#### WORLD WHEAT SITUATION

Wheat Supplies of Four Major Exporters One Per Cent Below a Year Ago Total supplies of wheat held by the four traditional major exporters, for export and for carryover at the end of their respective crop years, totalled 2,280.4 million bushels at March 1, 1963 compared with 2,302.1 million at the same

time a year ago. Reduced supplies in United States and Argentina more than offset larger totals in Canada and Australia. Supplies at March 1, 1963, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 1,438.0 (1,546.8); Canada, 609.8 (528.5); Argentina, 34.6 (82.9); and Australia, 198.0 (143.9).

August-February Exports
Decline from Last Year
but Remain Well Above
Average

Reduced shipments from United States, Canada and Australia have more than offset larger exports from Argentina and as a result, total exports of wheat and flour in terms of wheat from the four major exporters during the first seven months of the 1962-63 crop year, at 615.7 million bushels,

are some 22 per cent less than last year's record August 1961-February 1962 level of 794.1 million, but 23 per cent more than the ten-year (1951-52-1960-61) average of 501.2 million for the same period. Shipments from the four traditional major wheat exporters during August-February of the 1962-63 crop year, with comparisons, appear in the accompanying table.

Exports of Wheat and Flour in Terms of Wheat, August 1962-February 1963 with Comparisons

1962-63 2/	309.5	188.8	38.5	78.9	615.7

<sup>1/</sup> Revised.

<sup>2/</sup> Preliminary.

Near Record 1962 World Bread Grain Crop Confirmed According to the February 1963 edition of World Agricultural Production and Trade published by the United States Department of Agriculture revised estimates place 1962 world breadgrain production at 297 million short tons, second only to the 1958

record. Latest information available to the Foreign Agricultural Service indicates a substantial increase in the 1962 world total since the first forecast.

The increase is wholly in wheat, with the present estimate of 8,670 million bushels up 280 million bushels above the early forecast. Most of the increase is in Western Europe, especially France, and in the Soviet Union, where final outturns were larger than expected. World rye production is now placed at 1,310 million bushels, the smallest outturn for many years. This is a reduction of 40 million bushels from the earlier forecast, all in the estimate for the Soviet Union.

A record wheat crop in Western Europe this year will greatly reduce import requirements for this marketing season. An increase of 340 million bushels over the 1961 outturn in this area would seem to limit import needs to the amount of strong wheats required for blending with weaker domestic wheats. Asia's overall total is also high and 155 million bushels above the 1961 total. This will mean reduction in import requirements of some countries, though total imports will still be large. With Africa's total back to normal after the poor 1961 harvest, some reduction in imports can be expected there also.

As a result of reduced import requirements in a number of importing countries, world trade is expected to fall about 180 million bushels below the 1961-62 total of 1,734 million bushels.

Wheat production in North America is now estimated at 1,702 million bushels, well above the 1961 total of 1,570 million since recovery of Canada's crop more than offsets the reduction in the U.S. crop. Acreage is much smaller than in 1961 but yields are somewhat larger. Rye production is up in both the United States and Canada. Western Europe's wheat production of 1,605 million bushels is unprecedented and 292 million bushels above the 1955-59 average. Increases over the small 1961 harvest are general but the gain in France is the outstanding one. A large acreage with record yields bring the crop to a record 510 million bushels and a surplus of about 150 million bushels is estimated. Rye production of 230 million bushels in Western Europe is above the poor 1961 outturn but is still below average.

Wheat production in <u>Eastern Europe</u> is below the good harvest of 1961 but is above average. The rye outturn is moderately below the 1961 harvest and also below average.

The Soviet Union's wheat crop appears larger than a year earlier and above average because of a near-record acreage. The rye crop was less than in 1961 because of lower yields. A record wheat crop of 2,020 million bushels in Asia resulted from large acreage and good yields. Africa's outturn of 210 million bushels contrasts with the poor 1961 crop of 160 million bushels because of higher production in North African countries.

The wheat crop in <u>South America</u> appears to be at the 1961 level while <u>Australia's</u> crop of 290 million bushels is well above. The high level is due to record acreage and above-average yields.

Editor's Note: The 1962-63 Australian wheat crop is now estimated at a record 300 million bushels.

#### CANADIAN SITUATION

Supply Position Total estimated supplies of wheat for the 1962-63 (August-July) crop year are placed at 948.6 million bushels, 6 per cent greater than the 1961-62 total of 891.2 million, with a substantial decline in carryover stocks more than offset by a sharp increase in production. After deducting 150.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1962-63 amount to 798.6 million bushels, 7 per cent above the 749.1 million in 1961-62.

Exports of wheat and flour in terms of wheat during the August-February period of the current crop year amounted to 188.8 million bushels compared with 220.6 million exported during the corresponding period of 1961-62 and the ten-year (1951-52-1960-61) average for the same months of 167.7 million bushels. This year's total consisted of 173.2 million bushels of wheat and 15.6 million of wheat flour equivalent. Corresponding totals for the same period of the preceding crop year were 201.6 million bushels of wheat and 18.9 million of flour equivalent. The balance remaining on March 1, 1963 for export and for carryover amounted to 609.8 million bushels, 15 per cent more than the March 1, 1962 total of 528.5 million.

<sup>1/</sup> Subject to revision.

<sup>2/</sup> Preliminary.

<sup>3/</sup> Less than 50,000 bushels.

<sup>4/</sup> Not available.

<sup>5/</sup> As reported by the Board of Grain Commissioners. (Includes overseas clearances and imports into the United States).

<sup>6/</sup> Customs returns, 1961-62 adjusted for time lag.

Farmers' marketings of wheat, (both east and west) up to March 20 of the 1962-63 crop year amounted to 289.7 million bushels and exceeded by 62 per cent last year's corresponding total of 179.2 million. Some 21.5 million bushels of this year's total were delivered during the four weeks February 21 to March 20. During the same period the volume of Canadian wheat entering domestic and export channels amounted to about 23.8 million bushels. As a result, the total visible supply of Canadian wheat recorded a slight decline from 389.9 million bushels at February 20 to a level of 387.5 million at March 20, 1963.

The total visible supply of Canadian wheat at March 20 this year represented an increase of 13 per cent over the 1962 comparable total of 344.3 million but 6 per cent less than the 1961 figure of 414.4 million. Stocks in country elevators amounted to 211.1 million bushels as against 178.5 million in this position a year ago and 259.4 million two years ago. This year's supplies in country elevators at March 20 accounted for 54 per cent of the total visible wheat supply compared with the 1962 and 1961 corresponding percentages of 52 per cent and 63 per cent, respectively. Interior terminal stocks, at 5.3 million bushels were sharply below both the 1962 figure of 10.2 million and the 1961 total of 10.9 million. The 17.3 million bushels "in transit rail" (Western Division) represented increases over both the 1962 total of 14.1 million and the 1961 figure of 11.0 million. Supplies at the Canadian Lakehead, at March 20 this year, amounted to 57.5 million bushels, 6 per cent above last year's comparable total of 54.4 million but 1 per cent lower than the 58.4 million bushels in this position two years ago. Supplies in Bay, Lake and Upper St. Lawrence ports, at 28.7 million bushels, were below the 29.9 million at March 21, 1962 but substantially above the 20.0 million at March 22, 1961. Stocks of Canadian wheat in "Storage Afloat" at March 20, 1963, amounted to 17.5 million bushels as against 14.4 million the previous year and in contrast to only 7.4 million in 1961. The 22.6 million bushels in Lower St. Lawrence and Maritime ports were slightly greater than both the 20.9 million of a year ago and the 20.8 million of two years ago. On the west coast, total supplies in Vancouver-New Westminster, Victoria and Prince Rupert at March 20, 1963, at 11.2 million bushels, were higher than both the previous years' corresponding total of 7.4 million and the 10.9 million bushels in 1961.

February 1963 Exports of Wheat and Flour Total 20.8 Million Bushels

Combined exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent during February 1963 amounted to 20.8 million bushels, compared with the January 1963 figure of 24.2 million, the February 1962

total of 26.7 million and the ten-year (1952-61) average for the month of February of 19.6 million. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during February 1963, at 18.8 million bushels, were below both the 21.5 million exported during last month and the 23.7 million of February last year but exceeded the ten-year (1952-61) average for the month of February of 16.0 million. Exports of bagged seed wheat during February 1963, based on Canadian Customs returns, amounted to 590 thousand bushels 14 per cent above the January 1963 figure of 520 thousand and 36 per cent larger than February 1962 (adjusted to remove time lag) of 433 thousand bushels. Customs returns also indicate that the equivalent of 1.4 million bushels of wheat was exported in the form of flour during February 1963 as against 2.2 million exported that month and the adjusted February 1962 total of 2.5 million.

Cumulative exports of wheat in bulk during the August 1962-February 1963 period amounted to 171.2 million bushels compared with the 1961-62 total of 199.6 million and about one fifth greater than the ten-year (1951-52-1960-61) average for the period of 142.5 million bushels. Britain, remaining in its

position as Canada's leading market for wheat, received shipments amounting to 44.2 million bushels and representing 26 per cent of the seven-month total. During August-February of 1961-62, shipments of wheat to Britain amounted to 46.8 million bushels and accounted for 23 per cent of the total. Other principal markets for Canadian wheat in bulk during the first seven months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: China Communist, 30.6 (31.1); Japan, 24.2 (29.6); Federal Republic of Germany, 18.8 (32.5); Poland, 14.2 (12.3); Belgium and Luxembourg, 6.4 (7.4); France, 4.2 (0.7); Venezuela, 4.1 (1.7); Netherlands, 3.8 (1.6); Italy, 3.5 (2.3); and Philippines, 3.4 (1.8). Cumulative exports of bagged seed wheat during August-February of the 1962-63 crop year, based Canadian Customs returns, amounted to 1,962 thousand bushels compared with last year's comparable total (adjusted to remove time lag) of 2,078 thousand.

Cumulative exports of wheat flour during August-February of the 1962-63 crop year, based on Customs returns, were the equivalent of 15.6 million bushels of wheat, as against the adjusted August 1961-February 1962 total of 18.9 million bushels. As with bulk wheat, Britain was also the major market for Canadian wheat flour. Shipments of wheat flour to that country during the period under review amounted to the equivalent of 6.7 million bushels and accounted for 43 per cent of the August 1962-February 1963 total. During the same months of 1961-62 shipments of wheat flour to Britain amounted to the equivalent of 7.0 million bushels and represented 37 per cent of the total. Other leading markets for Canadian wheat flour in terms of grain equivalent during the August-February period of the 1962-63 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Ghana, 1,184 (1,028); Jamaica, 804 (906); Trinidad and Tobago, 801 (782); United States, 771 (717); Nigeria, 665 (842); Hong Kong, 566 (515); Leeward and Windward Islands, 540 (603); and Costa Rica, 514 (457).

## 1961-62 Wheat Pool Closed

On March 22, 1963, Agriculture Minister Alvin Hamilton announced that the Canadian Wheat Board had closed out the 1961-62 wheat pool account and the average final

payment to producers amounted to 42.974 cents per bushel - the highest in history. Final payment on No. 1 Manitoba Northern is 40.611 cents per bushel. The initial payment was adjusted upwards by 10 cents to \$1.50 a year ago, making the final price of \$1.90611 the highest ever paid by the Wheat Board. Producers delivered 288,406,785 bushels of wheat (other than Durum wheat) to the 1961-62 pool and at its close February 28, there was a surplus of \$123,939,019 to be distributed. Payment of the surplus proceeds from the sale of Durum wheat was made to producers last December. The closing date was the same as for the 1960-61 pool account. Substantial sales during the pool period made the February 28 closing possible. Mr. Hamilton stressed that the payment is the farmers' own money - earned for them by the sale of their wheat deliveries to the 1961-62 wheat pool account.

Final payments and final realized prices for the principal grades of wheat delivered to the 1961-62 pool are as follows:

			Final Payment Final Realized Pri (\$ per bushel)	ice
No.	1	Manitoba Northern		
No.	2	Manitoba Northern	43666 1.89666	
No.	3	Manitoba Northern	46459 1.88459	
No.	4	Manitoba Northern	46930 1.81930	
No.	5	Wheat	56229 1.74229	
No.	6	Wheat	61179 1.73179	

Area Intended for Wheat 1963 On the basis of farmers' intentions at March 1 the largest individual change in the use of Canadian crop land in 1963 is the intended increase of 579,400 acres sown to barley followed by all wheat, which may increase by 167,400

acres. The largest offsetting decreases are prospective reductions of 480,400 acres in oats for grain and a reduction in summerfallow of 389,000 acres.

Intended Acreage of Spring Wheat in Canada, as at March 1, 1963 Compared with Acreages in 1962

	Acreage	Acreage Int	Acreage Intended to be Seeded in 196				
Province	Seeded in 1962 1/	Per Cent of 1962	Area 1963 <u>1</u> /	Indicated Change			
	acres		acres	acres			
Prince Edward Island	4,600	100	4,600	unchanged			
Nova Scotia	1,200	100	1,200	unchanged			
New Brunswick	2,600	100	2,600	unchanged			
Quebec	10,000	93	9,300	- 700			
Ontario	18,000	98	17,600	- 400			
Manitoba	3,118,000	103	3,220,000	+ 102,000			
Saskatchewan	17,388,000	100	17,439,000	+ 51,000			
Alberta	5,807,000	100	5,784,000	- 23,000			
British Columbia	93,500	98	92,000	- 1,500			
Totals	26,442,900	100	26,570,300	+ 127,400			

<sup>1/</sup> For provinces other than Ontario includes relatively small acreages of winter wheat for which annual estimates are not available.

Based on farmers' intentions at March 1 the acreage seeded to all classes of wheat will be 27.1 million acres an increase of one per cent over the 1962 seedings, and 3.4 million acres or 15 per cent above the 1957-61 average. In Manitoba the increase in acreage may be 3 per cent, while in Saskatchewan and Alberta no change from a year ago is expected.

Prospective plantings of spring wheat of 26.6 million acres are unchanged from the 1962 acreage and 15 per cent above the 1957-61 average. <u>Durum wheat</u> is included with the spring wheat figures, but in view of the interest shown by Prairie farmers in this crop, intended acreage was obtained separately. The results indicate that a 37 per cent decrease in acreage is planned for this spring. If the acreage intentions are carried out Prairie farmers will plant 2,012,000 acres to this crop compared with 3,199,000 grown in 1962 and the 1957-61 average of 1,444,200 acres. All Canada spring wheat acreage excluding durum may total 24.6 million in 1963 compared with 23.2 million planted in 1962 and the 1957-61 average of 21.6 million. The 0.5 million acres seeded to winter wheat last fall in Ontario is some 9 per cent greater than the previous year but 9 per cent below the 1957-61 average.

# WEEKLY VISIBLE SUPPLY OF CANADIAN WHEAT

CUMULATIVE RECORD OF WHEAT MARKETINGS IN THE PRAIRIE PROVINCES BY WEEKS

(Data in both charts for crop years beginning August 1)

Wheat Shipments to the United States by Destination

Total rail and vessel shipments of wheat to the United States, either for re-export or retention for domestic use, from the beginning of the current crop year to March 20, 1963 amounted to 286 thousand bushels. During the comparable periods of

1961-62 and 1960-61 shipments amounted to 578 thousand and 1,231 thousand bushels, respectively. Of this season's total to date some 70 per cent has been shipped by vessel.

Freight
Assistance
Shipments

Claims filed for payment up to February 28, 1963 represent the movement of some 4,988 thousand bushels of wheat from the Prairie Provinces to Eastern Canada and British Columbia under the freight assistance policy during the August-January period of the 1962-63 crop year claims had been filed

for a total of 6,811 thousand bushels, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the 1962-63 August-January shipments of wheat under the policy were running about 27 per cent below those of 1961-62. Revised data on the 1961-62 August-January shipments of wheat based on claims submitted up to February 28, 1963 place the six-month total at 7,354 thousand bushels. The bulk of the shipments during the current six-month period under review went to destinations in Quebec and Ontario, with these two provinces accounting for 42 per cent and 33 per cent of the total, respectively.

Preliminary data on millfeed shipments under the freight assistance policy indicate shipments of 218,566 tons during the August-January period of the current crop year. During the same six months of 1961-62 claims had been filed for a total of 256,538 tons, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the 1962-63 August-January shipments of millfeeds under the policy were running about 15 per cent below those of 1961-62. Revised data on the 1961-62 August-January shipments of millfeeds based on claims submitted up to February 28, 1963 place the six-month total at 278,529 tons. As with freight-assisted shipments of wheat, the greater portion of the millfeed shipments during the period under review went to destinations in Quebec and Ontario.

#### CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during February 1963 amounted to 2,815,000 hundredweight, representing an increase of one per cent over both the January 1963 output of 2,793,000 hundredweight and the February 1962 figure of 2,782,000 hundredweight, but 10 per cent below the ten-year (1953-62) average production for the month of February of 3,132,000 hundredweight. Mills reporting operations during February 1963 had a total rated capacity of 166,000 hundredweight per 24-hour day and on the basis of a 24-day working period 70.5 per cent of this rated capacity was effective.

Wheat milled for flour during February 1963 amounted to 6,250,000 bushels, one per cent more than both the 6,198,000 bushels milled during the preceding month and the 6,218,000 bushels milled during February 1962. Of the wheat milled for flour during February 1963 some 5,537,000 bushels were Western Canadian spring wheat (other than Durum) while the remainder consisted of Ontario winter wheat (540,000 bushels); Durum (113,000 bushels); and all other (59,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during February 1963 amounted to 617,000 hundredweight (some 1,420,000 bushels of wheat equivalent) as against the 2,234,000 bushels exported during the previous month and the adjusted February 1962 total of 2,546,000 bushels. Flour shipments during the month went to 46 countries with exports to Britain amounting to 560,000 bushels of wheat equivalent and accounting for 39 per cent of the February 1963 total. Other principal markets for Canadian wheat flour during the month with shipments in thousands of bushels of wheat equivalent were as follows: Costa Rica, 1,250; United States, 104; Jamaica, 85; Trinidad and Tobago, 83; Leeward and Windward Islands, 76; and Hong Kong, 70.

#### UNITED STATES SITUATION

Supply Position

Domestic supplies of wheat in the United States for the 1962-63 crop year (July-June) are estimated at 2,396.5 million bushels, consisting of the July 1, 1962 carryover of 1,304.8 million and the 1962 crop, placed at 1,091.8 million bushels. Domestic supplies of this size are 9 per cent less than last year's total of 2,645.9 million and 10 per cent smaller than the record 1960-61 figure of 2,670.8 million bushels. Imports of wheat from Canada during July-February of the current United States crop year amounted to 3.0 million bushels. Domestic disappearance during 1962-63 is estimated at about 605.0 million bushels, 4 per cent less than the 630.1 million last year. After deducting anticipated domestic requirements for the current United States crop year, some 1,794.5 million remain available for export and for carryover, a decrease of 11 per cent from the 2,019.1 million in 1961-62.

Exports of wheat, wheat flour and other products in terms of grain equivalent during the first eight months (July-February) of the 1962-63 United States crop year amounted to 356.5 million bushels, 25 per cent below the 472.3 million exported during the same months in 1961-62. The balance remaining on March 1, 1963 for export and for carryover was estimated at 1,438.0 million bushels compared with 1,546.8 million on the same date a year ago.

Prospective Plantings of Spring Wheat

The following report on prospective plantings of spring wheat in the United States was taken from the March 20 report of the Crop Reporting Board, United States Department of Agriculture. Farmers intend to plant 11.1 million acres of all spring wheat in 1963, 6 per cent more than in 1962, but 11 per cent below average. Planted acreage of all wheat is indicated to be 53.2 million acres if the March 1 intentions for spring wheat are combined with the December estimate of winter wheat planted last

Durum wheat plantings are expected to total 2.2 million acres, 12 per cent less than in 1962, but 37 per cent above average. With prices for durum wheat averaging as high or higher than hard spring wheat and durum yields also averaging higher, there is a shift in some areas from hard spring to durum wheat in 1963.

fall. This would be an increase of 8 per cent or 4.1 million acres from 1962.

The acreage of other spring wheat is indicated to be 8.9 million acres, 11 per cent more than in 1962, but 18 per cent below average and the second smallest planted acreage of record. The major producing States expect substantial acreage increases over a year earlier. Acreage reduction is expected in Wisconsin and several western States.

If present planting intentions are carried out and with average yields, with an allowance for trend, an all spring wheat crop of 240 million bushels would be produced. Based on conditions as of December 1, 1962, a winter wheat crop of 1,028 million bushels was forecast. The projected total wheat crop of 1,268 million bushels compares with 1,092 million bushels produced in 1962,

Crop and Weather Conditions The following extract has been taken from the Weekly Weather and Crop Bulletin, published jointly by the United States Department of Commerce and United States Department

of Agriculture for the week ending March 25, 1963. Another week of mild weather stimulated further greening and growth of winter grains in the northern Great Plains and brought more acreages out of dormancy in the Corn Belt region. Crop prospects were improved considerably by additional moisture in the form of snow, sleet, and rain in the Dakotas and Nebraska. Precipitation was generally inadequate in the remainder of the Great Plains, however. High winds during the period continued to cause more than the usual amount of soil blowing in the Central and Southern Plains States as a result of limited growth for ground cover so far this season and relatively dry topsoil conditions. Winterkill on barley acreages became more evident as growth advanced in the central Great Plains. The worst army worm outbreak in several years continued to plague farmers in the winter wheat areas of Kansas. Infestations were severest in the southwestern part of the State, but populations were also reported building up in the west-central and northwestern districts. High winds and above-normal temperatures further depleted rather limited topsoil moisture supplies throughout the southern Great Plains.

Winter wheat stands continued to look good in the Far Northwest, although warmer weather is needed in most sections for optimum growth. Small grain crops in California were given a boost by substantial and widespread showers during the period, especially in the southern dryland areas. Winter grains and grazing crops showed further improvement in response to warmer weather and ample soil moisture in the lower Mississippi Valley and eastward.

Seeding of spring grains was generally well along in the Far Northwest, as far north as Colorado in the central Great Plains, and was started on a limited scale in the southern part of the Corn Belt. Rice planting moved along at a rapid pace in Texas and a start was made during the week in Louisiana.

## July 1 Carryover to Decline Again

According to the Wheat Situation published by the Economic Research Service, United States Department of Agriculture, under date of March 2, 1963, July 1 stocks of wheat are

expected to decline for the second consecutive year. The carryover at the end of 1962-63 is presently estimated at 1,225 million bushels, 80 million below July 1, 1962, and 186 million below the record of 1961. The anticipated decreases in stocks of winter wheats would more than offset increases in stocks of spring wheats.

The carryover of hard winter wheat on July 1, 1963, may total about 960 million bushels, a decrease of over 100 million from a year earlier. Soft red winter stocks are expected to be about 10 million bushels on July 1, down 14 million from a year earlier. The hard winter and soft red winter wheat crops in 1962 were considerably below those of 1961.

The carryover of hard spring, at 195 million bushels, would be only 8 million above that on July 1, 1962, although stocks of durum, at 45 million, would be 40 million above the small stocks of 5 million bushels on hand a year earlier. Crops of each of these classes in 1962 far exceeded the poor crops of 1961.

White wheat (winter and spring) stocks, estimated at 15 million bushels, would be 6 million below last July 1.

## Supply in 1963-64 May Increase

The Wheat Situation stated further that the signup for diversion of spring wheat acreage started on February 1 and will run through March 22. The first report on spring

wheat diversion has not yet been released. Based on the reported winter wheat diversion and expected spring wheat diversion, it appears that the acreage of all wheat harvested in 1963 may be about 47.0 million acres. This would be 3.5 million acres more than in 1962. With a continuation of the upward trend in yield, the outturn per harvested acre might be about 26 bushels. This would be nearly a bushel above the yield in 1962. On the basis of these assumptions, an all wheat crop of 1,225 million bushels would be produced in 1963.

This estimate of the crop is identical with the current estimate of the July 1, 1963, carryover. These two supply items along with imports of about 5 million bushels would provide a total supply of 2,455 million bushels, about 50 million more than the supply in 1962-63. Domestic disappearance in 1963-64 might change little from the level of recent years, 600 million bushels, while exports might be somewhat larger, about 625 million. As a result, the carryover on July 1, 1964, might be about the same as that currently estimated for the end of 1962-63.

# 1964 Wheat Program Announced

On March 29, United States Secretary of Agriculture, Orville Freeman set May 21 as the date for the referendum on the 1964 wheat program; support prices were established at \$2.00

per bushel national average for certificated wheat and \$1.30 per bushel for non-certificated wheat if the referendum carries; set the national marketing quota at 1,220,000,000 bushels and the national acreage allotment for 1964 at 49,500,000 acres, the same as in 1962. The marketing allocation for certificated wheat was determined at 975,000,000 bushels, 80 per cent of the national marketing quota. Individual producers will receive marketing certificates for 80 per cent of the normal production on their acreage allotments.

United States Wheat and Flour Exports Continue Downtrend

U.S. wheat and flour exports during the first half of 1962-63 totaled 277 million bushels - 89 million below shipments during July-December 1961. The decrease in wheat and flour exports reflects a larger production of

wheat in various parts of Europe, Asia, and Africa where import requirements in 1962-63 are smaller than during the previous year. The East Coast dock strike during December and January seriously curtailed shipments during the period it was in effect. Wheat exports at 231 million bushels were approximately 28 per cent below last season. Smaller shipments to Brazil and Venezuela accounted for 13 million of the 19-million bushel decline to the Western Hemisphere. There was an overall reduction of 65 million bushels to Europe, with 32 million less going to the Common Market countries and about 23 million less to Spain and Yugoslavia. Exports to Asia were slightly above July-December 1961. However, significant changes were made in the destinations. About 19 million bushels more went to India with a contrast of about 18 million less going to Turkey. Larger shipments went to Iran and Korea, but smaller quantities were exported to the Philippines and Taiwan. Smaller shipments to Morocco accounted for most of the 6.7 million bushels decline to Africa. Exports to Algeria and Tunisia were also down, but were slightly larger to British East Africa and Egypt.

Flour exports during July-December 1962 at 46.3 million bushels (grain equivalent) were slightly below last season. Shipments to EEC countries, United Kingdom, Yugoslavia, and Egypt were down. Exports to Ceylon, Saudi Arabia, Vietnam, Laos, Cambodia, Algeria, and Morocco were up somewhat. Total wheat and flour exports during July-January 1962-63 are currently estimated to be about 30 per cent below the 416 million bushels exported during the first 7 months of last year.

Shipments of wheat and flour to Canada as shown in Table A were largely for transhipment to other countries. Table B shows the quantities and destinations of U.S. wheat inspected for export from Canadian ports and total exports from Table A adjusted to include inspections during July-December 1961 and July-December 1962. As the Great Lakes and St. Lawrence Seaway are frozen during the winter months, little, if any, additional U.S. wheat will be transhipped through Canadian ports until the lakes reopen.

## AUSTRALIAN SITUATION

Supply Position Estimated supplies of wheat in Australia for the 1962-63 (December-November) crop year amount to some 317.9 million bushels, consisting of the December 1, 1962 carryover of 17.9 million and the current crop estimated at a record 300.0 million bushels. Supplies of the size indicated, reflecting a substantially larger production which more than offset a decline in carryover, represent an increase of 17 per cent over the 1961-62 total of 271.8 million bushels. After deducting 73.0 million for anticipated domestic requirements, an estimated 244.9 million are available for export and for carryover during 1962-63, 25 per cent above the 195.8 million in 1961-62.

Combined exports of wheat as grain and wheat flour in terms of grain equivalent during the period December 1-March 2 of the current Australian crop year amounted to 46.9 million bushels compared with 51.9 million exported during the corresponding period of 1961-62. The balance remaining on March 3, 1963 for export and for carryover, at 198.0 million bushels, exceeded by 38 per cent the comparable 1962 total of 143.9 million.

<sup>1/</sup> Revised. 2/ Preliminary.

The following information relative to the Australian situation has been extracted from a report from Mr. H.A. Gilbert, Commercial Counsellor for Canada, Melbourne, under date of March 15, 1963 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Currency conversions have been made at the rate of £1 equals \$2.4148 (Canadian) the quotation in effect on February 25, 1963.

Crop Position No further figures have been released by the Australian Wheat Board on the final crop estimates but it is still generally accepted that a 300 million bushel harvest will be brought in.

Preparations are under way now for the sowing of the 1963-64 crop but here again, no figures are available; except an estimate for New South Wales where six million acres are expected to be sown to wheat. This compares with five million last year which produced the all-time record harvest in that State of 101 million bushels.

Experts are forecasting that a greater acreage will be put under wheat this year and should events prove them to be right, given favourable growing conditions, another good harvest can be expected.

Marketing Position Reviewing the wheat stocks situation in Australia and the marketing outlook for the current season, the Australian Wheat Board recently issued a statement to clarify the "confusing picture" that exists in this country and overseas about the wheat situation. The Board is faced with the task of marketing within Australia and overseas 278 million bushels which allows for a 20 million bushel carryover in November, 1963. As at February 16 this year, the Board had sold, for export, 108 million bushels and for local consumption a further 8.5 million bushels. The balance still required for home consumption will be in the vicinity of 44 million bushels, leaving about 118 million bushels for sale to overseas markets as wheat and flour.

The Board states that a considerable proportion of this quantity, currently estimated at around 70 million bushels will be required for their "traditional" markets. With the necessity to prospect all avenues of disposal for the balance, the Board, although it is optimistic regarding the marketing outlook, appreciates that intensive selling efforts will be required. Upon the return of the mission at present exploring selling possibilities in Africa, Europe and Britain the Board intends to dispatch a further mission to investigate market prospects in Japan and the Philippines.

Figures just released by the Commonwealth Statistician show that China bought more than one-third of Australia's total wheat exports in the year ended June, 1962. For that financial period, 203.2 million bushels of wheat were exported from Australia, valued at £142.5 million (\$ 344 million). Shipments to China totalled 71.8 million bushels, worth £48.8 million (\$ 118 million). Other major purchasers of Australian wheat were Britain, 23.2 million bushels, worth £16 million (\$ 39 million); India, 21.2 million bushels, £14.9 million (\$ 36 million); and Japan, 15.7 million, £11.1 million (\$ 27 million).

Australia's exports of flour in 1961-62 totalled 603,000 short tons (27,738,000 bushel equivalent) valued at £18.2 million (\$ 44 million). The major customer was Ceylon, which purchased 179,000 short tons (8,234,000 bushel equivalent) worth £5 million (\$ 12 million) - more than double the next largest customer, Malaya 83,000 tons (3,818,000 bushel equivalent) valued at £2.7 million (\$ 7 million).

#### ARGENTINE SITUATION

Supply Position

Estimated total supplies of wheat in the Argentine for the 1962-63 (December-November) crop year amount to 188.6 million bushels, consisting of the December 1, 1962 carryover of 8.6 million and the new crop, placed at 180.0 million. Indicated supplies for the current Argentine crop year, reflecting decreases in both carryover stocks and production, are about 21 per cent less than the 1961-62 total of 237.4 million bushels. After making an allowance of 128.6 million bushels for anticipated domestic requirements, an estimated 60.0 million are available for export and for carryover in 1962-63, in contrast to 109.4 million the previous year.

Exports of wheat and wheat flour in terms of grain equivalent during December 1962-February 1963 amounted to 25.4 million bushels, 4 per cent below the 26.5 million exported during the same months in 1961-62. The balance remaining on March 1, 1963 for export and for carryover was estimated at 34.6 million bushels, less than half the March 1, 1962 total of 82.9 million.

<sup>1/</sup> Revised.

4/ Official estimate.

The following account of the Argentine situation has been extracted from a report from Mr. C.O.R. Rousseau, Commercial Counsellor, Buenos Aires, under date of March 20, 1963 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from Argentine to Canadian measures have been made for the convenience of our readers. Currency conversions have been made at the rate of 135.40 pesos per U.S. dollar and £1 equals \$3.0185 (Canadian) the quotation in effect on March 11, 1963.

Weather and Crops Rainfall has been abundant during the period under review and although it came too late for the recovery of some areas of summer sown crops (corn, sorghum, millet) it has provided a much more favourable outlook for the Autumn and Winter seasons through soil moisture build up. The grain trade believes that the area sown to wheat will increase this year in the former drought areas of Buenos Aires and La Pampa provinces as cattle populations have been seriously depleted in those areas. It has been reported from some of the worst drought areas that just a few days after the rains first came, a green 'fuzz' had already appeared on land which previously had been completely barren.

Wheat
The official production estimate for wheat still stands at
4,900,000 metric tons (180.0 million bushels) which is very close
to the 5,000,000 metric tons (183.7 million bushels) predicted by the trade.

<sup>2/</sup> Preliminary.

<sup>3/</sup> Includes allowances for farm stocks.

During the second half of February, both exporters and millers bought at the minimum prices of 650 pesos per 100 kilos (\$1.31 per bushel). At the end of the month there were rumours that the wheat export ban would soon be lifted and that prompted some exporters to enter the market. Although it was reported that some 45,000 metric tons (1,653,000 bushels) were purchased for delivery to various Argentine ports, the rumours now appear to have been without any basis.

Brazil issued another tender for wheat during February and it is reported that Argentine exporters participated at least to some extent in the 60,000 metric tons (2,205,000 bushels) purchased. Price was \$US 57.00 per ton (\$1.55 per bushel) f.o.b. In the meantime, it has been stipulated that Argentina will sell only 600,000 metric tons (22,046,000 bushels) of wheat to Brazil this year, thereby waiving the contract requirement for 1,000,000 metric tons (36,743,000 bushels) per annum agreed upon on December 30, 1961.

At the end of February, c.i.f. prices for Argentine bread wheat averaged \$US 66.50 (\$1.31 per bushel) to the Continent and £ 24.10 0d (\$2.01 per bushel) for Britain. Prices for durums during February rose to as high as 1,000 pesos per 100 kilos (\$2.01 per bushel) about \$US 89.00 per metric ton (\$2.42 per bushel) c.i.f., Continental ports, but later dropped somewhat from this high.

Wheat shipments during February totalled 220,140 metric tons (8,089,000 bushels), the main buyers being Italy with 42,995 tons (1,580,000 bushels); Britain with 37,939 (1,394,000 bushels); Brazil with 23,595 (867,000 bushels); and Peru with 22,143 tons (814,000 bushels).

During the past two days a number of measures have been announced which at first glance seem to represent an effort on the part of the Secretariat of Agriculture and Livestock to encourage wheat producers to increase production and to assist the National Grain Board in its hunt for funds. Some of these measures will require further clarification but in essence, they are:

- (1) An export tax on wheat has been established amounting to the equivalent of \$US 5.00 per metric ton (14 cents per bushel); revenue to be used exclusively to build up the operating funds of the National Grain Board. It appears that this tax is destined as much an anything to prevent exporters from realizing excessive profits on their transactions abroad, although the official decree covering the new tax mentions Argentina's obligations under the I.W.A. agreement to maintain prices at international levels. In addition, exporters appear to have been given some encouragement to purchase wheat at prices higher than the minimum official producers prices, as from now on, such exporters will be entitled to a tax refund equivalent to the total amount of money they have paid in excess of the minimum producer's price. Regardless of the price paid to the producer for his wheat, the producer should benefit from the new tax as it is destined to build up the Board's funds (which were exhausted) for the purchase of additional wheat.
- (2) By another decree, new bonuses have been established over and above minimum official producers prices. This decree establishes a progressive fortnightly increase in the minimum official prices from April 1, 1963, to September 1, 1963. The bonuses covering the first fortnight of this period, i.e. April 1, to April 15, will be 10 pesos per 100 kilos (2 cents per bushel). Each fortnight the bonus will be increased by a specific amount until reaching the maximum of 100 pesos per 100 kilos (20 cents per bushel) as from September 1, 1963. These bonuses are destined to stretch out purchases until later in the

year when more funds will be available to the Board. At the same time, an effort is to be made by the Central Government to pay back gradually the 1.8 billion pesos (\$13 million) owed by it to the Grain Board.

(3) It has been decided to allot 100,000 metric tons (3,674,000 bushels) of wheat for export to LAFTA countries other than Brazil during the current crop year.

#### FRENCH SITUATION

The following account of the current crop situation in France has been extracted from a report by Mr. R.G. Woolham, Assistant Commercial Secretary, Canadian Embassy, Paris, under date of March 29, 1963, and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from French to Canadian measures have been made and rounded for the convenience of our readers.

Weather Temperature levels moderated at the beginning of the month bringing some sunshine and relief. However, cooler weather returned within a few days with wide spread rain and wind storms. This cool wet weather reported throughout most regions has held back crop growth and re-seeding by about three weeks compared with normal.

Estimates of winter damage to cereals have now risen to 25-30 per cent of the seeded area or between 1.15 to 1.17 million hectares (2,840,000 to 2,890,000 acres). In addition, another 0.8 to 1.0 million hectares (1,976,000 to 2,470,000 acres) are classed as doubtful. However, these figures are tentative and because the season is considerably retarded, official damage reports based on regrowth observations, will probably not be available until after the first week in April.

Up to March 1 no changes were reported in estimates of seeded area compared with the previous month. On the whole however, there is little doubt that wheat production in France will be down considerably this year. Chances of re-seeding to spring wheat have also been reduced because of the late arrival of spring, and, therefore, the area seeded to barley will probably be substantially higher this year than last.

French Grain Market Activity in the French Grain Market has been somewhat below normal although some orders for durum wheat were concluded during the month. These orders amounted to 10,000 tons

(367,000 bushels) of No. 4 Canadian Western Amber Durum for April shipment through Le Havre and 10,000 tons (367,000 bushels) of Russian Durum plus 2,000 (73,000 bushels) of Argentine Durum wheat booked for Marseille. At the same time, Tunisia offered to market 60,000-80,000 tons (2,205,000-2,939,000 bushels) of Durum wheat but no purchases by French millers were made.

Reports have recently appeared reporting French Soft wheat sales to Switzerland at fully subsidized prices. This wheat would subsequently be transhipped to Germany, imported under temporary license and re-exported as flour.

#### CALENDAR OF WHEAT EVENTS

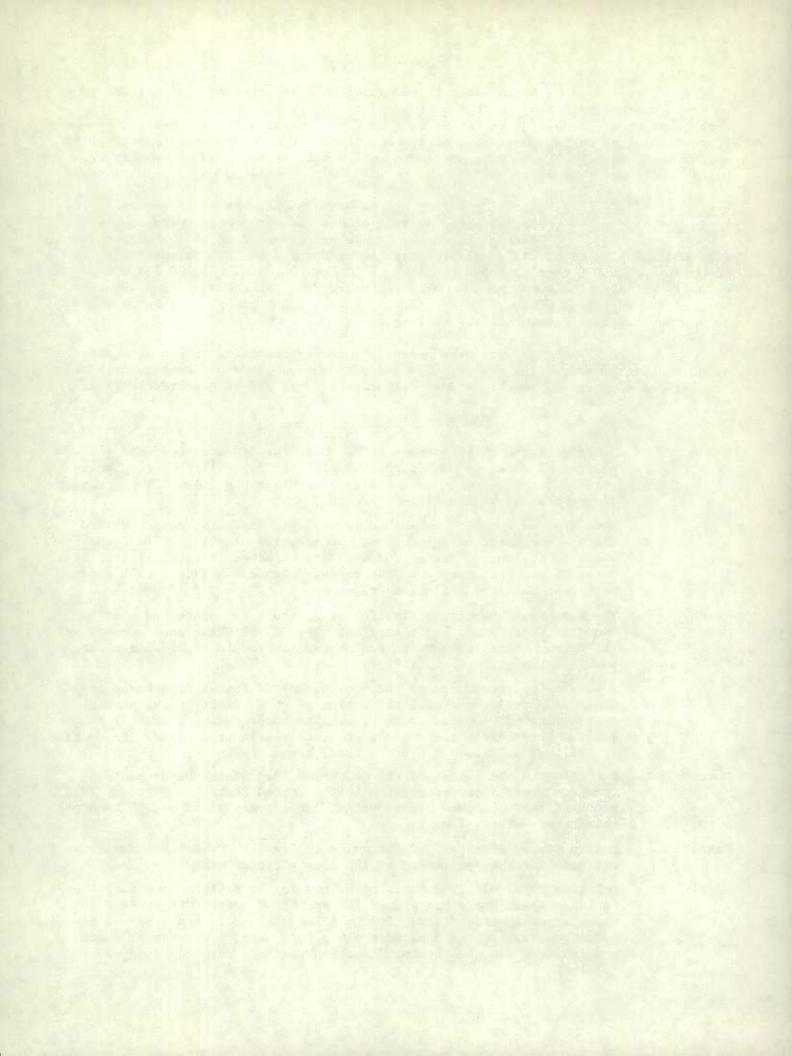

March 20 Based on farmers' intentions at March 1, the acreage seeded to all classes of wheat in Canada in 1963 will be 27.1 million acres, an increase of one per cent over the 1962 seedings and 3.4 million acres or 15 per cent above the 1957-61 average.

According to a report published by the Crop Reporting Board, United States Department of Agriculture, prospective plantings of <u>all spring</u> wheat in the United States for 1963 are expected to total 11.1 million acres, 6 per cent more than the acreage planted in 1962 but 11 per cent less than the 1957-61 average.

March 22 The Hon. Alvin Hamilton, Minister of Agriculture, announced that the Canadian Wheat Board had closed out the 1961-62 wheat pool account and the average final payment to producers amounted to 42.974 cents per bushel - the highest in history.

According to the Bureau of the Census, United States Department of Commerce, total commercial production of wheat flour in the United States in 1962 amounted to 262.1 million hundredweight, about 1.8 million hundredweight above the previous year's production. Production in 1962 was at 92.4 per cent of total annual capacity.

- March 28 According to the Bureau of the Census, United States Department of Commerce wheat flour production in the United States in February 1963 amounted to 20,676,000 hundredweight, an average of 1,034,000 hundredweight per working day.
- March 29 United States Secretary of Agriculture, Orville Freeman set May 21 as the date for the referendum on the 1964 wheat program.
- April 1 Out of a total of 1,942 shipping points in the Western Division, the Canadian Wheat Board had placed 764 points on a delivery quota of 8 bushels per specified acre, 307 on a 7-bushel quota and 279 on a 6-bushel quota. Of the remainder 418 points were on a 5-bushel quota and 155 on a 4-bushel quota. Nineteen stations were reported as "closed".
