THE SYSTEM OF NATIONAL ACCOUNTS

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks, and descriptions of sources and methods) which make up this System will now carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data, (Catalogue Nos. with prefix 67), in their more summary form, are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Indexes of Real Domestic Product by Industry (included with Catalogue Nos. carrying the prefix 61) provide "constant dollar" measures of the contribution of each industry to gross domestic product at factor cost. Inputs and outputs are related in Productivity Studies (Catalogue Nos. with prefix 14).

Both the Input-Output Tables and Indexes of Real Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics, and the legal entity is the main unit of classification of transactors. Also, provision is made in the System for incorporation of balance sheet (wealth) estimates when such data are sufficiently developed.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, the Dominion Bureau of Statistics is continuing research on enterprise-companyestablishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in the United Nations publication, "A System of National Accounts" (S.udies in Methods, Series F., No. 2, Rev. 3, Statistical Office, Department of Economic and Social Affairs, United Nations, New York, 1968). In the future, a document on the conceptual framework of the Canadian System of National Accounts will be prepared for publication by the Dominion Bureau of Statistics. This document will furnish the broad theoretical outline of the System. The finer conceptual details, the statistical tables, and the descriptions of sources and methods as they pertain to the individual parts of the System, will appear in the various regular and occasional publications relating to those parts.

TECHNICAL NOTE

The Business Finance Division of the Bureau has released a new publication "Industrial Corporations - Financial Statistics". This publication contains quarterly financial data by industry (excluding Finance) for the period 1962 to 1969.

Because of certain conceptual differences and because the National Income and Expenditure Accounts annual figure for corporate profits is basically derived from financial statistics emanating from the administration of the Corporations and Labour Unions Returns Act, a reconciliation between the two series cannot readily be carried out at the present time.

(This report incorporates revisions to exports and imports of goods and services for 1968-70 (based on data in <u>Quarterly Estimates of the Canadian Balance of International Payments, Third Quarter 1970</u>, DBS Catalogue No. 67-001 and advance information for the Fourth Quarter 1970 given in the DBS Daily Bulletin of February 16, 1971) and to gross fixed capital formation for 1969-70 (based on preliminary direct survey information).)

ANNUAL REVIEW 1970

Preliminary fourth quarter 1970 estimates of the National Income and Expenditure Accounts and revised estimates for the earlier quarters indicate continued expansion in 1970. In real terms, the gain in the final quarter of the year was particularly strong.

The aggregate value of Canada's production of goods and services rose by 7.5 per cent in 1970, to reach a level of \$84.5 billion. This rate of increase is somewhat lower than those witnessed in most recent years, except in 1967 when the economy also experienced some slowing down. The rise in the implicit price deflator for GNP of 4.1 per cent, though smaller than the 4.7 per cent rise in 1969, was still one of the largest annual price increases recorded in recent years. However, most of the annual increase was attributable to the momentum of rising prices at the beginning of the year. In the course of 1970 there was some deceleration. After allowing for rising prices, the physical volume of production rose by 3.3 per cent. This compares with increases of 3.5 per cent in 1967 and of around 5 per cent in 1968 and in 1969.

Fiscal and monetary policies adopted in 1969 apparently played some role in slowing down the growth of incomes and domestic demand in the first half of the year and at the same time contributed to the moderation of price advance. Some easing of these policies appears to have had an effect in the recovery of demand in the latter part of 1970. The quickened pace of activity in the fourth quarter was noteworthy, especially in view of the fact that it occurred despite a major strike in the automobile industry through most of that period. A remarkable development in 1970 which contributed to the continued growth of the economy was the spectacular gain in exports realized in the first quarter and maintained through the remainder of the year.

Prices showed a progressive deceleration as the year wore on. However, despite some indications of moderate productivity gains, there was no comparable evidence of a parallel decrease in cost pressure. The sharp decline in corporation profits reflected these underlying cost-price relationships as well as certain special factors, in particular numerous work stoppages and the effect on some export-oriented industries of the appreciation of the Canedian dollar, which resulted from the freeing of the exchange rate in the month of June. Employment increases were unusually small and insufficient to absorb the rapid rise in the labour force. As a result, the unemployment rate for the year jumped from 4.7 per cent to 5.9 per cent - its highest level since 1962.

Consumer Demand

Consumer spending continued to be an important element in explaining cyclical changes in aggregate demand. Personal expenditure on consumer goods and services rose by 5.3 per cent, compared with increases of between 8 per cent and 10 per cent in the previous few years.

Not unexpectedly, the principal weakness occurred in the purchases of the more expensive durable goods items, where the consumer has the greatest scope for discretionary spending. Outlays on new passenger cars fell by 17 per cent. A steep decline in this component occurred in the first quarter; after recovering ground in the following two quarters, spending fell again in the fourth quarter, when sales were affected by the automobile strike. (Only outlays on automobiles of North American manufacture were diminished; spending on overseas models rose strongly for a second consecutive year.) Among other durable goods, recreation equipment and home appliances also showed declines, while outlays on furniture, fixtures (such items as lamps and curtains) and floor coverings stayed around their 1969 level.

Sluggishness of demand was also evident in the other major categories of consumer spending. The slowdown in semi-durable goods was especially marked in clothing and footwear. In services, the deceleration was largely due to the further extension of the medicare program, which has the effect of shifting most medical expenses from the personal to the government sector. However, services other than medical also showed a deceleration. Outlays on non-durable goods, which were propped up by accelerated rises in electricity and fuel, rose at an only slightly lower rate than in the pre-

Fixed Capital Outlave

High levels of mortgage interest rates in 1969 and early 1970 had an influence on investment outlays for new housing. New residential construction fell by 8 per cent in the year. Starts of residential structures fell abruptly in March 1969 and continued to slide down until May 1970. This was reflected, with a usual time lag, in strongly declining outlays in the latter part of 1969 and in the first two quarters of 1970. In response to the easing in mortgage markets since mid-year, and to the injection of federal mortgage funds for direct lending in low rental housing, especially in the fourth quarter, starts climbed sharply from July onward. This rebound in starts showed up in a very sharp 12.7 per cent advance in outlays in the closing quarter.

Business fixed investment excluding housing rose by 8.0 per cent to a level of \$11,172 million. These latest results, which are based on preliminary annual survey information, reveal a much better performance than could have been inferred from a reading of the quarterly estimates published earlier in the year. The indicators normally used in the preliminary estimation of quarterly spending did not capture in 1970 the strength of business spending on plant and equipment. Despite falling profits and sluggish sales in domestic markets, the current results are much closer to the expressed intentions declared at the beginning of the year in the survey of business investment. Spending on non-residential construction was up by 10.1 per cent versus 5.1 per cent last year. Outlays on machinery and equipment rose at a lesser rate than last year - by 6.2 per cent compared with 11.1 per cent.

Inventory Investment

The bulk of the sharp decline in inventory investment was attributable to the farm component, which swung from an accumulation of \$503 million to a decumulation of \$178 million. The farm inventory movement reflected a sharp reduction in the value of the new crop, partly in response to the government "Lower Inventory for Tomorrow" program; it also reflected considerable declines in grain stocks in commercial channels, coinciding with rising grain exports.

Investment in non-farm business inventories also declined somewhat. This was largely due to sharp depletions in the fourth quarter, especially in the stocks of motor vehicle dealers which were drawn down as a result of the automobile strike. For the year as a whole, the stock-to-shipments ratio in manufacturing industries and stock-to-sales ratios in both retail and wholesale trade were higher than in 1969.

Exports and Imports

Strong foreign demand for Canadian goods and services provided by far the greatest stimulus to the economy. The gains were concentrated in the first quarter, when they accounted for practically all of the increase in total demand. Exports were thereafter maintained at only slightly lower levels than in the first quarter, resulting in a gain of 13.5 per cent for the year as a whole compared with 10.5 per cent in 1969. As is illustrated in the following table, increases in merchandise exports were widespread, but particularly notable in metals and in cereals. An unusual feature of this expansion was the altered direction of the flow of export gains. Exports to the United States, Canada's largest customer, increased very moderately, in line with the marked economic slowdown in that country, whereas exports to overseas countries, especially to the European Economic Community, to the United Kingdom and to Japan rose spectacularly. In sharp contrast with exports, imports of goods and services rose by only 2.0 per cent. These developments in the external sector caused a huge swing of \$2.1 billion in the balance on transactions in goods and services with non-residents, from a deficit of \$967 million to a surplus of \$1,136 million - the highest surplus ever recorded in Canada.

Government Current Expenditure on Goods and Services

Rising government current expenditure on goods and services was another important sustaining force. This year's rise of 15.5 per cent was the highest since 1966. Almost half of the gain occurred at the provincial level of government, up 37 per cent, largely due to increased expenditures under medicare programs. Expenditure of local governments and of hospitals also recorded sizable increases of over 10 per cent. Federal government current expenditure on goods and services rose by 5.1 per cent.

Incomes

On the income side, wages, salaries and supplementary labour income made a substantial gain of 8.9 per cent. Though this increase was smaller than those recorded in recent years (when annual increases generally exceeded 10 per cent), it was nevertheless well ahead of the increase of 7.5 per cent in GNP. Higher average earnings accounted for most of the increase in labour income. With most of the increase in employment absorbed by service-producing industries, there was an accentuation of the tendency towards faster increases in this group than in goods-producing industries.

The deceleration in the rate of increase of wages and salaries in the goods-producing industries was entirely due to slow growth in strike-affected manufacturing, where the rate of increase was about half that of the previous year - 5.6 per cent versus 10.7 per cent. Construction, which also experienced labour disputes, showed an increase similar to that shown in 1969. A sharp acceleration in mining, from 4.4 per cent to 17.5 per cent reflected a rebounce in production following strikes in 1969. In the service producing industries, although all groups showed smaller rises in labour income, the deceleration was most evident in public administration.

Preliminary estimates of corporation profits before taxes indicate a decline of 6.2 per cent for the year. This was the first annual decline since 1967, when profits fell by 2.0 per cent. After alling in mid-1969, profits moved somewhat erratically along an apparently flat trend line from the third quarter 1969 until the third quarter 1970, then plunged by 11.7 per cent in the strikeaffected fourth quarter. The year's rise of 9.3 per cent in capital consumption allowances cushioned the fall in gross profits (which include these provisions for depreciation); gross profits declined by a moderate 0.9 per cent. Other income components either fell, or rose at slower rates than in 1969 Accrued net form income fell by almost 20 per cent, mostly due to the lower crop. (Swings of this magnitude are not uncommon in this series.) Net income of non-farm unincorporated business including rent rose by 3.2 per cent compared with 4.6 per cent in 1969; interest and miscellaneous investment income was up by 13.4 per cent after an unusually large 24 per cent increase in 1969.

Personal disposable income (personal income after tax and other deductions) rose by 6 per cent a slower pace than in any year since 1961. However, because personal expenditure on goods and services was even more sluggish, the personal saving ratio (personal saving as a proportion of personal disposable income) increased in 1970.

Price Movements

For the year 1970 as a whole, the implicit price index for gross national expenditure rose by 4.1 per cent compared with a 4.7 per cent rise in 1969. While conceptually different, base-weighted price indexes such as the Consumer Price Index, the Industry Selling Price Indexes and the General Wholesale Price Index, also showed price moderation this year. The price indexes for most major categories of final expenditure recorded lower increases than last year. Within 1970, the overall implicit price index decelerated, mainly as a result of the moderation from the second quarter onward of the rise in the implicit price index for personal expenditure on goods and of that for exports.

The implicit price index for exports rose by 3.3 per cent. The increase was concentrated in the first quarter, which showed an unusually strong 2.1 per cent rise. Export prices rose very little in the rest of the year. The effect on export prices of the freeing of the exchange rate in June 1970 is not yet clear. It would appear that for many export commodities where prices are determined in world markets or contractually fixed in United States dollars it caused a lowering of the Canadian prices. The impact of the appreciation of the Canadian dollar on import prices was, as expected, to ease their rate of increase.

The implicit price index for total personal expenditure rose by 3.2 per cent - a deceleration from the increases of about 4.0 per cent recorded in each of the previous two years. All components except durables decelerated. A marked easing in the price of rents explains the slowdown in services, as most other items in the services group continued to rise strongly. The softening in non-durables was due to declining food prices. The decline in these prices, which was one of the more striking developments of the year, was related to depressed markets for certain agricultural products, to lower prices of food imports, and, in the latter part of the year, to intense competition among large retail chain stores. The rise in durable goods prices was centered on the first quarter.

Implicit Price Indexes Percentage Change from the Previous Year

The increase of 3.0 per cent shown by the implicit price index for business gross fixed capital formation was notably lower than that of 4.6 per cent shown in 1969. The deceleration occurred in construction prices. The implicit price index for residential construction rose by 3.3 per cent; that for non-residential construction by 4.2 per cent. This compares with increases in 1969 of 5.2 per cent and 6.3 per cent respectively. The rise in the price of residential construction was entirely due to increased price of the labour component; in non-residential construction both labour and materials contributed to the increase. The price for machinery and equipment rose at the same rate of 2.5 per cent as in 1969.

The Government Sector

Total revenues of all levels of government combined (excluding inter-governmental transfers) rose by just over 9 per cent in 1970 from the 1969 level, the smallest annual increase in several years. All categories, with the exception of corporate direct taxes, increased. Over half of the increase was accounted for by a 14 per cent gain in revenue from personal direct taxes, the larger part of which took place at the federal level. Revenue from indirect taxes rose by over \$650 million with the gain concentrated at the provincial and local government levels, due mainly to higher returns from retail sales, gasoline and property taxes; federal indirect taxes were virtually unchanged. The investment income of governments also rose during the year and was mainly attributed to higher interest receipts.

Total expenditures of all levels of government rose more than revenues, by over 13.5 per cent, with about two-thirds of the increase due to higher outlays on goods and services. A significant part of this increase in goods and services took place at the provincial level, where a major factor was the medicare program, reflecting a full year's operation in some provinces and its introduction during the year in other provinces. Transfer payments to persons rose by \$744 million in 1970. At the federal level the gain was due to higher old age security pensions and unemployment insurance benefits while at the provincial level there were higher transfers to post-secondary educational institutions and to benevolent associations.

With revenues rising less sharply than expenditures, the surplus of the government sector, on a dational Accounts basis, declined from \$2,208 million in 1969 to \$1,278 million in 1970. The federal government moved from a surplus of \$773 million in 1969 to a deficit of \$12 million in 1970 while the provincial government also moved to deficit position. Local governments recorded a small surplus in 1970 and the surplus of the Canada and Quebec Pension Plans rose.

FOURTH QUARTER 1970

Preliminary estimates of the National Income and Expenditure Accounts indicate an acceleration in the rate of economic activity in the closing quarter of 1970. The fact that a substantial gain was realized in spite of a major strike in the automobile industry suggests an improvement in the underlying trend of the economy. Gross National Product at market prices, seasonally adjusted at annual rates, rose by 1.6 per cent to reach a level of \$86.4 billion. In each of the previous two quarters, the increases had been at a somewhat smaller rate of 1.4 per cent. As there was practically no change in the overall implicit price index in the quarter, the volume of physical production rose by almost as much - 1.5 per cent. This was the largest gain in real terms since the third quarter of 1969.

Demand

The significant contributions to aggregate demand in the fourth quarter were found in personal expenditure on consumer goods and services, up 1.6 per cent; in government current expenditure on goods and services, up 3.4 per cent (half at the federal level); and in business gross fixed capital formation, up 2.9 per cent.

After declining in the first quarter, consumer expenditure have made increasingly larger gains in the remaining quarters of the year. Because prices markedly slowed their rate of advance from the second quarter onward, the acceleration was particularly evident in volume terms. In the fourth quarter, constant dollar personal expenditure rose by 1.6 per cent. This compares with 1.3 per cent in the third quarter and with an average quarterly rate of real growth of 1.1 per cent in the decade size 1960. Within consumer expenditure, semi-durable goods made the largest percentage gain, mostly on account of a sharp increase in spending on women's and children's clothing. However, spending on other items also rose in the quarter, and in particular spending on personal accessories and on secudurable household equipment (items such as pots and pans, dishes and cutlery). Expenditure on most durable goods also rose quite strongly, though a decline in spending on new cars, probably partly reflecting the automobile strike, dampened the rise in that category. Among durable goods items showing substantial increases were recreation equipment, home appliances and auto parts, maintenance and repairs. Spending on the other two major categories of personal expenditure, non-durable goods and services, showed a deceleration in the fourth quarter.

The increase in business gross fixed capital formation was apparently due to an upsurge in residential construction, which rose by 12.7 per cent - the largest percentage gain since the fourth quarter of 1963. This increase reflected the large number of starts initiated during the quarter. Plant and equipment spending remained flat in the quarter, as an increase in non-residential construction was offset by a decline in machinery and equipment.

In contrast to the above mentioned categories of demand, investment in non-farm business inventories declined sharply, from an accumulation of \$760 million in the third quarter to a decumulation of \$652 million in the fourth quarter. The most notable depletion occurred in the stocks of motor vehicle dealers. However, inventory investment other than motor vehicles also fell quite sharply at all major industry levels.

Value of Ph	nysical Cha	nge in Nor	n-Farm Bus	iness Inventories
	Seasonally	Adjusted	at Annual	Rates

	100	1970					
	10	2Q	3Q	4Q	minus 30		
		m	illions of	f dollars			
Manufacturing	452	-152	-8	-96	- 38		
Durable goods	268	- 200	-124	20	144		
Non-durable goods	184	48	116	-116	-232		
Wholesale trade	156	36	160	-224	-384		
Retail trade	-96	560	348	-348	-696		
"Other" industries	96	92	260	16	- 244		
Grand Total	608	536	760	-652	-1,412		

The final quarter of the year saw the balance on current transactions in goods and services with non-residents rise spectacularly from a surplus of \$580 million to one of \$2,196 million, as a marginal increase in exports was dwarfed by a 7.6 per cent fall in imports. Most of the sharp drop in merchandise imports was in goods from the United States, particularly automotive products. (Exports of automotive products also fell in the quarter.) Lower deficits in the travel and income accounts also contributed to the unprecedentedly large overall surplus.

Incomes

The most notable development on the income side was a severe drop of 11.7 per cent in corporation profits. The drop was substantial even after allowing for the influence of the industrial dispute in the automobile industry. The declining trend in corporation profits which started in the first half of 1969 was sharply accentuated by this further setback which brought profits down to their 1967 level.

In contrast, the gain in labour income of 2.4 per cent represented an acceleration over the same of 1.7 per cent in the third quarter and of 0.6 per cent in the second quarter. Wages and salaries showed accelerations in both goods-producing and service-producing industries. In the former, the gain was entirely due to increases in average earnings, as employment declined slightly, mainly cause of industrial disputes. Within goods-producing industries, construction rose by a strong 6.8 per cent, mostly reflecting recovery from strikes in the third quarter. In the service-producing Industries both employment and average earnings contributed to the increase. Sizable gains were recorded in communications, where retroactive payments to post office employees were a factor, in community, business and personal services, and in trade. The gain in the latter of 3.1 per cent marked a notable recovery from the low levels experienced through most of the year.

Among other income components, accrued net income of farm operators rose by 29 per cent, reflecting increased value of grain and livestock production. Net income of non-farm unincorporated business including rent rose by 2.3 per cent. Both personal income and personal disposable income showed appreciably larger gains in the fourth quarter than in previous recent quarters.

Price Movements

A feature of the year was the pronounced easing in the quarterly rates of increase of the implicit deflator for gross national expenditure. This was most evident in the final quarter, when it rose by a negligible 0.1 per cent. However, this easing was partly due to a substantial weight shift between the value of physical change in inventories, which declined steeply in the quarter, and the other components of gross national expenditure. Excluding inventories, the rise in the overall deflator was 0.4 per cent, compared with 0.8 per cent in the previous two quarters. The slowdown in these overall implicit price indexes reflected a slight decline in the implicit price index for personal expenditure, a deceleration in that for government current expenditure, and a stable implicit price index for exports. With the continuing appreciation of the Canadian dollar, import prices 1/ fell for a second consecutive quarter. The decline in the deflator for merchandise imports of 1.5 per cent was especially notable. The price index for business gross fixed capital formation was the only major component to show an accelerated rise.

*In the third quarter 1970 publication the movement from the fourth quarter 1969 to the first quarter 1970 had been erroneously computed as a decrease of 0.3.

It may be noted that since imports are a negative entry in gross national expenditure a price decline in this component appears to raise the implicit price index. However, import prices will already have been reflected in the various other categories of gross national expenditure. The implicit price index is accordingly a price measure for domestically produced goods and services. The decline in the price for personal expenditure on consumer goods and services - the first since the fourth quarter of 1963 - was entirely due to a fall of 1.0 per cent in the non-durable goods component. A second consecutive sharp decline in food prices was responsible for the fall in non-durable prices. (Falling food prices in the quarter were due both to lower prices of imported food items, and to competitive price cutting by large retail chain stores.) The implicit price indexes for durable and semi-durable goods showed little change, while that for services, where increases were widespread, continued to rise at the same rate of 1.0 per cent as in the previous quarter.

The upsurge of 1.4 per cent in the implicit price index for business gross fixed capital formation contrasted sharply with the relatively small increases of less than half a per cent in the previous two quarters. The acceleration was mostly due to higher prices for construction. Increases in the prices for residential and non-residential building resulted from a higher price for labour input, as material prices remained unchanged. In engineering construction, both labour and materials components showed increases.

The Government Sector

Total government revenues of all levels of government combined (excluding inter-governmental transfers) declined by 0.4 per cent during the quarter. Most categories showed decreases, particularly corporate direct taxes and indirect taxes, although these were partially offset by higher revenues from personal direct taxes. Total government expenditures rose by 1.6 per cent with the major gain occurring in outlays on goods and services. Thus, with expenditures rising and revenues declining, the surplus of the government sector, on a National Accounts basis and seasonally adjusted at annual rates, was more than halved, moving from a rate of \$1,256 million in the third quarter to a rate of \$660 million in the fourth quarter.

Much of the change in the government sector surplus took place at the federal and provincial levels of government, which both registered deficits in the quarter. The federal government moved from a surplus of \$276 million in the third quarter to a deficit of \$60 million in the fourth, while at the provincial level, a deficit of \$552 million was recorded, compared to *e* surplus \$108 million in the third quarter. Offsetting somewhat the movements at the federal and provincial levels, the local government deficit narrowed while the surplus of the Canada and Quebec Pension Plans rose.

(1) Incluses defence expenditures. Data for the years 1967-1968 are shown in line 3, Table 6.

 (2) Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which are defined as current expenditure.
 (3) Comprises capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets.

(4) The book value of inventories is deflated to remove the effect of price changes and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment (see line 8, Table 1).

Includes the newly imposed taxes on life insurance companies. At the present time, for national accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance.
 Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter

of 1968. The amounts are as follows:

			1966					1967			1968		1969	1970
	I	II	III	IV	Year	I	TII	II I	/ Year	I II	III IV	Year	I II III IV Year	I II III IV Your

 Includes personal remittances, government official contributions and government pension payments.
 Includes withholding taxes and personal remittances from abroad.
 Saving of residents on transactions with non-residents in the national income and expenditure accounts. A negative figure indicates savings made available to the economy by non-residents (see line 8, Table 8). (4) See "Quarterly Estimates of the Canadian Balance of International Payments", DBS 67-001.

(1) The implicit price deflators of the seasonnally unadjusted components of Gross National Expenditure, derived by dividing the value figures in Table 2 by the constant dollar figures in Table 10, are not suitable as indicators of quarter-toquarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Veperditors on a quarter-to-cuarter basis. Quarter-te-quarter movement in the implicit price deflators based on presenting during during data are less unject to the poster of militing of the state of poster change.

25. GROSS NATIONAL EXPENDITURE IN CONSTANT (1961) DOLLARS	14,145	14,788	16,614	15,667	61,214	14,599	15,626	16,837	16,148	63,210

(1) The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in Table 2 by the constant dollar figures in Table 10, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

(1) See footnote 1, Table 1. *See Technical Note re Corporation and Labour Unions Returns Act, page 4.

See footnote 1, Table 1. *See Technical Note re Corporation and Labour Unions Returns Act, page 4.
 See footnote 2, Table 1.
 See footnote 3, Table 1.
 Includes an arbitrary smoothing of crop production, and standard seasonal adjustments for withdrack of grain from farm stocks and for the change in farm-held livestock and other inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures of accrued net income of farm operators.
 See footnote 5, Table 1.
 See footnote 4, Table 2.

 See footnote 2, Table 6.
 See footnote 3. Table 6.
 See footnote 4, Table 6.
 See footnote 4, Table 6.

(5) The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual total by four since real property taxes accrue uniformly throughout the taxation year. Because in recent years, changes in real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes series.

(6) Includes capital consumption allowances as shown in line 86.
(7) See footnote 6. Table 6.
(8) See footnote 6, Table 6.

See footnote 1, Table 7.
 See footnote 2, Table 7.

(3) Saving of residents on transactions with non-residents in the national income and expenditure accounts. A negative figure indicates savings made available to the economy by non-residents (see line 8, Table 18).

(4) See footnote(4) Table 7.
