The following table shows the results of the investigation of the effects of the various factors on the rate of the reaction. The rate of reaction is expressed in moles per liter per second. The concentration of A is expressed in moles per liter. The concentration of B is expressed in moles per liter. The concentration of C is expressed in moles per liter. The time is expressed in seconds.

The results show that the rate of reaction increases with increasing concentration of A, B, and C. The rate of reaction also increases with increasing time.
