#### WORLD WHEAT SITUATION

Wheat Exports Maintain Rush to New Records Shipments of wheat and flour in terms of wheat, from the four traditional major exporters continue to move in record volume, with the April total of 167.7 million

bushels only fractionally less than the peak of 169.0 million exported in the previous month. The total of 1,328.6 million bushels of wheat and flour exported from Canada, United States, Argentina and Australia during the August-April period of the current Canadian crop year registered an increase of 28 per cent over the previous record of 1,035.4 million shipped during the same months of 1961-62. This year's August-April shipments of wheat and flour are 52 per cent greater than last year's corresponding level of 872.3 million bushels, nearly double the ten-year (1952-53-1961-62) average for the period of 687.8 million and only 4 per cent less than the entire 1961-62 crop year record of 1,377.5 million bushels. On this basis it is evident that the 1963-64 crop year shipments of wheat, including flour, will establish a new peak well in excess of the previous high set two seasons ago.

At the three-quarter mark of the current (Canadian) crop year, exports of wheat from Australia show the largest proportionate increase (78 per cent) over shipments during the same period of last year. Canadian wheat and flour shipments during August 1963-April 1964 were 63 per cent greater than during the same months in 1962-63 while wheat exports from United States and Argentina recorded increases of 42 per cent and 33 per cent, respectively.

1/ Revised. 2/ Preliminary.

Wheat Supplies of
Four Major Exporters
8 per cent Lower
Than Year Ago

Supplies of wheat, held by the four traditional major exporters at May 1, 1964, for export and for carryover (less estimated domestic requirements to the end of their respective crop years) amounted to 1,941.9 million bushels, 8 per cent less than both the 2,103.1 million of

a month ago and the 2,115.3 million available at the same time a year ago. As indicated by the accompanying figures, smaller supplies in the United States and Australia more than offset larger totals in Canada and Argentina. Supplies at May 1, 1964, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 1,030.9 (1,330.2); Canada, 657.6 (574.9); Argentina, 110.2 (42.6); and Australia, 143.2 (167.6).

#### CANADIAN SITUATION

Supplies Remain at Record Level are placed at an all-time high of 1,210.7 million bushels, consisting of the August 1 carryover of 487.2 million and the 1963 crop, estimated at a record 723.4 million bushels. Supplies of the size indicated represent a 27 per cent increase over the 956.6 million of a year ago

indicated represent a 27 per cent increase over the 956.6 million of a year ago and surpass by 5 per cent the previous peak of 1,152.8 million bushels established in 1956-57. After making an allowance of 155.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1963-64 amount to 1,055.7 million bushels, 29 per cent above the 818.5 million in 1962-63.

Exports 22 Per Cent

Ahead of Record

period of the current crop year amounted to the unsurpassed level of 398.1 million bushels, exceeding by 22 per cent the previous peak of 325.8 million shipped during the same period in 1928-29 and exceeding by 63 per cent last season's comparable total of 243.5 million. Of the current total, shipments of wheat as grain accounted for some 356.5 million bushels as against 223.2 million a year ago. The equivalent of 41.6 million bushels was exported in the form of wheat flour in contrast to 20.3 million shipped during the August-April period last year. The balance remaining on May 1, 1964 for export and for carryover amounted to 657.6 million bushels, 14 per cent larger than the May 1, 1963 total of 574.9 million.

April Exports of
Wheat and Flour Set
Record of 50 Million Bushels

Total exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent amounted to 50.1 million bushels during April 1964, the highest total ever recorded for that month and

surpassing by a wide margin the previous peak of 41.3 million shipped in April 1944. This year's April total was more than double the ten-year 1953-62 average for the month and exceeded by margins of 76 per cent and 58 per cent the March 1964 exports of 28.4 million bushels and the April 1963 figure of 31.7 million. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during April 1964 reached 43.2 million bushels, the largest clearances for that month since 34.4 million were exported in 1944. In addition, this year's April exports of wheat in bulk were nearly double the March total of 22.5 million, 49 per cent greater than the April 1963 figure of 28.9 million and in sharp contrast to the ten-year average exports for the month of April of 20.1 million bushels. Exports of bagged seed wheat during April 1964, based on Canadian Customs returns, amounted to 261 thousand bushels as against the March 1964 figure of 605 thousand and the April 1963 total (adjusted to remove time lag) of 422 thousand bushels. Customs returns also indicate that the equivalent of 6.6 million bushels of wheat was exported in the form of flour during April 1964, the largest volume of flour shipped in the month of April since 1947. This season's April total exceeded the previous month's exports of 5.3 million by 26 per cent and was nearly three times greater than the adjusted April 1963 total of 2.3 million bushels.

August-April Wheat Exports
Almost Equal Record
Crop Year Total

Cumulative exports of wheat in bulk during the first three quarters (August-April) of the current crop year have amounted to 353.7 million bushels, almost the same as the 1928-29 crop year total of

354.4 million. This year's August-April total represented an increase of 61 per cent over the 1962-63 comparable figure of 219.4 million and 92 per cent more than the ten-year average for the period of 184.6 million. Clearances to the U.S.S.R. (Russia) totalled 16.0 million bushels during the month of April 1964 and raised the cumulative crop year total to that destination to 127.5 million. This total represented 36 per cent of the nine-month total exports of Canadian wheat in bulk form. Shipments of wheat to Britain amounted to 54.9 million bushels and accounted for 16 per cent of the August-April 1963-64 total. During the same period of 1962-63 there were no shipments of wheat to the U.S.S.R. while those to Britain amounted to 56.4 million bushels and represented 26 per cent of the August-April total. Other principal markets for Canadian wheat in bulk during the first nine months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: Japan, 36.3 (32.9); China Communist, 30.8 (45.4); Federal Republic of Germany, 27.2 (20.2); Belgium and Luxembourg, 13.6 (7.0); Poland, 8.1 (14.2); Venezuela, 5.1 (4.8); Cuba, 5.0 (nil); and Philippines, 4.8 (4.6). Cumulative exports of bagged seed wheat during August-April of the current crop year, based on Canadian Customs returns, amounted to 2,814 thousand bushels compared with last year's comparable total (adjusted to remove time lag) of 3,870 thousand.

Wheat Flour Exports
Highest Since 1947-48

Cumulative exports of wheat flour during the first nine months of the 1963-64 crop year, based on Customs returns, were the equivalent of 41.6 million bushels, the highest

August-April volume since 48.4 million were exported during the same months in 1947-48 and more than double the adjusted 1962-63 total for the same period of 20.3 million bushels. The U.S.S.R. (Russia) and Britain were the two major markets for Canadian wheat flour during the period under review. Shipments of wheat flour to

the U.S.S.R. during the August-April period of the current crop year amounted to the equivalent of 16.3 million bushels and accounted for 39 per cent of the ninemonth total while those to Britain, at 9.5 million bushels, represented 23 per cent of the August 1963-April 1964 exports of wheat flour. During the same months of the 1962-63 crop year there were no shipments of flour to the U.S.S.R. but shipments of wheat flour to Britain amounted to the equivalent of 9.0 million bushels and represented 44 per cent of the total. Other leading markets for Canadian wheat flour in terms of grain equivalent during the August-April period of the 1963-64 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Cuba, 5,434 (nil); Jamaica, 1,303 (1,015); Trinidad, 1,072 (991); Leeward and Windward Islands, 792 (719); Ghana, 753 (1,414); Hong Kong, 752 (720); United States, 701 (963); and Ceylon, 612 (1).

Visible Supplies
Register Decline of
101 Million Bushels

Visible supplies of Canadian wheat, reflecting the impact of the greatest movement of this cereal in the history of the trade, have declined from a level of 420 million bushels at August 1, 1963 to 319 million at May 20, 1964.

Deliveries from farms have added 385 million bushels to the commercial supply over the same period but this amount has been slightly exceeded by the unprecedented volume of 387 million bushels flowing into export channels. With exports offsetting marketings, the decline in commercial supplies basically reflects the unusually large movement of some 100 million bushels to the domestic commercial market.

During the current four-week period since the last report the combined total of 57.4 million bushels moving into export and domestic markets was 36 per cent above the 42.1 million bushels delivered from farms and, as a result, the total visible supply of Canadian wheat decreased from 334.5 million bushels at April 22 to a level of 319.1 million at May 20, 1964.

The total visible supply of Canadian wheat at May 20 this year represented a decrease of 11 per cent from the 1963 comparable total of 359.7 million but 4 per cent more than the 1962 figure of 307.8 million. Stocks in country elevators amounted to 176.4 million bushels compared with 191.7 million in this position a year ago and 146.2 million two years ago. This year's supplies in country elevators at May 20 accounted for 55 per cent of the total visible wheat supply compared with the 1963 and 1962 corresponding percentages of 53 per cent and 48 per cent, respectively. Interior terminal stocks, at 5.6 million bushels were slightly above the 1963 figure of 5.4 million but considerably less than the 9.0 million of 1962. The 26.3 million bushels "in transit rail" (Western Division) represented relatively substantial increases over both the 1963 total of 16.2 million and the 1962 figure of 16.7 million. Supplies at the Canadian Lakehead, at May 20 this year, amounted to 54.8 million bushels, 4 per cent below last year's comparable total of 57.1 million but 7 per cent more than the 51.4 million bushels in this position two years ago. Supplies in Bay, Lake and Upper St. Lawrence ports, at 8.3 million bushels, were in sharp contrast to both the 30.0 million of last year and the 26.8 million of 1962. Stocks of Canadian wheat "in transit lake" at May 20, 1964, amounted to 10.8 million bushels and exceeded both the 6.9 million of the previous year and the 7.3 million in 1962. The 15.0 million bushels in Lower St. Lawrence and Maritime ports were sharply reduced from both the 26.3 million of last year and the 25.5 million of two years ago. On the west coast, total supplies in Vancouver-New Westminster, Victoria and Prince Rupert at May 20, 1964, at 9.0 million bushels, were lower than both the previous year's corresponding total of 12.2 million and the 1962 figure of 11.6 million bushels.

Canadian Wheat Board Announces Change in Delivery Quotas In its Instructions to the Trade No. 42, under date of May 7, 1964, the Canadian Wheat Board announced a basic change in its administration of delivery quotas. Effective Monday, May 11 all delivery points in Western Canada

currently on an 8 bushel per specified acreage quota will be given a supplementary 5 bushel per seeded acre quota for wheat deliveries (other than Durum). As delivery points in Western Canada are raised to an 8 bushel per specified acre level, they will automatically be placed on a 5 bushel per seeded acre for wheat. The supplementary quota for wheat (other than Durum) will be raised above this level if and when the export and domestic movement on wheat warrants an increase.

With respect to Durum wheat, oats and barley no further deliveries of these grains will be allowed beyond the 8 bushel per specified acre level unless market demand for these grains warrant quota increases. In this event it will be the Board's intention to grant supplementary quotas for the grain required.

The basic reason for this change in policy is that the Board must have the type of grain in the marketing pipeline that is required to meet market requirements. Extremely heavy commitments for wheat (other than Durum) have been entered into for delivery prior to the end of the crop year. To facilitate the movement of this wheat and to avoid congesting marketing facilities with grain that is not immediately required for the market, the Board deems this change in quota policy to be essential.

With respect to oats, barley and Durum wheat, the Board wishes to call attention to the fact that producers can deliver these grains up to the 8 bushel per specified acre level. This level is comparable to the quota level normally existing the past few years at the end of the crop year.

By June 1, 1964, out of a total of 1,921 shipping points in the Western Division, the Canadian Wheat Board had placed 1,571 points on a delivery quota of eight bushels per specified acre while 339 points were on a 7-bushel quota. Eleven stations were reported as "closed".

Summary of Elevator Shipping Points in the Western Division as at June 1, 1964

Province	General Quot Per Speci	Closed	Total	
	Seven	Eight		
Ontario		1	-	1

All Provinces	339	1,571	11	1,921

Total shipments of the five major grains out of Lakehead terminals from the opening of navigation to May 20 this year amounted to 76.3 million bushels, 67 per cent greater than the during the comparable period of 1963. In 1964 the season of navigation opened on April 2 while the 1963 season opened on April 19. Shipments of wheat, at 60.7 million bushels accounted for 80 per cent of the current total. Shipments of wheat, barley, rye and flaxseed were above last year's corresponding levels, while those for oats were lower.

Lake Shipments of Canadian Grain from the Opening of Navigation to May 20, 1964 and to Approximately the Same Date 1954 to 1963

#### Crop and Weather Conditions

The telegraphic crop report, published by the Dominion Bureau of Statistics on June 10, 1964 summarized crop conditions in each of the Prairie Provinces as follows:

Early-sown crops in Manitoba are in fair condition but later-sown crops germinated unevenly. All crops require rain to ensure development. Frost damage last week was confined to vegetables, rapeseed, flax and mustard and reseeding of damaged crops is almost finished. The last bit of seeding of oats and flax is being held up until moisture is received. Rainfall last week was light and scattered. Hay and pasture conditions are poor. Legume hay was partly damaged from frost.

After showing excellent germination and emergence crop growth in Saskatchewan is now very slow due to lack of adequate surface moisture in the greater part of the province. Rains in the southeast and the Regina-Weyburn district, as well as local showers in a few other scattered points, have resulted in satisfactory advancement, but crop progress is at a standstill in the remaining areas. Early rains are now a requirement to ensure proper development and to stimulate and encourage a favourable crop outlook. Grasshopper and cutworm activity is very spotty and there has been no significant damage so far. It has been necessary to reseed a few fields of coarse grains and rapeseed which were badly damaged by frost, but the indications are most other fields will recover from this setback.

# WEEKLY VISIBLE SUPPLY OF CANADIAN WHEAT

# CUMULATIVE RECORD OF WHEAT MARKETINGS IN THE PRAIRIE PROVINCES BY WEEKS

( Data in both charts for crop years beginning August 1 )

Wheat Shipments to the United States by Destination Total rail and vessel shipments of wheat to the United States, either for re-export or retention for domestic use, from the beginning of the current crop year to May 20, 1964 amounted to 231 thousand bushels. During the comparable periods of

1962-63 and 1961-62 shipments amounted to 1,322 thousand and 1,077 thousand bushels, respectively. Of this season's total to date some 54 per cent has been shipped by vessel.

Assistance Shipments Claims filed for payment up to April 30, 1964 represent the movement of some 10.4 million bushels of wheat from the Prairie Provinces to Eastern Canada and British Columbia under the freight assistance policy during the August-March period of the 1963-64 crop year. During the same months last year claims had been filed for a

submission of claims during both the current and preceding crop years that the August-March shipments of wheat under the policy were running about 56 per cent above those of 1962-63. Revised data on the August-March 1962-63 shipments of wheat based on claims submitted up to April 30, 1964 place the eight-month total at 6.8 million bushels. The bulk of the shipments during the current eight-month period under review went to destinations in Quebec and Ontario with these two provinces accounting for 40 per cent and 32 per cent of the total, respectively.

Revised 1/	70	65	398	202	2,733	2,180	1,174	6,821

Preliminary data on millfeed shipments under the freight assistance policy indicate shipments of 349,275 tons during the August-March period of the current crop year. During the same eight months of 1962-63 claims had been filed for a total of 303,742 tons, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-March shipments of millfeeds under the policy were running about 15 per cent above those of 1962-63. Revised data on the 1962-63 August-March shipments of millfeeds based on claims submitted up to April 30, 1964 place the eight-month total at 317,759 tons. As with freight-assisted shipments of wheat, the greater portion of the millfeed shipments during the period under review went to destinations in Quebec and Ontario.

#### CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during April 1964 amounted to 3,960,000 hundredweight, representing a decrease of 16 per cent from the 4,725,000 hundredweight produced during March 1964 but 30 per cent greater than the April 1963 figure of 3,045,000 hundredweight and 25 per cent above the ten-year (1954-63) average production for the month of April of 3,163,000 hundredweight. Mills reporting operations during April 1964 had a total rated capacity of 176,000 hundredweight per 24-hour day and on the basis of a 26-day working period 86.7 per cent of this rated capacity was effective.

Wheat milled for flour during April 1964 amounted to 8,818,000 bushels, 16 per cent less than the 10,505,000 bushels milled during the preceding month but 31 per cent higher than the 6,727,000 bushels milled during April 1963. Of the wheat milled for flour during April 1964 some 7,929,000 bushels were Western Canadian spring wheat (other than Durum) while the remainder consisted of Ontario winter wheat (557,000 bushels); Durum (237,000 bushels); and all other (95,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during April 1964 amounted to 2,886,000 hundredweight (some 6,639,000 bushels of wheat equivalent) representing an increase of 26 per cent over the 5,278,000 bushels exported during the previous month, and in sharp contrast to the adjusted April 1963 total of 2,330,000 bushels. Flour shipments during the month went to fifty-one countries with exports to the U.S.S.R. amounting to 2,654,000 bushels of wheat equivalent and accounting for 40 per cent of the April 1964 total. Shipments of Canadian wheat flour during April to Cuba, at 1,453,000 bushels equivalent, and to Britain, at 1,266,000 bushels equivalent, accounted for 22 per cent and 19 per cent of the total, respectively. Other principal markets for Canadian wheat flour during April this year with shipments in thousands of bushels of wheat equivalent were as follows: Japan, 281; Jamaica, 189; Trinidad, 158; Ghana, 94; United States, 81; and Leeward and Windward Islands, 81.

#### UNITED STATES SITUATION

Domescic Supplies
3 Per Cent Below
Previous Year

Domestic supplies of wheat in the United States for the 1963-64 crop year (July-June) are estimated at 2,333.0 million bushels, consisting of the July 1, 1963 carryover of 1,195.4 million and the 1963 crop, placed at 1,137.6 million bushels.

Domestic supplies of the size indicated are 3 per cent less than last year's total of 2,415.5 million and 13 per cent smaller than the record 1960-61 figure of 2,670.8 million bushels. Imports of wheat from Canada during July-April of the current United States crop year amounted to 3.6 million bushels. Domestic disappearance during 1963-64 is estimated at about 598.0 million bushels, 2 per cent more than the 588.6 million last year. After deducting anticipated domestic requirements for the current United States crop year some 1,738.6 million remained available for export and for carryover, a decrease of 5 per cent from the 1,831.9 million in 1962-63.

July-April
Exports Maintain
Record Level

Exports of wheat and flour in terms of grain equivalent during the July-April period of the 1963-64 crop year, amounted to a record 707.7 million bushels, surpassing by a substantial margin the previous peak of some 594.0 million

exported in July-April 1961-62, and exceeding last year's comparable total of 501.7 million bushels by 41 per cent. The balance remaining on May 1,1964 for export and for carryover was estimated at 1,030.9 million bushels compared with 1,330.2 million on the same date a year ago.

Winter Wheat Crop Estimated at 1,013 Million Bushels In a report released on May 11, 1964 the Crop Reporting Board of the United States Department of Agriculture stated that production of winter wheat is forecast at 1,013 million bushels, about the same as the April 1

estimate, 12 per cent more than the 1963 crop, but 1 per cent less than the 1958-62 average. Frequent and generous April rainfall over the Corn Belt, Eastern, and most Southern States raised yield prospects and brightened expectations for record to near-record yields. These improved prospects were partially offset by reduced production potentials from a month earlier in the Texas and Oklahoma panhandles, southwest Kansas and southeast Colorado where continued dry weather and soil blowing lowered hopes for good yields. Elsewhere in the important producing Plains States, prospects remained favourable. In western States, the outlook was generally good but warmer weather and timely rains are needed for the best development of the crop.

In the past 10 years the average change in the United States production estimate from May 1 to harvest has been 65 million bushels, ranging from a maximum of 164 million bushels to a minimum of 9 million bushels. Yield per harvested acre is indicated at 26.9 bushels, 0.8 bushel above last year and the third highest of record. Acreage for harvest is indicated at 37.6 million acres, 9 per cent more than harvested last year but 3 per cent below average. Based on growers appraisal of crop prospects as of May 1, it is anticipated that about 87 per cent of the acreage seeded will be harvested for grain.

In Kansas, prospects continued favourable. Timely rainfall over the northwest, and eastern one-half of the State, along with the warmer temperatures, stimulated rapid growth. However, in the southwest quarter the crop was suffering from a lack of moisture. Wheat in south central counties is starting to head. In Oklahoma, prospects in the major producing western districts were dimmed by lack of rain, above normal temperatures and high winds. In eastern areas, wheat was generally in good condition with adequate moisture to carry the crop to maturity. Texas wheat in the Cross Timbers district and eastward, and irrigated wheat in the High Plains were in good condition. However, lack of moisture, soaring temperatures and high winds caused deterioration of dryland wheat on the High and Southern Plains. In Nebraska, winter wheat prospects are good to excellent. The crop has tillered heavily and is growing rapidly. Surface moisture is generally adequate but subsoil moisture is still deficient in many areas. Colorado wheat prospects declined during April as lack of moisture and high winds caused considerable damage in the southeast. Wheat in the northeast and on the Western Slope of Colorado made favourable growth and with normal precipitation should produce a good crop.

Pacific Northwest prospects continued favourable during April but cool temperatures and moisture shortages in Washington and Oregon retarded development. Soil moisture is generally favourable in Idaho. Warmer temperatures and a general rain over Washington and Oregon are needed to overcome the slow development of the crop. In most other western States, prospects were slightly below a month earlier but the wheat outlook is still generally favourable, except in New Mexico where moisture is extremely short.

In the East and most of the South, wheat production prospects improved during April as abundant rainfall during the month bolstered hopes for good to excellent yields. Heading of wheat was becoming general in southern States.

Prospects for 1964 - 65

The May 1964 issue of "The Wheat Situation" published by the Economic Research Service, United States Department of Agriculture stated in part that. ...

Small Supply The Agricultural Act of 1964 became effective on April 11. The sign-up to participate in this program took place from May 1 to 22. The latest official winter wheat estimate by the Crop Reporting Board is based on May 1 conditions. Their report estimated winter wheat production in 1964 at 1,013 million bushels on an estimated 37.6 million acres for harvest. The only official estimate to date of spring wheat production was based on farmers' intentions to plant as of March 1. This estimate placed spring wheat production at 262 million bushels. In addition to natural factors, these estimates may be changed as a result of farmer participation in the 1964 wheat program. However, no attempt to adjust the estimates was made, since complete sign-up data were not available.

Adding the May winter wheat estimate of 1,013 million bushels to the spring wheat estimate of 262 million bushels provides a total crop of 1,275 million. Along with the anticipated carryover of 890 million bushels on July 1, 1964, and an allowance for the usual small imports, this would provide a total supply of 2,170 million bushels in 1964-65.

Demand At High Level of recent years due to some increase in the use of wheat for feed.

Total domestic use of wheat for food, feed, and seed may be about 620 million bushels. Exports will be well below the record level of 1963-64, but should be in line with the high level of recent years. Total exports are currently assumed at about 700 million bushels in 1964-65 with commercial exports accounting for only 20 to 25 per cent of the total. With total disappearance of 1,320 million bushels, carryover stocks on July 1, 1965, may be further reduced from those estimated for July 1, 1964.

Even with the fairly strong demand indicated at the present time, the average farm price of wheat in 1964-65 will decline substantially from the \$1.85 per bushel estimated for the current year. The relation of market prices to the \$1.30-per-bushel loan level will depend to a large extent on the quantity of wheat eligible for price support and on farmers use of the loan program.

United States Wheat and Flour Exports Soon to Top Record United States exports of wheat and flour (grain equivalent) totaled 623 million bushels between July 1963 and March 1964 -- 47 per cent more than the 424 million bushels last year during the same period. The large increase was reflected in

shipments to all areas, with 80 million bushels shipped to the Eastern European countries, which represented the largest percentage increase. The U.S.S.R. received 44 million bushels, slightly over half the amount going to these countries. Exports to the EEC doubled as these countries continued to import large amounts of wheat and flour to offset the shortages in their crops. About 46 per cent of U.S. exports went to Asiatic countries. As in the past, India received the largest amount. Shipments to this country amounted to 116 million bushels during the July 1963-March 1964 period or 18 per cent of the U.S. total. Second largest market was Japan with 54 million bushels, while Pakistan was a close third with 50 million bushels.

United States shipments of wheat as grain were 57 per cent higher in the first nine months of this fiscal year as compared with the same period in 1962-63. Approximately 26 per cent of this commodity or 115 million bushels went to India. Flour shipments decreased about 3 per cent, from 71 million

bushels (grain equivalent) to 69 million bushels. Egypt continues to be the largest market receiving about one third of the total shipments.

Exports of wheat and flour by country of destination for the period July 1963 through March 1964 are shown in Table A. Canadian imports of wheat from the United States are largely for transshipment to other destinations. Inspections of U.S. wheat for export from Canadian ports are shown in Table B. These inspections are three times greater than they were last year at this time. Exports for specified countries which have been adjusted to include these inspections also shown in Table B, are 75 per cent higher than they were during the July 1962-March 1963 period. It is anticipated that United States exports of wheat and flour will reach 850 million bushels by June 30, 1964 as compared to 638 million bushels for July-June 1962-63. This will be the largest volume shipped in any one fiscal year to date.

The Bureau of the Census, Department of Commerce, estimated wheat flour production in the United States in April 1964 at 22,241,000 hundredweight, an average of 1,011,000 hundredweight per working day. This compared with an average output per working day of 998,000 hundredweight last month and 980,000 hundredweight in April 1963. Wheat flour mills in April operated at 91.5 per cent of capacity compared with 90.3 per cent and 90.0 per cent, respectively, for the previous month and the same month a year ago. Flour mills in April ground 50,226,000 bushels of wheat compared with 49,646,000 bushels during the previous month. Wheat offal output during April amounted to 410,787 tons.

# AUSTRALIAN SITUATION

Supply Position Total estimated supplies of wheat in Australia for the 1963-64 (December-November) crop year are placed at an all-time high of 351.5 million bushels, exceeding by 8 per cent the previous peak of 325.4 million in 1962-63. Indicated supplies for the current Australian crop year reflect an increase in carryover stocks from 18.2 million bushels at December 1, 1962 to 23.5 million in 1963 while production, estimated at 328.0 million bushels, represents a record crop for the second consecutive year. After deducting 75.0 million for anticipated domestic requirements, an estimated 276.5 million are available for export and for carryover in 1963-64, an increase of 10 per cent over the 252.1 million the previous year.

Combined exports of wheat as grain and wheat flour in terms of grain equivalent during the period December 1-April 25 of the current Australian crop year amounted to 133.3 million bushels, 58 per cent more than the 84.5 million exported during the corresponding period of 1962-63. The balance remaining on April 26, 1964 for export and for carryover, at 143.2 million bushels, is 15 per cent below the comparable 1963 total of 176.6 million.

<sup>1/</sup> Revised. 2/ Preliminary.

The following information relative to the Australian situation has been extracted from a report from Mr. H. A. Gilbert, Commercial Counsellor for Canada, Melbourne, under date of May 15, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

Extensive rains over the wheat-growing areas in Australia have ensured a good start to the wheat season. Early indications are that a higher acreage than last year will be sown to wheat and although it is not possible at this stage to assess the actual harvest, it could develop into yet another bumper crop. A reported shortage of superphosphates, however, in the eastern states, particularly New South Wales could well have an effect on wheat production in the coming season.

Rainfall has been most favourable in New South Wales, especially in the western districts where the extent of the acreage to be sown is dependent greatly on the amount of moisture available at seeding time. Cereal growing areas in Victoria have also received good soaking rains and lighter rains extended into South Australia. In Western Australia rainfall has been earlier than usual but amounts have only been light.

Marketing Position No sales have been announced in the period under review.

The Minister for Primary Industry, Mr. Adermann said recently that wheat sold to Mainland China on credit has been diverted to Cuba and other countries in the Communist Bloc. It appears that some 12,000 tons (448,000 bushels) have been transshipped to Cuba, 61,000 to Albania (2,277,000 bushels) and 57,000 tons (2,128,000 bushels) to North Korea. Another 11,000 tons (411,000 bushels) have been diverted to Tunisia and Morocco. Mr. Adermann added, however, that China has been unfailing in making payments by the due date and recently had been paying ahead of schedule.

Miscellaneous

A record movement of over 114 million bushels of wheat will be delivered by the New South Wales Railways this financial year. This is an increase of 12 million bushels compared with the previous record set in 1962-63.

However, in New South Wales, storage once again is proving to be a problem as it seems that the silos now being constructed under the State Government's 15 million bushel storage building programme will not be ready for the forthcoming harvest. Should the expected acreage increase be realized, this lack of bulk storage space will cause some disruption in the wheatgrowing areas. In 1965, when the current programme is completed, the State's storage capacity will increase by 16.6 million to 100 million bushels.

#### ARGENTINE SITUATION

Supply Position

Estimated total supplies of wheat in the Argentine for the 196364 (December-November) crop year amount to 300.0 million bushels,
consisting of the December 1, 1963 carryover of 18.5 million and the new crop,
estimated at 281.5 million. Indicated supplies for the current Argentine crop year,
reflecting a substantial increase in production as well as slightly larger opening
stocks are about 41 per cent more than the 1962-63 total of 212.6 million bushels.
After making an allowance of 132.3 million bushels for anticipated domestic
requirements, an estimated 167.7 million are available for export and for carryover
in 1963-64, in contrast to 84.6 million the previous year.

Exports of wheat and wheat flour in terms of grain equivalent during December 1963-April 1964 amounted to 57.5 million bushels, 13 per cent above the 42.0 million exported during the same months in 1962-63. The balance remaining on May 1, 1964 for export and for carryover was estimated at 110.2 million bushels, more than two and one-half times greater than the May 1, 1963 total of 42.6 million.

<sup>1/</sup> Revised.

The following account of the Argentine situation has been extracted from a report from Mr. M. B. Bursey, Commercial Counsellor, Buenos Aires, under date of May 21, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from Argentine to Canadian measures have been made for the convenience of our readers.

<sup>2/</sup> Preliminary.

<sup>3/</sup> Includes allowances for farm stocks.

<sup>4/</sup> Official estimate.

Weather and Crops Characterized the period under review. The rains have proved highly beneficial to the now growing dual-purpose lots of oats; barley and rye, and in most livestock areas, adequate grazing is ensured for the winter months.

Heavy rainfalls, however, have proved detrimental to crops now being harvested, and many delays have been reported in harvest operations for corn, sunflowerseed and cotton. Harvested lots of these grains are arriving in country and terminal positions in a very damp condition, and costly drying operations are being required.

Wheat is very poor. When the minimum official producers prices for the present crop year were established, last year, the exchange rate was approximately 146 pesos per U\$\$ 1.00, and the established prices permitted Argentine exporters to export wheat at what was, for the time, a normal price of around U\$\$\$ 62 per metric ton (\$1.82 per bushel). The minimum producers prices increased progressively to the present 8,800 pesos per metric ton (\$1.90 per bushel) for hard wheat. During the same period, the Argentine peso has strengthened to approximately 137 pesos per U\$\$\$ 1.00, and assuming U\$\$\$\$ 62 per ton(\$1.82 per bushel) to be the normal price for Argentine wheat, this would convert to just 8,000 pesos. As a consequence, exports by the private trade have been at a standstill for some time, with the exception to Brazil.

As a consequence, the National Grain Board has been forced to purchase most of the available wheat, and total purchases to date have amounted to approximately 4 million metric tons (146,973,000 bushels). Of this tonnage, only the following sales have been made by the Board:

#### National Grain Board Export Sales

27,557,000 bushels sold direct to Mainland China
3,013,000 bushels sold to private exporters or shipments to Brazil
404,000 bushels sold to private exporters or shipments to Peru
110,000 bushels sold to private exporters or shipments to Paraguay
37,000 bushels sold to Argentine millers

Total 31,122,000 bushels

The only sales abroad reported during the period under review were 80,000 metric tons (2,939,000 bushels) sold by the private trade to Brazil at a f.o.b. price of U\$S 69 metric ton (\$2.03 per bushel). It should be noted that sales to Brazil at prices in excess of world prices are possible in accordance with the terms of existing trade agreements between the two countries. Also, Brazil insists that her purchases of Argentine wheat include grain of the highest quality. The Board announced just a few days ago that Brazil will accept, during the current year, the entire one million metric tons (36,743,000 bushels) of wheat called for under the existing agreements. There had been some concern in Argentine trading circles that the recent agreement, whereby Brazil would increase her 1964 purchases of United States wheat under PL 480 by one million metric tons (36,743,000 bushels) might affect Argentine sales to that market. However, these fears appear to have been dispelled. At the present time, there are rumours circulating that the Grain Board will sell 100,000 to 150,000 metric tons (3,674,000 to 5,511,000 bushels) to West Germany and 150,000 metric tons (5,511,000 bushels) to Chile. However, no further details whatsoever are available at writing.

The season is fast approaching for the sowing of the 1964-65 crop of wheat and, in theory at least, the new minimum official prices should have been announced by now in order to permit farmers to plan in advance. At the present time, there is considerable criticism by the trade of the present system, as it is against the law for private traders to purchase any wheat below the minimum price. Many trading firms feel that the system of minimum prices should be replaced by a system of "support" prices, under which private traders would be free to operate at any price level. No announcements whatsoever have been forthcoming from the Government, so there is no way of knowing their intentions.

Wheat prices in both the Buenos Aires Futures Market and the Buenos Aires Cereal Exchange are at the minimum official levels.

Argentine Wheat Exports December-March 1963-64 with Comparisons

## Wheat Situation in Uruguay

The following account of the wheat situation in Uruguay has been extracted from a report supplied by the Commercial Division, Canadian Embassy, Montevideo, under date of May 7, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from metric to Canadian measures have been made and rounded for the convenience of our readers.

The wheat harvest during the 1963-64 crop year was the poorest since 1959, which was a year of heavy flooding. The high output of wheat per acre of the previous year had revived interest in that crop, but heavy rains during the seeding period hindered seeding operations and even prevented seeding in some cases. Continued heavy rainfall during October and November caused erosion and flood damage in sections of the principal wheat growing districts. Total planted acreage was 353,155 hectares (872,000 acres), from which it is estimated that around 260,000 metric tons (9,553,000 bushels) were harvested, some 45 per cent less than the previous year. The average yield per hectare was only 708 kilos (11 bushels per acre), some 37 per cent lower than that of the previous crop.

During 1963, Uruguay exported 56,564 metric tons (2,078,000 bushels) of wheat; all of this being shipped between July and November, and most of it to Brazil, which received nearly 41,000 tons (1,506,000 bushels). On the instructions of the Argentine Government, some 6,500 tons (239,000 bushels) of wheat were exported to Czechoslovakia, West Germany and Paraguay, as part payment of the 100,000 tons (3,674,000 bushels) of wheat borrowed from Argentina in 1959. When it became apparent, towards the end of 1963, that the wheat crop would be small, the Government issued a decree prohibiting all exports of wheat and wheat products. At the present time, Uruguay is facing an acute shortage of wheat, and it is estimated that some 150,000 tons (5,511,000 bushels) will be required to be imported before the new crop comes in towards the end of 1964.

# FRENCH SITUATION

Total estimated commercial domestic supplies of wheat in France for the crop year (July-June) 1963-64, consisting of the July 1 carryover of 100.4 million bushels and anticipated marketings of 260.9 million, amount to some 361.3 million bushels,16 per cent less than the 1962-63 total of 429.8 million. Imports of wheat during the July-April period of the current crop year amounted to 12.3 million bushels as against only 3.8 million imported during the same period in 1962-63. After deducting 210.7 million bushels for estimated domestic use, including normal feed wheat requirements, the surplus available for export and for carryover amounts to 162.9 million bushels in contrast to 214.6 million last year.

French Supplies of Soft Wheat

Item	1962-63	1963-64 1/
	- millio	n bushels -
Commercial carryover, July 1	58.7 371.1	100.4 260.9
Total estimated domestic supplies	429.8	361.3 12.3
Total estimated commercial supplies  Less domestic requirements for crop year	433.6 219.0	373.6 210.7
Available for export and for carryover	214.6	162.9
Deduct: Exports of wheat as grain, July-April Exports of wheat flour in terms of wheat, July-April	77.7 20.1	65.3 16.7
Total exports of wheat and wheat flour	97.8	82.0
Balance on May 1 for export and for carryover	116.8	80.9

<sup>1/</sup> Preliminary.

Combined exports of wheat and wheat flour in terms of grain equivalent during the first ten months of the 1963-64 crop year amounted to 82.0 million bushels, and represented a decrease of 16 per cent from the comparable 1962-63 total of 97.8 million. The balance of commercial supplies remaining on May 1, 1964 for export and for carryover amounted to 80.9 million bushels, 31 per cent below the May 1, 1963 total of 116.8 million.

The following account of the current crop situation in France has been extracted from a report by Mr. R. G. Woolham, Assistant Commercial Secretary, Canadian Embassy, Paris, under date of May 25, 1964, and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from French to Canadian measures have been made and rounded.

French supplies of wheat available for export at the present time are estimated in the neighbourhood of 1.7 million tons (62,464,000 bushels). In addition to this quantity, another 400,000 to 500,000 tons (14,697,000 to 18,372,000 bushels) of wheat and flour stocks are held on a continuing basis by the flour industry. Assuming export sales of wheat and flour, between now and the end of the crop year (June 30) in the order of 300,000-400,000 tons (11,023,000 to 14,697,000 bushels) a total carryover of 1.8 to 1.9 million tons (66,138,000 to 69,812,000 bushels) is anticipated on July 1. If this turns out to be the case, it will be one of the lowest carryovers on record during the past several years. Efforts are now being made to move current supplies of relatively inferior wheat into export markets in order to release as much elevator space as possible for the new crop.

# Farm Deliveries of Grain - July 1 to May 1

	1962-63 - thousand	
Wheat	361,958	255,513
Durum Wheat	3	2
Barley	125	183
Corn 1/	23	51
Oats	19	26
Rye	2	3

Since October 1.

Market Situation Sales of cereals during the last month were considered as being very slow with 50,000 tons (1,837,000 bushels) of wheat sold to East Germany at \$60 (\$1.63 per bushel) CIF Hamburg for delivery

before June 30. This sale was concluded under a proposed long term contract which would commit France to deliver 350,000 tons (12,860,000 bushels) of wheat and 100,000 tons of other cereals during the 1964-65 crop year, plus another 350,000 tons of cereals during 1965-66. Ireland also purchased during this month 10,000 tons (367,000 bushels) of feed wheat.

Imports of hard milling wheats into France were considerably less active than interest registered during previous months. To May 15, 1964, Import Certificates for hard wheat totalled 360,000 tons (13,228,000 bushels) for the crop year.

Weather and Crops

The fine weather conditions noted for April carried into May. Warm, sunny weather, broken occasionally by scattered rain or thunderstorms throughout the area were reported. Crop growth is very satisfactory and if present weather conditions continue until harvest time

a bumper crop in all cereals can be anticipated. The estimated area seeded to wheat as of May 1 is already 5 per cent higher than the 5-year average, and almost as high as the area seeded to wheat in 1962 - a record year.

Given average yields, wheat production this year will probably reach between 10.5 and 12.5 million tons (385.8 and 459.3 million bushels).

Estimated Area Seeded to Cereals on May 1

Grain	5-yr. Average Actual	May 1 1962	May 1 1963	<b>May</b> 1 1964

Totals	20,335	20,143	18,603	19,891

#### WHEAT SITUATION IN ITALY

The following account of the current crop situation in Italy has been extracted from a report by Miss M. D. Johnson, Commercial Assistant, Canadian Embassy, Rome, under date of May 15, 1964, and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from Italian to Canadian measures have been made and rounded for the convenience of our readers. Currency conversions have been made at the rate of 578.03 lire per Canadian dollar, the quotation in effect on May 15, 1964.

A provisional official estimate as to the area sown to winter and spring wheat during the current crop year is just over 11 million acres, an increase of 1.4 per cent over last year. Weather conditions have, so far, been generally favourable to grain growing and, although no estimated figures have yet been released, excellent outturns of all grain products are anticipated.

No decision has yet been made by EEC in Brussels as to this year's target prices for wheat and other grains. On the other hand, the Italian Minister of Agriculture has publicly stated that there will be no change in the wheat prices in Italy. For the 1963-64 crop year target prices per metric ton ranged, according to areas and/or qualities, from Lire 64,000 to Lire 71,000 (\$3.01 to \$3.34 per bushel) for non-durum wheat and from Lire 84,000 to Lire 92,500 (\$3.95 to \$4.36 per bushel) for durum. Threshold prices for imports from third countries were established at Lire 70,500 per metric ton (\$3.32 per bushel) for non-durum and Lire 92,500 (\$4.36 per bushel) for durum wheat. Starting September 1, 1963, and for a period of eight months these prices have been raised monthly by 500 Lire per metric ton (2.4 cents per bushel) and therefore they are at present increased by 4,000 Lire (18.8 cents per bushel).

Italy obtained authority in June 1963 to impose a supplementary levy on a series of hard wheats, including Manitoba 1, 2 and 3, to discourage using imported hard wheats to make "pasta". The authority to apply these levies expires on June 30, 1964, and there is no indication yet whether the Italian Government will ask for an extension.

On May 1, 1964, the general levies applicable to imports from third countries were as follows: Wheat (except Durum) \$1.56 per bushel and Durum wheat \$2.22 per bushel.

On the same date the supplementary levies for quality wheats (to be added to the above levy for "wheat") were as follows:

		cents pe	r bushel
CANADA	Manitoba 1	4	9
	Manitoba 2	5	0
	Manitoba 3	5	4
U.S.A.	Dark Hard Winter 1 & 2	5	9
	Dark Northern Spring 1 & 2	5	0
ARGENTINA	Southern	5	9
U.R.S.S.	431 type	5	9
AUSTRALIA	Semihard	5	9
MOROCCO	Florence Aurora	5	9

Imports of wheat in 1963 totalled about 300,000 metric tons (11,023,000 bushels), against about 450,000 tons (16,534,000 bushels) in 1962. Official figures show January 1964 wheat imports at 36,580 metric tons (1,344,000 bushels) against 18,321 tons (673,000 bushels) in January 1963, and it is unofficially reported that between December 1963 and April 1964 about 50,000 metric tons (1,837,000 bushels) of soft wheat from France have been imported.

During the current crop year farmers delivered to the "Intervention Organization" (Government agency) both durum and soft wheat at established prices ranging, according to areas and/or qualities, from Lire 61,250 to Lire 65,500 per metric ton (\$2.88 to \$3.08 per bushel) for non-durum wheat and from Lire 73,000 to Lire 85,500 (\$3.44 to \$4.03 per bushel) for durum. Established prices for sale of this wheat to millers range from Lire 64,000 to Lire 71,000 per metric ton (\$3.01 to \$3.34 per bushel) for non durum and from Lire 84,000 to Lire 92,500 (\$3.95 to \$4.36 per bushel) for durum wheat. Both the buying and selling prices given above have been increased for eight months, starting September 1, 1963, by Lire 500 per metric ton (2.4 cents per bushel) per month, and consequently have all now risen by 4,000 Lire (18.8 cents per bushel). However, only a portion of the crop has been delivered to the Intervention Organization, whose principal scope is to assure a minimum price to farmers for their wheat crops. The greater part of the crop has been, and is being, sold on the open market either direct or through authorized voluntary pools.

At April 22, 1964, stocks of the Intervention Organization were as follows:

11,023,000 bushels domestic soft wheat (safety stock piling)
367,000 bushels domestic soft wheat still available for sale
3,535,000 bushels domestic durum wheat still available for sale
1,102,000 bushels domestic durum wheat (stock piling held for Sicily).

It would appear that while imports of wheat will still be small, especially if the excellent crop forecasts materialize, the increase in the imports of other grains, with the exception of rye and with the emphasis on maize, will continue.

# CROP SITUATION IN BRITAIN

The following account of the current crop situation in Britain has been extracted from a report received from Mr. D. B. Laughton, Agricultural Counsellor for Canada, London, under date of May 19, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

The weather up to the end of April was cloudy and wet, making conditions for spring sowing generally unfavourable; some grain still remained to be seeded. Heavier soils were too wet for this operation, but some seeding was done on lighter soils.

Winter wheat made good progress in the later part of the month, looking vigorous and generally healthy, but with some yellowing in wetter areas. Germination of spring sown wheat was satisfactory on the whole, but had been checked by cold wet conditions; this and a leatherjacket infestation (grub of the crane fly) in some areas caused some patchiness.

Winter sown barley was described as healthy and pest free and made rapid growth in the second half of the month. Spring sown barley germination has been uneven, being similarly affected by the above conditions.

Winter sown oats similarly made vigorous growth in the latter part of April and looked in good condition; spring sown oats made satisfactory progress except on heavy, wet soils.

# Grain Acreages - England and Wales

Grain	June 1962	June 1963	Forecast March '63	Forecast March '64
		- thousand acres -		
Wheat	2,144	1,837	1,887	2,111
Barley	3,501	4,148	3,974	4,307
Oats	787	616	677	542
Mixed Grain	120	94	102	81
(for threshing)		A PHAT I STORY		
Rye, for threshing	17	21	20	N/A
Total Cereals	6,570	6,717	6,660	7,041

Compared with March 1963, the forecast of the total cereals area is up by 6 per cent, or 401,000 acres. The largest acreage increase is in barley, by 333,000 or 8 per cent. The wheat forecast is up by 224,000 or 12 per cent on the previous year. Continuing the trend of recent years oats are down by 135,000 acres or 20 per cent.

#### continued from page 7.

With warm weather, early-sown crops are making good progress in Alberta. In general, however, surface soils are drying rapidly and late-seeded crops need rain for even germination. Useful precipitation during the past week was confined to the southwest and the Peace River area. In some areas seeding of late flax and other late crops is being postponed for more moisture. Because of streak mosaic damage about 40 per cent of the winter wheat has been cultivated out at Lethbridge and other areas are affected to the extent of 10 to 15 per cent.

Indications are that planting intentions have been carried out in all areas except eastern Peace River districts where wet weather hindered wheat seeding. Pastures are good in southern, central and Peace River districts but rate only fair in most other northern regions. Grasshoppers are hatching rapidly in the south, and in isolated cases, considerable damage had occurred before observed, due to species being the type that hatch throughout fields rather than predominantly in field borders. The hatch in central regions is not sufficiently advanced to permit an estimate of infestation. Damage by pale western cutworms has occurred across the south of the province as far north as Nobleford with some control by chemicals reported.

Wheat Sale to China

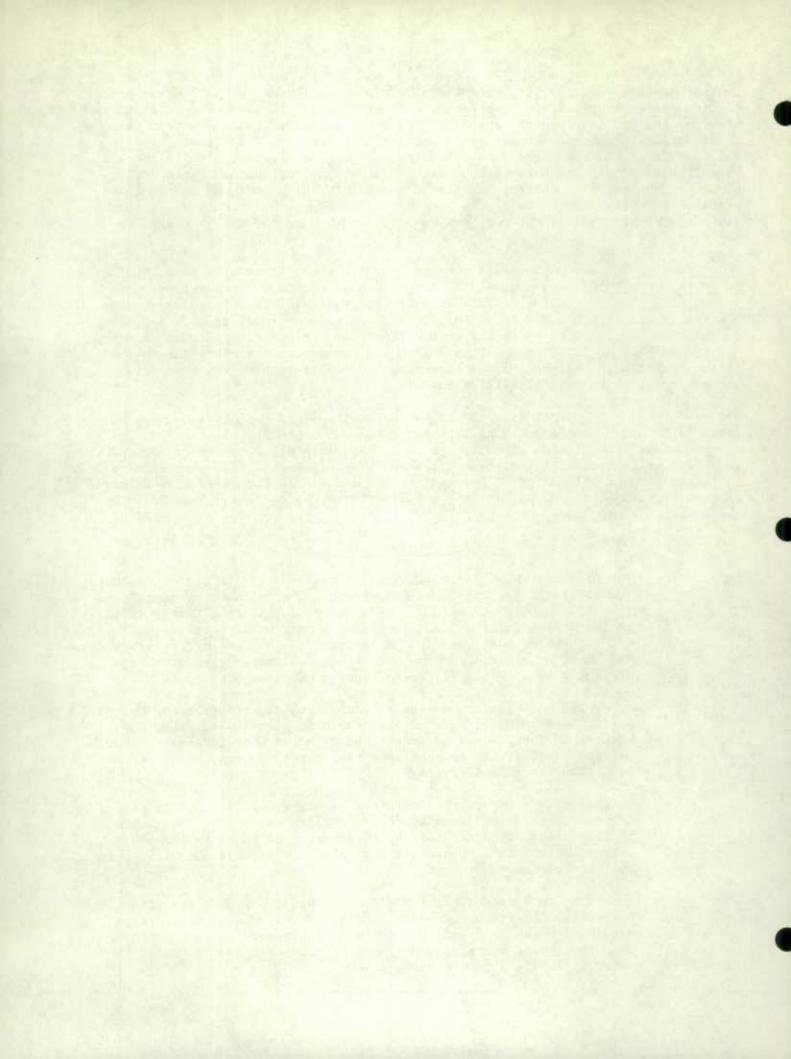

On May 11, 1964 the Canadian Wheat Board announced that under the provisions of the Second Long Term Wheat Agreement with China, a further sales contract had been signed to provide for the export of 1,075,000 long tons, 5 per cent more or less, of wheat of which one million tons will be shipped from Pacific Coast Ports during July to December, and the balance of 75,000 tons shipped from St. Lawrence River Ports during the period May through December, 1964. Assuming the full tolerance is taken this amounts to slightly over 42 million bushels.

Including the sales contract covered by this announcement, total sales under the Second Long Term Agreement amount to 2.1 million tons or approximately 77.4 million bushels. As in the previous sales contracts payment terms for sales under the long term agreement are 25 per cent cash when each vessel is loaded and the balance of 75 per cent in 18 months with interest. The deferred payment provision is made possible by a guarantee to the Canadian Wheat Board by the Government of Canada.

# CALENDAR OF WHEAT EVENTS

May

- The Canadian Wheat Board, in its Instructions to the Trade, re Quotas (General) No. 19, announced in part that a supplementary quota of five (5) bushels per seeded acre to wheat (other than Durum) as shown in the individual producer's delivery permit book, or three hundred (300) bushels, whichever is the larger, will be made effective Monday, May 11th, at all delivery points in the designated area which are presently on an eight (8) bushel specified acreage quota.
- 11 According to a report published by the Crop Reporting Board, United States Department of Agriculture, the U.S. winter wheat crop for harvest in 1964, based on conditions at May 1, was forecast at 1,013 million bushels, 12 per cent more than the 1963 crop, but I per cent less than the 1958-62 average.
- 15 According to a report received from Mr. H. A. Gilbert, Commercial Counsellor for Canada, Melbourne, extensive rains over the wheatgrowing areas in Australia have ensured a good start to the wheat season. Early indications are that a higher acreage than last year will be sown to wheat.
- 25 According to a report received from Mr. R. G. Woolham, Assistant Commercial Secretary, Canadian Embassy, Paris, the estimated area seeded to wheat in France as of May 1 is already 5 per cent higher than the 5-year average, and almost as high as the area seeded to wheat in 1962 - a record year.
