

RENTAL MARKET REPORT

Montréal CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2015

Highlights

- In 2015, the vacancy rate rose to 4.0 per cent.
- The estimated increase in the average rent was 1.8 per cent.
- The rental condominium vacancy rate remained stable, at 3.0 per cent.

The rental market is easing for the second consecutive year

According to the results of the Rental Market Survey conducted in October 2015 by Canada Mortgage and Housing Corporation (CMHC), the vacancy rate on the conventional rental market in the Montréal census metropolitan area (CMA) rose over the past year, reaching 4.0 per cent, compared to 3.4 per cent in October 2014.¹ This is the second consecutive annual increase in the vacancy rate, since the proportion of vacant units had remained relatively stable between 2006 and 2013.

The increase in the vacancy rate was essentially attributable to a decrease in rental housing demand, as supply rose only slightly during this period. Net migration, which declined from around 34,000 people in 2010 to only 20,000 people in 2015,² contributed in part to the slowdown in rental housing demand.

The conventional rental market also faces more competition from rental condominiums. Even though these two markets are not perfect substitutes, some renter clients likely chose to rent a condominium, further reducing demand for conventional rental apartments.

At the level of the three major geographic sectors, an increase in the vacancy rate was recorded on the North Shore (from 2.0 per cent in 2014 to 2.7 per cent in 2015) and on the Island of Montréal (from 3.5 per cent in 2014 to 4.1 per cent in 2015).

At the CMA level, the vacancy rate increased for bachelors (6.1 per cent in 2015, 4.0 per cent in 2014). In the case of one-bedroom apartments, the vacancy rate remained at around 4.5 per cent, while for two- and three-bedroom apartments, it varied between 3.0 and 3.5 per cent.

The estimated change in the average rent between 2014 and 2015 in the Montréal CMA was 1.8 per cent. This result is relatively similar among the different geographic sectors and between the various housing types.

The average rents were \$573 for bachelors, \$668 for one-bedroom apartments, \$760 for two-bedroom apartments and \$952 for three-bedroom apartments. When comparing similar-sized apartments, significant rent gaps were observed depending on the geographic sectors. For example, on the Island of Montréal, the average rent for a two-bedroom apartment varied between \$610 (Montréal-Nord) and \$1,413 (Downtown-Île-des-Soeurs).

As for the secondary rental market, it continued to expand, as evidenced by the number of rental condominiums in the Montréal metropolitan area, which now reaches 24,000 units (+3,200 from 2014). The proportion of condominiums offered for rent in the Montréal metropolitan area now stands at 14.8 per cent (compared to 13.3 per cent in 2014). Despite this more abundant supply, demand has remained steady, as the vacancy rate stayed relatively stable, at 3.0 per cent.

Large vacant units are still relatively scarce

Again this year, the overall vacancy rate in the Montréal CMA concealed significant differences depending on the unit size. In fact, vacancy rates were lower for two-bedroom apartments (3.5 per cent) and apartments with three or more bedrooms (3.0 per cent) than for one-bedroom apartments (4.5 per cent) and bachelor units (6.1 per cent).

Figure 2

Source: CMHC

¹ The survey is based on privately initiated rental apartment structures of three or more units.

² The drop in net migration was mainly caused by a decrease in the number of immigrants and non-permanent residents.

The impact of the structure size on rental performance is still observed on many Quebec markets, and the Montréal CMA is no exception. In fact, smaller structures (three to five units) have a lower vacancy rate (3.0 per cent) than larger structures. Small rental buildings allow the renters to have a closer relationship with the owner, which likely explains, in part, the low turnover. The vacancy rate for structures with more than 20 units³ ranged from 4.5 per cent to 5.4 per cent.

Vacancy rates also vary depending on the age of the structures. While the vacancy rate for structures built after 1990 hovered between 2.1 per cent and 2.4 per cent, it was much higher in older buildings.⁴ This seems to indicate a certain demand for modern rental units, especially among the older population, even if they generally command higher rents than older apartments. This is also consistent with the popularity of rental condominiums that has been observed these last few years. In fact, condominium buildings which are typically newer, posted a vacancy rate of 3.0 per cent, despite considerably higher rents.⁵

The Island of Montréal and the South Shore show the softest market conditions

Among the large sectors of the CMA, the highest vacancy rates were recorded on the Island of Montréal (4.1 per cent) and the South Shore (3.9 per cent). On the Island, the vacancy rate again climbed slightly from the October 2014 survey (3.5 per cent). The decline in

Figure 3

Source: CMHC

migration and the growth in the stock of rental condominiums likely contributed to a decrease in the demand for conventional rental apartments in these sectors.

On the Island of Montreal, as was the case in the entire CMA, bachelor units were the only apartment type that saw their vacancy rates rise significantly from 2014. The vacancy rate for this apartment type reached 6.3 per cent this past fall, compared to 4.0 per cent a year earlier. The vacancy rates for the other apartment types did not change significantly, and varied between 3.0 per cent and 4.6 per cent. Consumer preferences for larger apartments may explain the weaker rental performance of bachelor units.

More specifically, the easing of the market on the Island of Montréal has been observed in the following

zones: Downtown–Île-des-Sœurs, Côte-des-Neiges–Mont-Royal–Outremont, Plateau–Mont-Royal, Saint-Laurent and Pointe-aux-Trembles–Rivières-des-Prairies–Montréal-Est. In these sectors, the easing of the market brought the proportion of unoccupied rental housing units to around 5.0 per cent. Moreover, no sector on the Island of Montréal saw its vacancy rate drop significantly this year. Anjou–Saint-Léonard was the only sector to post a vacancy rate below 2 per cent.

Rental markets in the North Shore and Laval sectors remained the tightest, with vacancy rates still below 3.0 per cent. That being said, the vacancy rate increased on the North Shore by approximately one percentage point between 2014 and 2015 (from 2.0 per cent in 2014 to 2.7 per cent this year). The rise in the vacancy rate in this sector

³ Structures of 20 to 49, 50 to 99 and 100 and plus units.

⁴ Structures built between 1940 and 1975.

⁵ The last section of this report covers the rental condominium market.

may be attributable to the addition of many new rental units on this market over the past year.

Finally, with a vacancy rate of about 4 per cent, the South Shore remained one of the softest markets in the CMA. In this sector, the vacancy rate remained stable year over year.

Rents vary on the Island of Montréal

The average rent for two-bedroom apartments on the Island was \$775 in 2015, but varied greatly from one sector to another. For example, average rents ranged from \$610 to \$683 in Montréal-Nord and Le Sud-Ouest-Verdun, but were above \$1,000 in three zones: Downtown-Île-des-Sœurs (\$1,413), the southern West Island zone (\$1,044) and Notre-Dame-de-Grâce (\$1,036). The higher rents downtown are particularly attributable to the choice location of the buildings, which are close to many amenities and several employment hubs. The size of these buildings, where several services are generally offered, also explains the higher rents. Last, it should be noted that the estimated change in the average rent on the Island of Montréal was 1.9 per cent between October 2014 and October 2015, which is close to inflation.

In the suburban sectors, the estimated changes in the average rents hovered at around 1.3 per cent. The average monthly rent for two-bedroom apartments, for its part, stood at about \$717. There is a greater homogeneity between the suburban sectors than on the Island of Montréal.

The easing of the market is caused by a decrease in rental housing demand

The vacancy rate in the Montréal area, which had been stable since the mid-2000s, increased for the second consecutive year. This rise was not caused by a growth in supply, since starts of conventional rental apartments have been very low over the last few years.⁶ With supply showing very little progress, the easing was due essentially to a slowdown in demand.

The slowdown in demand is in part attributable to the significant decrease in net migration in the Montréal CMA, which dropped from 29,000 to 22,000 people between 2013 and 2014. Another decrease, albeit smaller, should also be observed this year, as net migration in the CMA is expected to hover around 21,000 people, one of the lowest levels in the past 10 years. This variation in the last two years is mainly explained by a significant decline in the number of non-permanent residents and, to a lesser extent, the number of immigrants⁷ settling in the Montréal area. It should be recalled that these people often opt for the rental market when they arrive, mainly on the Island of Montréal, and therefore significantly sustain the demand on this market. The decline in employment among people aged from 15 to 24, group that has a high proportion of renters, is another factor that may have contributed to the lower demand.

Furthermore, part of the potential demand for conventional rental units, likely shifted to rental condominiums, a housing type

which, although not perfectly comparable, can be a substitute. On this market, despite the relatively strong increase in the rental condominium supply in 2015 (+3,200 units), the vacancy rate remained stable.

Since these last two trends are mainly concentrated on the Island of Montréal, it is normal for the increase in the vacancy rate to be more pronounced in this sector of the CMA.

Rental condominium vacancy rate remains stable

The rental condominium vacancy rate in the CMA was 3.0 per cent in October 2015, remaining relatively stable compared to a year earlier. The number of rental condominiums posted another strong increase between the last two CMHC surveys. In all, some 3,200 units have been added to the rental condominium stock (+15 per cent). The proportion of rental condominiums has now reached 15 per cent in the Montréal CMA (versus 13 per cent in 2014), which represents approximately 24,000 units.

Despite this increase in supply, the vacancy rate remained stable, which indicates that supply and demand rose at the same rate. It is possible that this housing type attracts an older clientele who is looking for well-situated modern units in a building that offers a range of services. It is also probable that this housing type attracts young adult households who want to live near employment hubs, generally more centrally located, but who find it difficult.

⁶ An average of 1,650 starts of conventional rental housing units per year from 2010 to 2014, which represents, on an annual basis, approximately 0.3 per cent of Montréal's rental housing stock.

⁷ This number includes non-permanent residents.

Figure 4

Source: CMHC

As has been the case every year since the first Secondary Rental Market Survey, the Downtown Montréal sector⁸ continues to rank first in the supply category, with close to one in four condominiums offered for rent. The condominium vacancy rate stood at 2.4 per cent, which indicates that despite the steady increase in supply, the demand remains strong in this sector.

In the suburbs, the Laval sector stood out in terms of supply, with 20 per cent of condominiums offered for rent. These units seem to have easily found takers, since the vacancy rate was 1.9 per cent.

The rent for two-bedroom condominiums (\$1,140) continues to be considerably higher than rents for conventional rental apartments of the same size in the CMA (\$760). This gap can be explained by the fact that many of the condominiums are contained in newer buildings and often offer several services. There is also a significant portion of condominiums in the central districts on the Island of Montréal. In downtown Montréal, the average rent for two-bedroom condominiums was \$1,628, the highest of all the zones in the Montréal area, while in the suburbs, average rents varied between \$900 and \$1,000.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

↑ indicates the year-over-year change is a statistically significant increase

↓ indicates the change is a statistically significant decrease

- indicates that the change is not statistically significant

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

↑ indicates the year-over-year change is a statistically significant increase

↓ indicates the change is a statistically significant decrease

- indicates that the change is not statistically significant

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- No units exist in the universe for this category n/a: Not applicable

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents in the following CMAs: Calgary, Edmonton, Montréal, Ottawa, Québec, Toronto, Vancouver, Victoria and Winnipeg.
- A Condominium Apartment Vacancy Survey to collect vacancy information in the following CMAs: Calgary, Edmonton, Gatineau, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.

For more information, visit our website at www.cmhc.ca or follow us on [Twitter](#), [YouTube](#), [LinkedIn](#) and [Facebook](#).

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to www.cmhc.ca/en/hoficlincl/homain

For more information on MAC and the wealth of housing market information available to you, visit us today at www.cmhc.ca/housingmarketinformation
