## FOREWORD

Housing in Canada is published quarterly, designed to provide factual information which will afford as complete and current a picture of the housing situation as possible.

The first issue, published in October, 1946, provided information on an annual basis for the period 1919-1945. In each subsequent issue the established material has been kept up to date on a quarterly basis and new data added. The present issue covers the period 1945 to the third quarter, 1953, providing monthly or quarterly data for 1952 and the more recent period. Each issue is arranged in three parts. The first part comprises a brief factual summary highlighting the results of the statistical material. The second part consists of the tabular material itself and is arranged in eight sections: (1) population trends; (2) house-building activity; (3) publicly-assisted house building; (4) real estate lending; (5) building materials; (6) building labour; (7) building costs; (8) building industry. The third and final part of this report provides sources of the factual material and explanatory notes where interpretation of the series seems appropriate.

Commencing with the April, 1950, issue of Housing in Canada, data on Newfoundland were shown separately in Section 9 of Part II. This separation was made partly in the interest of continuity of the tabular material for the rest of Canada and partly because of the immediate scarcity of statistical information for the Province of Newfoundland. Beginning with the second quarter issue, 1951, all statistical series have been revised to include data that are available for the Province of Newfoundland since March 31, 1949, when Newfoundland became part of Canada.

Some of the material incorporated in this report is obtained from original sources with other data submitted by various Federal Government departments, including the Department of Finance, Department of Trade and Commerce, Department of Labour, Department of Veterans' Affairs, Department of Citizenship and Immigration, the Superintendent of Bankruptcy, the Dominion Bureau of Statistics, and the Department of Defence Production. Data are also provided by the Quebec Government through its Farm Credit Bureau.

Housing in Canada concentrates on major trends in the housing field only and provides all available information of substance. As new and improved statistical series become available, they will be incorporated in future issues.

Central Mortgage and Housing Corporation<br>Economic Research Department

Ottawa, September, 1953.

## LIST OF TABLES

Table ..... Page

1. Net Family Formation and Number of Families, Canada 1945 - June, 1953. ..... 27
2. Number of Births, Deaths, Marriages, Divorces, Immigration, and Total Population, Canada, 1945-June, 1953 ..... 28
3. Number of Births by Sequence of Arrival, Canada, 1945 - June, 1953 ..... 29
4. Number of Immigrants to Canada, by Sex, Marital Status and Age Group, 1945 - June, 1953 ..... 30
5. Number of New Dwellings Started, Completed, and Under Construction, Canada, 1945 - August, 1953 ..... 31
6. Dwellings Started and Completed in New Structures, Actual and Seasonally Adjusted Annual Rates, by Quarter, 1948 -- June, 1953 ..... 32
7. Number of New Permanent Dwellings Started by Urban and Rural Areas, Canada, 1947 - - September, 1953 ..... 33
8. Number of New Permanent Dwellings Completed by Urban and Rural Areas, Canada, 1947 - September, 1953 ..... 34
9. Number of New Permanent Dwellings Completed, by Type of Unit, Canada, 1947 - August, 1953 ..... 35
10. Distribution of New Completed Dwellings Unsold, by Number of Months Unsold, and Average Number of Months Unsold, Metropolitan Areas and Other Major Cities, Canada, 1950 - June, 1953 ..... 36
11. Gross and Net Residential Capital Formation, Canada, 1945 - June, 1953 ..... 37
12. Gross and Net Residential Capital Formation Valued in 1939 Dollars, Canada, 1945 - June, 1953 ..... 38
13. Expenditures on New Construction, Major Improvements, Repair and Maintenance, Residential and Other Construction, and Gross National Expenditure, Canada, 1945 - June, 1953 ..... 39
14. New Residential Construction, Building Permits Issued in 204 Municipalities, Canada, 1945 - June, 1953 ..... 40
15. New Residential Construction, Construction Contracts Awarded, Canada, 1945 - August, 1953 ..... 41
16. Number of Dwellings in New Structures Started, Publically-Initiated, and Privately-Initiated, With and Without Federal Government Financial Assistance, Canada,1947 - June, 195342
17. Lending Operations Under the National Housing Act, 1944, Number and Amount of Net Loans Approved and Number of Dwellings Financed, Canada, February, 1945 - August, 1953 ..... 43
18. Lending Operations Under the National Housing Act, 1944, Number and Amount of Net Loans Approved for Non-Defence Worker Houses Built with Agreed Sale or Contract Price, and Number of Dwellings Financed, Canada, October, 1951 - August, 1953 ..... 44
19. Lending Operations Under the National Housing Act, 1944, Gross Loans Approved by Type of Loan, Canada, First Halves, 1952 and 1953. ..... 45
20. Lending Operations Under the National Housing Act, 1944, Analysis of Gross Loans Approved, Showing Number and Amount of Loans, Number of Dwellings, Average Estimated Cost, Lending Value, Amount of Loan, Floor Area, and Construction Cost per Square Foot, by Type of Dwelling, Canada, First Halves, 1952 and 1953 ..... 46
21. Operations Under the National Housing Act, 1944, Rental Insurance Plan, Net Number of Projects, Dwellings and Total Estimated Cost, Approved with Loans, Under the N.H.A. and with Conventional Loans, Canada, July, 1948 - June, 1953.. ..... 47
22. Operations Under the National Housing Act, 1944, Rental Insurance Plan, Average Number of Rooms, Floor Area, Estimated Cost, and Maximum Monthly Rent Per Unit, for Gross Projects Approved, Canada, 1948 - July, 1953. ..... 48
23. Federal-Provincial Housing Operations Under Section 35 of The National Housing Act, 1944, Canada, 1950 - June, 1953 ..... 49
24. Federal-Provincial Land Assembly Operations Under Section 35 of The National Housing Act, 1944, Canada, 1950 - June, 1953. ..... 50
25. Expenditures, Under Section 35 of The National Housing Act, 1944, Canada, 1950 - June, 1953 ..... 51
26. Land Assembly Projects Under Section 11B of The National Housing Act, 1944, Canada, 1947 - June, 1953. ..... 52
27. Veterans' Rental Housing Projects by Central Mortgage and Housing Corporation, Number of New Dwellings Started, Completed, and Under Construction, and Expenditure, Canada, 1941 - June, 1953. ..... 53
28. Property Management Operations Under Central Mortgage and Housing Corporation, Number of Rental Units Under Administration, and Per Cent Vacant, by Type of Unit, Canada, 1947 - July, 1953. ..... 54
29. Armed Service Married Quarters, Construction Operations by Central Mortgage and Housing Corporation, Number of Dwellings Started, Completed and Under Construction, and Actual Expenditures, Canada, 1949 - June, 1953. ..... 55
30. Construction of New Schools by Central Mortgage and Housing Corporation for the Department of National Defence, Number of Schools for Which Contracts Have Been Awarded, Started and Completed, and Expenditures, Canada, 1950 - June, 1953 ..... 56
31. Housing Operations and Other Construction Operations by Defence Construction (1951) Limited, Canada, November, 1950 - July, 1953. ..... 57
32. Construction Operations Under the Veterans' Land Act, 1942, Number of New Dwellings Started, Completed and Under Construction, and Expenditure, Canada, September 23, 1943 - June, 1953 ..... 58
33. Lending Operations Under The Canadian Farm Loan Act, 1927, Canada, 1929 - June, 1953. ..... 59
34. Lending Operations Under The Farm Improvement Loans Act, 1944, Canada, March, 1945 - June, 1953 ..... 60
35. Operations Under the Quebec Housing Act, Number and Amount of Loans Approved, Number of Dwellings Involved, and Provincial Commitments, January, 1948 - June, 1953. ..... 61
36. Gross Mortgage Loans on Real Estate Approved by Lending Institutions, by Type of Loan, Canada, 1947 - June, 1953 ..... 62
37. Gross Mortgage Loans Approved on New Non-Farm Housing Construction, by Type of Lending Institution, and by Type of Dwelling, Canada, 1947 - June, 1953 ..... 63
38. Gross Joint and Conventional Mortgage Loans by Lending Institutions, on New Non-Farm Housing Construction, Canada, 1949 - June, 1953. ..... 65
39. Number of Mortgages Registered and Discharged and Real Estate Transfers Registered, Greater Toronto Area and Province of Ontario, 1945 - June, 1953 ..... 66
40. Indexes of Production and Indexes of Domestic Disappearance of Construction Materials, by Lumber, Other Construction Materials and Total, Canada, 1939 - June, 1953 ..... 67
41. Production of Selected Building Materials, Canada, 1945 - June, 1953 ..... 68
42. Sales and Stocks of Selected Building Materials, Canada, 1949 - June, 1953 ..... 73
43. Imports of Selected Building Materials, Canada, 1945 - June, 1953 ..... 76
44. Exports of Selected Building Materials, Canada, 1945 - June, 1953 ..... 79
45. Production of Pig Iron and Steel Ingot and Estimated Domestic Disappearance of Rolling Mill Products, Canada, 1945 - June, 1953 ..... 81
46. Shipments of Primary Iron and Steel Shapes to Consuming Industries, Canada, 1946 - June, 1953 ..... 82
47. Production of Selected Iron and Steel Building Materials, Canada, 1945 - June, 1953 ..... 83
48. Sales and Stocks of Selected Iron and Steel Building Materials, Canada, 1949 - June, 1953 ..... 84
49. Imports and Exports of Selected Iron and Steel Building Materials, Canada, 1945 - June, 19:3 ..... 85
50. Volume of Selected Building Materials Unloaded at Railway Stations in Canada, 1945 - June, 1953 ..... 86
51. Employment and Weekly Payrolls in the Building Material Industries, Canada, 1946 - June, 1953 ..... 87
52. Non-Seasonal Layoffs in Building Material Producing Industries, Number of Establishments and Number of Employecs by Reason for Layoff, Canada, March, 1948 - August, 1953 ..... 88
53. Employment, Unemployment, and the Labour Force by Industry, Construction, Non-Agricultural and All Industries, Canada, 1945 - June, 1953 ..... 89
54. Employment in the Construction Industry, Percentage Distribution of Construction Workers, by Number of Hours Worked Per Week, Canada, March, 1949 - June, 1953 ..... 90
55. Employment and Weekly Payrolls in the Building Industry and Indexes of Employ- ment in the Building and Non-Agricultural Industries, Canada, 1945 - June, 1953. . ..... 91
56. Number of Hourly Wage Earners, Average and Total Number of Hours Worked Per Week, Average Hourly and Weekly Earnings, Building Industry, Canada, 1945 -- June, 1953 ..... 92
57. Labour Income in the Construction Industry and Total Labour Income, Canada, 1945 - June, 1953 ..... 93
58. Unfilled Vacancies and Unplaced Applicants in Construction Trades, Canada, 1945 - July, 1953. ..... 94
59. Number of Male Workers in Construction Trades Applying for Unemployment Insurance Benefits and Establishing Benefit Years, Canada, 1945 - June, 1953. ..... 95
60. Apprenticeship Training in Construction Trades, by Number in Training and Graduates, Canada, 1945 - June, 1953 ..... 96
61. Immigration of Construction Workers by Trade, Canada, 1945 - June, 1953 ..... 97
Table Page
62. Strikes and Lockouts in the Building Industry, the Building Material Industries, and in All Industries, Canada, 1945 - June, 1953 ..... 98
63. Indexes of Residential Building Material Prices and Composite Indexes of Construction Material Prices, Canada, 1945 - July, 1953 ..... 99
64. Indexes of Average Hourly Rates in Construction Trades and in All Industries, Canada, 1945 - July, 1953 ..... 100
65. Composite Indexes of Wage Rates and Material Prices in the Construction Industry, with Wholesale Prices of all Commodities and Consumer Price Index with Sub-Indexes of Rent and Home Ownership, Canada, 1945 - August, 1953 ..... 101
66. Percentage Distribution of New Completed Dwellings by Number of Months Under Construction and Average Number of Months Under Construction, by Month of Completion, Canada, 1946 -- June, 1953 ..... 102
67. Bankruptcies in The Construction Industry, Building Material Industries, and in All Industries, Canada, 1945 - June, 1953 ..... 103
68. Indexes of Stock Prices of Common Shares of Sixteen Building Material Companies and Eighty-Two Industrial Companies, Canada, 1945 - July, 1953 ..... 104
LIST OF CHARTS
FigurePage
69. Production of Twelve Selected Building Materials, Canada, Quarterly, 1949 - 1953 ..... 17
70. Indexes of Residential Material Prices, Wage Rates of Construction Workers and Combined Index of Material Prices and Wage Rates, Canada, January, 1950 - July, 1953 ..... 21

## PART I

FACTUAL SUMMARY

## SECTION 1.-POPULATION TRENDS

(See Tables 1-4)
Canada's population reached 14.8 million at June 1,1953 according to the annual population estimate of the Dominion Bureau of Statistics. The figure represents an increase of 351,000 from June 1,1952 and a two year advance of 772,000 from the 1951 Census total of 14.4 million. While below the record years gain of 421,000 from June, 1951 to June, 1952 the past year's increase was greater than for any other comparable post-war period. The June estimate showed an increase for all provinces.

Net family formation in the year ending June 30, totalled 79,200 bringing the number of families at that date to 3.5 million. In the first half of 1953 the rate of net family formation declined, totalling 22,600 as against 30,300 in the same period of 1952. The decline stemmed mainly from a drop in immigration although marriages were also fewer in the second quarter of 1953.

Births numbered 196,000 in the first half of 1953 an increase of 4,400 over births in the same period of 1952.

## Innmigration

During the first half of 1953 immigration to Canada totalled 78,300, a drop of 20 per cent from immigration in the same period of 1952. The decline occurred mainly in the first quarter when selection was largely restricted to relatives of immigrants already in Canada and to certain of the skilled trades. In the second quarter, immigration at 55,400 equalled the level of immigration in the same quarter of 1952.

Immigrants from the British Isles numbered 24,000 in the first half, slightly above the corresponding 1952 total. Northern European immigrants numbered 32,750 , a decline of 15 per cent from the same period of 1952 . United States immigrants numbered 4,300 as against 3,900 in the first six months of 1952.

## SECTION 2.-HOUSE-BUILDING ACTIVITY

(See Tables 5-15)
The 1953 upswing in new housing construction continued into the eighth consecutive month in August when starts were 15 per cent above the August, 1952 figure and completions were 30 per cent higher. Housing units started in the first eight months of 1953 numbered 69,460 an increase of 30 per cent over starts in the same months of 1952. In the same period 53,760 dwellings were completed, an increase of 31 per cent. At the end of August 71,500 dwellings were under construction, a 27 per cent increase over 56,300 units under construction one year earlier. Indicating a continued high level of house building in September, starts in centres of 5,000 and over numbered 8,300 , a 34 per cent increase over starts in the same centres during September, 1952.

Of dwellings completed in the first eight months, 74 per cent were single family dwellings, eight per cent were two family dwellings and 22 per cent were apartments or row housing units. In the corresponding months of 1952, 76 per cent were single family dwellings and 16 per cent were apartment units.

One of the reasons for this trend towards more rental accommodation was the necessity to meet the increasing requirements for such accommodation from people whose work involved moving from one place to another. Also, higher incomes made it possible for a number of families to meet the scale of rentals necessitated by present levels of house-building costs.

In absolute terms the volume of house-building for owner occupancy reached new peaks. The reason for it was strong effective demand, partly because of the continuing high rate of family formation, the large number of births, particularly of first children, and rising personal incomes. The strength in demand for homes for owner occupancy is illustrated by data on completed but unsold dwellings. In June, 1953 only 3 per cent of total completions in major urban areas had remained unsold for more than 3 months, as against 7.4 per cent in June, 1952.

## Residential Capital Formation

With the increase in housing completions in the first half of 1953, gross residential capital formation was 35 per cent greater in value than in the first half of 1952 , totalling $\$ 179$ million. Allowing for residential capital consumption in the form of depreciation and accidental damages, net capital formation was placed at $\$ 94.7$ million, almost double the figure for the first half of 1952.

The value of land added to residential use in the first half was estimated at $\$ 12.1$ million bringing total additions to residential real estate to $\$ 106.8$ million.

## Residential and Other New Construction

Expenditures on non-residential construction in the first half amounted to one billion dollars, slightly above expenditures in the corresponding period of 1952.

Expenditures on new residential construction totalled $\$ 479.5$ million in the first half of 1953 , an increase of 40 per cent over the corresponding total in 1952. The total constituted 32 per cent of the value of all types of new construction while in the same period of 1952 residential construction comprised 26 per cent.

## SECTION 3.-PUBLICLY-ASSISTED HOUSE-BUILDING (See Tables 17-35)

In the first half of 1953 housing starts assisted under Federal legislation constituted about one third of the total. During the six month period dwellings started with public financial assistance numbered 14,700 or 32 per cent of total starts. This was the same proportion as in the corresponding period of 1952 when publicly-assisted starts numbered 11,600.

The increase in publicly-assisted house-building was directly related to increased lending under the National Housing Act, (see below). Publiclyinitiated housing starts numbered only 600 units, less than one third the number started in the first half of 1952.

## Legislation

The Prime Minister announced October 1, 1953 that measures designed to increase and broaden the supply of mortgage money for new housing were to be submitted to Parliament in November. The Government took steps at this time because present sources of mortgage funds appeared insufficient to keep pace with housing needs. The solution was to increase the supply of mortgage money by admitting banks and other lenders to the mortgage field and by making mortgages a more liquid form of investment than had hitherto been the case.

The amendments to the National Housing Act are to empower Central Mortgage and Housing Corporation to insure holders of mortgages of new
residential property against loss on payment of an insurance premium and to enable both chartered banks and other lenders to make insured mortgage loans. The insured mortgage system once in operation is intended to replace the joint loan arrangements presently provided under parts I and II of the National Housing Act. Under the new insurance system the mortgage lender in the event of default may transfer the mortgaged property to Central Mortgage and Housing Corporation in exchange for appropriate consideration. The objective of the new proposals is to make mortgage investment more attractive by reducing risk and by increasing the saleability of mortgages. It is also proposed to make insured mortgages eligible security for Bank of Canada advances to chartered banks in the same way as Government bonds. It is expected that the introduction of an important group of new lenders will make more money available for home mortgages and also that better facilities will become available for mortgage lending in smaller communities.

## The National Housing Act, 1944

Lending operations under the National Housing Act in the first eight months of 1953 were considerably above levels in the 1952 period. Loans were approved in the eight month period for the construction of 27,229 dwellings, a 17 per cent increase over approvals in the same months of 1952. The value of loans approved totalled $\$ 196$ million an increase of 16 per cent over the value of loan approvals in the first eight months of 1952.

Direct loans by Central Mortgage and Housing Corporation on residential mortgages increased 12 per cent from $\$ 26.5$ million in the first eight months of 1952 to $\$ 29.6$ million in the 1953 period as operations under the rental insurance plan increased notably (see page 15 ). During the eight month period corporation loans involved a total of 4,265 dwellings.

The expansion in mortgage lending under the Act arose from strong demand supported by a greater flow of mortgage funds from private lending institutions.

Loans for home-ownership averaged $\$ 8,300$ per dwelling compared with $\$ 8,000$ in the 1952 period. Loans for rental housing averaged $\$ 7,590$ per dwelling as against $\$ 7,275$ in the first half of 1952 . Estimated costs for all types of dwellings were also higher averaging $\$ 10,788$ compared with $\$ 10,194$ in the first half of 1952. The increase in costs stemmed mainly from a small advance in building costs, land costs showing little change.

One storey dwellings constituted 52 per cent of dwellings approved through National Housing Act loans as against 44 per cent in the first half of 1952. Apartment and row housing units constituted 27 per cent, the same proportion as in the first half of 1952.

## Federal-Provincial Housing and Land Assembly Projects

Housing operations under joint Federal-provincial agreements involved 418 starts and 680 completions during the first half of 1953. At the end of June 930 units were under construction compared with 517 units one year earlier. Expenditures on rental housing projects totalled $\$ 5.3$ million in the first half. Since 1950 the Federal-provincial plan has resulted in 2,176 housing starts and 1,246 completions.

Under the land assembly provisions of the Federal-provincial scheme no new projects were approved in the first half of the year although 517 lots were sold or placed under option. Total expenditures on all Federal-provincial projects
totalled $\$ 6.7$ million in the half year period compared with $\$ 1.8$ million in the same months of 1952.

## Veterans' Rental Projects

During the first half of 1953 an additional 358 housing units for veterans were completed by Central Mortgage and Housing Corporation under Federal Municipal Agreement. In the same period 81 veterans' rental units were started leaving 175 units under construction at the end of June as against 364 one year earlier.

Expenditures under the program dropped from $\$ 1.7$ million in the first half of 1952 to $\$ 1.5$ million in the same period of 1953.

## Veterans' Land Act

House-building activity under the Veterans' Land Act increased during the first half of 1953 when 570 housing units were started compared with 369 starts in the corresponding period of 1952. In the same period 846 units were completed and 1,823 units remained under construction at the end of June. Expenditures on new construction under the Act totalled $\$ 3.8$ million compared with $\$ 3.1$ million in the same period of 1952.

## Armed Service Married Quarters

House-building for the armed services by the construction division of Central Mortgage and Housing Corporation resulted in the completion of 1,827 housing units for married personnel during the first half of 1953. In the same period 388 units were started leaving 1,014 under construction at the end of June, about one half the number under construction one year earlier.

Expenditures under the program totalled $\$ 10.5$ million in the first half of 1953.

## Defence Construction (1951) Limited

An additional 412 dwelling units were completed by Defence Construction (1951) Limited during the first seven months of 1953 bringing to 1,121 the number constructed since 1950. Expenditures by the company on new residential construction totalled $\$ 1.7$ million in the seven month period while expenditures on all types of construction totalled $\$ 72.6$ million.

## Department of National Defence Schools

Since 1949 Central Mortgage and Housing Corporation, on behalf of the Department of National Defence has negotiated agreements with the provincial and municipal authorities for the provision of educational facilities for children at camp sites. The Corporation also supervises the construction of most of the schools resulting from the negotiations.

By the end of June, 1953, contracts had been let for 26 schools and 21 schools had been completed. Expenditures under the plan totalled $\$ 9.1$ million.

## Canadian Farm Loan Act

The Canadian Farm Loan Board, operating under the Canadian Farm Loan Act, provides mortgage loans to farmers for all productive farm purposes. In the first half of 1953 the board made loans for the construction of 16 new farm houses. In addition 38 loans were made for the alteration and improvement of existing structures. Loans for both purposes totalled $\$ 75,000$ during the first half.

Farm Improvement Loans Act, 1944
The Farm Improvement Loans Act provides that under certain conditions guarantees may be granted on medium term farm loans including loans for the construction and improvement of farm homes. During the first half of 1953 guarantees were granted on 295 loans for new farm houses and 627 loans for the alteration and improvement of existing structures. These loans were valued at $\$ 1.2$ million of which $\$ 602,000$ went for the construction of farm dwellings.

## Property Management Operations, Central Mortgage and Housing Corporation

The sales program of munitions workers and veterans' rental units continued to reduce the number of units under the management of Central Mortgage and Housing Corporation. At the end of July, 1953, the number of rental units under management totalled 18,800 , a reduction of 3,000 units from one year earlier. The vacancy rate for these units averaged only .2 per cent during the seven month period.

## Rental lnsurance Plan

Designed to encourage the construction of rental housing projects, the rental insurance plan enables Central Mortgage and Housing Corporation to enter into a contract on completion of construction, to guarantee an annual return of rentals for approved housing projects. The period of guarantee may be up to 30 years but generally the term is 20 years. Construction may be financed privately or failing private financing, may be assisted by direct Corporation loans under The National Housing Act.

From initiation of the plan in July, 1948, until July, 1953, guarantees were made covering 20,642 dwelling units, of which 15,000 were approved through direct National Housing Act loans. Units approved under the plan had an average of 4 rooms, a floor area of 900 square feet and rented for an average of $\$ 75.49$ per month. During the first seven months of 1953,31 projects comprising 2,373 units were approved under the plan as against 2,484 units in the same months of 1952. All of the projects in 1953 were approved with Corporation loans.

## The Province of Quebec Farm Credit Bureau

The Quebec Farm Credit Bureau is authorized to pay mortgage interest charges in excess of 3 per cent on approved loans for the construction of dwellings containing one or two units.

In the first half of 1953 , the Bureau approved 2,927 applications for interest subsidies covering a total of 3,210 dwellings. The provincial committment for interest subsidies totalled $\$ 6.6$ million.

## SECTION 4.-REAL ESTATE LENDING

(See Tables 36-39)
Mortgage lending by lending institutions during the first half of 1953 was heavier than during the same period of 1952. The rise in volume of mortgage lending was most evident in the case of loans for new construction, particularly new residential construction.

In the first six months of 1953 the value of loans approved by lending institutions on all types of property was up 24 per cent from 1952, totalling $\$ 292$ million. Of this total, loans for purposes of new construction accounted for 73 per cent as against 66 per cent in the first half of 1952.

Mortgage lending for new residential construction in non-farm areas accounted for 63 per cent of the value of all institutional mortgage loan approvals in the first half compared with 61 per cent in 1952 and 54 per cent in 1951. Loan approvals in this category were valued at $\$ 183$ million and covered the construction of 27,600 new dwellings. In the same period of 1952, institutional mortgage loans were approved for the construction of 21,000 dwellings.

A major portion of institutional mortgage loans for new residential construction is under the joint loan provisions of the National Housing Act. During the first half of 1953 joint loans constituted 71 per cent of the value of all institutional mortgage loans on new residential property as against 76 per cent in the corresponding period of 1952. This proportion has varied considerably since 1949 with a high point of 89.6 per cent being reached in 1950. In the second quarter of 1953 the proportion was 78.3 per cent.

## Mortgage Registrations and Real Estate Transfers

A high level of real estate activity in the Greater Toronto area was indicated by the volume of new mortgages registered and real estate transfers in the first half of 1953. Mortgage registrations numbered 23,000 , an increase of 19 per cent over the same period of 1952 and mortgages discharged rose 9 per cent to 15,600 . The increase in mortgage registrations reflects in part a 36 per cent increase in housing starts in the area during the same period.

Real estate transfers in the first six months totalled 23,600 , as against 19,800 in the same months of 1952.

## SECTION 5.-BUILDING MATERIALS

(See Tables 40-52)

## Production of Building Materials

In the first six months of 1953 the output of building materials rose to meet the demands of the total construction program (see page 11). The index of building material production, measuring output of items other than lumber, averaged $106.8(1949-100)$ in the six month period as against 96.6 in the same period of 1952. Output of sawn lumber in the period was also higher and the index of lumber production averaged 117.9 compared with 104.5 in the 1952 period. In the month of June the lumber production index rose to 160.5 , as against 131.7 in June of 1952.

Of the 29 building materials under review only structural tile was lower in output in the first half of 1953 than in the same period of 1952. As new cement plants came into production, cement output rose to 10.7 million barrels, 23 per cent above production in the first half of 1952. In line with greater cement production, output of concrete blocks and cement pipe and tile rose 33 per cent and 11 per cent respectively. Products in the sanitary ware group showed the most notable increase with bathtub production increasing 84 per cent to 77 thousand units, and production of sinks doubling to 94 thousand units. In the clay products group, production of building brick rose 28 per cent to 193 million brick in the first half while output of flue linings and vitrified sewer pipe increased 48 per cent and 17 per cent to 669 thousand feet and 2.6 million feet respectively. In the plumbing and heating category, warm air furnaces, heating boilers, and cast iron radiators all exceeded 1952 production levels.

## Supply and Demand for Building Materials

Reflecting a high level of activity in both residential and commercial building operations during the first half of 1953, producers' sales of building products were considerably above sales in the same period of 1952. The index of domestic disappearance, which measures the flow of building materials from manufacturers averaged 105.7 (1949-100) in the first six months of 1953 as against 93.8 in the same months of 1952. Sales of cement were 17 per cent higher in the 1953 period totalling 10.4 million barrels and sales of all products in the sanitary ware group were well above 1952 levels.

Despite a high level of demand, stocks of building materials at the end of June were either at or above stocks on hand at June, 1952. Supplies of gypsum wallboard, gypsum lath, and flue linings were double stocks on hand at June one year earlier.

## Non-Seasonal Lay-Offs in the Building Material Industries

As demand for building materials increased in 1953, non-seasonal lay-offs in the building materials industries became fewer.

In the first eight months of 1953 there were 20 non-seasonal lay-offs in the industry involving a total of 850 employees, about one half the number of firms and number of employees involved in lay-offs in the corresponding months of 1952. Of employees laid off in the 1953 period only 145 were employed in firms shut down through lack of material. Workers laid off through lack of orders numbered 432 as against 1,540 in the first eight months of 1952.

## Building Materials-Imports and Exports

Domestic supplies of building materials were supplemented by a high volume of building material imports during the first half of 1953. Imports of colourless window glass, our principal building material import, totalled 26.5 million square feet, an increase of 60 per cent over the volume imported in the first half of 1952. In the same period, imports of bathtubs, closets and sinks more than doubled to a value of $\$ 1.1$ million. Plumbing and heating equipment was also brought into the country in much larger quantities than in the first half of 1952, particularly in the case of warm air furnaces which numbered 3,000 units as against 705 in the 1952 period.

Lumber products constitute Canada's principal building material export and during the first half of 1953 foreign shipments continued at 1952 levels. Shipments of wood laths which increased 60 per cent was the only notable exception.

## Supply of Primary Iron and Steel Products

An announcement by the Minister of Defence Production October 16, 1953 revoked order SD-1 dated January 9, 1952 as amended by order SD-3 dated December 15, 1952 which provided for certification of end use on all purchase orders for steel material. Restrictions on end use imposed by such certification and the necessity to keep records on inventories and stocks of steel material are also removed. The announcement reflects a continued improvement in domestic production.

In the first half of 1953 output of structural steel amounted to 105,000 tons, a 21 per cent increase over production in the same months of 1952. In the same period production of cast iron soil pipe rose 51 per cent to 28 thousand tons. Production of galvanized sheets, steel pipe and wire nails declined from production levels in the corresponding 1952 period.

Imports of iron and steel building materials were lower in the 1953 period with the exception of galvanized sheets, the volume of which rose 50 per cent to 5,100 tons.

## Sbipments of Primary Iron and Steel

Shipments of primary iron and steel shapes to consuming industries in the first half of 1953 totalled 2.4 million tons, slightly below the volume of shipments in the same period of 1952. The building industry absorbing 202 thousand tons, received 8.4 per cent of total shipments as against 7.4 per cent in the corresponding period of 1952. Shipments to the automotive industry almost doubled in the six month period, totalling 175 thousand tons. Industries in the merchant trade products group and wholesalers also received heavier shipments in the period under review.

## SECTION 6.-BUILDING LABOUR

(See Tables 53-62)

## Employment and Earnings

A record level of new residential construction together with a high level of commercial and industrial construction resulted in a sizeable increase in employment in the construction industry, in the second quarter of 1953. According to the quarterly Labour Force survey carried out by the Dominion Bureau of Statistics, employment in the construction industry during the week ending June 20 totalled 373,000 , an increase of 5 per cent over employment in the industry one year earlier. Total industrial employment rose in the same period to 5.4 million, an increase of about one per cent from May, 1952.

Sample data on the number of hours worked per week indicate that construction workers were putting in a longer work week in the first half of 1953 than in the same period of 1952. The average work week in the construction industry was 41.4 hours compared with 40.3 hours in the first half of 1952 . Average weekly earnings in the building industry rose 10 per cent in the year ending June, 1953 to $\$ 65.67$ and average hourly earnings rose 10 per cent to $\$ 1.56$ per hour.

Reflecting increased weekly wages and a slightly longer work week, construction labour income reached peak levels both for the month of June and for the six months of this year. The total for the month was $\$ 72$ million compared with $\$ 68$ million in June of 1952 . For the half year period the aggregate was $\$ 378$ million as against $\$ 318$ million for the first six months of 1952 . With consumers prices stable the gain in labour income represented a clear gain in real income.

Total labour income showed a corresponding increase advancing 10 per cent to a total of $\$ 5.7$ billion in the first half of 1953 . Gains were recorded in the half year period in each main industry group except the primary industries. The
increases ranged from almost 19 per cent in construction and 12.5 per cent in manufacturing to 9 per cent in the service industries.

Employment in construction firms with more than 15 employees increased less rapidly than total construction employment. Construction firms in this category reported an increase of 2 per cent in employment to an average of 132,000 workers per month in the first half of 1953 . The smaller percentage increase in employment in larger firms is related to the expansion in the residential construction industry where smaller firms are more numerous.

## The Labour Market

With a high level of activity in all branches of the construction industry, unemployment was low in June of 1953. Only 16,000 persons were without jobs and seeking work in the construction industry according to the Labour Force Survey at June 20, 1953, a group constituting only $1 / 2$ of one per cent of the construction labour force. According to the same survey one year earlier 20,000 construction workers were unemployed.

Additional information on unemployed construction workers in urban areas is provided by registrations of unplaced tradesmen at National Employment Service offices. Unplaced construction workers totalled 17,000 in the month of July of 1953, the same number as in July of 1952. In the same month unfilled vacancies, mainly for carpenters and unskilled workers totalled 3,243.

## Supply of Construction Workers

Immigration of construction workers was lower in the first half of 1953 than in the same months of 1952 although in the second quarter arrivals approached 1952 levels. In the first six months 3,843 construction workers entered the country compared with 5,200 in the same period of 1952 , the drop occurring mostly in the first quarter. Carpenters and electricians made up the largest groups numbering 1,144 and 644 respectively.

The second major source of skilled construction workers, the Federal Provincial Apprenticeship Training Program supplied 518 graduates to the construction industry in the first half of 1953. At the end of June there were 5,736 students in training under the program, an increase of 300 from one year earlier. The largest groups were in the plumbing and electrical trades with 1,741 and 1,686 respectively.

## Strikes in the Building and Building Material Industries

The first six months of 1953 were particularly favourable in terms of time lost through strikes in the building industry. Only 7,347 working days were lost through strikes in the first half compared with 188,000 working days in the first half of 1952. Time lost through strikes in the building material industries was negligible involving only 3,300 days in the first six months.

A similar picture existed in other industries as only a small part of Canada's work potential was lost through strikes. Time lost in all industries totalled 210,000 man working days, only 27 per cent of the working days lost in the same period of 1952 .

## Legislation-The Unemployment Insurance Act, 1940

Of particular interest to construction workers was the extended unemployment coverage for Canadian workers which went into effect August 3, 1953. The new benefits cover persons who become incapacitated after losing their jobs. Formerly persons thrown out of work received insurance benfits only so long as they were available to take on other jobs. If sickness or other disability made them unavailable for work they did not collect.

Under the new amendment to to the Unemployment Insurance Act, ${ }^{(1)}$ those becoming incapacitated through illness, injury or quarantine after unemployment starts will continue to receive benefits for as long as they would be qualified to get them if they were capable of working. The amendment makes no change in the rate of benefit nor in the method by which the duration of benefit is established, nor is there any increase in the rate of contributions.

## SECTION 7.-BUILDING COSTS

(See Tables 63-68)
Building costs, after dropping from January to May rose again in July to equal costs at January, 1953. The rise in construction costs resulted from an advance in construction labour wage rates, building material prices having remained unchanged from January. The July composite index of residential building material prices and construction labour wage rates stood at 128.7 $(1949=100)$ in July as against 126.4 in January and 124.7 in July, 1952.

The effect of higher wage rates on building costs was offset somewhat by a
(1) Chapter 337, 1-2 Elizabeth 11, 1952-53.

reduction in the average number of months under construction. This average dropped from 8.4 months in the first half of 1952 to 7.2 months in the first six months of 1953.

## Residential Building Material Prices

Notwithstanding a high rate of absorption by the building industry the composite index of residential building material prices remained stable in the first 7 months of 1953. The July composite index stood at 124.5 ( $1949=100$ ), unchanged from January and the same as at July one year earlier. In the group indexes, the paint and glass price index showed the only major advance since January, rising 4 per cent to 113.5 in July. Prices of brick and stone, and roofing materials also edged up slightly from January but these increases were offset by reductions in the price of electrical and plumbing equipment.

## Wage Rates in the Construction Trades

Construction labour wage rates advanced 5 per cent from January to July, 1953 and 9 per cent from July, 1952. The July index of wage rates in the construction industry stood at $135.8(1949=100)$, a rise of 6 points from January, 1953. The advance in wage rates applied to all trades but was greatest in the plumbing and electrical trades. Wage rates for plumbers rose 5 per cent from January to 129.4 in July and electricians' wages rose 4 per cent to 134.3.

## Shelter Costs, The Consumers' Price Index and General Wholesale Price Index

The consumers' price index rose .3 per cent from July to August, marking the third successive increase subsequent to a six month decline. The fractional rise brought the August index to 115.7 which placed the index at the same level as at January, 1953.

The rent index moved up in August for the eighth successive rise. The August rent index at 126.2 was 2 per cent above the January, 1953 index and 4 per cent above the August, 1952, index. The index of home-ownership costs remained almost stable in the same period and the August index at 121.4 was less than one per cent above the January index. The overall shelter cost index measuring changes in both rents and home-ownership costs was at 124.1 for August, about 1.5 per cent above the January index.

The wholesale price index, measuring price changes in eight major groups of commodities stood at 112.2 at August, 1953, fractionally above the January index but almost one per cent down from one year earlier.

# SECTION 8.-BUILDING INDUSTRY 

(See Tables 67-68)

## Bankruptcies in the Construction and Building Material Industries and in all Industries

Data on bankruptcies reflect stronger demand conditions in the construction industry in 1953. There were 69 construction firms which failed in the first half of 1953 as compared with 82 firms in the same period of 1952. In the building material industries only 13 failures were reported as against 23 in the 1952 period. Defaulted liabilities per firm were higher however, averaging $\$ 26,000$ in construction firms and $\$ 47,000$ in the building material industries, as compared with $\$ 20,000$ and $\$ 35,000$ respectively in the 1952 period.

Bankruptcies in all industries were also fewer, numbering 715 compared with 825 in the first half of 1953. Here again, however, average defaulted liabilities were higher, averaging $\$ 20,000$ as against $\$ 14,000$ in the 1952 period.

## Common Stock Prices

Strengthened by increased sales volume and good market prospects, the index of stock prices of 16 building materials maintained its level in 1953. In the first seven months the index averaged 288.4 (1939-100) as against 285.3 in the same period of 1952 .

In contrast the Common Stock price index of 82 industrial companies followed the general market trend and averaged some 19 per cent lower in the first seven months of 1953 than in the comparable 1952 period.

(1) Data shown are net of cancellations, reinstatements and adjustments.
(2) Revised.
(3) Data represent number and value of contracts taken over from Canadian Commercial Corporation.
(4) Not yet available.
(5) Includes 374 units started in defence projects which are in addition to starts shown in Table 21, Annual Report, 1951, C.M.H.C. p. 87. The remaining 404 units were started in remote areas.
(6) Represents units completed in remote areas, 20 of which were in Manitoba and 63 in the Yukon. Excluded are 277 units completed in remote areas as shown in Table 33, Housing in Canada, First Quarter, 1952, p. 69.

## PART III

SOURCES AND EXPLANATORY NOTES

## SOURCES AND EXPLANATORY NOTES

Sources and explanatory notes are organized in the order of the factual material referred to in Parts I and II. Where figures are rounded to the nearest thousand or million, totals do not necessarily equal the sum of their constituent items. Frequent references are made to the Dominion Bureau of Statistics and to the Central Mortgage and Housing Corporation. In the following notes these organizations are designated by the abbreviations, "D.B.S." and "C.M.H.C." respectively.

## PART I <br> CHARTS

FIGURE 1.-Chart based on data shown in Tables 41 and 47.
FIGURE 2.-Chart based on data shown in Tables 63-65.

## PART II <br> TABULAR MATERIAL

TABLE 1.-Net family formation is the total number of families formed minus the number of existing families dissolved. The number of families formed is taken as the sum of marriages and married female immigrants. Dissolutions represent the sum of deaths to married persons, emigration of married females and divorces.

Data on marriages, deaths to married persons and data on divorces obtained by courtesy of the Vital Statistics Section, Division of Social Welfare, D.B.S. Quarterly deaths to married persons during 1952 and 1953 estimated by the Economic Research Department C.M.H.C., on the basis of total deaths during the corresponding periods. Quarterly data on divorces have been averaged from the annual totals and will be revised when actual data become available.

The net family formation series was adjusted by pro-rating the difference between the computed net family formation 1941-1951 and the actual number of families formed in the same period according to the 1951 census. During the intercensal period the computed net family formation totalled 685,300 while the 1951 census shows an increase of 682,300 . The difference of 3,000 was pro-rated over the ten year period to conform with the census totals. The number of families at the end of 1949 does not represent the number of families at the end of 1948 plus net family formation in 1949 because of the inclusion of Newfoundland families in March, 1949.

TABLE 2.-Population data for 1951 represent the census count for that year. Data for births deaths and marriages obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S.

Until the end of 1951, annual and monthly data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1952 and 1953 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review regardless of month of occurrence.

Source immigration data is the same as for Table 4.
TABLE 3.-Data obtained by courtesy the Vital Statistics Section, Division of Social Welfare, D.B.S. Total births in this table do not equal total births in Table 2 as in this table illegitimate births are excluded.
TABLE 4.-Data compiled by the Economic Research Department, C.M.H.C. through courtesy of the Immigration Branch, Department of Citizenship and Immigration.
TABLE 5.-Source of data shown in Table 5 are as follows:
1945 Housing Statistics, 1946, D.B.S.
1946 Data for completions obtained from Dwelling Units and New Buildings Containing Dwelling Units Reported by Municipalities and other Areas as Completed in the Nine Months Ending September 30, 1947, D.B.S. Data for units under construction at the end of 1946 obtained from Housing Bulletin No. 1, March, 1948, D.B.S.

1947 Data for completions obtained from Supplement to Housing Statistics, 1947, D.B.S. Data for units under construction at the end of 1947 obtained from Housing Bulletin No. 1, March, 1948, D.B.S. Data for starts during 1947 estimated by Economic Research Department, C.M.H.C. from figures supplied by Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-1953 Data obtained from monthly issues New Residential Construction, D.B.S.
Data for housing units completed in Canada during 1945, 1946 and 1947 are based on returns received from 623 municipalities out of a total of 3,845 or approximately 66 per cent of the total population of incorporated municipalities. For detailed explanation of coverage and statistical technique used see Housing Statistics, 1946, D.B.S.

Estimates for 1948-1953 are based on the results of a nation-wide survey carried out each month by D.B.S. with the co-operation of C.M.H.C. All metropolitan areas and urban centres with a population of 5,000 or more are enumerated completely. Approximately 400 sample areas lying outside these municipalities are also chosen for complete enumeration.

The figures for units under construction are subject to adjustment each month because of errors in the designation of starts between single and multiple units, and also because of the cancellation of some starts reported in previous months.

TABLE 6.-Actual data were obtained from the same sources as are shown for the material in Table 5. The seasonally adjusted series was prepared by the Economic Research Department, C.M.H.C., in the following manner:

First a seasonally adjusted quarterly series was prepared for each region, Maritimes, Quebec, Ontario, Prairies, and British Columbia. These series were added together to obtain quarterly figures for Canada and multiplied by four to express the series in terms of an annual rate. The regional seasonal indexes on which the series is based were calculated by the moving average method. Data for Newfoundland are included from 1949.

TABLE 7.-The data on dwellings stated in metropolitan areas and in other cities and towns with population of 5,000 and over are obtained by direct count by C.M.H.C. Dwellings started in other areas are estimates prepared by D.B.S. based on sample surveys. Sources of data are:
1947 Data compiled by the Economic Research Department, C.M.H.C., from figures supplied by the Public Finance Statistics Division, D.B.S.
1948-1949 Data obtained from monthly issues Housing Bulletin, D.B.S.
1950-1953 Data obtained from monthly issues New Residential Construction, D.B.S.
TABLE 8.--Sources are the same as for Table 5.
TABLE 9.-Sources of data shown in Table 9 are as follows:
1947 Data obtained from Supplement to Housing Statistics, 1947, Dwelling UnitsTypes of Buildings and Types of Construction for Individual Municipalities and Others Areas, D.B.S.
1948-1953 Sources are the same as for Table 5.
TABLE 10.-Data based on reports compiled by the Statistical Department, C.M.H.C.
TABLE 11.-Data for this table for the years 1945-1948 were obtained from Residential Real Estate in Canada by O. J. Firestone, University of Toronto Press, 1951, Tables 77, 78 and 79, pp. 282, 283 and 284. Annual data shown in Residential Real Estate for 1949 were preliminary and have been revised. Annual data since 1948 and quarterly estimates for 1951-1953 were computed by the Economic Research Department, C.M.H.C. Data for 1949-1953 include an allowance for Newfoundland.

Gross residential capital formation represents an estimate of expenditures on new construction including major improvements and alterations to existing structures. It includes also supplementary house-building expenses of installed non-moveable equipment and payments for professional services such as architectural and legal fees.

Capital consumption represents an estimate of depreciation, demolitions, and accidental losses to the stock of residential capital such as may be caused by fire, flood or storm.

Both gross residential capital formation and gross capital consumption are net of raw land and relate to the value of assets created by construction activity only.

Net land added to residential real estate represents the value of land put in use for housing purposes less the value of land withdrawn from residential use. The value of net land added for residential purposes together with the value of net capital formation provides a value for total net additions to Residential Real Estate.

The methods of estimating the net value of land put in use for residential purposes are outlined in detail in Residential Real Estate, pp. 418-431.

TABLE 12.-Source is the same as for Table 11. Values involved are based on 1939 prices throughout.
TABLE 13.-Data for "other" construction for the period 1945-1950 obtained from Private and Public Investment in Canada 1926-1951, Department of Trade and Commerce, Ottawa, p. 151. Annual data shown in Private and Public Investment in Canada for 1951 were preliminary and have been revised by the Economics Division, Department of Trade and Commerce.

For the period 1945-1953 housing data estimated by the Economic Research Department, C.M.H.C.

Data on gross national expenditure for the period 1945-1951 obtained from National Accounts, Income and Expenditure, 1926-1950, Research and Development Division, D.B.S. and National Accounts, Income and Expenditure, 1951, and Preliminary 1952, D.B.S.

TABLE 14.-Data for 1940-February, 1947, obtained from annual and monthly issues Building Permits Issued in Canada, Construction Statistics Section, Census of Industry and Merchandising Division, D.B.S. Data for March-December, 1947, compiled by the Economic Research Department, C.M.H.C., from returns made to D.B.S. Data for 1948-1953, provided by courtesy of the General Assignments Division, D.B.S. The number of new dwelling units includes conversions.

TABLE 15.-Data obtained from monthly isuses of The Building Reporter, published by Hugh C. Maclean Publications Limited, Toronto.

Contracts awarded may be used as an indicator of trends but they are liable to misinterpretation if used as indicators of total volume of residential activity. They relate only to projected work which may or may not be commenced. Coverage is apt to vary over a period of time.

Data on the number of new housing units estimated to be involved in contract awards for apartments which replace the series on apartment blocks shown in The Building Reporter have been derived by the application of a conversion factor to the value of contract awards for apartments made during the periods shown. This has been done to make the data more comparable with the series on building permits issued.

The conversion factor used is simply the average construction cost per dwelling unit of an apartment of the solid masonry type (brick facing and masonry blocks) prevailing throughout Canada during the first six months of 1946 as outlined in the study Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 40-41. 1946 construction costs for the units are estimated at $\$ 6,053$, of which $\$ 3,178$ are material costs, $\$ 2,270$ are on-site labour costs and $\$ 605$ are overhead and profits. This conversion factor was adjusted according to variations in the composite index of residential building material prices and wage rates in the construction industry as contained in Table 65.
TABLE 16.-Data compiled by Economic Research Department, C.H.M.C. Publicly-initiated housing comprises starts under the Veterans' Rental Housing Program of C.M.H.C. and the Armed Service Married Quarters' Program of the Department of National Defence, the Federal-provincial housing projects and units built under the Capital Assistance provisions of the Department of Defence Production. Privately-initiated housing with Federal Government financial assistance in the form of loans, covers starts under the National Housing Act, 1944, The Farm Loan Act, 1927, and the Veterans' Land Act, 1942. Privately-initiated housing with Federal Government financial assistance in the form of guarantees comprises starts under the Farm Improvement Loans Act, 1944, and the Rental Insurance Plan, except those rental insurance units approved for National Housing Act loans.

National Housing Act starts for 1947 and 1948 were distributed by quarter according to the pattern established by the number of housing units approved for loans. Starts under the rental insurance plan, the Farm Loan Act, 1927, and the Farm Improvement Loans Act, 1944, were considered to be equal to the number of units approved under these provisions.

As this tabulation covers new permanent houses only, Federal Government guarantees under the home extension provisions of The National Housing Act, 1944, financial assistance for Emergency Shelter units, and construction of temporary units by the Department of National Defence, are excluded.

Data on "publicly-assisted housing starts" for 1950-1952 as shown in this table differ from those shown in the 1950-1952 issues of Mortgage Lending in Canada, C.M.H.C., under the title "Dwellings Started and Completed by Principal Source of Financing and Province, Canada". The latter issues include starts of dwellings constructed for Government employees but excludes dwellings started on which double depreciation benefits have been extended. This table, on the other hand, excludes starts on dwellings built for Government employees and includes dwellings built under the double depreciation assistance. An additional difference between data in the two sources is due to the fact that only permanent dwellings are covered in this table whereas starts on temporary dwellings are included in the above mentioned issues of Mortgage Lending in Canada.

TABLES 17, 18, 19, 20.-Data compiled by the Statistical Department, C.M.H.C.
TABLE 21.-Data compiled by the Statistical Department, C.M.H.C. on a net basis. As a result allowances for cancellations, adjustments and reinstatements have been made in the month they were reported and negative figures may appear in a particular month, during which there were more cancellations reported than approvals made.

Whereas the data under the heading "Loans under N.H.A." comprise all Rental Insurance projects with N.H.A. loans approved at time of compilation, the data under the classification "with conventional loans" are residual and in addition to Rental Insurance. Projects withour N.H.A. loans may include cases where an N.H.A. loan may be approved in a subsequent quarter. The distribution between N.H.A. loans and conventional loans are preliminary for the last quarter shown and are subject to revision in the Fourth Quarter, 1953 issue of Housing in Canada.

TABLE 22.-Data compiled by the Statistical Department, C.M.H.C.
TABLE 23.-Data compiled by the Economic Research Department, C.M.H.C. from reports prepared by the Statistical Department, C.M.H.C.

TABLE 24.-Data compiled by the Economic Research Department, C.M.H.C. from reports supplied by the Statistical Department and Public Housing Division, C.M.H.C.

The construction work involved in each project varies from one to another but in general a complete land assembly project includes surveying of roads and lots, installation of main and lateral sewers, water mains and hydrants, the ditching, grading, gravelling and surfacing of roads and driveways, the installations of street lights and filling and grading of grounds.

TABLE 25.-Data are from records of Accounting Division, C.M.H.C.
TABLE 26.-Data compiled by the Property Management Department, Mortgage and Real Estate Division, C.M.H.C.

TABLE 27.-Data to the end of 1946 compiled by Wartime Housing Limited.
Financial data for 1947-1953 compiled by the Accounting Division, C.M.H.C. For the years 1947 and 1948, data on the number of housing units started, completed and under construction compiled by the Program Section, Construction Division, and for 1951-1953 by the Statistical Department, C.M.H.C.

TABLE 28.-Data compiled by Statistical Department from data supplied by the Property Management Section, Mortgage and Real Estate Division, C.M.H.C.

TABLE 29.-Data compiled by the Statistical Department and Accounting Division, C.M.H.C.
TABLE 30.-Data compiled by the Economic Research Department, C.M.H.C., from reports prepared by the Statistical Department, C.M.H.C.

Data on expenditures are from the records of the Accounting Division, C.M.H.C.
TABLE 31.-Data compiled by the Statistical Department and Accounting Division, C.M.F.C.
TABLE 32.--Data compiled by the Economic Research Department, C.M.H.C. from information obtained by courtesy of the Research and Statistics Division, Department of Veterans' Affairs. Data on expenditures for 1950-1953 are not comparable with data for previous years as excess costs borne by the veterans and certain improvements included in previous years are not available for 1950-53.
TABLE 33.-Data obtained by courtesy of the Canadian Farm Loan Board, Department of Finance.
TABLE 34.-Data obtained by courtesy of the Supervisor, The Farm Improvement Loans Act, Department of Finance.

TABLE 35.-Data obtained by courtesy of the Quebec Farm Credit Bureau.
TABLE 36.-Data compiled by the Economic Research Department, C.M.H.C. from monthly reports submitted by 112 lending institutions comprising 40 life insurance companies, 35 trust companies, 22 loan companies, 7 fire insurance companies, and 8 fraternal societies. These companies advanced 94 per cent of the total cash disbursements on mortgage loan account for Canadian real estate made by all companies of these types in 1951.
TABLE 37.-Data compiled by Economic Research Department, C.M.H.C. Source is the same as for Table 36.
TABLE 38.-Data compiled by Economic Research Department C.M.H.C. from sources as outlined in Table 36. Data of Joint Loans supplied by Statistical Department, C.M.H.C.
TABLE 39.-Data compiled by the Economic Research Department, C.M.H.C. The number of mortgages registered, Greater Toronto Area, 1945-1953 were obtained from the Toronto Registry Office, York East and West Registry Offices and Toronto and York Land Titles Office.

The number of mortgages discharged, Greater Toronto Area, 1945-1953, were obtained from the Toronto Registry Office, York East and West Registry Offices and estimates of discharges from Toronto and York Land Titles Office.

The number of real estate transfers obtained through courtesy of the Inspector of Legal Offices.

The number of mortgages registered and discharged in the Province of Ontario reflect mortgage activity as recorded in the 65 registry and 16 land titles offices of the province. Data for the 65 registry offices and one land titles office are based on original records made available by courtesy of the Inspector of Legal Offices, Province of Ontario. Coverage of the remaining 15 land titles offices were obtained by means of a sample survey of the mortgage registrations and discharges during the month of September, 1952, recorded in 10 land titles offices. This information was used in conjunction with the data mentioned above to produce estimates for the province as a whole. For further details of the sample survey see Mortgage Lending in Canada. 1952, p. 101.

Estimates for Ontario in 1953 based on data supplied for Greater Toronto.
TABLE 40.-Data compiled by Fconomic Research Department, C.M.H.C., from information provided by courtesy of D.B.S.

The indexes of production are based on the total value of output of the more important construction materials in terms of 1949 prices and provide a rough indication of trends in domestic construction activity. As this is true to a somewhat less degree in the case of lumber, and because of its heavy weight in relation to the other materials, it has been shown separately.

The indexes of domestic disappearance are designed to measure the rate of absorbtion of construction materials and provide a somewhat closer indication of trends on the
domestic scene. As in the case of the production indexes values are based on 1949 prices. To obtain these indexes the production indexes were adjusted, where possible, by the addition of imports, the deduction of exports and more significantly the replacement of the original production data with data on factory sales, thus taking into account changes in producers' inventories. Caution should be taken in the interpretation of this series as it does not take into consideration changes in dealers inventories. This is particularly true with regard to lumber as a very large proportion of yearly output or factory shipments are taken up in this manner. Because of this fact these series cannot be relied upon to give a short term indication of actual absorbtion of materials on site.

TABLE 41.-Sources of data for building materials are as follows:
Sawn Lumber:
1945-1949 Annual issues of The Lumber Industry in Canada, D.B.S.
1950-1953 Monthly issues Production Shipments and Stocks on Hand at Sarwills, D.B.S.
Hardwood Flooring:
1946-1953 By courtesy the Timber-Controller, Department of Trade and Commerce. The unit measure, square feet represents a surface measure, plus an allowance for waste and tongue irrespective of thickness.
Wood Fibre Building Board:
1945 By courtesy of the Forest Products Statistics Section, D.B.S.
1946-1953 Monthly issues Rigid Insulating Board Industry, D.B.S.
Building Brick and Structural Tile:
(Data relates to face and common brick only)
1945-1950 Clay and Clay Products, 1950, D.B.S.
1951-1953 Monthly issues Products Made From Canadian Clays, D.B.S.
Flue Linings; Vitrified Sewer Pipe; Non-Metallic Sheathed Cable; Bath Tubs; Sinks; Wash Basins:
1945-1953 By courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Mineral Wool (Batts, Granulated and Loose) :
1945-1950 Annual issues The Stone Industry in Canada, D.B.S.
1951-1953 Monthly issues Mineral Wool, D.B.S.
Cement:
1945-1950 Annual issues The Cement Manufacturing Industry in Canada, D.B.S.
1951-1953 Monthly issues Cement and Cement Products, D.B.S.
Concrete Blocks; Cement Pipe and Tile:
1945-March, 1949 Monthly issues Concrete Building Blocks and Cement Pipe, D.B.S.
April, 1949-1953 Monthly issues Cement and Cement products, D.B.S.
Production figures are estimated since D.B.S. figures include only $85 \%$ of total output in this industry.
Gypsum Plaster; Wallboard; Lath:
1945-1950 Annual issues The Gypsum Industry in Canada, D.B.S.
1951-1953 Monthly issues of Production Sbipment and Stocks of Gypsum Products, D.B.S. The figures for gypsum plaster, in the above publication were adjusted so as to exclude the production of such sundry plasters as moulding plaster and etc.
Builders' Hardware:
1945-1950 Annual Issues of The Hardware Tools and Cutlery Industry in Canada, D.B.S.
1951-1953 Estimates prepared by the Economic Research Department, C.M.H.C. based on data reported to D.B.S. by firms which in 1949 accounted for $98 \%$ of the total sales.
Domestic Heating Boilers; Cast Iron Radiators; Warm Air Furnaces:
1945-1950 Annual issues The Heating and Cooking Apparatus Industry in Canada, D.B.S.
1951-1953 Monthly issues of Stoves and Furnaces, and, Cast Iron and Steel Heating Radiators, D.B.S.
Hot Water Storage Tanks:
1945-1950 Annual issues The Sheet Metals Products Industry in Canada, D.B.S. 1951-1953 Monthly issues Domestic Range Boilers, D.B.S.
Electric Hot Water Tank Heaters:
1945-1950 Tbe Electrical Apparatus and Supplies Industry in Canada, D.B.S.
1951-1953 Estimates prepared by the Economic Research Deparment, C.M.H.C. from data supplied by D.B.S., which represents the production of firms which in 1949, accounted for $86 \%$ of the production.

Asphalt Shingles; Tar and Asphalt Felts:
1945-1950 Annual issues Paper Roofing Industry, D.B.S.
1951-1953 Monthly issues of Asphalt Roofing Industry, D.B.S.
Asphalt Floor Tiles:
1948-1953 Monthly issues of Asphalt Floor Tiles, D.B.S.
Paint and Varnishes:
1945-1951 Annual issues Paints and Varnishes Industry, D.B.S.
1952-1953 Monthly issues Sales of Paints, Varnishes and Lacquers, D.B.S.
TABLE 42.-Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

TABLE 43.-Data obtained.from monthly issues of Trade of Canada-lmports Entered for Consumption, Department of Trade and Commerce.

The data on wallboard building board for the period 1945-1947 include insulating board. The data for the period 1948-December, 1950 exclude insulating board as the Emergency Exchange Conservation Act which was in effect from 1948 to December 31,1950 prohibited the importation of this type of building board.
TABLE 44.-Data obtained from monthly issues of Trade of Canada-Exports-Canadian Prodace, Department of Trade and Commerce.

Data on lumber exports include planks, boards and squared timber.
Data for lumber in monthly issues of the Canadian Statistical Review, D.B.S. include planks and boards only.

TABLE45.-Data on production of domestic pig iron and steel ingots obtained from Iron and Steel and Their Products in Canada, 1943-1945, D.B.S. for 1945, and for subsequent periods from annual issues of The Primary Iron and Steel Industry in Canada, D.B.S., and monthly issues of Primary Iron and Steel, D.B.S. Annual and quarterly revisions for the period 1945-1951 have been made by the Steel Division, Department of Defence Production. Data on production of rolling mill products made from Canadian ingot are estimated by applying a conversion factor of .725 to steel ingot processed in Canada. The conversion factor of .725 allows for the estimated weight loss involved in turning iron and steel shapes. out of the ingot form. Data on imported rolling mill products are derived by reducing the total of imported steel, including ingots, by the estimated production loss sustained in processing its ingot content.

Domestic disappearance of rolling mill products is the sum of domestic production and imports less exports.

The volume of rolling mill products being made available to Canadian consuming industries as indicated in "domestic disappearance" exceeds that of "net total domestic shipments" of primary iron and steel shapes from Canadian rolling mills as shown in Table 46. This difference is accounted for by the fact that a portion of imports of primary iron and steel shapes is shipped direct to consuming industries without being processed in Canadian mills. Another factor is that data on production of rolling mill products from Canadian ingot as shown in this table do not show actual production but represent output of iron and steel shapes that would be forthcoming from current ingot production.

TABLE 46.-Data obtained from monthly issues of Canadian Statistical Review, D.B.S. Monthly revisions during 1951, provided by the Steel Division, Department of Defence Production.

The classification "Merchant Trade Products" refers to items produced in integrated mills and covers wire and wire products. The "miscellaneous" category includes all steel used in the following: agricultural and other farm implements, machinery and tools, mining and lumbering industries, pressing, forming and stamping industries, public works and utilities, shipbuilding and steel specifically marked for National Defence purposes. During the year 1949 the amount of steel used for National Defence purposes amounted to .3 per cent of the total miscellaneous category. The classification "Producers' Interchange" represents the amount of steel shipped to producers' own plants or to other plants within the primary industry for further processing e.g. black sheet to galvanizing department; hot rolled bars to make railway track material. See also explanatory note to Table 45.

TABLE 47.-Data obtained from the following sources:
Cast-iron Soil Pipe and Fittings; Cast-iron Pressure Pipe and Fittings; Steel Pipe and Fittings: 1945-1951 Annual issues Iron Castng Industry, D.B.S.
1952-1953 By courtesy of the Mining, Metallurgical and Chemical Statistics Section, D.B.S. Structural Steel:
1945-1953 By courtesy of the Steel Division, Department of Defence Production. Structural Steel includes T-bars, Z-bars, H-beams, I-beams, upright angles, etc. where any one leg of the section is 3 inches or over.
Wire Nails and Spikes:
1945-1950 Annual issues The Hardware Tools and Cutlery Industry in Canada, D.B.S. 1951-1953 Monthly issues Nails, Tacks and Staples, D.B.S.
Galvanized Sheets:
1945-1953 Monthly issues Primary Iron and Steel, D.B.S.
TABLE 48.-Data based on monthly reports supplied by courtesy the Mining, Metallurgical and Chemical Statistics Section, D.B.S.

TABLE 49.-Data on imports obtained from monthly issues of Trade of Canada-lmports Entered for Consumption, Department of Trade and Commerce.

Data on exports obtained from monthly issues of Trade of Canada-ExportsCanadian Produce, Department of Trade and Commerce.

TABLE 50.-Sources of data shown in Table 50 are as follows:
1945-1948 Data obtained from annual issues of Summary of Montbly Railway Traffic Reports, D.B.S.
1949-1993 Data obtained from issues of Montbly Traffic Report of Railways of Canada, D.B.S.

This series replaces the data on "Movenent by Rail of Building Materials" appearing in Housing in Canada, prior to the October, 1950, issue which were based on freight loadings at stations in Canada. Whereas the present series covers only freight unloaded for domestic use, thereby including imports and excluding exports, the former series covered freight loaded at Canadian stations and thereby included exports and excluded imports. The present series more closely reflects the use of materials by the construction industry in Canada.

TABLE 51.-Data compiled by the Economic Research Department, C.M.H.C. from information supplied by courtesy of the Employment and Payrolls Statistics Section, D.B.S.

Data are based on monthly reports from employers with 15 or more employees. The materials covered include: lumber, brick, tile, paints, pigments, varnishes, building blocks, roofing and sheathing paper, prefabricated houses, stoves, heaters, furnaces, iron pipe, sheet metal, wallboards, structural iron and steel fabrication, builders' hardware, glass, gypsum products, asbestos building materials, sanitary ware, mineral wool, sand and gravel.

TABLE 52.-Data obtained by courtesy the Fconomics and Research Branch Department of Labour.

The figures are compiled on the basis of information submitted through day to day layoff reports and monthly summary reports made by local offices of the National Employment Service. Layoffs that are occasioned by normal seasonal factors are excluded from the compilation as far as possible. For the most part, reports are not received for layoffs involving less than ten workers or for those of less than two weeks' duration.

The layoffs cover manufacturing industries only, and are classified by their cause into three categories: lack of orders; lack of material; and other. The category "other" to a large extent represents non-economic factors such as flood and fire, but it includes some factors that are at least partly economic such as bankruptcies, strikes, and plant closures for repairs or retooling. The latter factors however do not directly reflect the immediate demand and supply conditions of the businesses concerned. The factors which have an immediate bearing on the supply side (lack of material) and on the demand side (lack of orders) of the businesses concerned are shown separately.

TABLE 53.-Data for 1945 on employment and unemployment in non-agricultural industries and for the Canadian labour force obtained from Canadian Labour Force Estimates, 1931-1950, Reference Paper No. 23, 1951, Labour and Prices Division, D.B.S. Data on employment in construction industry for 1945 prepared by the Economic Research Department, C.M.H.C. from estimates of paid-workers in the construction industry as contained in Canadian Labour Force Estimates 1931-1950, p. 18.

The data in this table for the period 1946-1953 are based on the results of sample surveys undertaken by D.B.S. on an approximate quarterly basis. Results of these samples are published in periodic issues of The Labour Force Bulletin, D.B.S.

The estimates for this period are subject to sampling error. In general the smaller the estimate the larger the relative sampling error. In the case of unemployment estimates in the construction industry, the percentage error is apt to be quite high, and reliance can be placed on these figures only with careful reservations. The coefficient of variation for estimates of employment in the construction industry is estimated at 6 per cent. Roughly this means that there are about two chances out of three that the sampling error will be less than 6 per cent; and about one chance in twenty that it will amount to more than 12 per cent.

The construction industry referred to in Table 56 includes engineering as well as building construction, whereas Table 55 covers the building industry only.

The industry classification used in Table 56 is that contained in the Standard Industrial Classification Manual, D.B.S. and has the business of the establishment as a basis whereas the Occupational class shown is based on the Standard Summary of Occupational Classes, D.B.S. where the basis is the actual job performed. Force account employees of non-construction firms are classified by occupation as construction workers if they are employed in construction work but are classified by industry according to the industrial classification of the employing firm. Conversely, non-construction employees in construction firms are classified by industry as construction employees but by occupation according to the work performed e.g. clerical, managerial. The Province of Manitoba was excluded from the June Labour Force Survey, 1950, because of flood conditions. To achieve comparability with preceding periods, estimates for Manitoba were made by Labour and Prices Division, D.B.S. and Economic Research Department; C.M.H.C.

TABLE 54.-Data based on a distribution of employed construction workers by number of hours worked per week, provided by courtesy the Special Surveys Division, D.B.S. The average number of hours worked per week is shown to indicate overall seasonal variations and longer term trends. It is calculated from a frequency distribution, somewhat more detailed than that shown in this table, on the assumption that the mid-point of each class interval is representative of the group falling therein. The averages shown are subject to sampling error and should be interpreted with caution. The total number of hours worked per week represents the product of the average number of hours worked per week and the number of workers employed in the construction industry.

TABLE 55.--Data represent new series compiled by the Employment Section of the Labour and Prices Division, D.B.S. from reports made by employers with 15 or more employees.

Sources for number of persons employed, aggregate weeekly payroll and average weekly earnings in the building industry:
1945-1949 Annual Review of Employment and Payrolls D.B.S.
1950 The Employment Situation, D.B.S.
1950-1953 Monthly issues of Employment and Payrolls D.B.S.
Sources for indexes of employment in the building and non-agricultural industries:
1945-1946 For building industry-by courtesy Labour and Prices Division D.B.S. For non-agricultural industries-Employment Payrolls and Average Weekly earnings 1939-1946 D.B.S.
1947-1950 Employment Payrolls and Average Weekly Earnings 1947-1950 D.B.S.
1951-1953 Monthly Issues Employment and Payrolls D.B.S.
TABLE 56.-Data compiled by the Employment Statistics Section, D.B.S., from reports made by employers with 15 or more employees. Data are published monthly in Statistics of Average Hours Worked and Average Hourly Earnings, D.B.S.

The number of hourly wage-earners comprises workers who are employed by the hour and excludes salaried personnel and other employees whose earnings are not directly dependent on the number of hours worked. Consequently the total number of hourly wage-earners shown in this table is smaller than the number of persons employed as shown in Table 55.

The statistics on hours worked include overtime as well as the hours put in by parttime and casual workers. Hours credited to persons on leave with pay are also included.

The average hourly and weekly earnings shown represent gross earnings before deduction for taxes, unemployment insurance, etc.
TABLE 57.-Data for the period 1945-1950 obtained from National Accounts, Income and Expenditure, 1926-1950, 1951, Research and Development Division, D.B.S. Monthly data for 1951-1953 obtained from Estimates of Labour Income, D.B.S.

A series on total construction outlay is shown in Table 13 and a comparison of the two series shows trends that are similar but not identical. There are two reasons for some variation in trend. First, the labour component of construction expenditure does not vary exactly as the other components because of changes in labour output per man hour and different rates of change in wage rates and construction material prices or management and overhead expenses. Second, in the case of labour income estimates a different coverage of the construction industry is made than for estimates of total construction expenditure. Whereas Table 13 is intended to cover all construction expenditures, the estimates in Table 57 do not include: 1) expenditures by unincorporated own account contractors and builders, 2) construction outlay by railway and telephone companies, 3) repair and maintenance construction outlay on force account by nonconstruction companies, 4) construction outlay by Federal, provincial or municipal governments.
TABLE 58.-Compiled by the Unemployment Insurance Section, Labour and Prices Division, D.B.S., based on weekly reports submitted by local offices of the Unemployment Insurance Commission.
TABLE 59.-Data compiled by the Unemployment Insurance Statistics Section, D.B.S.
A person who has made at least 180 contributions into the Unemployment Insurance Fund, during the two year period immediately preceding a claim for benefits and has made 60 contributions in the year preceding the claim or 45 contributions in the 6 months preceding the claim establishes a benefit year. The series on the number of male workers in the construction industry applying for unemployment insurance benefits is supplementary to data shown in Table 53 and 58.

The chief limitations of the data in Table 59 as an index of unemployment are as follows: (1) coverage is confined to male workers in construction occupations who come under the terms of the Unemployment Insurance Act, 1941; to the end of 1947 these comprise employees on salary who earn less than $\$ 2,400$ annually, employees paid by the hour or by the day, and employees paid by the week unless they earn more than $\$ 3,120$ annually and apply for exemption from the Act; from January 1, 1948, to June 30, 1950, salaried personnel earning less than $\$ 3,120$ have come under the Act and since July 1, 1950, the ceiling of insurability for salaried employees is raised from $\$ 3,120$ to $\$ 4,800$ a year; there are therefore, a number of construction workers not covered in this tabulation; (2) not all unemployed workers have made 180 days' contribution prior to their period of unemployment; (3) a worker who is unemployed twice during a 12 month period does not as a rule establish a benefit year the second time; (4) the establishment of a benefit year does not give an indication of the duration of unemploymenc.
TABLE 60.-Data compiled by the Vocational Training Branch, Department of Labour.
TABLE 61.-Data compiled by the Economic Research Department, C.M.H.C., from data supplied by courtesy of the Immigration Branch, Department of Citizenship and Immigration.
TABLE 62.-Data obtained from monthly issues of The Labour Gazette, Department of Labour.
TABLE 63.-The composite non-residential building material price index is obtained from D.B.S. Reference Paper No. 43, Non-Residential Building Materials Price Index, August, 1953 and subsequently from Prices and Price Indexes D.B.S. Indexes of prices of
building materials obtained from Prices and Price Index Numbers of Residential Building Materials, March 1948, D.B.S. and subsequently from monthly issues of Prices and Price Indexes, D.B.S. Indexes are converted from a 1935-1939 to a 1949 base. The composite index residential building material prices is weighted according to the value of each listed group of materials entering into residential construction as estimated in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946, pp. 60-67. Insofar as possible the price index for each group of materials is based on the component items shown in the above publication, and weighted accordingly. In some cases however, where the specific material components listed in the publication covered a wide variety of individual items, representative material items were chosen and weighted according to total production in Canada.

The purpose of these group indexes is to reflect the average movement of prices of building materials having a characteristic use. In interpreting these indexes certain qualifications should be observed before drawing general conclusions from them. First, the price of each building material in a group rises or falls either independently of the other or possibly in an inter-related fashion depending on the extent of their homogeneity. Changes in prices of each material may also occur at varying rates from another. Consequently a group index provides no information with respect to price changes experienced by a specific building material within a group. Attention is drawn to Price Index Numbers of Residential Building Materials 1926 to 1948, Labour and Prices Division, D.B.S., March 1949, which sets out in detail the building materials comprising each group. Secondly, though the indexes are designed, by applying appropriate weighting techniques, to express national averages of price changes, they may be modified by regional cost differentials. This problem of regional differentials in housing construction costs is treated at length in Chapters 1 and 2, Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa, 1946.

TABLE 64.-Data obtained from the Department of Labour.
Annual indexes for the individual trades other than sheet metal workers obtained by courtesy of the Economics and Research Branch for the years 1939-1952. The intervening monthly indexes for 1952 and 1953 were computed by the Economic Research Department, C.M.H.C., according to methods established by the Department of Labour and based on monthly wage rate schedules in 29 cities supplied by courtesy of the Industrial Relations Branch.

The index for sheet metal workers was calculated by the Economic Research Department, C.M.H.C. on the basis of rates for 15 cities obtained from annual issues of Wages and Hours of Labour in Canada, Department of Labour, for the years 1945-1949 and as supplied by courtesy of the Industrial Relations Branch for 1951-1953.
The weights used in calculating the index for all construction workers are based on the pattern of building labour employment in 29 cities as revealed by the 1941 census.

The index for all industries for the years 1945-1949 was obtained from annual issues of Wages and Hours of Labour in Canada, Department of Labour, and by courtesy of the Economics and Research Branch for April 1952 and 1953. The wage rate index for all industries was converted arithmetically to a 1949 base.

The indexes for all construction workers and all industries include a percentage allowance to cover holiday pay assessments effective in most cities in Canada.
TABLE 65.-Combined index of residential building material prices and wage rates in the construction trades is based on the composite residential material index shown in Table 63 and the index of wage rates of all construction workers, including holiday pay allowances, shown in Table 64. Combined index of non-residential construction material prices and wage rates in the construction trades is based on the composite non-residential material index shown in Table 63 and the index of wage rates of all construction workers including holiday pay allowances shown in Table 64. The weights for the combined index of residential building material prices and wage rates of construction workers are based on the proportions established in Manpower and Material Requirements for a Housing Program in Canada, Department of Reconstruction and Supply, Ottawa 1946, and adjusted to reflect labour and material costs in 1949. In percentage terms materials are weighted 62.5 and the wage rates 37.5 . The combined index of non-residential building material prices and wage rates is computed according to weights established by the Prices Section of D.B.S. For the non-residential index materials are weighted 65 and wage rates 35 .

Revised index of wholesale prices of all commodities obtained from monthly issues of Prices and Price Indexes, D.B.S. and converted to a 1949 base.

Remaining data obtained from issues of Prices and Price Indexes, D.B.S. The rental index is constructed from a matched sample of tenant households. Rent changes on new rental units are recorded from the time such units are taken into the sample. The higher level of rents between old and new dwellings arises first, because they are new, and second because they are freed from control or are subject to different forms of rent control than older dwellings. Only the second factor is equivalent to a price increase because it is not accounted for by the higher quality of new units. Then rental component of the cost of living index did not allow for this price increase factor, whereas the rental component of the consumers' price index does. A survey in June, 1952 conducted by D.B.S. showed that decontrolled apartments were renting for an average of 20 per cent more than identical controlled apartments. This figure was taken as a measure of that portion of the difference in rents between old and new units which is attributable to rent control rather than quality differences and has been applied to new rental accommodation built since the base year 1949.

The Home ownership cost index includes 5 principal expenditures; property taxes, mortgage interest, repairs, replacement and insurance. The home ownership index is combined with the rent index to produce the overall shelter cost index. For weighting methods see The Consumer Price Index, January, 1949-August, 1952, Queen's Printer 1952.

TABLE 66.-Data for 1946 and 1947 obtained from Annual Report, 1947. C.M.H.C., p. 18. Data for 1948 and 1949 obtained from monthly issues of Housing Bulletin, D.B.S. Data for 1950-1953 obtained from monthly issues of New Residential Construction, D.B.S.
TABLE 67.-Tabulation based on data obtained by courtesy the Superintendent of Bankruptcy, Department of Justice. The data on bankruptcies in all industries do not correspond exactly with the series published in the D.B.S. quarterly Commercial Failures, chiefly because the latter publication includes closures under the Winding Up Act, whereas the series in Table 67 covers the Bankruptcy Act only. There is the additional factor that the D.B.S. series excludes certain assignments and receiving orders under the Bankruptcy Act where the debtor makes a composition of assets and continues in business, whereas all receiving orders and assignments are covered in Table 67.

The series on building materials industry is designed to cover firms engaged in the production of: lumber, wallboard, bricks, flue linings, vitrified sewer pipe, structural tile, drain tile, cement, concrete brick, concrete building blocks, cement drain pipe and culvert tile, warm air furnaces, cast-iron radiators, hot water storage tanks, hot water tank heaters, domestic heating boilers, asphalt shingles, asphalt rolls, tar and asphalt felts, cast-iron soil pipe, sanitary ware, wrought iron pipes, lead pipe water service, structural steel, steel pipe, wire nails and spikes, mineral wool insulation, gypsum wallboard, gypsum lath, gypsum plaster, gypsum block and tile, electrical equipment, and wood fibre insulating board.

The classification of bankruptcies in the construction industry, covers general and trade contractors and small builders classed as "wage earners in the construction trades".

TABLE 68.-Data for period 1945-1946 obtained from Prices and Price Indexes, December, 1946, D.B.S.

Data for 1947-1953 obtained from monthly issues of Prices and Price Indexes, D.B.S.
(1) Building materials index based on 16 stocks.
(2) All industrial index based on 74 stocks during 1945-1947, 76 during 1948 and 82 during 1949-1952 and 81 during 1953.
(3) Data converted from a $1935-1939$ to a 1939 base.
