"It was the significant increase in supply that caused the vacancy rate of conventional rental units to rise in the Québec area."

**Élisabeth Koulouris**  
Principal, Market Analysis (Québec CMA)

\*CMHC collects data on the primary and secondary rental market annually, in the fall. These data refer to the primary rental market, which only includes rental units in privately-initiated apartment structures containing at least three rental units. The secondary rental market covers rental dwellings that were not originally purpose-built for the rental market, including rental condominiums. The primary vacancy rate and rent level is based on all surveyed structures, while the rent increase is based only on structures common to the survey sample in both the current and previous year.

## Highlights

- Significant increase in supply caused the vacancy rate of conventional rental units to rise<sup>1</sup>.
- The addition of a large number of new units put upward pressure on the average rent
- The vacancy rate for rental condominiums remained stable.

## Québec area rental market conditions ease once again

According to the Rental Market Survey (RMS), the rental housing vacancy rate in the Québec census metropolitan area (CMA) rose to 4.9 per cent in October 2016, compared to 4.0 per cent one year earlier. This rise can be explained by the large number of housing units started since 2015. Many of these projects were recently completed and helped sustain a significant increase in supply for the second straight year.

## Increase in supply leads to softer conditions on the conventional rental market

It is estimated that, between 2015 and 2016, the evolution of demand for conventional rental units remained similar to what it was during the previous period. This can be explained by the stable employment, migration and mortgage interest rate conditions over the last few years. As a result, between the last two years, the growth of demand for rental units likely evolved at a pace similar to that observed between 2014 and 2015.

On the supply side, however, the situation was different because, since 2015, a number of developers and builders have been building conventional rental structures. Various factors contributed to the development of this market segment, including the large inventories of condominiums. Investors, builders

Note: Figures are for rental units completed between the rental market surveys, that is, the period from July of the year preceding the survey to June of the following year.

and developers therefore focused on the rental market as the destination for their new projects.

In 2015, starts of conventional rental units reached a high<sup>2</sup>, and 1,500 units were added to existing supply between 2015 and 2016. A similarly large number had also been added during the previous period.

Available data shows, moreover, that market conditions softened most in the sectors with large numbers of

recently completed units, namely, Sainte-Foy–Sillery, Charlesbourg and the South Shore.

Furthermore, the rental condominium market also expanded: the number of condominiums offered for rent grew from 3,512 in 2015 to 3,830 in 2016, for an increase of 9 per cent. Even though this market is not quite comparable to the conventional rental market, rental condominiums still compete with high-end conventional rental apartments.

<sup>1</sup> The survey is based on privately initiated rental apartment structures of three or more units.

<sup>2</sup> See "Traditional rental market: the growth in supply accelerated in 2015, but what about future demand?" in the first quarter 2016 issue of Housing Market Insight—Québec CMA.

## Vacancy rate for newer structures increases significantly

The market softened considerably when it comes to structures built since 2005: in this market segment, the vacancy rate went from 4.6 per cent to 7.6 per cent between October 2015 and October 2016. This trend went hand in hand with the recent increase in supply. Indeed, many new units were added to the market in a short period of time. Incidentally, many new structures are relatively luxurious and are geared toward clients who are more affluent, such as retirees looking for rental accommodations that suit their aspirations and offer a range of services. This higher-end market is, however, limited by households' ability to pay. In the Québec CMA, it can be noted that the proportion of renter households in the 65 to 74 age group with incomes of \$60,000 or over was only 20 per cent in the last census<sup>3</sup>. This is not the only indicator that must be considered, because it excludes household wealth (assets). It does, nevertheless, provide an overview of the proportion of households with above-average incomes who could potentially—solely on the basis of income—afford to opt for more expensive housing. The results from the RMS indicate that the vacancy rate for higher-end apartments (with monthly rents of \$1,100 or more) was relatively high, having reached 8.8 per cent in October 2016.

The addition of a large number of new units also had an effect on the average rent: between 2015 and 2016,

Figure 2

Source: CMHC (Rental Market Survey)

the average rent for two-bedroom apartments increased from \$788 to \$808 per month. This result not only reflected inflation of the typical rent but also showed that the increase in the number of new units pushed up the average rent. A comparison of the units that were included in both this year's and last year's surveys<sup>4</sup> revealed that the change in the average rent for two-bedroom apartments between 2015 and 2016 was 1.4 per cent.

## Tenant turnover rates are higher in central sectors and for bachelor units

Tenant mobility was higher in the central sectors of the CMA. While the average tenant turnover rate for the Québec area was 21.6 per cent, the averages reached 25.4 per cent in Sainte-Foy–Sillery, 23.5 per cent in Haute-Ville and 22.2 per cent in

Basse-Ville. These results indicate that, in these sectors, nearly one in four tenants changed units between 2015 and 2016. This often generates additional expenses for owners, who have to cover costs related to repairs and marketing, among other things.

A high tenant turnover rate was also observed for bachelor units: 27.1 per cent, on average, for the Québec CMA.

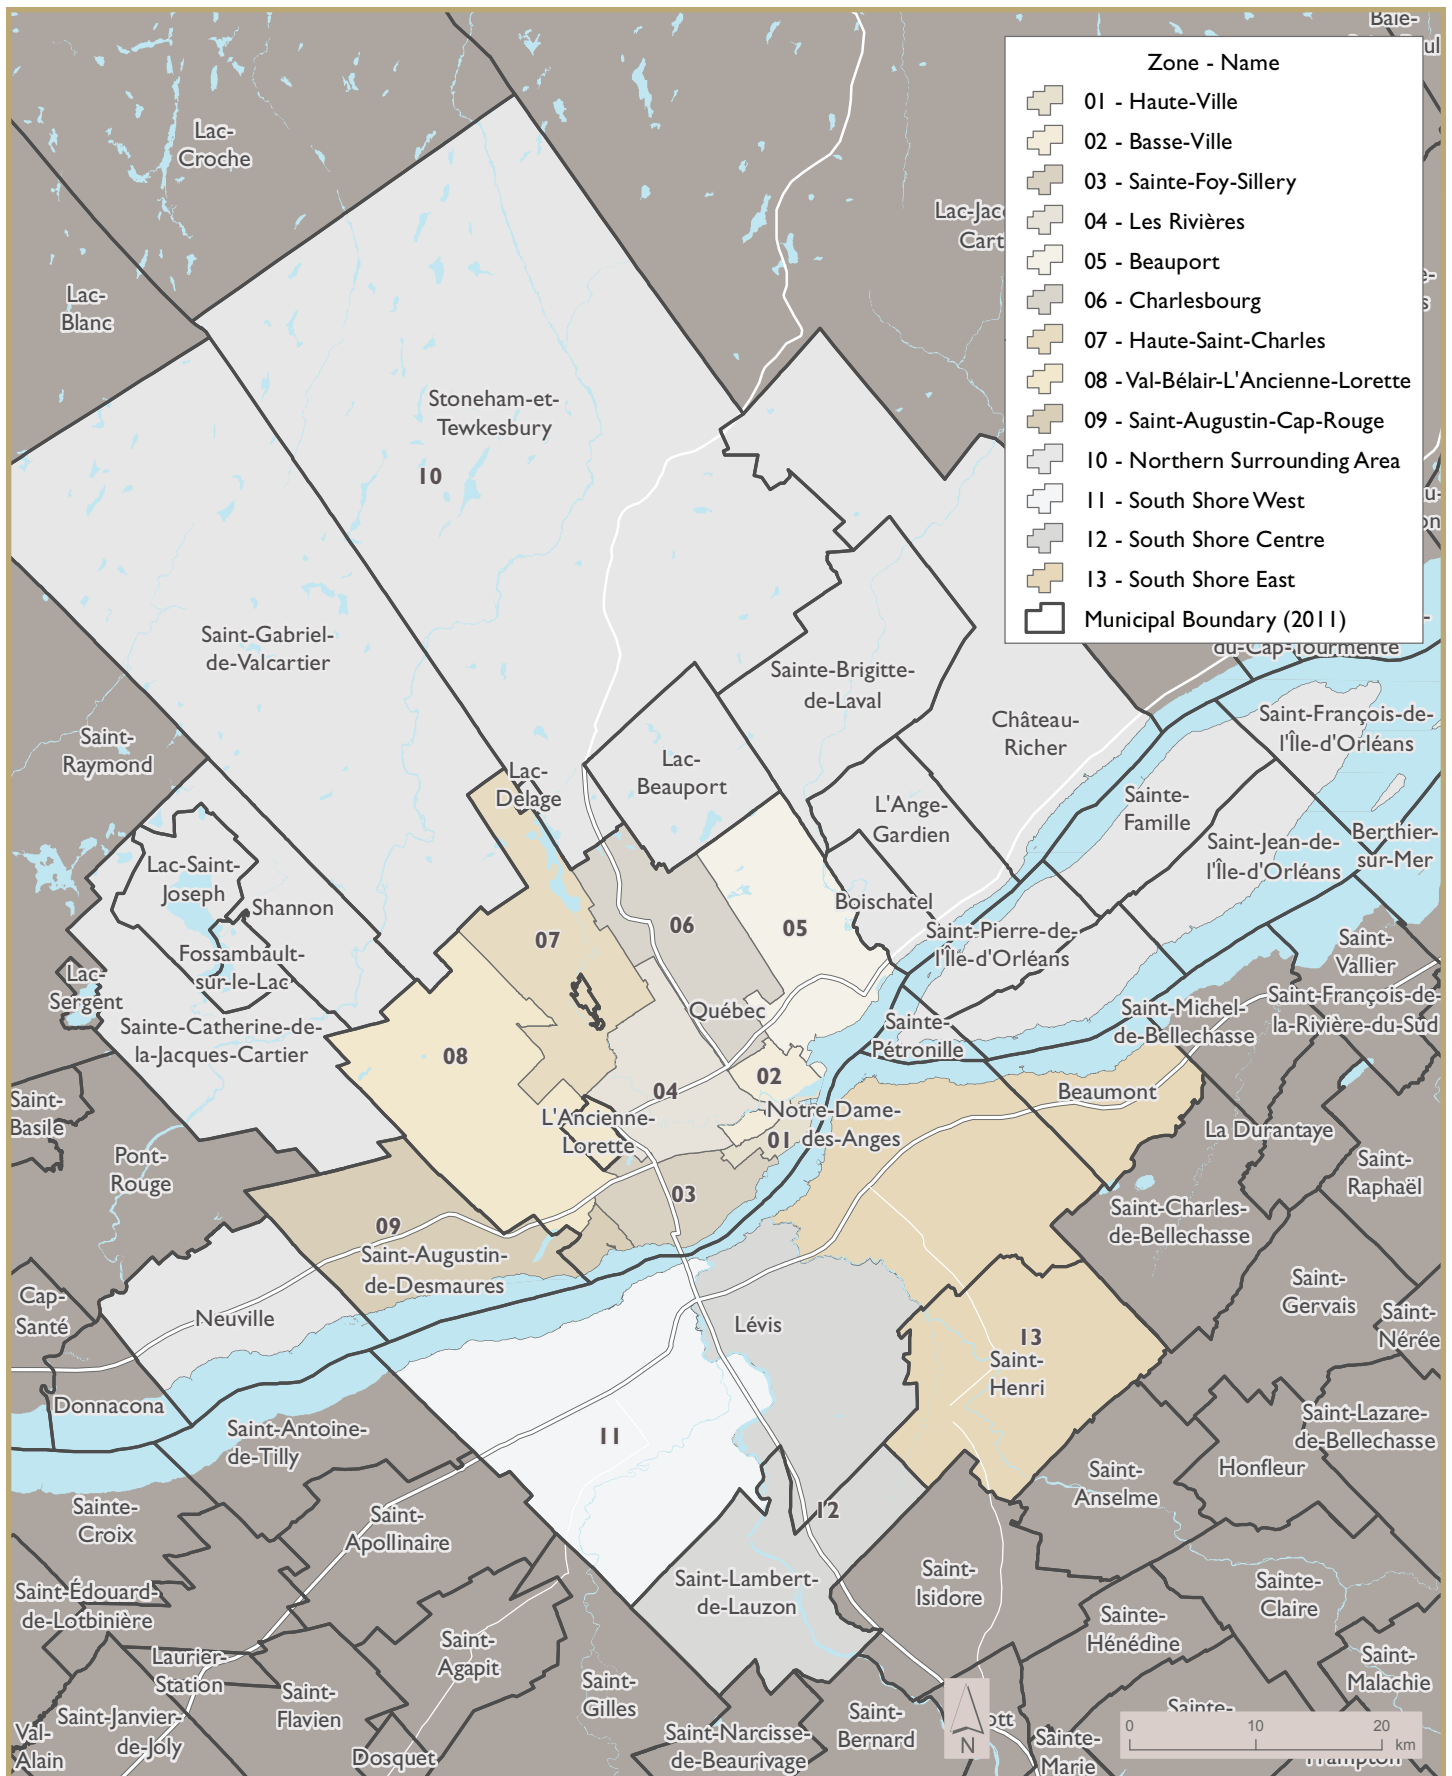

## Rental condominium vacancy rate remains stable

While the number of rental condominiums climbed between the last two fall surveys (see above), market conditions did not change significantly from a statistical standpoint. Currently, the vacancy rate on this market (4.8 per cent) is similar to that observed on the conventional rental market.

<sup>3</sup> Statistics Canada, special compilations, 2011 Census, Québec CMA.

<sup>4</sup> This indicator is called "estimated change in average rent" and is presented in table I.1.5.

Even though this market is growing, it is still of limited size: supply is estimated at just over 3,800 units, compared to nearly 85,000 conventional rental units. It is therefore a niche market that seems to meet the needs of households looking for accommodations that offer a range of services and that are located, most often, in downtown Québec. The average rent for units of this type is higher than that of conventional apartments. In October 2016, the average rent for two-bedroom condominiums was \$1,033, compared to \$808 for conventional rental apartments of the same type

RMS ZONE DESCRIPTIONS - QUÉBEC CMA	
Zone 1	<b>Haute-Ville</b> - Districts of Saint-Jean-Baptiste, Montcalm, Vieux-Québec–Cap-Blanc–colline-Parlementaire and Saint-Sacrement
Zone 2	<b>Basse-Ville</b> - Districts of Saint-Roch, Saint-Sauveur, Maizerets, Vieux-Limoilou and Laitet
Zone 3	<b>Sainte-Foy–Sillery</b> - Districts of Sillery, Cité-Universitaire, Pointe-de-Sainte-Foy, Saint-Louis and Plateau

For an explanation of the letters and symbols used in the Rental Market tables, please refer to our [Methodology](#) page.

### 5.1 Other Secondary Rented Unit<sup>1</sup> Average Rents (\$) by Dwelling Type Québec CMA - October 2016

	Bachelor			1 Bedroom			2 Bedroom			3 Bedroom +			Total						
	Oct-15	Oct-16		Oct-15	Oct-16		Oct-15	Oct-16		Oct-15	Oct-16		Oct-15	Oct-16					
Québec CMA																			
Single Detached	**	**		**	**		**	713	c	966	c	958	c	897	b	882	c	-	
Semi detached, Row and Duplex	**	**		537	d	**	715	b	728	c	849	b	844	b	754	b	780	b	-
Other-Primarily Accessory Suites	**	**		582	b	594	b	699	b	712	c	**	**	627	b	649	b	-	
Total	**	**		**	634	c	716	a	719	b	895	b	891	b	748	a	763	b	-

<sup>1</sup>Statistics for secondary rented units exclude apartments in purpose built rental structures with three rental units or more, condominium apartments, units in institutions, and any dwelling whose type could not be identified in the survey.

### 5.2 Estimated Number of Households in Other Secondary Rented Units<sup>1</sup> by Dwelling Type Québec CMA - October 2016

	Estimated Number of Households in Other Secondary Rented Units <sup>1</sup>			
	Oct-15		Oct-16	
Québec CMA				
Single Detached	4,841	d	**	
Semi detached, Row and Duplex	10,489	b	11,679	c
Other-Primarily Accessory Suites	7,072	d	**	
Total	22,402		22,776	

<sup>1</sup>Statistics for secondary rented units exclude apartments in purpose built rental structures with three rental units or more, condominium apartments, units in institutions, and any dwelling whose type could not be identified in the survey.

For an explanation of the letters and symbols used in the Rental Market tables, please refer to our [Methodology](#) page.

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent levels, availability, turnover and vacancy unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy, availability, and turnover rates and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of percent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports. The rent levels in new and existing structures are also published. While the percent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has two components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford-Mission, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Survey to collect vacancy and rent information in the following CMAs: Calgary, Edmonton, Gatineau, Halifax, Hamilton, Kelowna, Kitchener-Cambridge-Waterloo, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

Both these surveys are conducted by telephone interviews. For the Condominium Apartment Survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the Household Rent Survey, information is collected from an adult living in the household. Both surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the Condominium Apartment Survey. For the Household Rent Survey, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

## RENTAL MARKET SURVEY (RMS) AND SECONDARY RENTAL MARKET SURVEY (SRMS) DATA RELIABILITY

CMHC does not publish an estimate (e.g. Vacancy Rates and Average Rents) if the reliability of the estimate is too low or the confidentiality rules are violated. The ability to publish an estimate is generally determined by its statistical reliability, which is measured using the coefficient of variation (CV). CV of an estimate is defined as the ratio of the standard deviation to the estimate and CV is generally expressed a percentage. For example, let the average rent for one bedroom apartments in a given CMA be  $\bar{x}$  and its standard deviation be  $\sigma_{\bar{x}}$ . Then the Coefficient of Variation is given by  $CV = \frac{\sigma_{\bar{x}}}{\bar{x}}$ .

### Reliability Codes for Proportions

CMHC uses CV, sampling fraction and universe size to determine the ability to publish proportions such as vacancy rates, availability rates and turnover rates. The following letter codes are used to indicate the level of reliability of proportions:

a – Excellent

b – Very good

c – Good

d – Fair (Use with Caution)

\*\* – Poor – Suppressed

++ – Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

-- No units exist in the universe for this category

n/a – Not applicable

The following two tables indicate the level of reliability of proportions:

If the proportion is Zero (0) and sampling fraction is less than 100% then the following levels are assigned:

#### Sampling Fraction (%) range

Structures in Universe	(0,20]*	(20,40]	(40,60]	(60,80]	(80,100)
3 – 10	Poor	Poor	Poor	Poor	Poor
11 – 20	Poor	Fair	Fair	Fair	Good
21 – 40	Poor	Fair	Fair	Good	Very Good
41 – 80	Poor	Fair	Good	Good	Very Good
81+	Poor	Good	Good	Very Good	Very Good

\*(0, 20] means sampling fraction is greater than 0% but less than or equal to 20%; others are similar.

Otherwise, the following table is used to determine the reliability level of proportions:

#### Coefficient of Variation (CV) %

Vacancy Rate	0	(0,5]	(5,10]	(10,16.5]	(16.5,33.3]	(33.3,50]	50+
(0,0.75]	Excellent	Excellent	Excellent	Excellent	Excellent	V. Good	V. Good
(0.75,1.5]	Excellent	Excellent	Excellent	Excellent	Excellent	Fair	Poor
(1.5,3]	Excellent	Excellent	Excellent	V. Good	Good	Poor	Poor
(3,6]	Excellent	Excellent	V. Good	Good	Fair	Poor	Poor
(6,10]	Excellent	Excellent	V. Good	Good	Poor	Poor	Poor
(10,15]	Excellent	Excellent	Good	Fair	Poor	Poor	Poor
(15,30]	Excellent	Excellent	Fair	Poor	Poor	Poor	Poor
(30,100]	Excellent	Excellent	Poor	Poor	Poor	Poor	Poor

## Reliability Codes for Averages and Totals

CMHC uses the CV to determine the reliability level of the estimates of average rents and a CV cut-off of 10% for publication of totals and averages. It is felt that this level of reliability best balances the need for high quality data and not publishing unreliable data. CMHC assigns a level of reliability as follows (CV's are given in percentages):

- a – If the CV is greater than 0 and less than or equal to 2.5 then the level of reliability is **Excellent**.
- b – If the CV is greater than 2.5 and less than or equal to 5 then the level of reliability is **Very Good**.
- c – If the CV is greater than 5 and less than or equal to 7.5 then the level of reliability is **Good**.
- d – If the CV is greater than 7.5 and less than or equal to 10 then the level of reliability is **Fair**.
- \*\* – If the CV is greater than 10 then the level of reliability is **Poor**. (Do Not Publish)

## Arrows indicate Statistically Significant Changes

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes:

- ↑ indicates the year-over-year change is a statistically significant increase.
- ↓ indicates the year-over-year change is a statistically significant decrease.
- indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.
- △ indicates that the change is statistically significant

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Turnover:** A unit is counted as being turned over if it was occupied by a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12 month period.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

## Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.

For more information, visit our website at [www.cmhc.ca](http://www.cmhc.ca) or follow us on [Twitter](#), [LinkedIn](#), [Facebook](#) and [YouTube](#).

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website.
