THE WORLD WHEAT SITUATION - SUMMARY

Within the past month the wheat situation generally has acquired a measure of stability in contrast with the unsettled conditions which marked the first month and a half of war. Among the constructive factors has been the resumption of British buying, as indicated by the substantial amount of export business reflected on the Winnipeg Grain Exchange on several occasions within the past month. In addition, the United States has virtually withdrawn from the export market so far as new wheat sales are concerned, in view of the distinctly uncertain prospects for the new domestic winter wheat crop. In the Southern Hemisphere, the Argentine and Australian crops, which are just maturing, have hardly maintained their condition within the past month. Present estimates for these two countries show a combined reduction of 81 million bushels from their harvest of a year ago. These factors have operated against the influence of a continued "bearish" world supply situation, and have sustained Winnipeg wheat prices around the 70 cent level for the nearby futures, while adding a slight buoyancy to Chicago and Buenos Aires prices.

On the basis of somewhat meagre reports, it appears that if any curtailment in European winter wheat seedings occurs this autumn it will have been caused by excessive moisture rather than by the presence of war. It is natural under present conditions that every European government should encourage the planting of winter wheat to the fullest possible extent. In Russia an increase of 2 1/2 per cent in the seedings of winter grains has been reported. In the Danubian countries, efforts have been made to increase acreage, although wet weather has delayed seeding in Roumania to some extent. Similarly in western Europe, a full acreage was intended, although seeding has been slow because of excessive rains.

World shipments of wheat and flour during the first sixteen weeks of the present crop year have turned in a disappointing performance, with a total of 134.6 million bushels shipped up to November 18, in comparison with 181.2 millions for the same period a year ago. Australian shipments, however, have not been reported since September 2, and it is possible that upwards of 10 million bushels have been shipped from this source. Argentina has been the heaviest single shipper since the beginning of the crop year, with shipments up to November 17 totalling 53.2 million bushels. Canadian and United States shipments combined have totalled 56.3 millions, according to Broomhall's figures. Within the past few weeks, the weekly volume of world shipments has shown a tendency to improve, due to an upturn in the movement from Canada. Canadian export sales within recent weeks indicate that the export volume from this country should continue to improve.

Additional governments have undertaken within the past month to husband their wheat supplies. On November 3, it was announced that the Spanish government, through its National Wheat Board, had assumed control of all native-grown wheat, and had fixed prices to growers. Spain's normal consumption requirements are 150 million bushels and her domestic production of 112 million bushels

this year emphasizes the need for conservation of supplies and imports. On November 6, it was also reported that the Irish government had taken over control of wheat imports, subject to maximum price control. On November 10, the Australian Commonwealth government, which had assumed control over exports since the outbreak of war, announced a measure of financial aid to growers, which will ensure the latter 3 shillings Australian or 51 cents Canadian per bushel for marketings from the new crop. This price will be paid in two instalments, half on delivery and the balance in April. Meanwhile, the British government, in its plan to encourage more home-grown wheat, has raised the standard price to be paid to growers from 45 to 49 1/2 shillings per quarter, which in its Canadian equivalent amounts to an increase from \$1.19 to \$1.32 per bushel. Any deficiency between the standard price and the average market price received by growers in the United Kingdom is paid from the proceeds of a tax on flour.

Southern Hemisphere Crop Prospects

The Argentine wheat crop received an excessive amount of rainfall during October, particularly in the northern districts including Cordoba and Santa Fe. In central Buenos Aires, however, there were also complaints of excessive rains. Black rust has been reported in northern districts, but the damage appears to have been local in character. Within the past two weeks, clearer weather has prevailed, and the crop has had an opportunity to recuperate, with ample moisture on hand for filling. The inclement weather in late October brought in its wake some pessimistic private crop estimates. The first official estimate of production is not expected until mid-December. In the meantime an approximation of 230 million bushels appears to be reasonably conservative. A crop of this amount would be 106.2 million bushels less than the unusually heavy production last year.

The first official estimate of the Australian wheat crop was issued on November 13 at 180 million bushels. This represents an increase of 25.4 million bushels over the 1938 crop. Harvesting has already begun in the northern districts of New South Wales, where the yields are reported as only fair.

The Wheat Situation in the United States

Some improvement in the United States winter wheat situation has occurred as a result of rains during the second week of November. Missouri, eastern and central Kansas and parts of Oklahoma and Texas received particular benefit, although western Kansas and the Oklahoma and Texas panhandles received very little relief. In the latter "dust bowl" area germination has been poor and there is considerable potential danger from soil blowing. Elsewhere in the winter wheat belt, there is only a scanty reserve of subsoil moisture, and further rainfall is badly needed for root development in the plant to insure against winterkilling. Private acreage estimates indicate a total winter wheat area seeded of 43,799,000 acres, which is a reduction of 2,374,000 acres from the area sown in the autumn of 1938.

United States farmers have availed themselves of the Federal loan facilities much more extensively this year than was the case in 1938. Up to November 14, loans had been made on 157 million bushels of wheat in comparison with a total of 40 million bushels up to November 14, 1938. In addition, 10.5 million bushels have been pledged as crop insurance premiums on the 1940 crop.

With poor prospects for the new winter wheat crop, and an appreciable portion of existing wheat stocks pledged against loans, the Federal Surplus Commodities Corporation is showing no effort to press wheat exports under subsidy, although an export business in flour is still being done.

The Wheat Situation in Canada

A substantial increase of 29.9 million bushels in the 1939 Canadian wheat crop estimate was indicated in the second estimate of 478,965,000 bushels issued by the Dominion Bureau of Statistics on November 10. The increase amounted to 30 million bushels in the Prairie Provinces where the wheat crop is now estimated at 452 million bushels, including 63 millions in Manitoba, 239 millions in Saskatchewan and 150 millions in Alberta.

The second estimate places the 1939 Canadian crop approximately equal to the 1927 crop which was the second largest on record. With improved harvesting and hauling facilities available for the present crop in comparison with those available for the 1927 and 1928 crops, primary deliveries of wheat from farms established new records in volume for the months of September and October. Total primary elevator receipts and platform loadings from August 1 to November 17, in the present crop year have amounted to 331,831,120 bushels in comparison with marketings of 307,618,684 bushels during the same period in the 1928-29 crop year. On the basis of the second crop estimate this year, it is estimated that total primary marketings during the 1939-40 season will approximate 400 million bushels. Accordingly, 83 per cent of total 1939-40 marketings have already come forward up to November 17, in comparison with 82 per cent in the same period of the previous crop year. In the autumn of 1927, however, only 49 per cent of total marketings had been delivered by November 17, and 66 per cent in the same period of 1928.

The rapid and heavy primary movement this season in addition to a 95 million bushel carry-over of old-crop wheat soon taxed the handling facilities and capacity of the terminal elevators. From October 16 to November 17, an embargo was placed on rail shipments of wheat from country points to Fort William and Port Arthur terminals, so that congestion at the Head of the Lakes might be relieved. In the meantime the visible supply of Canadian wheat has repeatedly established new records, with the 356,670,000 bushels in store or in transit on November 17 providing the latest peak. In the previous week, the visible had registered a decline from 351.5 to 350.5 million bushels, but the increase of 6.2 millions within the past week dispelled the belief that the maximum for the crop year had been reached at that time. With exports and domestic millings about ready to overtake the dwindling primary marketings of wheat, the visible supply is expected to decline in the very near future.

The Customs export figures are furnishing a picture of the Canadian export movement at variance with overseas clearance figures at the present time, but the discrepancy is largely explained by the increased stocks of Canadian wheat in store in the United States, which raise the Customs totals when leaving the Canadian border, but do not affect the overseas clearance figures. Customs exports of wheat and flour for the August-October period amounted to 48.3 million bushels, whereas the elevator overseas clearances, with United States imports for consumption and milling in bond and wheat flour exports added in, amounted to only 35.3 million bushels from August 1 to October 31. Canadian wheat in store in the United States at August 1 amounted to 7.1 million bushels, and on November 3 to 16.1 millions, with the increase in these stocks accounting for 9 millions of the 13 million bushel discrepancy between the Customs and the elevator clearance figures in the August-October period.

Exports on the basis of overseas clearances from August 1 to November 17 amount to 45.5 million bushels, made up as follows: overseas clearances of wheat 35.6 millions; imports into the United States for consumption and milling in bond 3.3 millions; flour exports partly estimated and expressed as wheat 6.3 million bushels. Exports computed on the same basis and for the same period in the previous crop year totalled 63.8 million bushels.

CALENDAR OF WHEAT EVENTS

- October 20. Argentine wheat area 17,791,000 acres according to second official estimate.
26. Rainfall in Oklahoma, Kansas and Texas heavy in places, but light in western Kansas.
28. Stem rust is observed in Australia. Dust storms are reported in Kansas.
30. United States Federal Crop Insurance Corporation announces 300,000 winter wheat farmers have paid in premiums on 1940 crop insurance with 10,458,501 bushels pledged as premiums.
- November 1. Unwanted rains in Argentina.
2. United States private estimates average 43,799,000 acres sown to winter wheat this autumn. Production forecasted around 400,000,000 bushels.
3. Spanish government commandeers all native-grown wheat.
4. Argentine official report claims damage from excessive rain.
6. Eire imposes government control of wheat imports and prices.
9. Six to ten cargoes of United States wheat sold to Vladivostok under subsidy.
- Showers at several points in Kansas, Oklahoma and Nebraska.
10. Canadian crop estimate raised to 478,965,000 bushels. Beneficial rains in Australia. Australian government announces financial aid to growers.
11. Rains in Argentina. Black rust appears in north-west.
13. Australian wheat crop officially estimated at 180,000,000 bushels.
14. United States flour export subsidy increased.
16. United Kingdom raises guaranteed price to growers from 45s. to 49s. 6d. per quarter of 504 pounds, equivalent to an increase from \$1.19 to \$1.32 per bushel, Canadian funds, at current rates of exchange.
17. Rail embargo on wheat shipments to Fort William-Port Arthur lifted.
20. United States wheat under Federal loan as of November 14 announced at 157,004,955 bushels.

An Appraisal of the Canadian Export Movement

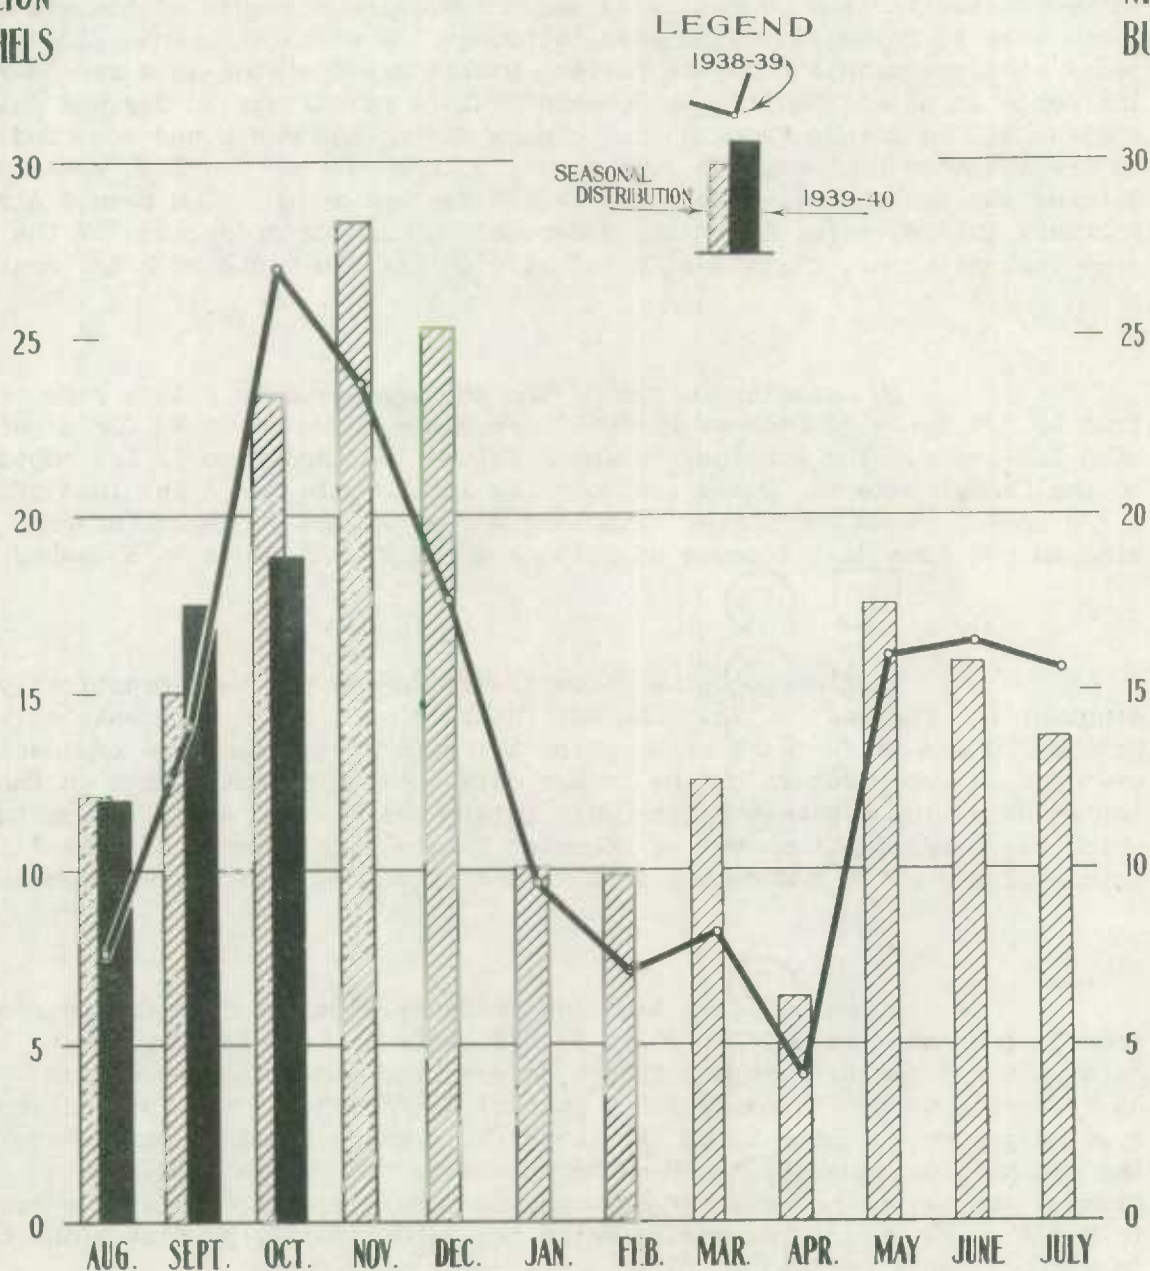

The Customs exports of wheat and wheat flour for the first three months (August-October) of the present crop year, have amounted to 48,342,797 bushels. Total Customs exports of wheat and wheat flour for the 1939-40 season are estimated within a range of 180 to 200 million bushels. In the chart on the opposite page, a seasonal distribution for the total crop year's exports based upon 190 million bushels is shown, together with actual exports of the three-month period already elapsed. In order to maintain the seasonal distribution during the August-October period 50.5 million bushels would need to be exported. Accordingly at the end of October, the Customs exports of 48.3 million bushels were only 2.2 millions below the amount required to maintain the average seasonal rate of exporting a crop-year total of 190 millions. During September and the first half of October, export sales of Canadian wheat were considerably disrupted in the transition from peace to war conditions. Since mid-October export sales have been made in much larger volume and these should shortly be reflected in a larger actual export movement.

PRICES

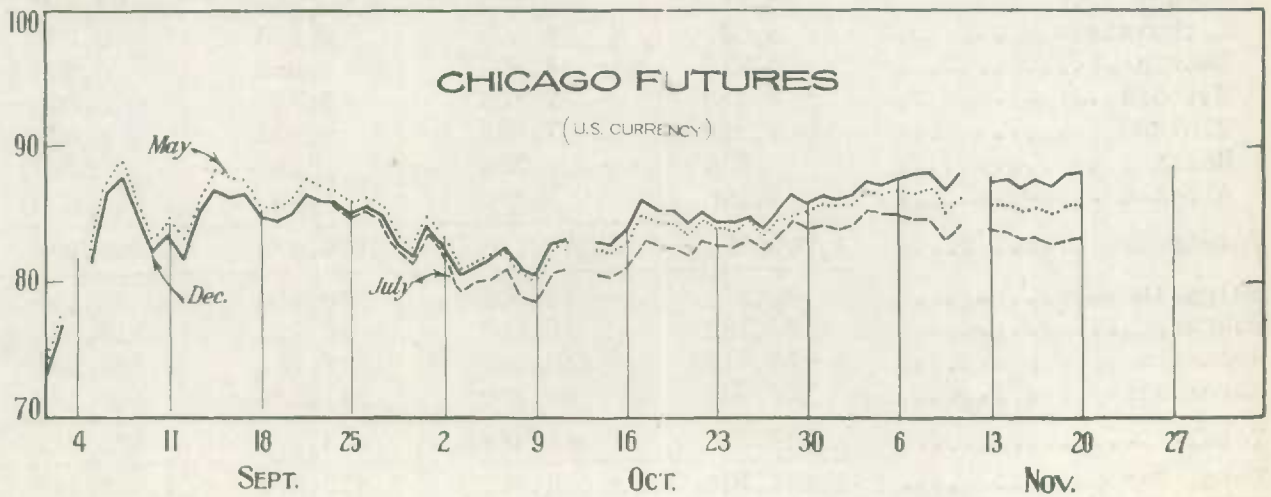

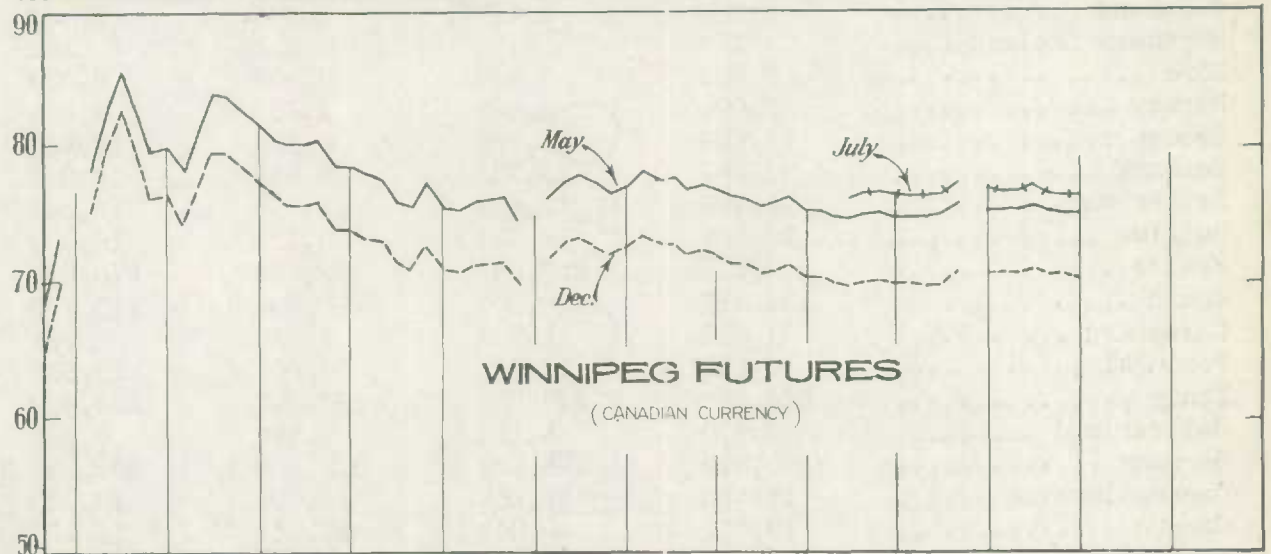

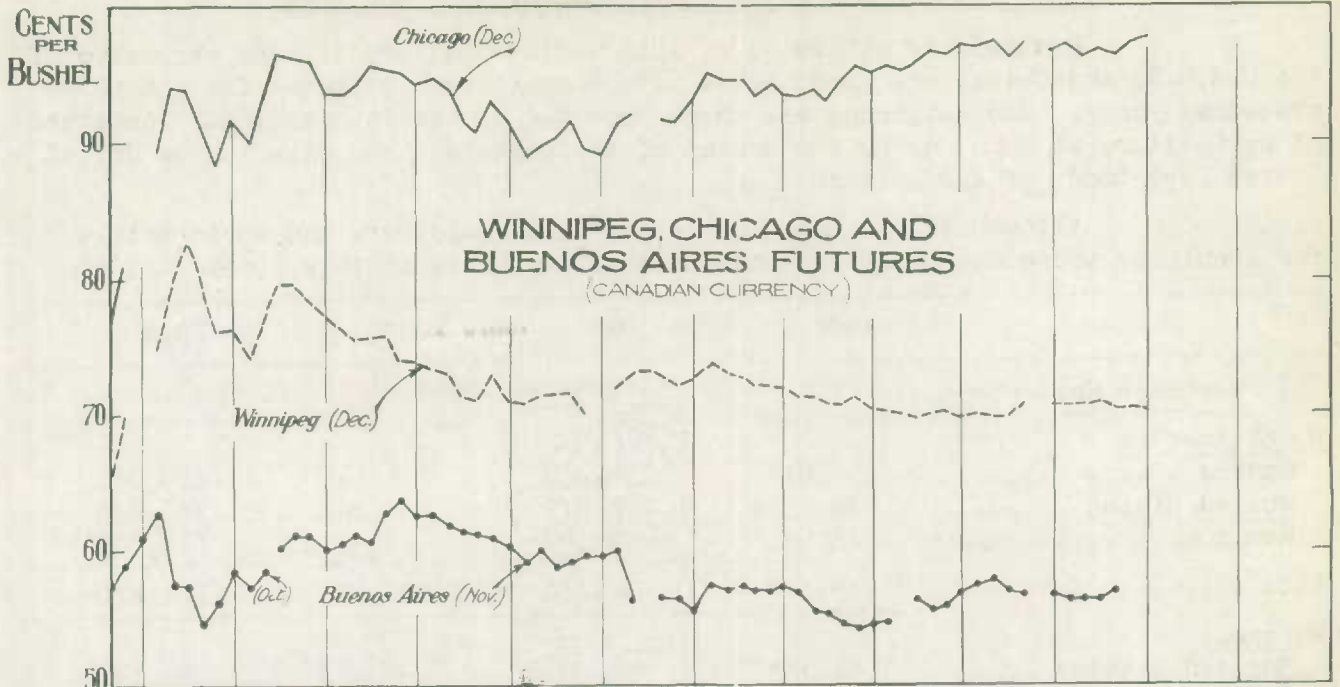

The spread between the Winnipeg and the Chicago December futures has been gradually widening out during the past month. While Winnipeg prices have eased slightly within the month with a tendency for the nearby positions to settle around the 70 cent level, Chicago prices have been working moderately upward. The underlying influence in United States markets generally is the threatening collapse of the winter wheat crop to be harvested in 1940, although the withdrawal under loan of 153.4 million bushels from the current market has operated as a secondary influence in strengthening the December future relatively to May and July contracts. In Buenos Aires no net change during the month has occurred in the November contract, the weakness displayed during the last week in October having been overcome early in the present month. The Buenos Aires February future, affected by the moderately declining prospects for the crop just maturing, registered a net gain during the month of $2 \frac{3}{8}$ cents.

In Canadian currency, the Chicago December future rose from $93 \frac{3}{8}$ cents on October 20 to $97 \frac{5}{8}$ cents on November 20 for a gain of $4 \frac{1}{4}$ cents. The Winnipeg December future declined from $72 \frac{1}{8}$ cents on the former date to $70 \frac{1}{4}$ cents on the latter date for a net loss of $1 \frac{7}{8}$ cents. Thus the Chicago-Winnipeg spread in the December futures widened out from $21 \frac{1}{4}$ cents on October 20 to $27 \frac{3}{8}$ cents on November 20.

At Winnipeg, the December-May spread has been practically constant for the past month. The May future closed at $76 \frac{7}{8}$ cents on October 20 and at 75 cents on November 20, with the spread of $4 \frac{3}{4}$ cents over the December future on the former date showing no net change on the latter date. On November 2, the July future was boarded at $76 \frac{1}{8}$ cents, which was $6 \frac{3}{8}$ cents above the December future. On November 20 the July future closed at $76 \frac{1}{8}$ cents, at a spread of $6 \frac{1}{8}$ cents above December.

At Chicago, in American currency, the December future rose from $84 \frac{1}{2}$ cents on October 20 to $88 \frac{3}{8}$ cents on November 20, for a gain of $3 \frac{7}{8}$ cents. The May future between the same dates rose from $83 \frac{3}{4}$ cents to $85 \frac{7}{8}$ cents for a gain of $2 \frac{1}{8}$ cents. The July future rose only from 82 cents to $83 \frac{1}{2}$ cents for a gain of $1 \frac{1}{2}$ cents over the month. Consequently the December premiums over May and July have widened out, with the December-May premium increasing from $\frac{3}{4}$ of a cent to $2 \frac{1}{2}$ cents during the month, while the December-July premium widened from $2 \frac{1}{2}$ cents on October 20 to $3 \frac{1}{4}$ cents on November 20.

DAILY CLOSING WHEAT FUTURES QUOTATIONS IN LEADING MARKETS

WORLD WHEAT PRODUCTION ESTIMATES, 1939

WITH COMPARATIVE ESTIMATES FOR 1936, 1937 AND 1938

Preliminary estimates of 1939 world wheat production, exclusive of the U.S.S.R. and China, are shown below with comparative estimates for the three preceding years. The estimates are those reported by the International Institute of Agriculture at Rome, or by the Bureau of Agricultural Economics in the United States Department of Agriculture.

Allowances are made in the northern hemisphere and world totals for countries whose estimates are not normally available at this time.

1/ Including Austria. 2/ Including Austria and Sudetenland. 3/ Approximation for Bohemia-Moravia and Slovakia. 4/ Present frontiers excluding Sub-Carpathian Russia.

World production of wheat in 1939, excluding the U.S.S.R. and China, is now estimated at 4,298,000,000 bushels, showing a reduction of only 265 million bushels from the record world production of 1938.

Principal revisions in the 1939 estimates within the past month included those for Canada, Australia and Roumania. The Canadian estimate shows an increase of 29.9 million bushels, while the first official estimate for Australia at 180 million bushels is 5 millions higher than the private estimate used a month ago. The Roumanian estimate, on the other hand, is 11.4 million bushels lower than in October. While no official estimate of the Argentine crop has yet been made, and one trade forecast was published as low as 200 million bushels, the tentative figure of 230 million bushels continues to appear sufficiently conservative for the present.

Canadian Exports of Wheat and Wheat Flour by Countries of Final Destination
Crop Year, 1938-39.

The table below shows Canadian wheat exports by countries of final destination for the 1938-39 crop year, as based upon the elevator overseas clearances figures, with all cargoes and parcels traced to their final destination by the Board of Grain Commissioners in co-operation with several Canadian Trade Commissioners and a London representative. Durum wheat exports are shown separately from other wheat, except in the case of the United States. United States imports for consumption and milling in bond, as shown below, are those recorded by the United States Bureau of Foreign and Domestic Commerce. The flour exports shown below are based upon the Canadian customs returns for wheat flour by countries of consignment. Because wheat flour diversions in transit are comparatively minor, these figures may be taken for practical purposes as indicating the countries of final destination for wheat flour exports.

AUSTRALIAN CABLE

The following cable was received on November 16 from the Canadian Government Trade Commissioner in Melbourne:

New crop conditions generally favourable, first official estimate 180 million bushels. British Government indicates only portion required, increasing difficulties Australian Wheat Board in disposal exportable surplus 130 million bushels. Guaranteed price by Wheat Board at present three shillings per bushel bagged (fifty-three cents Canadian) and two shillings tenpence per bushel bulk (fifty cents Canadian) f.o.b., yielding to grower two shillings one penny per bushel bagged (thirty-six cents Canadian) and two shillings three pence per bushel bulk (thirty-nine cents Canadian). Advances of one shilling five pence per bushel bagged (twenty-four cents Canadian) and one shilling threepence per bushel bulk (twenty-one cents Canadian) planned to be made to growers when wheat delivered to Wheat Board, remainder to be paid during April. Commonwealth Bank lending twenty million pounds to Wheat Board to cover advances to be repaid from realizations of proceeds of Federal flour tax and special subsidy of two million pounds. Export quotations flour approximately seven pounds per ton (twenty-four dollars sixty-four cents Canadian) but little movement owing to freight difficulties.

ARGENTINE LETTER

The correspondent of the Dominion Bureau of Statistics in Buenos Aires has forwarded the following report, under date of November 4, 1939, dealing with the grain situation in Argentina.

Seeded Areas. Second Official Estimate

A further reduction, amounting to 421,000 acres, as compared with the first estimate is shown in the second official calculation of the areas seeded to the five principal field crops (excluding maize), published a few days ago by the Ministry of Agriculture, bringing the figures down to 1,836,000 acres below those of last season. The total area planted is now calculated as 33,308,000 acres.

Details of the new estimate are shown in the following statement to which has been added the percentage of increase or decrease as compared with last season:

	Acres	Comparison with 1938-39
		p.c.
Wheat	17,791,000	Decrease 14.74
Linseed	7,660,000	Increase 15.93
Oats	3,459,000	Increase 2.94
Barley	2,224,000	Increase 8.30
Rye	2,174,000	Decrease 3.51
Totals	33,308,000	Decrease 5.2

The third, and presumably final, estimate of the sowings will be issued from the Ministry late in November.

Unofficially it may be mentioned that the loss of area in the the case of the crops dealt with above is generally expected to be made up by an increase in that devoted to maize, which crop is now being planted.

Crop Conditions

While there were a few fine and sunny days during October, generally speaking it was another rainy month, with unusually heavy precipitation at frequent intervals. Far too much moisture fell for the good of the grain crops.

The actual damage in the way of lodged or drowned grain may not be very serious, but the potential damage may prove quite considerable. Conditions are now such that should subsequent hot weather produce an outbreak of rust, great destruction may result. Future weather conditions will now be of great interest.

The official report on crop conditions during the month of October, issued yesterday by the Ministry of Agriculture, is summarized below:

The frequent and copious rains which fell in October caused deterioration in the grain crop prospects, and the condition of the wheat and linseed crops throughout the country as a whole is now only somewhat better than medium. Recently germinated maize was also affected, and ploughing in preparation for the planting of this grain has in many districts been stopped.

The Wheat Crop: The state of the wheat fields has perceptibly deteriorated since the last report, this being especially evident in the province of Santa Fe, the east of Entre Rios and the central part of Cordoba, there being also some damage from excessive moisture in the centre and east of Buenos Aires. In the south of Cordoba, the Pampa and the south-west of Buenos Aires, zones normally stricken by drought, the rains on the other hand, have been of great benefit and the condition of the wheat crop has consequently improved. Nevertheless, the improvement here is not sufficient to compensate for the damage caused in the rest of the country. In fact, apart from the lodging of much of the wheat, particularly noticeable in the province of Sante Fe and in the central portion of Buenos Aires, the extreme humidity has caused intensified attacks of rust throughout the cereal zone, especially in the leaves and stalks, the rust not being yet generally noticeable in the heads. If the weather should remain relatively cool, attacks of striped rust (*P. Glumarum*), which would cause a still further reduction in the yields, may be avoided.

In the province of Santa Fe army grubs have also caused appreciable damage, and in the remainder of the Republic overflowing rivers and creeks have flooded areas, which however in relation to the whole crop is of little importance.

In Santiago del Estero harvesting has begun, the yields up to now being very low. This also applies to the north of Santa Fe.

For all the reasons above indicated the condition of the wheat crop, considered as a whole, can be regarded only as somewhat better than medium, improvement being possible if weather conditions become normal before long.

Supplies and Markets

Wheat: The October movement was somewhat slower than that of September. Shipments amounted to 12,292,000 bushels of wheat and 204,000 bushels of flour in terms of wheat, a total of 12,496,000 bushels as compared with a combined total of 13,955,000 bushels in the previous month.

The statistical position is now as set out below:

Third official estimate 1938-39 crop	336,199,000 bushels
Carry-over from 1937-38 crop	8,296,000 "
Total supplies	344,495,000 "
Deduct for seed and domestic consumption	99,206,000 "
Surplus available for export	245,289,000 "
Shipments) Wheat..... 140,144,000 bushels	
to Oct. 31) Wheat as flour . 1,014,000 "	141,158,000 "
Balance still available	104,131,000 "

Early in the month the National Government took the step of prohibiting the millers of the country grinding any wheat into flour other than grain purchased from the Grain Trade Control Board, which must be of the 1938-39 crop. This measure is effective up to the end of November 1940. The wheat will be sold to the millers at the price paid by the Board to the producers, viz., 7 pesos per 100 kilos. The quantity of wheat used by the millers averages about 73,486,000 bushels per annum. The Board is thus assured an outlet for the major portion of the stocks which it is believed to still hold, even though the **quality** may have suffered or will suffer during storage leaving the more readily marketable new crop available to supply the export demand.

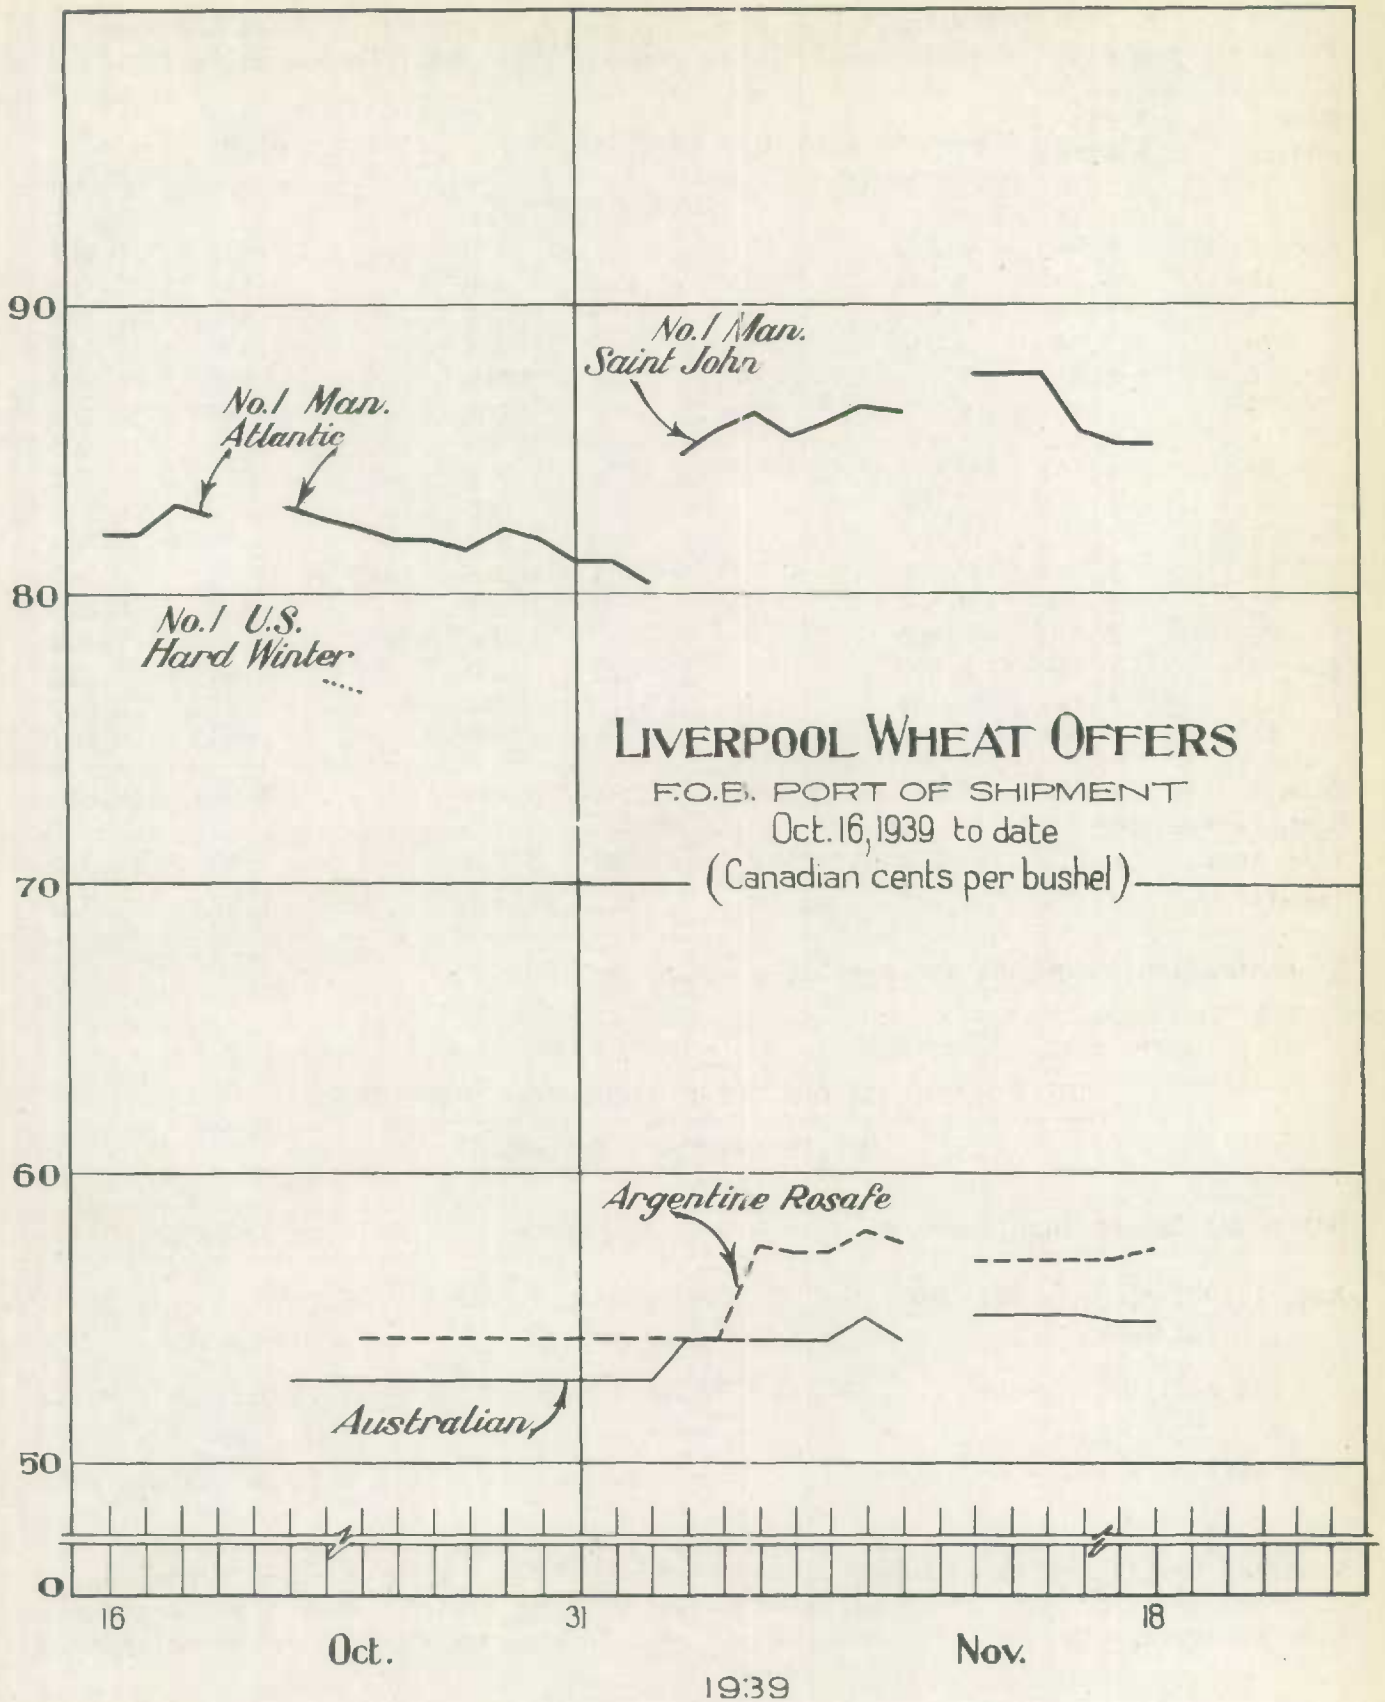

Strong protests against the action of the Government have been made by the millers and the grain trade. The former will be compelled to purchase their wheat at a price which is above the world's level, and will be at the disadvantage of not having the opportunity to select the grain most suited to their particular needs as they do at present by purchasing in the sample market or at country points.

The objection of the grain trade is that the millers, who are now prohibited from operating in the futures market, have been an important market element in the past through their activity in purchasing to assure themselves of stocks. Consequently there will now be little or no competition against the exporting houses, who will be left with a clear field, with possibly disastrous results in the matter of prices unless an official minimum price is re-established for the protection of producers. On this point there has been as yet no official announcement or hint.

During the month selling of wheat of the new crop was officially authorized, and trading for February delivery commenced at a price of 6.60 pesos per quintal, equal to 30 centavos above the current quotations for old wheat. At the close of the month this price had advanced to 6.70, the equivalent of 54 3/8 cents United States per bushel at prevailing official rates of exchange. Spot wheat at the same time closed at 5.95, or say 48 1/4 cents per bushel; and November 6.12, or say 49 5/8 cents per bushel. In Winnipeg on the same day December wheat closed at 70 1/4 cents.

Freights: The very abnormal conditions described in this report a month ago have suffered some modification, and although freights are still high and space scarce, the situation is not so difficult as it was.

The tendency is more and more to bring the cargo boats under official control and government supervision, with fixed rates and orderly allocation to the waiting shipping firms. This process has been made complete in the case of the nations at war, and in the case of neutral nations more and more control is being exercised so that the number of "free" tramp vessels is apparently declining, and order is emerging from confusion.

INTERNATIONAL TRADE

THE POSITION OF THE IMPORT REQUIREMENTS ESTIMATE

(Mr. Broomhall's Estimate)

Estimated Import Requirements	Actual Shipments	Balance to be Shipped
Aug. 1, 1938 to July 31, 1939 (52 weeks)	Aug. 1, 1939 to Nov. 18, 1939 (16 weeks)	Nov. 18, 1939 to July 31, 1940 (36 weeks)
584 million bushels	134.6 million bushels	449.4 million bushels
or	or	or
11.2 million bushels weekly	8.4 million bushels weekly	12.5 million bushels weekly

During the first sixteen weeks of 1939-40 world shipments have amounted to 134.6 million bushels, or an average of 8.4 million bushels per week. In order to fulfil the world estimate of 584 million bushels, weekly shipments will have to average 12.5 million bushels per week for the balance of the cereal year.

FOREIGN EXCHANGE ^{1/}

(October 17 - November 20)

Daily buying and selling rates set by the Canadian Foreign Exchange Control Board for sterling and United States funds remained unaltered during the five-week period ended November 20 at \$4.43-\$4.47 and \$1.10-\$1.11 respectively. Erratic fluctuations in free rates for sterling and Canadian funds at New York were, however, indicative of increased pressure on these units. Sterling ranged between a high of \$4.02 1/8 on October 24 and \$3.85 on November 9, finally closing at \$3.93 1/2 for a net loss of 6 1/4 cents. During the same period Canadian funds moved between 90 cents and 86 3/4 cents, the close at 87 cents indicating a net decline of 2 1/4 cents. The Australian pound remained unchanged in terms of the Canadian dollar at \$3.5760. Argentine unofficial or free peso rates dropped from a peak of 26.14 cents on October 25 to 25.25 cents on November 10, but subsequently stiffened to 26.03 cents on November 20.

THE CANADIAN SITUATION

I. SECOND ESTIMATES OF PRODUCTION

On November 10, the Dominion Bureau of Statistics issued the second estimate of grain production in Canada, and the following excerpts are taken from the report:

The second estimates of 1939 grain production in Canada are featured mainly by a substantial increase in the estimate for wheat. Based on crop correspondents' returns received at the end of October, the Canadian wheat crop of 1939 is now estimated at 478,965,000 bushels, which is 29,907,000 bushels above the September estimate. This increase almost wholly reflects a higher appraisal of the wheat crop in the Prairie Provinces, which is now placed at 452,000,000 bushels, an increase of 30,000,000 bushels in comparison with the September estimate. The second estimates in each of the Prairie Provinces are as follows: Manitoba 63,000,000, Saskatchewan 239,000,000 and Alberta 150,000,000 bushels. These represent increases of 4,000,000, 21,000,000 and 5,000,000 bushels respectively over the September estimates of production. Included in Manitoba's estimate is 9,000,000 bushels of Durum wheat, unchanged from September, while Saskatchewan's Durum production is reduced slightly to 2,300,000 bushels. Spring wheat production in eastern Canada is somewhat lower than indicated in September, although Ontario's fall wheat crop and British Columbia's spring wheat production show increases. The total 1939 wheat crop in Canada is approximately equal to the 1927 crop of 479,665,000 bushels, which has hitherto held undisputed second-place in the annals of Canadian wheat production.

Oats production in Canada is now estimated at 385,930,000 bushels, which is 12,798,000 bushels above the September estimate, with higher yields now indicated in Quebec, Ontario, Manitoba and Alberta. Barley production at 103,226,000 bushels shows an increase of 4,017,000 bushels over the September estimate. Both fall and spring rye show small reductions with total Canadian rye production now placed at 15,307,000 bushels. Flaxseed production is also somewhat lower at 2,149,000 bushels. Mixed grains, on the other hand, are higher at 44,350,000 bushels. Peas, beans and buckwheat are very little changed from their first estimates. Corn for husking shows a slight increase.

Wheat Production in the Prairie Provinces, 1939

With threshing results providing a more accurate basis for estimating yields per acre on the first heavy western crop since 1932, crop correspondents in each of the three provinces almost unanimously reported higher yields at the end of October than at the end of August this year. In consequence, the second estimate of wheat production in the Prairie Provinces at 452,000,000 bushels shows an increase of 30,000,000 bushels over the first estimate of 422,000,000 bushels. In Manitoba and Saskatchewan, the heavy rate of wheat deliveries to country elevators and over platforms has supported the increased estimates. In Alberta the primary movement has been slower due to congested elevators in some instances and to unfavourable weather conditions delaying threshing, particularly in northern districts.

Wheat Marketings in the Prairie Provinces, 1939

Primary elevator receipts and platform loadings of wheat in the Prairie Provinces for the fourteen-week period from August 1 to November 3, 1939, have amounted to 313,946,590 bushels. For this period, wheat deliveries during the present season have established a new record, supplanting the 251,095,122 bushels delivered from the 1928 crop during the first fourteen weeks of the crop season. That a much heavier primary movement has taken place to date this year from a crop smaller than that harvested in 1928 is the result of progress in harvesting methods which has been accomplished over the past decade. Straight and pick up combining has speeded up threshing, and the use of farm trucks for delivery to elevators has hastened the rate of marketings early in the crop season.

Marketings during the present crop year are divided by provinces as follows: Manitoba, 48,521,287 bushels; Saskatchewan 179,137,760 bushels; and Alberta 86,287,543 bushels. In appraising the volume of marketings still to come forward during the remainder of the crop year, allowance should be made for only a small amount of seed to be withdrawn from elevators, as well as for somewhat higher amounts of wheat to be fed to live stock and poultry. Accordingly, from the total crop of 452 million bushels, approximately 400 million bushels should be delivered from farms. If this estimate of marketings is borne out, then 78 per cent of this year's marketings have already taken place, in comparison with 79 per cent for the same period in 1938, and 69 per cent in 1937.

Second Estimate of the Production of Grain Crops in Canada, 1939,

II. AREA AND CONDITION OF FALL WHEAT

On November 17, the Dominion Bureau of Statistics issued the following estimates:

The area sown to fall wheat in the autumn of 1939 is estimated at 813,000 acres, an increase of 39,000 acres or 5 per cent as compared with the area sown in 1938, viz., 774,000 acres. The condition at October 31 was reported at 98 per cent of the long-time average yield per acre as compared with 98 per cent in 1938.

III. PRIMARY MOVEMENT

The following table shows primary receipts of wheat in the Prairie Provinces for the 1939-40 crop year along with comparative figures for 1938-39:

Week ending		Manitoba	Saskatchewan	Alberta	Totals	Last Year
(bushels)						
August	4	400,929	143,422	136,978	681,329	608,014
	11	2,222,896	121,744	266,227	2,610,867	2,231,338
	18	3,550,957	1,241,585	928,424	5,720,966	6,562,985
	25	6,242,914	6,073,204	3,234,534	15,550,652	14,920,847
September	1	13,032,482	16,424,590	5,699,321	35,156,393	23,112,502
	8	8,132,617	24,991,538	9,414,191	42,538,346	31,342,019
	15	5,513,903	29,122,977	8,184,234	42,821,114	20,725,068
	22	2,899,684	24,573,608	10,322,765	37,796,057	32,148,351
October	29	2,826,976	24,683,007	16,251,437	43,761,420	30,241,394
	6	1,190,288	15,669,645	6,905,621	23,765,554	21,443,468
	13	694,711	14,164,210	8,351,324	23,210,245	11,142,554
	20	633,872	9,976,018	6,603,381	17,213,271	14,555,994
November	27	603,760	7,767,275	6,870,865	15,241,900	11,973,646
	3	659,387	5,320,453	3,496,106	9,475,946	8,619,449
	10	394,763	5,337,400	3,526,329	9,258,492	4,502,145
	17	412,166	3,584,166	3,069,236	7,065,568	4,675,524
Totals		49,412,305	189,194,842	93,223,973 ^{1/}	331,831,120 ^{1/}	238,805,298

^{1/} The totals for Alberta and the Prairie Provinces include a downward revision of 37,000 bushels which has not been allocated to the weekly figures.

IV. GRADING OF THE 1939 WHEAT CROP

The following shows the grading of new-crop inspections during August to October 1939, in comparison with the same months in 1938:

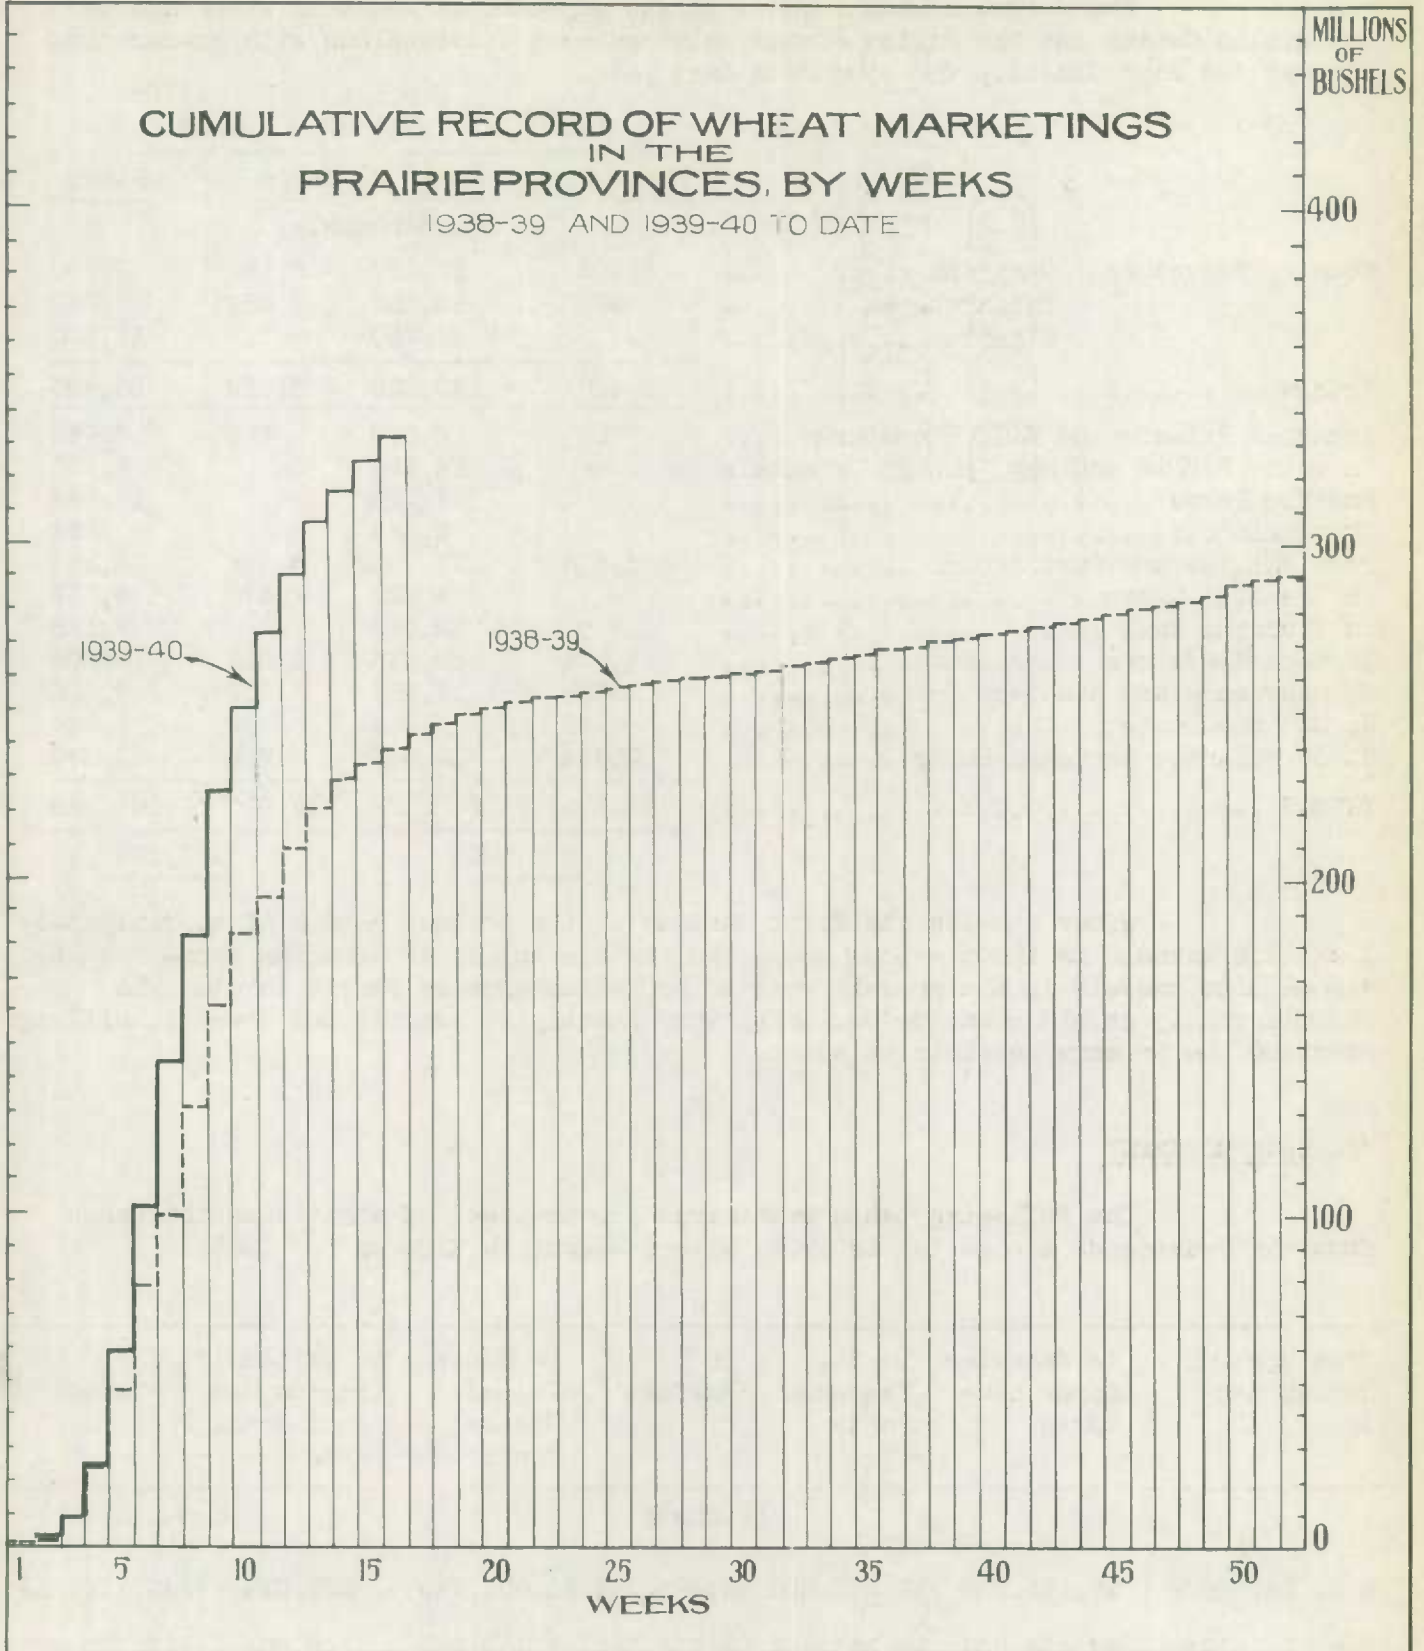

Number of Cars Grading No. 3 Northern or Better					
		1939-40		1938-39	
		Cars	Per Cent of Inspections	Cars	Per Cent of Inspections
August		13,478	94.55	9,905	95.84
September		58,166	95.82	34,715	89.71
October		24,123	92.78	30,778	82.40
Totals		95,767	94.86	75,398	87.28

Omitting special grades such as Garnets, Durums, White Springs and Winters, the number of cars of new wheat inspected in October, 1939 totalled 26,000 of which 24,123 or 92.78 per cent graded No. 3 Northern, or higher. October 1939 inspections of new Durum wheat amounted to 148 cars of which 131 or 88.51 per cent graded No. 3 Amber Durum or higher. In October, 1938, new Durum inspections numbered 742 cars of which 718, or 96.77 per cent graded No. 3 Amber Durum or higher.

CUMULATIVE RECORD OF WHEAT MARKETINGS IN THE PRAIRIE PROVINCES, BY WEEKS

1938-39 AND 1939-40 TO DATE

MILLIONS
OF
BUSHELS

V. VISIBLE SUPPLY

The following table shows stocks of Canadian wheat in store and in transit in Canada and the United States on November 17, 1939 along with comparative figures for approximately the same date last year.

	1939		1938	
	Durum	Other	Durum	Other
	(000 bushels)			
Country Elevators -- Manitoba	2,450	12,150	3,190	5,700
Saskatchewan	950	83,580	539	21,780
Alberta	--	44,790	--	31,340
Totals	3,400	140,520	3,729	58,820
Interior Private and Mill Elevators	25	6,070	112	5,932
Interior Public and Semi-public Terminals	7	14,893	--	6,158
Pacific Ports	--	11,265	--	16,768
Churchill	--	2,485	--	896
Fort William and Port Arthur	3,318	71,706	4,531	33,181
In Transit, Lakes	--	5,823	2,470	3,771
In Transit, Rail	--	22,098	--	9,175
Eastern Elevators -- Lake Ports	4,001	33,543	1,524	13,356
St. Lawrence and Seaboard Ports	1,310	17,686	853	9,555
U. S. Lake Ports	25	5,498	784	3,261
U. S. Atlantic Seaboard Ports	2,454	10,543	907	1,096
TOTALS	14,540	342,130	14,910	161,969
	356,670		176,879	

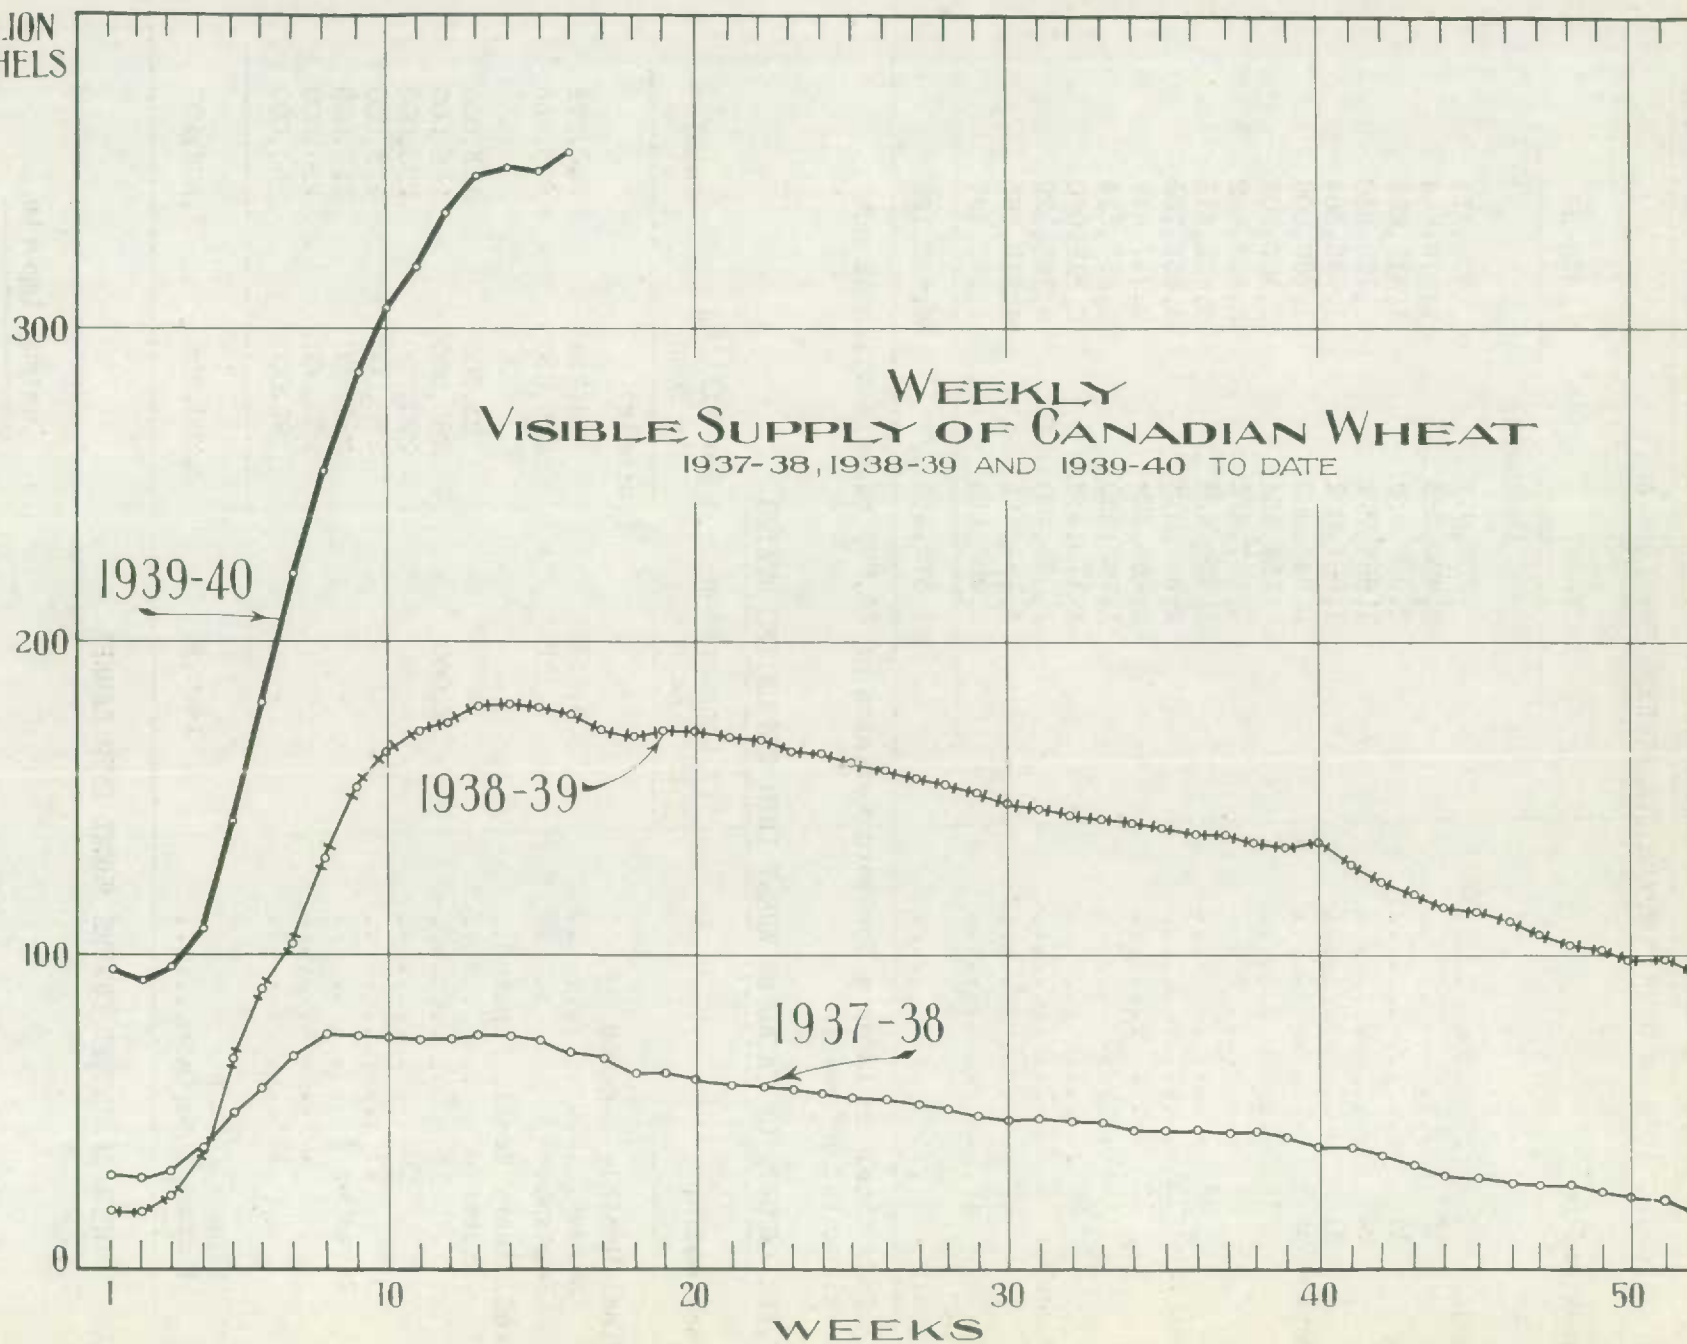

After showing its first decline in the present season of approximately 1 million bushels in the previous week, the visible supply of Canadian wheat rose by 6.2 million bushels in the present week to establish another record level. The visible supply should commence declining very shortly as exports and domestic millings overtake the primary receipts of wheat.

VI. LAKE MOVEMENT

The following table summarizes the movement of wheat down the Lakes from the opening of navigation in 1939, with comparative figures for 1938.

From opening navigation to	To Canadian Lower Lake Ports	To St. Lawrence Ports	To Buffalo	To Other United States Ports	To United Kingdom and Continental Ports	Totals
(bushels)						
Nov. 14, 1939	97,675,238	12,515,550	24,473,733	13,904,760	225,026	148,794,312
Nov. 14, 1938	82,438,644	16,303,557	8,376,315	5,965,289	112,066	113,195,871

IX. IMPORTS OF UNITED STATES WHEAT INTO CANADA

	Customs Imports
	(bushels)
Crop Year, August 1936 - July 1937	146,957
Crop Year, August 1937 - July 1938	5,743,953
Crop Year, August 1938 - July 1939	1,558,551
August, 1939	29

X. THE STATISTICAL POSITION

(a) In Canada only: The table below summarizes the statistical position of wheat in Canada as at November 1, 1939, with comparative figures for the same date in 1938. The calculation is based upon available supplies for the crop year in Canada only, from which are deducted the Customs exports for the months of August-October. Supplies are available for export or carry-over at November 1, 1939, are shown at 397.6 million bushels, representing an increase in current supplies of 195.2 million bushels, compared with those of a year earlier.

	1938-39	1939-40
	(bushels)	
Carry-over in Canada, July 31	23,553,228	95,013,476
New Crop	350,010,000 1/	478,965,000 2/
Total Supplies	373,563,228	573,978,476
Domestic Requirements	122,563,689	128,000,000 3/
Available Supplies	250,999,539	445,978,476
Exports, August-October	48,566,029	48,342,797
Balance for Export or Carry-over, November 1 .	202,433,510	397,635,679

(b) In Canada and the United States: A second method of calculating the statistical position takes into account stocks in the United States as well as in Canada, then works from the elevator returns of overseas clearances, plus United States' imports for consumption and milling in bond. The calculation shown below, based on this method, indicates a balance of 417.8 million bushels on November 1, available for export or for the July 31 carry-over in Canada and the United States, compared with 201.4 million bushels a year earlier, indicating an increase of 216.4 million bushels in the current available supplies between the two years.

	1938-39	1939-40
	(bushels)	
Carry-over in Canada and the United States, July 31	24,535,858	102,161,568
New Crop	350,010,000 1/	478,965,000 2/
Total Supplies	374,545,858	581,126,568
Domestic Requirements	122,563,689	128,000,000 3/
Available Supplies	251,982,169	453,126,568
Export Movement, August-October		
Overseas Clearances	43,345,341	27,151,325
United States' Imports	2,159,617	2,589,835
Flour as wheat	5,105,746	5,579,879
	50,610,704	35,321,039
Balance for Export or Carry-over, November 1 .	201,371,465	417,805,529

1/ Subject to final revision, January 19, 1940.
