

SENIORS' HOUSING REPORT

Ontario

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: 2016

Highlights

- The vacancy rate for standard spaces¹ hit 11.3 per cent this year, its lowest level since 2009. The vacancy rate for all spaces touched 10.7 per cent, its lowest point since 2001.
- Total supply of seniors' housing grew by 4.9 per cent to 56,301 spaces in 2016, but growth in demand outpaced the growth in supply.
- The average rent for a standard space increased by 6.7 per cent to \$3,499.

Vacancy Rate

Vacancy Rate Hits Its Lowest Level

The overall seniors' housing vacancy rate in Ontario dropped from 11.5 per cent last year to 10.7 per cent in 2016, the lowest level since the start of the standardized Ontario wide survey in 2001. Meanwhile, the vacancy rate for standard spaces also reached 11.3 per cent, the lowest level since its introduction in 2009.

The strong rise in demand drove down the vacancy rate. The growth in seniors' housing residents in 2016 was 6.5 per cent, up from three per cent last year. This growth rate was also faster than the 3.1 per cent growth in the population aged 75 and over, and the 4.9 per cent growth in total supply.

The interest in seniors' housing living in Ontario has been on a slow uptrend since 2007, with the growth of residents outpacing the growth of the population aged 75 and over in most of the years. The capture rate², which shows seniors' preference for retirement home living, grew from 4.5 per cent in 2006 to 5.4 per cent in 2016. On the supply side, new and existing residences have been expanding features targeting the lifestyle of today's seniors, like flexible care service options, larger spaces, and more amenities and services as well as activities programs. On the demand side, there is a growing preference among seniors for the carefree lifestyle with socialization opportunities offered by seniors' housing. Meanwhile, rising home prices have increased household wealth and continued to enable

seniors who opted for retirement home living to choose more upscale residences.

The vacancy rate dropped in most regions in Ontario except Ottawa and Northern Ontario, where

² Please refer to Definitions on page 32 for the definition for capture rate.

the growth in supply was much faster than the Ontario average at 8.3 per cent and 11.6 per cent, respectively. Nonetheless, the increases in the overall vacancy rate in these two regions were modest thanks to the strong growth in demand. Total senior residents grew by close to nine per cent in these two regions. Southwestern Ontario also experienced strong growth in demand³ with a close to nine per cent growth in residents, resulting in the largest drop in the vacancy rate, down to 12.1 per cent from 14.8 per cent in 2015.

Vacancy Rate Declines the Most for Suites and Higher Priced Spaces

Demand for suites grew the fastest and continued to show seniors' rising interest in larger spaces. The overall vacancy rate dropped to 10.3 per cent from 11.7 per cent last year for one-bedroom spaces, and declined to 11.8 per cent from 13.5 per cent in 2015 for two-bedroom spaces. Meanwhile, total suite spaces increased by 7.5 per cent in 2016, accounting for 60 per cent of the total increase in supply.

Correspondingly, spaces with rent above \$3,000 experienced the largest declines in their vacancy rates in 2016 by over two percentage points. These higher priced spaces also had the lowest vacancy rates and accounted for 63 per cent of the standard spaces in 2016 in Ontario. In the Greater Toronto Area (GTA) and Ottawa, the average rents for bachelor and suite spaces were all above \$3,000, while in other regions in Ontario, only the average rents for suite spaces were over \$3,000.

Small and Medium Population Centres See Larger Drops in Vacancy Rate

Centres with less than 50,000 population in Ontario experienced close to two percentage points drop in the vacancy rate, from 13.5 per cent in 2015 to 11.6 per cent this year, while total supply grew by over seven per cent. The drop in the vacancy rate while supply continued to grow strongly indicated that demand for new supply was picking up. Similar to larger centres in Ontario, there is growing interest in larger spaces. More suites spaces were met by the demand for seniors' housing in these small and medium centres. Suites made up 28.4 per cent of the total supply in these small and medium population centres in 2016, up from 20.4 per cent five years ago and accounted for over 83 per cent of the total growth in supply for the past five years. However, the share of suites in these areas was still below the average of 40.3 per cent in Ontario. The level of supply in these areas was also lower than the average in Ontario. These small and medium population centers had 19.4 per cent of the total seniors' housing supply in Ontario, while accounted for about 24 per cent of the population aged 75 and over in the province.

Demand for New Residences Remains Strong

The vacancy rate for residences opened in 2000 or later dropped to 10.3 per cent from 11.1 per cent in 2015. However, because it usually takes about two to three years for a new home to achieve a stabilized

occupancy rate in Ontario, the vacancy rates of recently opened homes are likely to be substantially higher. In 2016, there were about 3,300 spaces opened in 2013 and 2014, which were still in the lease-up phase. When excluding residences added in 2010 or later, the vacancy rate was 8.8 per cent, the same level of last year and lower than those of residences opened earlier. New residences usually provide a higher level of amenities and services which are valued by seniors who continue to pursue their hobbies and stay socially active.

Universe

Supply Rises

Total seniors' housing supply was 56,301 spaces in Ontario in 2016, up five per cent from 53,680 spaces in 2015. There were 16 residences with about 1,470 spaces that opened in 2014 and became eligible for the survey for the first time in 2016. Five residences opened in 2013 but were not captured in the 2015 survey, adding another 540 spaces to the total universe. Other renovation, addition and removal activities accounted for the rest of the change in the total supply. The average residence size increased to 81.1 spaces from 79.3 spaces last year. Excluding new supply that became eligible for the survey for the first time 2016, the average residence size was 80.6 spaces, indicating that older homes have been expanding their capacity. One of the growing trends in the market is older homes increase their service level by adding new part to accommodate residents who need high levels of care like assisted living and memory care.

³ Although Ottawa's growth in residents (8.8 per cent) was higher than the growth in total supply (8.3 per cent) in 2016, couple residents increased by 17 per cent, resulting in a slower growth rate for occupied spaces (8.0 per cent) and a higher vacancy rate.

Heavy Care Supply Up Strongly

Heavy care spaces rose to 2,707 spaces, up strongly from 1,993 spaces in 2015. The demand for heavy care spaces has been increasing because residents prefer to age in place. Furthermore, the substantially lower vacancy rate for heavy care spaces attracted builders to increase supply in this category. However, even with the large increase in supply, the vacancy rate for heavy care spaces remained much lower than the rate for standard spaces, and was almost unchanged in 2016 at 5.8 per cent. The average rent for a heavy care space rose nine per cent to \$4,847 in 2016.

Higher Priced Spaces Are More Common

Spaces with rents about \$3,500 made up 45.0 per cent of the total standard spaces in 2016, up from 35.9 per cent in 2015. Decreasing vacancy rate, new supply, as well as renovations made to existing residences enabled more spaces to charge higher rents. The share of spaces rented for more than \$3,500 rose considerably in the GTA, Ottawa, Central, Eastern, and Southwestern Ontario, while it declined modestly in Northern Ontario where the vacancy rates moved up moderately.

New Supply Attracts More Couples

Couples made up 14.7 per cent of the total residents in Ontario, up from 13.7 per cent last year. Meanwhile, couples accounted for 30 per cent of the growth in residents in 2016. Because new supply usually takes up most of the growth in demand, recently built residences are accommodating a much higher share of couples than older homes, thanks to the larger spaces and higher levels of amenities and care services provided by these new homes.

Rent

Rent Up Strongly

After two years of slow growth, the average monthly rent for standard spaces rose by 6.7 per cent to \$3,499 in 2016, the fastest growth since 2009 when CMHC started tracking rents for standard spaces. The tightening market as well as extensive renovations helped seniors' housing operators raise rents for existing residences. Meanwhile, the relatively strong growth in labour costs in 2015 in Ontario boosted the costs of retirement homes. Finally, new supply added to the pace of rent increase.

The average cost of a bachelor space was \$2,978 in Ontario, and the highest rate was in the GTA at \$3,484. The cost of a one-bedroom space, which has been gaining market share rapidly, was \$4,177 in Ontario. The change in rents in homes surveyed in both 2015 and 2016 was 5.7 per cent.

Rent grew strongly across Ontario, with the exception of the Northern region, where the vacancy rate edged higher. In addition, the 2016 survey was able to capture rental information for several residences which rented

most of their spaces under \$2,500 in the Northern region, resulting in an increase in supply of lower priced spaces in this area. Meanwhile, centres with less than 50,000 population also experienced relatively strong rent growth, although the pace of rent increase varied across centres. The fastest pace of increase was in Central Ontario where the average rent grew by 10 per cent. The slowest growth rate, 2.2 per cent, was in Northern Ontario.

Rents Grow at Similar Pace for Residences of All Ages

The pace of rent increase was very similar for residences of different ages. Residences opened prior to 1990 experienced a 5.7 per cent increase in rent, similar to the 5.6 per cent rate for residences opened in 2000 or later. Over one third of existing residences in Ontario undertook major renovations in the past five years. These upgrades increased the attractiveness of older homes and helped their rents grow at a pace similar to that of the provincial average.

Spotlight on...

Larger Size Seniors' Residences

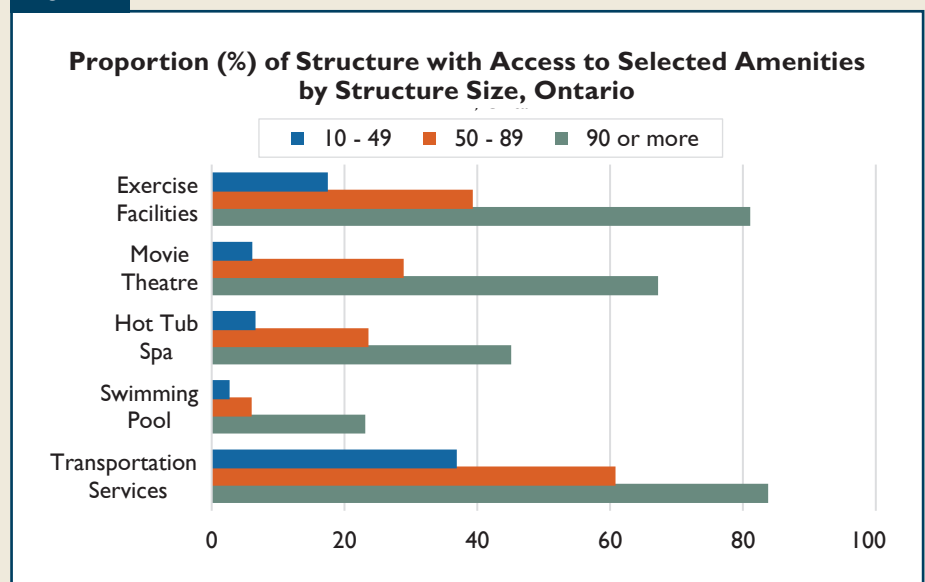

Seniors' residences with 90 or more spaces accounted for a rising share of the total supply in Ontario because larger structures make it economically feasible to provide the wide range of amenities and services that residents are looking for in today's market. Indeed, larger size residences provided a substantially higher level of amenities compared to smaller size residences in Ontario in 2016.

Structures with 90+ spaces made up slightly more than 60 per cent of the total supply in Ontario in 2016. The share was 44 per cent for supply that came into the market before 2000 and 76 per cent for supply added in 2000 and later. For supply opened since 2010, the share was 83 per cent in Ontario, while in the GTA and Ottawa, almost all the residences had 90 or more spaces.

A couple of other factors, besides the additions of larger size residences, contributed to the growth of the share of supply from residences with 90+ spaces. First, supply from homes with less than 50 spaces has been gradually trending lower due to the removal of smaller size residences, where higher vacancy rates were more common about 10 years ago. Second, supply from mid-size residences with 50-89 spaces has been almost unchanged since 2013 because developers have focused more on larger scale projects in recent years.

After their lease-ups, larger size residences usually have a lower vacancy rate than smaller size residences. The average vacancy rate of spaces from residences with

Figure 5

Source: CMHC Seniors' Housing Survey, 2016

Figure 6

Source: CMHC, Seniors' Housing Survey, 2015 and 2016
Ontario Retirement Homes Survey, 2005 and 2006

90+ spaces was substantially lower than that of residences with less than 50 spaces in 2005 and 2006, when the share of spaces from residences with 90+ spaces was about 45 per cent. The vacancy

rate for larger size residences has remained stable and close to the market average even with larger size homes making up most of the new supply since 2000. When excluding new residences that were

Spotlight on...

(continued)

still in lease-up, the vacancy rate for larger-size homes should be lower than the market average. For example, in the GTA, where supply added in 2010 and later were almost all from residences with 90+ spaces, the vacancy rate for supply added in

2000-2009 was nine per cent, much lower than the GTA average of 10.9 per cent and the rate for mid-size homes of 9.4 per cent in 2016. Mid-size homes, with no growth in supply, were mostly at stabilized occupancy, where the vacancy rate

moves in the general direction of the market. The removal of underperforming smaller size homes (about a quarter of homes with less than 50 spaces were removed since 2005) has reduced the vacancy rate of these smaller size homes.

Methodology

Canada Mortgage and Housing Corporation conducts the Seniors' Housing Survey in February and March. This annual survey became national in scope in 2009, covering all centres in each of the ten provinces. Both private and non-profit residences are included in the survey universe.

To be eligible for inclusion in the survey results, a residence must:

- ✓ have at least one unit that is not subsidized (in the Atlantic provinces, Quebec and Ontario);
- ✓ have been in operation for at least one year (for example, it must have started operation before January 2015 to be included in the 2016 survey);
- ✓ have at least 10 rental units (in Quebec, Ontario and the Prairies) or 5 rental units (in the Atlantic provinces and B.C.);
- ✓ offer an on-site meal plan;
- ✓ not mandate high levels of health care (defined as 1.5 hours or more of care per day) to all of its residents; nursing homes and long-term care homes are examples of residences that were not included in the survey;
- ✓ offer rental units; life lease units and owner-occupied units are excluded from this survey; and
- ✓ have at least 50 per cent of its residents who are 65 years of age or older.

The Seniors' Housing Survey is a census and not a sample survey; therefore, all seniors' residences in Canada meeting these criteria are to be part of this survey. The survey universe in Quebec may include private residences that do not meet the conditions for obtaining a certificate of compliance.

Survey data were obtained through a combination of telephone interviews and fax and e-mail responses. Information was obtained from the residence owner, manager or administrator. Survey results reflect market conditions at the time of the survey. Survey results have been weighted to adjust for non-responses, in order to ensure that they are reflective of the universe. The level of statistical reliability is noted in the data tables. For more information on the reliability of the data, please click [here](#).

All statistics published, excluding information on new market supply, include only those residences that have been in operation for at least one year.

Definitions

Space: A space is a residential area that is rented out. Examples of spaces include one half of a semi-private unit, a private or bachelor unit, a one-bedroom unit and a two-bedroom unit. In most cases, a space is the same as a unit. The exception is the case where a unit has been divided to rent to multiple residents. Semi-private and ward units are an example of this. Unless otherwise indicated, data for spaces are for all unit types.

Standard space: A space where the resident does not receive high-level care (that is, the resident receives less than 1.5 hours of care per day) or is not required to pay an extra amount to receive high-level care. Regional terms for this type of space may vary across the country.

Heavy care space: A space where the resident is paying an extra amount to receive high-level care (1.5 hours or more of care per day). Examples of conditions that could require high-level care include Alzheimer's, dementia and reduced mobility.

Respite space: A space used to provide temporary accommodation for a senior who normally lives in another place and not at the residence.

Non-market or subsidy space: A space where the rent received for the unit is less than market rent or where the resident occupying the unit is subsidized.

Rent: The actual amount a resident pays per month for his or her accommodation space and all mandatory services. For vacant spaces, the rent is the amount the owner is asking for the space.

Vacancy: A space is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Capture rate: The main age group living in seniors' residences are persons aged 75 years and older. Capture rate in a centre is the ratio of the total number of residents living in the survey universe divided by its estimated 75+ population, expressed as a percentage.

Acknowledgement

The Seniors' Housing Survey could not have been conducted without the co-operation of the residence owners and their staff. CMHC acknowledges their time and assistance in providing accurate information. As a result of their contribution, CMHC is able to provide data and analysis that benefits the entire industry.

Confidentiality

All information provide through this survey is kept strictly confidential and only used by CMHC to generate statistics and data sets that do not allow for the identification of individuals, households, businesses or buildings.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
