

# RENTAL MARKET REPORT

## Kingston CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: 2016

PRIMARY RENTAL MARKET (by bedroom type)			
Bachelor	One bedroom	Two bedroom	Three or more bedrooms
3.3%	2.3%	2.9%	**
<b>Vacancy Rate</b>	<b>Vacancy Rate</b>	<b>Vacancy Rate</b>	<b>Vacancy Rate</b>
\$694 <b>Avg. Rent</b>	\$942 <b>Avg. Rent</b>	\$1,119 <b>Avg. Rent</b>	\$1,798 <b>Avg. Rent</b>

“The vacancy rate remained stable as higher demand was offset by above average new supply. Rents went up, particularly downtown where newer units tend to achieve higher rents.”

**Aris Gianneskis**  
Market Analyst, CMHC

\*CMHC collects data on the primary and secondary rental market annually, in the fall. These data refer to the primary rental market, which only includes rental units in privately-initiated apartment structures containing at least three rental units. The secondary rental market covers rental dwellings that were not originally purpose-built for the rental market, including rental condominiums. The primary vacancy rate and rent level is based on all surveyed structures, while the rent increase is based only on structures common to the survey sample in both the current and previous year.

## Key analysis findings

- Strong rental demand, supported by downsizers and students, led to a stable vacancy rate notwithstanding the above average increase in new units supplied.
- Substitution effect between newer rentals geared exclusively towards students' leads to rise in vacancy rate in student related sub-market zone.
- The fixed sample average rent in Kingston for a two-bedroom apartment increased 2.3 per cent between 2015 and 2016.

## The rental market stabilized notwithstanding increased rental supply

According to our October 2016 *Rental Market Survey*, the vacancy rate in the Kingston Census Metropolitan Area (CMA) remained relatively steady from the previous year settling at 2.6 per cent, compared to 2.8 per cent in October 2015. The significant decrease in vacancy rate for Glenarden, Rideau Heights, Kingscourt and Stathcona Park (Zone 3) was more than enough to offset the rise in vacancy rate brought about by a large increase in new units for Portsmouth Village, Polson Park and Calvin Park (Zone 2). The increase in units for Zone 2 was almost exclusively 3 bedroom units and was the largest addition for this zone in the last eight years. The vacancy rate for Zone 3 decreased as no new units were introduced in this area, which kept supply constant in addition to the fact that this zone is influenced by the positive local employment numbers more than other areas.

## Rents in the core grow almost at double the rate of the periphery

The fixed sample average rent in Kingston for a two-bedroom apartment increased 2.3 per cent between 2015 and 2016.<sup>1</sup> This increase, which is above the 2016 rent increase guideline of 2.0 per cent permitted by the Ontario Residential Tenancies Act, was lower than the provincial average increase of 3.0 per cent. Rents increased by approximately 2.8 per cent in the core, almost twice the rate as they did in the periphery.

## Increased rental demand from downsizers and students

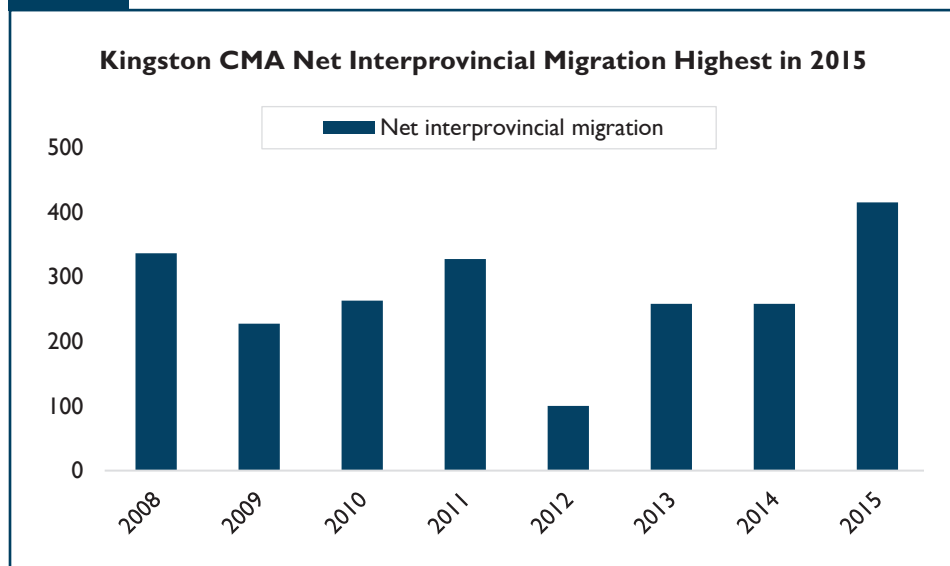

As the local population ages, many downsizers may choose to relocate from the periphery of Kingston to the rental units in the core.

Seasonally-adjusted year-over-year full-time employment for those aged 15 to 24 years of age is up by 20 per cent as of September 2016<sup>2</sup>. Local demand was boosted from the most recent migration numbers as well, particularly for migrants originating from other provinces which reached a ten year high of 415 net interprovincial migrants in 2015, (see Figure 1). Lastly, strong rental demand has originated in recent years from a growing number of international students, who tend to rent rather than own during their studies.

Figure 1

Source: Statistics Canada

<sup>1</sup> The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

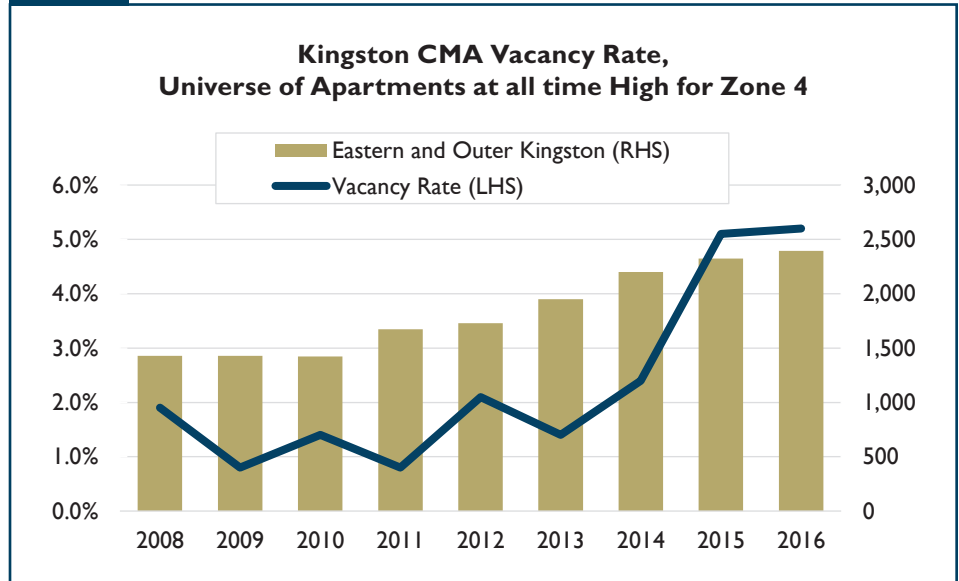

<sup>2</sup> A *seasonally adjusted time series* is a monthly or quarterly time series that has been modified to eliminate the effect of seasonal and calendar influences. The seasonally adjusted data allow for more meaningful comparisons of economic conditions from period to period. A raw time series is the equivalent series before seasonal adjustment and is sometimes referred to as the *original* or *unadjusted time series*.

## Supply side increases impacted vacancy rate, especially in the periphery

Since 2008, a total of 1,292 net new additions to the rental universe have been recorded. Of these, 966 or 75 per cent were added to the periphery of Kingston (Eastern and Outer Kingston). Of these units, 70 per cent or 667 units were added during the last four years (see Figure Two). Increased supply of new units in recent years explains for the most part, why the vacancy rate in the suburbs has settled or remained above five per cent rate for the past two years. Supply may well have outstripped demand, particularly for mid-sized buildings (i.e. 50-99 units) which were the only segment reporting an increase in vacancy rates.

Regarding the student population, an increase in supply of new rental units in the neighbourhoods

Figure 2

Source: CMHC Rental Market Survey

surrounding the academic institutions, lead to a rise in vacancy rates. The introduction of new rental units geared to students explain the high turnover rate, which for a bachelor in the core was 41 per cent

compared to the provincial average of 22 per cent. The turnover rate was particularly high for the periphery of Kingston, as many renters moved from smaller to larger rental buildings, as suggested by market intelligence.

<b>RMS ZONE DESCRIPTIONS - KINGSTON CMA</b>	
Zone 1	<b>Downtown Kingston</b> - Southern and Eastern boundaries determined by Lake Ontario and the Cataraqui River respectively. Western boundary determined by the following streets: Sir John A Macdonald, Albert, Princess, Division and Montreal. Northern boundary determined by the following streets: Concession, Joseph and Railway.
Zone 2	<b>Southwestern Kingston City</b> - Southern and Western boundaries determined by Lake Ontario and the Little Cataraqui River respectively. Eastern boundary abuts Zone 1.
Zone 3	<b>Northern Kingston City</b> - Southern boundary determined by Zones 1 and 2. Eastern, Northern and Western boundaries determined by Kingston's former city limits.

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent levels, availability, turnover and vacancy unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy, availability, and turnover rates and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of percent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports. The rent levels in new and existing structures are also published. While the percent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has two components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford-Mission, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Survey to collect vacancy and rent information in the following CMAs: Calgary, Edmonton, Gatineau, Halifax, Hamilton, Kelowna, Kitchener-Cambridge-Waterloo, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

Both these surveys are conducted by telephone interviews. For the Condominium Apartment Survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the Household Rent Survey, information is collected from an adult living in the household. Both surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the Condominium Apartment Survey. For the Household Rent Survey, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## RENTAL MARKET SURVEY (RMS) AND SECONDARY RENTAL MARKET SURVEY (SRMS) DATA RELIABILITY

CMHC does not publish an estimate (e.g. Vacancy Rates and Average Rents) if the reliability of the estimate is too low or the confidentiality rules are violated. The ability to publish an estimate is generally determined by its statistical reliability, which is measured using the coefficient of variation (CV). CV of an estimate is defined as the ratio of the standard deviation to the estimate and CV is generally expressed a percentage. For example, let the average rent for one bedroom apartments in a given CMA be  $\bar{x}$  and its standard deviation be  $\sigma_{\bar{x}}$ . Then the Coefficient of Variation is given by  $CV = \frac{\sigma_{\bar{x}}}{\bar{x}}$ .

### Reliability Codes for Proportions

CMHC uses CV, sampling fraction and universe size to determine the ability to publish proportions such as vacancy rates, availability rates and turnover rates. The following letter codes are used to indicate the level of reliability of proportions:

- a – Excellent
- b – Very good
- c – Good
- d – Fair (Use with Caution)
- \*\* – Poor – Suppressed
- ++ – Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).
- No units exist in the universe for this category
- n/a – Not applicable

The following two tables indicate the level of reliability of proportions:

If the proportion is Zero (0) and sampling fraction is less than 100% then the following levels are assigned:

#### Sampling Fraction (%) range

Structures in Universe	(0,20]*	(20,40]	(40,60]	(60,80]	(80,100)
3 – 10	Poor	Poor	Poor	Poor	Poor
11 – 20	Poor	Fair	Fair	Fair	Good
21 – 40	Poor	Fair	Fair	Good	Very Good
41 – 80	Poor	Fair	Good	Good	Very Good
81+	Poor	Good	Good	Very Good	Very Good

\*(0, 20] means sampling fraction is greater than 0% but less than or equal to 20%; others are similar.

Otherwise, the following table is used to determine the reliability level of proportions:

#### Coefficient of Variation (CV) %

Vacancy Rate	0	(0,5]	(5,10]	(10,16.5]	(16.5,33.3]	(33.3,50]	50+
(0,0.75]	Excellent	Excellent	Excellent	Excellent	Excellent	V. Good	V. Good
(0.75,1.5]	Excellent	Excellent	Excellent	Excellent	Excellent	Fair	Poor
(1.5,3]	Excellent	Excellent	Excellent	V. Good	Good	Poor	Poor
(3,6]	Excellent	Excellent	V. Good	Good	Fair	Poor	Poor
(6,10]	Excellent	Excellent	V. Good	Good	Poor	Poor	Poor
(10,15]	Excellent	Excellent	Good	Fair	Poor	Poor	Poor
(15,30]	Excellent	Excellent	Fair	Poor	Poor	Poor	Poor
(30,100]	Excellent	Excellent	Poor	Poor	Poor	Poor	Poor

## Reliability Codes for Averages and Totals

CMHC uses the CV to determine the reliability level of the estimates of average rents and a CV cut-off of 10% for publication of totals and averages. It is felt that this level of reliability best balances the need for high quality data and not publishing unreliable data. CMHC assigns a level of reliability as follows (CV's are given in percentages):

- a – If the CV is greater than 0 and less than or equal to 2.5 then the level of reliability is **Excellent**.
- b – If the CV is greater than 2.5 and less than or equal to 5 then the level of reliability is **Very Good**.
- c – If the CV is greater than 5 and less than or equal to 7.5 then the level of reliability is **Good**.
- d – If the CV is greater than 7.5 and less than or equal to 10 then the level of reliability is **Fair**.
- \*\* – If the CV is greater than 10 then the level of reliability is **Poor**. (Do Not Publish)

## Arrows indicate Statistically Significant Changes

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes:

- ↑ indicates the year-over-year change is a statistically significant increase.
- ↓ indicates the year-over-year change is a statistically significant decrease.
- indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.
- △ indicates that the change is statistically significant

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Turnover:** A unit is counted as being turned over if it was occupied by a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12 month period.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

## Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
