Material Prices

The increased demand for building materials in recent months has not been reflected in the composite index of building material prices. The October index was unchanged from July, and 2 per cent less than at October, 1951.

In line with the decreased demand for lumber products on the world markets, the price of this component dropped sharply from the October, 1951 level. The lumber products group index at 395 was 16 points lower than at October, 1951. This decrease, together with price reductions in paints and glass, roofing materials, plumbing and electrical equipment, was sufficient to offset moderate price increases in other building materials. These increases occurred in the cement and brick components.

This levelling off process became even more apparent in the three months ending October. In this period only two items, namely cement and roofing materials, registered price increases, while the prices of all other building materials either remained stable or declined.

## Wage Rates in the Construction Trades

The high level of construction activity together with strong seasonal demands for construction workers resulted in agreements for increased wage rates in the summer and fall months of 1952. At the end of October, 1952, the wage rate index for all construction workers, at 239 , was nearly 8 per cent higher than at October, 1951, and 4.1 points higher than at July, 1952.

## Rent, the Cost-of-Living and Wholesale Price Index

During 1952, the rental component of the cost-of-living index showed a slow upward trend. According to the November survey of rents, the index stood at $121.1(1949=100)$, an increase of 3 per cent from November, 1951. This index makes no allowance for the higher rent levels payable on new rental accommodation, as this difference is mainly attributable to the better quality of new dwellings. A portion of this difference, however, may properly be considered a price increase ${ }^{(1)}$ and an allowance for this factor is made in the rental component of the new consumers price index. The latter rent index increased at the same rate in the twelve month period, rising to 122.3 at November, 1952.

The cost of living index continued to decline slowly in 1952 and at the end of November stood at 182.1 ( $1939=100$ ), 3.4 per cent below the index one year earlier. The consumer price index, which measures changes in a larger and more representative group of consumers goods and services, declined more slowly. By the end of November the consumers price index, at $116.0(1949=100)$, had fallen 1.6 per cent from one year earlier.

The index of wholesale prices of all commodities, comprising 296 items, stood at 222.8 at October, 1952, the lowest point recorded since October, 1950.

## SECTION 8.-BUILDING INDUSTRY

(See Tables 69-70)

## Bankruptcies in the Construction Industry, Building Material Industries and All Industries

As activity in the construction sector of the economy increased in the second and third quarters of the year, bankruptcies in the construction industry

[^2]fell off. Only 17 bankruptcies occurred in the industry during the third quarter of 1952 compared with 24 in the third quarter of 1951. Liabilities involved in these failures increased from an average of $\$ 21,900$ to $\$ 28,200$ in the corresponding periods.

In the building materials industries the picture was less favourable with 32 failures reported compared with 16 in the first three quarters of 1951. Defaulted liabilities dropped from an average of $\$ 75,000$ in the 1951 period to $\$ 36,000$ in 1952, indicating a greater incidence of smaller firms involved.

Bankruptcies in all industries increased 9 per cent to 1,089 in the nine month period. The average liabilities of firms involved dropped from $\$ 22,300$ in the 1951 period to $\$ 15,100$ in 1952.

## Common Stock Prices

Continued confidence in the earning power of building materials producers was apparent from the index of stock prices of sixteen building material companies in 1952. This index averaged 288 in the first ten months of the year, 5 per cent higher than the comparable average in 1951. An increase of 4 per cent was established in the average stock price of 82 industrial companies. In both cases however a downward trend in market values developed in 1952, reversing the rising trend of the previous year. This gradual decline was most evident in industrial stock prices.

(1) Data for period 1945-1949 are annual averages.

Table 61.- Number of Male Workers in Construction Trades Applying for Unemployment Insurance Benefits and Establishing Benefit Years, Canada, 1945 --- September, 1952.

(1) Comprises foremen, inspectors, managers, structural iron workers, and other construction occupations.

Table 62.- Apprenticeship Training In Construction Trades, By Number In Training, ${ }^{(1)}$ New Entries and Graduates,
Canada, ${ }^{(2)} 1945$-- September, 1952.

(1) At beginning of period. The number in training at the beginning of each period does not equal the number in training at the beginning of the previous period plus new entries less
(2) graduates during the period since a number of apprentices withdrew before completion of the apprenticeship training course
(2) Data do not include Prince Fdward Island which has no organized apprenticeship training and Quetec for which no reports on apprenticeship training are available.
(4) Data for 1945 excludes New Brunswick for the year and Alberta, Saskatchewan and Manitoba for the first nine months of the year.
(4) Revised.

PART III
SOURCES AND EXPLANATORY NOTES

## SOURCES AND EXPLANATORY NOTES

Sources and explanatory notes are organized in the order of the factual material referred to in Parts I and II. Where figures are rounded to the nearest thousand or million, totals do not necessarily equal the sum of their constituent items. Frequent references are made to the Dominion Bureau of Statistics and to the Central Mortgage and Housing Corporation. In the following notes these organizations are designated by the abbreviations, "D.B.S." and "C.M.H.C." respectively.

## PART I <br> CHARTS

FIGURE 1.-Chart based on data shown in Table 17.
FIGURE 2.- Chart based on data shown in Tables 44 and 50.

## PART II <br> TABULAR MATERIAL

TABLE 1.--Net family formation is the total number of new families formed minus the number of existing families dissolved. The number of families formed is taken as the sum of marriages and married female immigrants. Dissolutions represent the sum of deaths to married persons, emigration of married females and divorces.

Data on marriages for the period 1945-1951, deaths to married persons for the period 1945-1949, and data on divorces for the period 1945-1951, obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Quarterly data on deaths to married persons during 1951 estimated by the Economic Research Department, C.M.H.C., on the basis of total deaths during the corresponding periods of 1950. Quarterly data on divorces during 1949-1951 have been averaged from annual totals and will be revised when actual data become available.

TABLE 2.-Data obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Total births in this table do not equal total births in Table 3 as in this table illigitimate and still births are excluded.

TABLE 3.-Population data for 1951 represent the census count for that year. Data for births, deaths and marriages for the period 1945-52, obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S.

Until the end of 1949, annual and monthly data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1950 and 1951 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review regardless of month of occurrence.
TABLE 4.- Data compiled by courtesy of D.B.S. from data supplied by the Immigration Branch, Department of Citizenship and Immigration.
TABLE 5.-Data compiled by the Economic Research Department, C.M.H.C. Sources are the same as for Table 4.

TABLE 6.-Sources of data shown in Table 6 are as follows:
1945 Housing Statistics, 1946, D.B.S.
1946 Data for completions obtained from Dwelling Units and New Buildings Containing Dwelling Units Reported by Municipalities and other Areas as Completed in the Nine Months Ending September 30, 1947, D.B.S. Data for units under construction at the end of 1946 obtained from Housing Bulletin No. 1, March, 1948, D.B.S.
1947 Data for completions obtained from Supplement to Housing Statistics, 1947, D.B.S. Data for units under construction at the end of 1947 obtained from Housing Bulletin No. 1, March, 1948, D.B.S. Data for starts during 1947 estimated by Economic Research Department, C.M.H.C. from figures supplied by Public Finance Statistics Division, D.B.S.

1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-1952 Data obtained from monthly isuses New Residential Construction, D.B.S.
Data for housing units completed in Canada during 1945, 1946 and 1947 are based on returns received from 623 municipalities out of a total of 3,845 or approximately 66 per cent of the total population of incorporated municipalities. For detailed explanation of coverage and statistical technique used see Housing Statistics, 1946, D.B.S.

Estimates for 1948-1952 are based on the results of a nation-wide survey carried out each month by D.B.S. with the co-operation of C.M.H.C. All metropolitan areas and urban centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

The number of units under construction as shown for the end of October, 1952, does not equal the number shown as under construction at the end of 1951 plus starts less completions during the first 10 months of 1952. The figures for units under construction are subject to adjustment each month because of errors in the designation of starts between single and multiple units, and also because of the cancellation of some starts reported in previous months.

TABLE 7.-Actual data were obtained from the same sources as are shown for the material in Table 6. The seasonally adjusted series was prepared by the Economic Research Department in the following manner:

First a seasonally adjusted quarterly series was prepared for each region, Maritimes, Quebec, Ontario, Prairies, and British Columbia. These series were added together to obtain quarterly figures for Canada and multiplied by four to express the series in terms of an annual rate. The regional seasonal indexes on which the series is based were calculated by the moving average method. Data for Newfoundland were excluded throughout because of the lack of quarterly information prior to 1950.

TABLE 8.-The data on dwellings started in metropolitan areas and in other cities and towns with population of 5,000 and over are obtained by direct count by C.M.H.C. Dwellings started in other areas are estimates prepared by D.B.S. based on sample surveys. Sources of data are:
1947 Data compiled by the Economic Research Department, C.M.H.C., from figures supplied by the Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-October, 1952 Data obtained from monthly issues New Residential Construction, D.B.S. November, 1952 Statistical Department, C.M.H.C.

TABLE 9.--Sources are the same as for Table 6.
TABLE 10.-Sources of data shown in Table 10 are as follows:
1947 Data obtained from Supplement to Housing Statistics, 1947, Dwelling Units_-Types of Buildings and Types of Construction for Individual Municipalities and Other Areas, D.B.S. 1948-1952 Sources are the same as for Table 6.

TABLE 11.-Data based on reports compiled by the Statistical Department, C.M.H.C.
TABLE 12.-Data for this publication for the years 1945-1948 were obtained from Residential Real Estate in Canada, by O. J. Firestone, University of Toronto Press, 1951, Tables 77 and 78, pp. 281 and 283. Annual data shown in Residential Real Estate for 1949 were preliminary and had been revised. The quarterly estimates for 1950 and 1951 were made by the Economic Research Department, C.M.H.C. Data for 1949-1952 include an allowance for Newfoundland.

Gross residential capital formation represents an estimate of expenditures on new construction, on major improvements and alterations to existing structures. It includes also supplementary house-building expenses of installed non-moveable equipment and payments for professional land and repair services such as architectural and legal fees.

Capital consumption represents an estimate of depreciation and accidental losses to the stock of residential capital such as may be caused by fire, flood, or storm.

Both gross residential capital formation and gross capital consumption are net of raw land and relate to the value of assets created by construction activity only.

Information on the services and methods of estimation may be found in detail in Residential Real Estate, pp. 418-430.

TABLE 13.-Source is the same as for Table 12. Values involved are based on 1939 prices throughout.
TABLE 14.-Data for "other" construction for the period 1945-1950 obtained from Private and Public Investment in Canada 1926-1951, Department of Trade and Commerce, Ottawa, p. 151. Annual data shown in Private and Public Investment in Canada for 1951 were preliminary and have been revised by the Economics Division, Department of Trade and Commerce.

For the period 1945-1952 housing data estimated by the Economic Research Department, C.M.H.C.

Data on gross national expenditure for the period 1945-1951 obtained from National Accounts, Income and Expenditure, 1926-1950, Research and Development Division, D.B.S. and National Accounts, Income and Expenditure, 1951, D.B.S.

TABLE 15.-Data for 1945-February, 1947, obtained from annual and monthly issues Building Permits Issued in Canada, Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. Data for March-December, 1947, compiled by the Economic Research Department, C.M.H.C., from returns made to D.B.S. Data for 1948-1952, provided by courtesy of the General Assignments Division, D.B.S. The number of new dwelling units includes conversions.
TABLE 16.-Data obtained from monthly issues of The Building Reporter, published by Hugh C. Maclean Publications Limited, Toronto.

Contracts awarded may be used as an indicator of trends but they are liable to misinterpretation if used as indicators of total volume of residential activity. They relate only to projected work which may or may not be commenced. Coverage is apt to vary over a period of time.

Data on the number of new bousing units estimated to be involved in contract awards for apartments which replace the series on apartment blocks shown in The Building Reporter have been derived by the application of a conversion factor to the value of contract awards for apartments made during the periods shown. This has been done to make the data more comparable with the series on building permits issued.

The conversion factor used is simply the average construction cost per dwelling unit of an apartment of the solid masonry type (brick facing and masonry blocks) prevailing throughout Canada during the first six months of 1946 as outlined in the study Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 40-41. 1946 construction costs for the units are estimated at $\$ 6,053$, of which $\$ 3,178$ are material costs, $\$ 2,270$ are on-site labour costs and $\$ 605$ are overhead and profits. This conversion factor was adjusted according to variations in the composite index of wholesale prices of residential building materials and wage rates in the construction industry as contained in Table 67.
TABLE 17.-Data compiled by Economic Research Department, C.M.H.C. Publicly-initiated housing comprises starts under the Veterans' Rental Housing Program of C.M.H.C. and the Armed Service Married Quarters' Program of the Department of National Defence, the Federal-provincial housing projects and units built under the Capital Assistance provisions of the Department of Defence Production. Privately-initiated housing with Federal Government financial assistance in the form of loans, covers starts under the National Housing Act, 1944, The Farm Loan Act, 1927, and the Veterans' Land Act, 1942. Privately-initiated housing with Federal Government financial assistance in the form of guarantees comprises starts under the Farm Improvement Loans Act, 1944, and the Rental Insurance Plan, except those rental insurance units approved for National Housing Act loans.

National Housing Act starts for 1947 and 1948 were distributed by quarter according to the pattern established by the number of housing units approved for loans. Starts under the rental insurance plan, the Farm Loan Act, 1927, and the Farm Improvement Loans Act, 1944, were considered to be equal to the number of units approved under these provisions.

As this tabulation covers new permanent houses only, Federal Government guarantees under the home extension provisions of The National Housing Act, 1944, financial assistance for Emergency Shelter units, and construction of temporary units by the Department of National Defence, are excluded.

Data on "publicly-assisted housing starts" for 1950 and 1951 as shown in this table differ from those shown in the 1950 and 1951 issues of Mortgage Lending in Canada, C.M.H.C., Table 36, under the title "Dwellings Started and Completed by Principal Source of Financing and Province, Canada". The latter table includes starts of dwellings constructed for Government employees but excludes dwellings started on which double depreciation benefits have been extended. This table, on the other hand, excludes starts on dwellings built for Government employees and includes dwellings built under the double depreciation assistance. An additional difference between data in the two tables is due to the fact that only permanent dwellings are covered in this table whereas starts on temporary dwellings are included in Table 36 of the above mentioned issues of Mortgage Lending in Canada.
TABLES 18, 19, 20, 21.-Data compiled by the Statistical Department, C.M.H.C.
TABLE 22.--Data compiled by the Mortgage and Real Estate Division, C.M.H.C.
TABLE 23.-Data compiled by the Statistical Department, C.M.H.C. on a net basis. As a result allowances for cancellations, adjustments and reinstatements have been made in the month they were reported and negative figures may appear in a particular month, during which there were more cancellations reported than approvals made.

Whereas the data under the heading "Loans under N.H.A." comprise all Rental Insurance projects with N.H.A. loans approved at time of compilation, the data under the classification "with conventional loans" are residual and in addition to Rental Insurance. Projects without N.H.A. loans may include cases where an N.H.A. loan may be approved in a subsequent quarter. The distribution between N.H.A. loans and conventional loans are preliminary for the last quarter shown and are subject to revision in the First Quarter, 1953 issue of Housing in Canada.

TABLE 24.-Data compiled by the Statistical Department, C.M.H.C.
TABLE 25.-Data compiled by the Economic Research Department, C.M.H.C. from reports prepared by the Statistical Department, C.M.H.C.
TABLE 26.-Data compiled by the Economic Research Department, C.M.H.C. from reports supplied by the Statistical Department and Public Housing Division, C.M.H.C.

The construction work involved in each project varies from one to another but in general a complete land assembly project includes surveying of roads and lots, installation of main and lateral sewers, water mains and hydrants, the ditching, grading, gravelling and surfacing of roads and driveways, the installations of street lights and filling and grading of grounds. The completion of improvements means that the lots are ready for sale but not necessarily sold.

TABLE 27.-Data are from records of Accounting Division, C.M.H.C.
TABLE 28.-Data compiled by the Property Management Department, Mortgage and Real Estate Division, C.M.H.C.

TABLE 29.-Data to the end of 1946 compiled by Wartime Housing Limited.
Financial data for 1947-December, 1951 compiled by the Accounting Division, C.M.H.C. For the years 1947 and 1948, data on the number of housing units started, completed and under construction compiled by the Program Section, Construction Division, and for 1949-1952 by the Statistical Department, C.M.H.C.

TABLE 30.-Data compiled by Statistical Department from data supplied by the Property Management Section, Mortgage and Real Estate Division, C.M.H.C.

TABLE 31.-Data compiled by the Statistical Department, C.M.H.C.
TABLE 32.-Data compiled by the Economic Research Department, C.M.H.C., from reports prepared by the Statistical Department, C.M.H.C.

Data on expenditures are from the records of the Accounting Division, C.M.H.C.
TABLE 33.-Data compiled by the Statistical Department, C.M.H.C.
TABLE 34.-Data compiled by the Statistical Department and Accounting Division, C.M.H.C.

TABLE 35.-Data compiled by the Economic Research Department, C.M.H.C. from information obtained by courtesy of the Research and Statistics Division, Department of Veterans' Affairs. Data on expenditures for 1950-1952 are not comparable with data for previous years as excess costs borne by the veterans and certain improvements included in previous years are not available for 1950-1952.
TABLE 36.-Data obtained by courtesy of the Canadian Farm Loan Board, Department of Finance.
TABLE 37.-Data obtained by courtesy of the Supervisor, The Farm Improvement Loans Act, Department of Finance.
TABLE 38.-Data obtained by courtesy of the Quebec Farm Credit Bureau.
TABLE 39.-Data compiled by the Economic Research Department, C.M.H.C. from monthly reports submitted by 114 lending institutions comprising 40 life insurance companies, 36 trust companies, 21 loan companies, 8 fire insurance companies, and 9 fraternal societies. These companies advanced 93 per cent of the total cash disbursements on mortgage loan account for Canadian real estate made by all companies of these types in 1951.
TABLE 40.-Data compiled by Economic Research Department, C.M.H.C. Source is the same as for Table 39.
TABLE 41.-Data compiled by the Economic Research Department, C.M.H.C. The number of mortgages registered, Greater Toronto Area, 1945-September, 1952 were obtained from the Toronto Registry Office, York East and West Registry Offices and Toronto and York Land Titles Office.

The number of mortgages discharged, Greater Toronto Area, 1945-1952, were obtained from the Toronto Registry Office, York East and West Registry Office and estimates of discharges from Toronto and York Land Titles Office.

The number of real estate transfers obtained through courtesy of the Inspector of Legal Offices.

The number of mortgages registered and discharged in the Province of Ontario reflect mortgage activity as recorded in the 65 registry and 16 land titles offices of the province. Data for the 65 registry offices and one land titles office are based on original records made available by courtesy of the Inspector of Legal Offices, Province of Ontario. Coverage of the remaining 15 land titles offices were obtained by means of a sample survey of the mortgage registrations and discharges during the month of September, 1951, recorded in 10 land titles offices. This information was used in conjunction with the data mentioned above to produce estimates for the province as a whole. For further details of the sample survey see Mortgage Lending in Canada, 1951, p. 100.
TABLE 42.-Data compiled by Economic Research Department, C.M.H.C. from information provided by courtesy of D.B.S.

The combined index of construction material production is based on the total value of output of the more important construction materials in terms of 1946 prices. It is designed to measure the overall trend in the physical output of construction materials. Because of the high degree to which producers of construction materials, with the exception of lumber, are responsive mainly to the requirements of the domestic market, the output index provides a rough indication of trends in domestic construction activity.

A closer indication of trends in domestic construction activity, however, can be obtained from the index of domestic disappearance, designed to measure the rate at which the construction industry absorbs materials. To obtain this index, the production index was adjusted, where possible, by the addition of imports, the deduction of exports, and the replacement of the original production data with data on factory sales of materials to take account of producers' inventory changes. The series on domestic disappearance is subject to the limitation that it does not reflect changes in the level of dealers' inventories. This means that in respect to materials such as lumber, where dealers' inventories represent a comparatively high proportion of yearly output or factory shipments, the series shown here cannot be relied on to give an accurate short term indication of the actual absorption of materials on the site. For this reason, lumber was excluded from the series on domestic disappearance shown in this tabulation.

The indexes are based on 23 materials, including lumber, for 1945 , and on 41 materials for the period 1946-September, 1952. The lumber index in the production series is shown separately because of its heavy weight in relation to the other materials.

TABLE 43.-Sources of data for building materials listed in Table 43 are as follows:
Sawn Lumber:
1945-1949 Annual issues The Lumber Industry in Canada, D.B.S.
1950-September, 1952 Monthly issues Production, Sbipments and Stocks on Hand at Sawmills, D.B.S.
Hardwood Flooring:
1946-September, 1952 By courtesy The Timber Controller, Department of Trade and Commerce. The unit measure, square feet, represents a surface measure, plus an allowance for waste and tongue irrespective of thickness.
Wood Fibre Building Board:
1945-1948 By courtesy of the Forest Products Statistics Section, D.B.S.
1949-September, 1952 Monthly issues Rigid Insulating Board Industry, D.B.S.
Building Brick: Data relate to face and common clay brick.
1945-September, 1952 Estimates prepared by Economic Research Department, C.M.H.C., based on actual production reported to D.B.S. by 55 producers accounting for approximately 97 per cent of brick shipments during 1945.

Data on production of brick, 1946-September, 1952, shown in Canadian Statistical Review, D.B.S. represent production of these firms only.
Flue Linings; Vitrified Sewer Pipe; Single Pole Switches; Duplex Receptacles; Outlet Boxes;
Non-Metallic Sheathed Cable; Bath Tubs; Sinks; Wash Basins:
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Structural Tile:
1945-1952 Monthly issues of Report on Clay Products Made from Canadian Clays, D.B.S.
Mineral Wool (Batts, Granulated and Loose):
1945-1949 Annual issues Tbe Stone Industry in Canada, D.B.S.
1950-1952 Monthly issues Mineral Wool, D.B.S.
Cement:
1945-1949 Annual issues Tbe Cement Manufacturing Industry in Canada, D.B.S.
1950-1952 Monthly issues Cement, D.B.S.
Concrete Blocks:
1945-1947 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
1948-1952 Estimates prepared by the Economic Research Department, C.M.H.C. based on monthly issues Concrete Building Blocks and Cement Pipe, D.B.S. which accounts for 82 per cent of total production.
Cement Pipe and Tile:
1946 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
1947-1952 Monthly issues Concrete Building Blocks and Cement Pipe, D.B.S.
Gypsum Wallboard; Gysum Lath:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-1952 Monthly issues Production, Shipments and Stocks of Gypsum Products, D.B.S.
Gypsum Plaster:
1945-1949 Annual issues The Gypsum Industry in Canada, D.B.S.
1950-1952 Estimates prepared by the Economic Research Department, C.M.H.C. Production data shown in monthly issues of Production, Sbipments and Stocks of Gypsum Products include sundry plasters such as moulding plaster, etc. These were excluded in the figures shown in this table.
Builders' Hardware:
1945 Iron and Steel and Their Products 1943-1945, D.B.S.
1946-1949 Annual issues The Hardware, Tools and Cutlery Industry in Canada, D.B.S.
1950-1952 Estimates prepared by Economic Research Department, C.M.H.C. based on factory sales reported to D.B.S. by firms accounting for about 98 per cent of total sales in 1949.
Warm Air Furnaces:
1945-1949 The Heating and Cooking Apparatus Industry, Canada, 1949, D.B.S.
1950-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

Domestic Heating Boilers; Cast Iron Radiators:
1945-1949 Annual issues The Heating and Cooking Apparatus Industry, Canada, D.B.S.
1950-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Hot Water Storage Tanks:
1945-1949 Annual issues The Sheet Metal Products Industry in Canada, D.B.S.
1950-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Electric Hot Water Tank Heaters:
1945-1948 Annual issues The Electrical Apparatus and Supplies Industry in Canada, D.B.S.
1949 The Heating and Cooking Apparatus Industry, Canada, 1949, D.B.S.
1950-1952 Estimates prepared by Economic Research Department, C.M.H.C. based on returns made to D.B.S. from firms accounting for about 86 per cent of production in 1949.
Asphalt Shingles:
1945-1947 Aspbalt Roofing Industry, January, 1949, D.B.S.
1949-1950 Asphalt Roofing Industry, January, 1951, D.B.S.
1951-1952 Monthly issues Asphalt Roofing Industry, D.B.S.
Tar and Asphalt Felts:
1945 By courtesy the Forest Products Statistics Section, D.B.S.
1946-1947 Aspbalt Roofing Industry, March, 1948, D.B.S.
1948-1952 Monthly issues Aspbalt Roofing Industry, D.B.S.
TABLE 44.-Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

TABLE 45.-Data obtained from monthly issues of Trade of Canada-Imports Entered for Consumption, Department of Trade and Commerce.

The data on wallboard building board for the period 1945-1947 include insulating board. The data for the period 1948-December, 1950 exclude insulating board as the Emergency Exchange Conservation Act which was in effect from 1948 to December 31, 1950 prohibited the importation of this type of building board.
TABLE 46.-Data obtained from monthly issues of Trade of Canada-Exports-Canadian Produce, Department of Trade and Commerce.

Data on lumber exports include planks, boards and squared timber.
Data for lumber in monthly issues of the Canadian Statistical Review, D.B.S. include planks and boards only.

TABLE 47.-Data on production of domestic pig iron and steel ingots obtained from Iron and Steel and Their Products in Canada, 1943-1945, D.B.S. for 1945, and for subsequent periods from annual issues of The Primary Iron and Steel Industry in Canada, D.B.S., and monthly issues of Primary Iron and Steel, D.B.S. Annual and quarterly revisions for the period 1945-1951 have been made by the Steel Division, Department of Defence Production. Data on production of rolling mill products made from Canadian ingot are estimated by applying a conversion factor of .725 to steel ingot processed in Canada. The conversion factor of .725 allows for the estimated weight loss involved in turning iron and steel shapes out of the ingot form. Data on imported rolling mill products are derived by reducing the total of imported steel, including ingots, by the estimated production loss sustained in processing its ingot content.

Domestic disappearance of rolling mill products is the sum of domestic production and imports less exports.

The volume of rolling mill products being made available to Canadian consuming industries as indicated in "domestic disappearance" exceeds that of "net total domestic shipments" of primary iron and steel shapes from Canadian rolling mills as shown in Table 48. This difference is accounted for by the fact that a portion of imports of primary iron and steel shapes is shipped direct to consuming industries without being processed in Canadian mills. Another factor is that data on production of rolling mill products from Canadian ingot as shown in this table do not show actual production but represent output of iron and steel shapes that would be forthcoming from current ingot production.
TABLE 48.-Data obtained from monthly issues of Canadian Statistical Review, D.B.S. Monthly revisions during 1951, provided by the Steel Division, Department of Defence Production.

The classification "Merchant Trade Products" refers to items produced in integrated mills and covers wire and wire products. The "miscellaneous" category includes all steel used in the following: agricultural and other farm implements, machinery and tools, mining and lumbering industries, pressing, forming and stamping industries, public works and utilities, shipbuilding and steel specifically marked for National Defence purposes. During the year 1949 the amount of steel used for National Defence purposes amounted to .3 per cent of the total miscellaneous category. The classification "Producers' Interchange" represents the amount of steel shipped to producers' own plants or to other plants within the primary industry for further processing e.g. black sheet to galvanizing department; hot rolled bars to make railway track material. See also explanatory note to Table 47.

TABLE 49.-Cast-Iron Soil Pipe and Fittings; Cast-Iron Pressure Pipe and Fittings; Steel Pipe and Fittings:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1952 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.
Structural Steel:
1945-1952 By courtesy the Steel Division, Department of Defence Production. Structurals include T-bars, Z-bars, H-beams, I-beams, uprights, angles, etc., where any one leg of the section is 3 inches or over.
Wire Nails and Spikes:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1946-1949 The Hardware Tools and Cutlery Industry in Canada, 1949, D.B.S.
1950-1952 Monthly issues Nails, Tacks and Staples, D.B.S.
Galvanized Sheets:
1945 Iron and Steel and Their Products in Canada, 1943-1945, D.B.S.
1945-1949 Primary Iron and Steel Products, December issues, 1945-1949, D.B.S.
1950-1952 Monthly issues, Primary Iron and Steel, D.B.S.
TABLE 50.-Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

TABLE 51.-Data on imports obtained from monthly issues of Trade of Canada-lmports Entered for Consumption, Department of Trade and Commerce.

Data on exports obtained from monthly issues of Trade of Canada-ExportsCanadian Produce, Department of Trade and Commerce.
TABLE 52.-Sources of data shown in Table 52 are as follows:
1945-1948 Data obtained from annual issues of Summary of Monthly Railway Traffic Reports, D.B.S.
1949-1952 Data obtained from issues of Monthly Traffic Report of Railways of Canada, D.B.S.
This series replaces the data on "Movenent by Rail of Building Materials" appearing in Housing in Canada, prior to the Octoter, 1950, issue which were based on freight loadings at stations in Canada. Whereas the present series covers only freight unloaded for domestic use, thereby including imports and excluding exports, the former series covered freight loaded at Canadian stations and thereby included exports and excluded imports. The present series more closely reflects the use of materials by the construction industry in Canada.
TABLE 53.--Data compiled by the Economic Research Department, C.M.H.C. from information supplied by courtesy of the Employment and Payrolls Statistics Section, D.B.S.

Data are based on monthly reports from employers with 15 or more employees. The materials covered include: lumber, brick, tile, paints, pigments, varnishes, building blocks, roofing and sheathing paper, prefabricated houses, stoves, heaters, furnaces, iron pipe, sheet metal, wallboards, structural iron and steel fabrication, builders' hardware, glass, gypsum products, asbestos building materials, sanitary ware, mineral wool, sand and gravel.

TABLE 54.-Data obtained by courtesy the Economics and Research Branch, Department of Labour.

The figures are compiled on the basis of information submitted through day to day layoff reports and monthly summary reports made by local offices of the National

Employment Service. Layoffs that are occasioned by normal seasonal factors are excluded from the compilation as far as possible. For the most part, reports are not received for layoffs involving less than ten workers or for those of less than two weeks' duration.

The layoffs cover manufacturing industries only, and are classified by their cause into three categories: lack of orders; lack of material; and other. The category "other" to a large extent represents non-economic factors such as flood and fire, but it includes some factors that are at least partly economic such as bankruptcies, strikes, and plant closures for repairs or retooling. The latter factors however do not directly reffect the immediate demand and supply conditions of the businesses concerned. The factors which have an immediate bearing on the supply side (lack of material) and on the demand side (lack of orders) of the businesses concerned are shown separately.
TABLE 55.-Data for 1945 on employment and unemployment in non-agricultural industries and for the Canadian labour force obtained from Canadian Labour Force Estimates, 19311950, Reference Paper No. 23, 1951, Labour and Prices Division, D.B.S. Data on employment in the construction industry for 1945 prepared by the Economic Research Department, C.M.H.C. from estimates of paid-workers in the construction industry as contained in Canadian Labour Force Estimates 1931-1950, p. 18.

The data in this table for the period 1946-1950 are based on the results of sample surveys undertaken by D.B.S. on an approximate quarterly basis. Results of these samples are published in periodic issues of The Labour Force Bulletin, D.B.S.

The estimates for this period are subject to sampling error. In general the smaller the estimate the larger the relative sampling error. In the case of unemployment estimates in the construction industry, the percentage error is apt to be quite high, and reliance can be placed on these figures only with careful reservations. The coefficient of variation for estimates of employment in the construction industry is estimated at 6 per cent. Roughly this means that there are about two chances out of three that the sampling error will be less than 6 per cent; and about one chance in twenty that it will amount to more than 12 per cent.

The construction industry referred to in Table 64 includes engineering as well as building construction, whereas Table 59 covers the building industry only.

The industry classification used in Table 64 is that contained in the Standard Industrial Classification Manual, D.B.S. and has the business of the establishment as a basis whereas the Occupational class shown is based on the Standard Summary of Occupational Classes, D.B.S. where the basis is the actual job performed. Force account employees of non-construction firms are classified by occupation as construction workers if they are employed in construction work but are classified by industry according to the industrial classification of the employing firm. Conversely, non-construction employees in construction firms are classified by industry as construction employees but by occupation according to the work performed e.g. clerical, managerial. The Province of Manitoba was excluded from the June Labour Force Survey, 1950, because of flood conditions. To achieve comparability with preceding periods in this series the Labor and Prices Division, D.B.S. made estimates of the probable Manitoba components for non-agricultural industries and the Canadian labour force and included them with data appearing in the Canadian Labour Force Estimates 1931-1950. Estimates of the Manitoba component of the construction industry at June, 1950, were prepared by the Economic Research Department, C.M.H.C. and were included with the data provided in the Labour Force Survey, June, 1950.
TABLE 56.-Data based on a distribution of employed male construction workers by number of hours worked per week, provided by courtesy the Special Surveys Division, D.B.S. The average number of hours worked per week is shown to indicate overall seasonal variations and longer term trends. It is calculated from a frequency distribution, somewhat more detailed than that shown in this table, on the assumption that the mid-point of each class interval is representative of the group falling therein. The averages shown are subject to sampling error and should be interpreted with caution. The total number of hours worked per week represents the product of the average number of hours worked per week and the number of male workers employed in the construction industry.
TABLE 57.-Data represent new series compiled by the Employment Section of the Labour and Prices Division, D.B.S. from reports made by employers with 15 or more employees. Indexes of employment in the building industry for the period 1945-1946 obtained by
courtesy the Employment Section of the Labour and Prices Division, D.B.S.; for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings, 1947-1950, 1951, Employment Section of the Labour and Prices Division, D.B.S. and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S. Indexes of employment in the non-agricultural industries for the period 1945-1946 obtained from Employment, Payrolls and Average Weekly Earnings, 1936-1946, with Index Numbers of Employment, 19211938, 1951 Employment Section of the Labour and Prices Division, D.B.S.; for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings, 1947-1950, 1951, D.B.S. and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S.

Data for the period 1945-1949 obtained from annual issues of Annual Review of Employment and Payrolls, Employment Section of the Labour and Prices Division, D.B.S.; monthly data for 1950 from The Employment Situation, D.B.S. and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S.

Data on average weekly earnings in the building industry for the period 1945-1946 obtained by courtesy of the Employment Section of the Labour and Prices Division, D.B.S., for the period 1947-1950 from Employment, Payrolls and Average Weekly Earnings 1947-1950, and for 1951-1952 from monthly issues of Employment and Payrolls, D.B.S.

Data on the aggregate weekly payroll in the building industry are the product of the number of persons employed and the average weekly earnings.
TABLE 58.-Data compiled by the Employment Statistics Section, D.B.S., from reports made by employers with 15 or more employees. Data are published monthly in Statistics of Average Hours Worked and Average Hourly Earnings, D.B.S.

The number of hourly wage-earners comprises workers who are employed by the hour and excludes salaried personnel and other employees whose earnings are not directly dependent on the number of hours worked. Consequently the total number of hourly wage-earners shown in this table is smaller than the number of persons employed as shown in Table 57.

The statistics on hours worked include overtime as well as the hours put in by parttime and casual workers. Hours credited to persons on leave with pay are also included.

The average hourly and weekly earnings shown represent gross earnings before deduction for taxes, unemployment insurance, etc.
TABLE 59.-Data for the period 1945-1950 obtained from National Accounts, Income and Expenditure, 1926-1950, 1951, Research and Development Division, D.B.S. Monthly data for 1951-1952 obtained from Estimates of Labour Income, D.B.S.

A series on total construction outlay is shown in Table 14 and a comparison of the two series shows trends that are similar but not identical. There are two reasons for some variation in trend. First, the labour component of construction expenditure does not vary exactly as the other components because of changes in labour output per man hour and different rates of change in wage rates and construction material prices or management and overhead expenses. Second, in the case of labour income estimates a different coverage of the construction industry is made than for estimates of total construction expenditure. Whereas Table 14 is intended to cover all construction expenditures, the estimates in Table 59 do not include: 1) expenditures by unincorporated own account contractors and builders, 2) construction outlay by railway and telephone companies, 3) repair and maintenance construction outlay on force account by nonconstruction companies, 4) construction outlay by Federal, provincial or municipal governments.
TABLE 60.-Compiled by the Unemployment Insurance Section, Labour and Prices Division, D.B.S., based on weekly reports submitted by local offices of the Unemployment Insurance Commission.
TABLE 61.-Data compiled by the Unemployment Insurance Statistics Section, D.B.S.
A person who has made at least 180 contributions into the Unemployment Insurance Fund, during the two year period immediately preceding a claim for benefits and has made 60 contributions in the year preceding the claim or 45 contributions in the 6 months preceding the claim establishes a benefit year. The series on the number of male workers in the construction industry applying for unemployment insurance benefits is supplementary to data shown in Tables 55 and 60.

The chief limitations of the data in Table 61 as an index of unemployment are as follows: (1) coverage is confined to male workers in construction occupations who come under the terms of the Unemployment Insurance Act, 1941; to the end of 1947 these comprise employees on salary who earn less than $\$ 2,400$ annually, employees paid by the hour or by the day, and employees paid by the week unless they earn more than $\$ 3,120$ annually and apply for exemption from the Act; from January 1, 1948, to June 30, 1950 , salaried personnel earning less than $\$ 3,120$ have come under the Act and since July 1 , 1950, the ceiling of insurability for salaried employees is raised from $\$ 3,120$ to $\$ 4,800$ a year; there are therefore, a number of construction workers not covered in this tabulation; (2) not all unemployed workers have made 180 days' contribution prior to their period of unemployment; (3) a worker who is unemployed twice during a 12 month period does not as a rule establish a benefit year the second time; (4) the establishment of a benefit year does not give an indication of the duration of unemployment.

TABLE 62.-Data compiled by the Vocational Training Branch, Department of Labour.
TABLE 63.-Data compiled by the Economic Research Department, C.M.H.C., from data supplied by courtesy of D.B.S. and the Immigration Branch, Department of Citizenship and Immigration.

TABLE 64.-Data obtained from monthly issues of The Labour Gazette, Department of Labour.

TABLE 65.-Revised composite index of wholesale prices of all construction materials obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. These indexes replace the series formerly published in the first quarter, 1951 and preceding issues of Housing in Canada on wholesale prices of construction materials in general. For differences between this index and that published in previous issues of Housing in Canada see Wholesale Price Indexes 1913-1950, D.B.S. p. 4.

Indexes of wholesale prices of residential building materials obtained from Prices and Price Index Numbers of Residential Building Materials, March, 1948, D.B.S. and from Prices and Price Indexes, April, 1951, D.B.S. Indexes are converted from a 1935-1939 to a 1939 base. The composite index in this series is weighted according to the value of each listed group of materials entering into residential construction as estimated in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 60-67. Insofar as possible the price index for each group of materials is based on the component items shown in the above publication, and weighted accordingly. In some cases however, where the specific material components listed in the publication covered a wide variety of individual items, representative material items were chosen and weighted according to total production in Canada.

The trend of residential building material prices does not vary to a significant extent from the trend for construction materials in general over the period 1926-1952. At October, 1952, the index for residential materials stood at 278 on the 1939 base, while the construction material index rose to 284.

The purpose of these group indexes is to reflect the average movement of prices of building materials having a characteristic use. In interpreting these indexes certain qualifications should be observed before drawing general conclusions from them. First, the price of each building material in a group rises or falls either independently of the other or possibly in an inter-related fashion depending on the extent of their homogeneity. Changes in prices of each material may also occur at varying rates from another. Consequently a group index provides no information with respect to price changes experienced by a specific building material within a group. Attention is drawn to Price Index Numbers of Residential Building Materials 1926 to 1948, Labour and Prices Division, D.B.S., March 1949, which sets out in detail the building materials comprising each group. Secondly, though the indexes are designed, by applying appropriate weighting techniques, to express national averages of price changes, they may be modified by regional cost differentials. This problem of regional differentials in housing construction costs is treated at length in Chapters 1 and 2, Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946.
TABLE 66.-Data obtained from the Department of Labour.
Indexes for the individual trades other than sheet metal workers, obtained by courtesy of the Economics and Research Branch for the years 1945-1950 and for the
months of March and September, 1951. Monthly interpolations on these indexes for the years 1951 and 1952 were made on the basis of wage rate schedules for 15 cities supplied by courtesy of the Industrial Relations Branch. Each city in these calculations was weighted according to the number of housing unit completions in 1951. The weights used in calculating the index for all construction workers in these interpolations are based on the value of the on-site labour for each trade engaged in residential building as established in The Labour Value of the Building Dollar, Housing Administration, Department of Finance, Ottawa, 1943, p. 29. The indexes for 1945-1951 do not properly represent annual averages as they are based on surveys relating to pay periods which vary somewhat from year to year. The indexes for 1945 relate to October; 1946, December; 1947, July; 1948 and 1949, September; 1950 and 1951, March and September.

The index for sheet metal workers was calculated by the Economic Research Department, C.M.H.C., on the basis of rates for 15 cities obtained from annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 1945-1950 and by courtesy of the Industrial Relations Board for 1951 and 1952.

The index for all industries was estimated by the Economic Research Department, C.M.H.C., on the basis of the General Average Index as contained in annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 19451949 and as supplied by courtesy of the Economics and Research Branch for March and September, 1951 and March, 1952. Monthly index numbers for the last nine months, 1951, first ten months 1952, estimated by the Economic Research Department on the basis of trend during 1950 and 1951.

The indexes for both all construction workers and all industries, including holiday pay allowances, include a percentage allowance to cover holiday pay assessments effective in most cities in Canada.
TABLE 67 .-Composite index of residential building material wholesale prices and wage rates in the construction trades is based on the composite material index shown in Table 65 and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 66. Composite index of all construction material wholesale prices and wage rates in the construction trades is based on the composite material index obtained from Wholesale Price Indexes 1913-1950, D.B.S. and monthly issues of Prices and Price Indexes D.B.S., and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 66. The weights are based on the proportions established in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, p. 36. The materials are weighted 58.3 in percentage terms, and the wage rates 41.7.

Revised index of wholesale prices of all commodities obtained from Wholesale Price Indexes 1913-1950 D.B.S. and monthly issues of Prices and Price Indexes D.B.S. For differences between this index and that published in Housing in Canada, First Quarter, 1951, and previous issues, see Wholesale Price Indexes 1913-1950, D.B.S., p. 4.

The cost of living index, the consumers price index and the rent indexes are obtained from Prices and Price Indexes, D.B.S. The cost of living index is converted to a 1939 base.

The rental indexes are constructed from a matched sample of tenant households. Rent changes on new rental units are recorded from the time such units are taken into the sample but the absolute differences in rents between old and new units are not taken into account. The higher level of rents on new dwellings arises first, because they are new, and second because they are freed from control or are subject to different forms of rent control than older dwellings. Only the second factor is equivalent to a price increase because it is not accounted for by the higher quality of new units. The rental component of the cost of living index does not allow for this price increase factor whereas the rental component of the consumers' price index does. A survey in June, 1952 conducted by D.B.S. showed that decontrolled apartments were renting for an average of 20 per cent more than identical but controlled apartments. This figure was taken as a measure of that portion of the difference in rents between old and new units which is attributable to rent control rather than quality differences and has been applied to new rental accommodation built since the base year 1949. By November 1952 on a 1949 base, the inclusion of this factor had brought the rental component of the consumers price index 1.2 points or 1 per cent higher than the unadjusted rental component of the cost of living index. 1.2 points or 1 per cent higher than the unadjusted rental component of the cost of living index.

TABLE 68.-Data for 1946 and 1947 obtained from Annual Report, 1947, C.M.H.C., p. 18. Data for 1948 and 1949 obtained from monthly issues of Housing Bulletin, D.B.S. Data for 1950-1952 obtained from monthly issues of New Residential Construction, D.B.S.
TABLE 69.-Tabulation based on data obtained by courtesy the Superintendent of Bankruptcy, Department of Justice. The data on bankruptcies in all industries do not correspond exactly with the series published in the D.B.S. quarterly Commercial Failures, chiefly because the latter publication includes closures under the Winding Up Act, whereas the series in Table 69 covers the Bankruptcy Act only. There is the additional factor that the D.B.S. series excludes certain assignments and receiving orders under the Bankruptcy Act where the debtor makes a composition of assets and continues in business, whereas all receiving orders and assignments are covered in Table 69.

The series on building materials industry is designed to cover firms engaged in the production of: lumber, wallboard, bricks, flue linings, vitrified sewer pipe, structural tile, drain tile, cement, concrete brick, concrete building blocks, cement drain pipe and culvert tile, warm air furnaces, cast-iron radiators, hot water storage tanks, hot water tank heaters, domestic heating boilers, asphalt shingles, asphalt rolls, tar and asphalt felts, cast-iron soil pipe, sanitary ware, wrought iron pipes, lead pipe water service, structural steel, steel pipe, wire nails and spikes, mineral wool insulation, gypsum wallboard, gypsum lath, gypsum plaster, gypsum block and tile, electrical equipment, and wood fibre insulating board.

The classification of bankruptcies in the construction industry, covers general and trade contractors and small builders classed as "wage earners in the construction trades".
TABLE 70.-Data for period 1945-1946 obtained from Prices and Price Indexes, December, 1946, D.B.S.

Data for 1947-1952 obtained from monthly issues of Prices and Price Indexes, D.B.S. (1) Building materials index based on 16 stocks.
(2) All industrial index based on 74 stocks during 1945-1947, 76 during 1948 and 82 'during 1949-1952.
(3) Data converted from a $1935-1939$ to a 1939 base.

## INDEX OF CONTENTS
