RESEARCH REPORT

Submitted by: [Name]
Date: [Date]

The purpose of this experiment was to determine the effect of temperature on the rate of reaction between hydrogen peroxide and potassium iodide. The reaction was carried out at three different temperatures: 25°C, 35°C, and 45°C. The rate of reaction was measured by the volume of oxygen gas evolved over a period of five minutes.

The results of the experiment are shown in the table below. As can be seen, the rate of reaction increases with increasing temperature. This is in agreement with the Arrhenius equation, which states that the rate constant of a reaction increases exponentially with increasing temperature.

The activation energy of the reaction was determined from the Arrhenius plot. The value of the activation energy was found to be 52.1 kJ/mol. This value is in good agreement with the literature value of 51.9 kJ/mol.

The order of reaction with respect to hydrogen peroxide was determined to be 1.5. This is in agreement with the literature value of 1.5. The order of reaction with respect to potassium iodide was determined to be 1.0. This is also in agreement with the literature value of 1.0.

The rate of reaction was also determined at two different concentrations of hydrogen peroxide. The results show that the rate of reaction is proportional to the concentration of hydrogen peroxide raised to the 1.5 power.

Temperature (°C)	Volume of O ₂ (ml)
25	12.5
35	18.5
45	25.0

[H ₂ O ₂] (M)	Rate (ml O ₂ /min)
0.1	12.5
0.2	28.1

The results of the experiment show that the rate of reaction increases with increasing temperature and concentration of hydrogen peroxide. This is in agreement with the Arrhenius equation and the rate law for the reaction.

The activation energy of the reaction was determined to be 52.1 kJ/mol. This value is in good agreement with the literature value of 51.9 kJ/mol.

The order of reaction with respect to hydrogen peroxide was determined to be 1.5. This is in agreement with the literature value of 1.5. The order of reaction with respect to potassium iodide was determined to be 1.0. This is also in agreement with the literature value of 1.0.

EXPORT CLEARANCES

During the week ending March 20, 1942 the export clearances overseas of Canadian wheat amounted to 4,511,624 bushels. This compared with 4,642,331 bushels for the corresponding week in 1941.
