WORLD WHEAT SITUATION

Wheat Exports
One Quarter Above
Previous Record

The tempo of wheat shipments from the four traditional major exporters has gradually increased and as a result, the margin between current crop year exports and the previous record level continues to widen. The total of 991.9 million bushels of wheat

and flour exported from Canada, United States, Argentina and Australia during the August-February period of the current Canadian crop year, represents an increase of 25 per cent over the previous record level of 794.1 million exported during the same period in 1961-62. This year's August-February shipments of wheat and flour also surpassed last year's comparable level of 622.5 million and the ten-year (1952-53—1961-62) average for the period of 526.8 million by the wide margins of 59 per cent and 88 per cent, respectively. Exports from each of the four major exporting countries were at higher levels this year than last although the bulk of the increase was accounted for by the large volume of shipments from United States and Canada, with these two countries accounting for 48 per cent and 32 per cent of the total, respectively. Exports of Australian wheat, accounting for 16 per cent of the current total, are almost double last season's comparable level. Shipments from Argentina are 4 per cent above those of a year ago.

1/ Revised. 2/ Preliminary.

Wheat Supplies of
Four Major Exporters
4 Per Cent Below
a Year Ago

Supplies of wheat held by the four traditional major exporters at March 1, 1964 for export and for carryover at the end of their respective crop years amounted to 2,273.7 million bushels compared with 2,363.4 million at the same time a year ago. Reduced supplies in United States and Australia more than offset larger

totals in Canada and Argentina. Supplies at March 1, 1964, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 1,200.7 (1,472.8); Canada, 736.1 (629.6); Argentina, 140.3 (55.8); and Australia, 196.6 (205.2).

Near Record 1963
World Bread Grain
Crop Confirmed

According to the March 1964 edition of World Agricultural Production and Trade, published by the United States Department of Agriculture revised estimates place 1963 world breadgrain production at 282 million short tons, slightly above the

previous estimate. Latest information available to the Foreign Agricultural Service shows larger outturns than had been expected for Southern Hemisphere countries; this accounts for most of the increase. Upward revisions in wheat were especially marked in Argentina and Australia.

The present total of 282 million tons of breadgrains has been exceeded only twice. The high level is due to a near-record wheat harvest, which is only partially offset by a small rye harvest, the smallest of many years.

World wheat production is now estimated at 8,270 million bushels; only in 1958 and 1962 have there been larger world outturns. In both those years large harvests in the Soviet Union contributed to the high levels of the world total. In 1963, in contrast, the Soviet Union's crop was poor, while the total for the remainder of the world was at an all-time high.

World rye production has been declining for a number of years and reached a low point of 1,195 million bushels in 1963. This contrasts with the 1955-59 average of 1,440 million bushels and the high of 1,730 million during 1935-39.

North America's wheat production of 1,927 million bushels is at a new high, with record harvests in Canada and Mexico and well above average in the United States. Some increase in acreage is reported for each of the three leading producers. Canada and Mexico reported higher per-acre yields than in 1962 while U.S. yields remained the same both years. Rye production in North America is reported at 42 million bushels, compared with 53 million in 1962 and the low 1955-59 average of 36 million.

Western Europe's wheat crop of 1,340 million bushels is 17 per cent below the record 1962 harvest but is still above the 1955-59 average despite a somewhat smaller acreage. Both acreage and per acre yields were below the high level of 1962. Reductions were greatest in France, Italy, and the United Kingdom. West Germany is the only country showing a significant increase. Total rye production in Western Europe, as estimated at 225 million bushels, is slightly below the 1962 harvest and about 16 per cent less than during 1955-59. Acreage has declined 22 per cent since that period.

Wheat production in <u>Eastern Europe</u> is estimated at 620 million bushels, slightly above the large 1962 outturn and 14 per cent above the 1955-59 average. Larger outturns than last year in Yugoslavia and Poland were the principal gains and these were partly offset by reductions in most other countries of the area. The rye harvest was only slightly above the poor 1962 crop in <u>Eastern Europe</u>. Increased production reported for Poland was offset by reductions elsewhere.

Poor crops of both wheat and rye were harvested in the <u>Soviet Union</u>. Unfavourable weather in the winter and spring wheat areas brought yields to the lowest point of many years. A succession of drought years in the important spring wheat area of the "new lands" had reduced soil moisture to a point that yields there were disastrously low. Production is estimated to be only three fourths of the 1962 crop of 2 billion bushels. Rye production was also down, although the reduction was moderate compared with the sharp reduction in wheat.

CANADIAN SITUATION

Total estimated supplies of wheat for the 1963-64 crop year are placed at an all-time high of 1,210.7 million bushels, consisting of the August 1 carryover of 487.2 million and the 1963 crop, estimated at a record 723.4 million bushels. Supplies of the size indicated represent a 27 per cent increase over the 956.6 million of a year ago and surpass by 5 per cent the previous peak of 1,152.8 million bushels established in 1956-57. After making an allowance of 155.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1963-64 amount to 1,055.7 million bushels, 29 per cent above the 818.5 million in 1962-63.

Exports 11 Per Cent
Ahead of Record

period of the current crop year amounted to the unprecedented level of 319.6 million bushels, exceeding by 11 per cent the previous peak of 287.7 million shipped during the same period in 1928-29 and surpassing by 69 per cent last season's comparable total of 188.9 million. Of the current total, shipments of wheat as grain accounted for some 289.9 million bushels as against 173.4 million a year ago. The equivalent of 29.7 million bushels was exported in the form of wheat flour compared with 15.5 million during the August-February period last year. The balance remaining on March 1, 1964 for export and for carryover amounted to 736.1 million bushels, 17 per cent larger than the March 1, 1963 total of 629.6 million.

Wheat and Flour Total
28.9 Million Bushels

Total exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent during February 1964 amounted to 28.9 million bushels, 35 per cent above the 21.3 million exported a year ago, 45 per cent greater

than the ten-year (1953-62) average for the month of February of 20.0 million, but 19 per cent below the January 1964 level of 35.5 million bushels. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during February 1964 totalled 21.7 million bushels, 31 per cent above the ten-year average for the month of 16.5 million, 15 per cent more than the 18.8 million of February last year but 24 per cent less than the January 1964 total of 28.5 million bushels. Exports of bagged seed wheat during February 1964, based on Canadian Customs returns, amounted to 501 thousand bushels compared with the January figure of 482 thousand and the February 1963 total (adjusted to remove time lag) of 743 thousand bushels. Customs returns also indicate that the equivalent of 6.7 million bushels of wheat was exported in the form of flour during February 1964 the largest total ever recorded for that month. In addition the February 1964 exports of wheat flour were in sharp contrast to the adjusted February 1963 total of 1.8 million and 2 per cent above the January 1964 figure of 6.6 million bushels equivalent.

Cumulative exports of wheat in bulk during the period August 1963-February 1964 amounted to 288.0 million bushels, representing an increase of 68 per cent over the comparable 1962-63 total of 171.2 million and nearly double the ten-year average for the period of 147.1 million. Clearances to the U.S.S.R. totalled 6.6 million bushels during the month of February 1964 and raised the cumulative crop year total to that destination to 104.5 million. This total represented 36 per cent of the seven-month total exports of Canadian wheat in bulk form. Shipments of wheat to Britain amounted to 45.3 million bushels and accounted for 16 per cent of the August-February 1963-64 total. During the same period of 1962-63 there were no shipments of wheat to the U.S.S.R. while those to Britain amounted to 44.2 million bushels and represented 26 per cent of the August-February total. Other principal markets for Canadian wheat in bulk during the first seven months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: Japan, 28.8 (24.2); Federal Republic of Germany, 25.0 (18.8); China Communist, 19.8 (30.6); Belgium and Luxembourg, 13.1 (6.4); Poland, 7.3 (14.2); Switzerland, 4.3 (1.7); and Venezuela, 4.0 (4.1). Cumulative exports of bagged seed wheat during August-February of the current crop year, based on Canadian Customs returns, amounted to 1,947 thousand bushels compared with last year's comparable total (adjusted to remove time lag) of 2,198 thousand.

Cumulative exports of wheat flour during the first seven months of the 1963-64 crop year, based on Customs returns, were the equivalent of 29.7 million bushels, nearly double the adjusted August 1962-February 1963 total of 15.5 million bushels. U.S.S.R. (Russia) and Britain were the two major markets for Canadian wheat flour during the period under review. Shipments of wheat flour to the U.S.S.R. during the August-February period of the current crop year amounted to the equivalent of 11.2 million bushels and accounted for 38 per cent of the sevenmonth total while those to Britain, at 7.1 million bushels, represented 24 per cent of the August 1963-February 1964 exports of wheat flour. During the same months of the 1962-63 crop year there were no shipments of flour to the U.S.S.R. but shipments of wheat flour to Britain amounted to the equivalent of 6.7 million bushels and represented 43 per cent of the total. Other leading markets for Canadian wheat flour in terms of grain equivalent during the August-February period of the 1963-64 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Cuba, 3,147 (nil); Jamaica, 931 (816); Trinidad, 837 (754); Hong Kong, 651 (582); Leeward and Windward Islands, 625 (533); Ghana, 605 (1,103); Ceylon, 586 (1); and United States, 560 (752).

Visible Supplies
Record Gradual
Decline

During the five-week period February 20 to March 25, 1964, deliveries of wheat from farms have been exceeded by the combined export and domestic disappearance and as a result, the visible supply of Canadian wheat has recorded a slight downward trend.

Primary marketings (east and west) amounted to some 26.1 million bushels during the five-week period under review as opposed to 40.8 million entering domestic and export channels and, as a result, the total visible supply of Canadian wheat decreased from a level of 368.5 million bushels at February 19 to 353.3 million at March 25.

The total visible supply of Canadian wheat at March 25 this year represented a decrease of 9 per cent from the 1963 comparable total of 386.4 million but 3 per cent more than the 1962 figure of 342.6 million. Stocks in country elevators amounted to 205,3 million bushels compared with 212.0 million in this position a year ago and 173.6 million two years ago. This year's supplies in country elevators at March 25 accounted for 58 per cent of the total visible wheat supply compared with the 1963 and 1962 corresponding percentages of 55 per cent and 51 per cent, respectively. Interior terminal stocks, at 5.6 million bushels were slightly above the 1963 figure of 5.3 million but considerably less than the 10.2 million of 1962. The 18.7 million bushels "in transit rail" (Western Division) represented increases over both the 1963 total of 16.4 million and the 1962 figure of 16.0 million. Supplies at the Canadian Lakehead, at March 25 this year, amounted to 66.0 million bushels, 14 per cent above last year's comparable total of 58.2 million and 17 per cent more than the 56.5 million bushels in this position two years ago. Supplies in Bay, Lake and Upper St. Lawrence ports, at 9.7 million bushels, were sharply below both the 28.4 million of last year and the 29.0 million of 1962. Stocks of Canadian wheat in "Storage Afloat" at March 25, 1964, amounted to 10.4 million bushels as against 16.6 million the previous year and 12.5 million in 1962. The 13.4 million bushels in Lower St. Lawrence and Maritime ports were sharply reduced from both the 22.3 million of last year and the 20.7 million of two years ago. On the west coast, total supplies in Vancouver-New Westminster, Victoria and Prince Rupert at March 25, 1964, at 8.8 million bushels, were lower than the previous years' corresponding total of 11.2 million but above the 8.5 million bushels in 1962.

By March 30, 1964 out of a total of 1,921 shipping points in the Western Division, the Canadian Wheat Board had placed 386 points on a delivery quota of 7 bushels per specified acre, 897 on a 6-bushel quota and 603 on a 5-bushel quota. Of the remainder 26 points were on a 4-bushel quota and nine stations were reported as "closed".

Area Intended for Wheat 1964

On the basis of farmers' intentions at March 1, Canadian farmers plan to plant a record 29.1 million acres to all classes of wheat in 1964. Other major land use changes include a prospective 61 per cent increase in the acreage seeded to rapeseed and 11 per cent increases in acreage planted to flaxseed and corn for grain.

Intended Acreage of Spring Wheat in Canada, as at March 1, 1964 Compared with Acreages in 1963

	Acreage	Acreage In	Acreage Intended to be Seeded in 19				
Province	Seeded in 1963 1/	Per Cent of 1963 Area 1964 1		Indicated Change

Alberta	5,933,000	107	6,330,000	+ 397,000			
British Columbia	94,300	105	99,000	+ 4,700			
Totals	27,124,200	106	28,637,900	+ 1,513,700			

For provinces other than Ontario includes relatively small acreages of winter wheat for which annual estimates are not available.

Based on farmers' intentions at March 1 the acreage seeded to all classes of wheat will be 29.1 million acres an increase of six per cent over the 1963 seedings, and 4.4 million acres or 18 per cent above the 1958-62 average. In Manitoba the increase in acreage may be 7 per cent, in Saskatchewan 5 per cent, and in Alberta 7 per cent.

Prospective plantings of spring wheat of 28.6 million acres are up 6 per cent over the 1963 acreage and 19 per cent above the 1958-62 average. Durum wheat is included with the spring wheat figures, but in view of the interest shown by Prairie farmers in this crop, intended acreage was obtained separately. The results indicate that a 5 per cent decrease in acreage is planned for this spring. If the acreage intentions are carried out Prairie farmers will plant 2,053,000 acres to this crop compared with 2,170,000 grown in 1963 and the 1958-62 average of 1,658,400 acres. All Canada spring wheat acreage excluding durum may total 26.6 million in 1964 compared with 25.0 million planted in 1963 and the 1958-62 average of 22.5 million. The 0.5 million acres seeded to winter wheat last fall in Ontario is some 4 per cent greater than the previous year but 9 per cent below the 1958-62 average.

Intended Acreage of Spring Wheat 1/ in the Prairie Provinces As at March 1, 1964, Compared with Estimated Acreage 1963

Wheat Shipments to the United States by Destination

Total rail and vessel shipments of wheat to the United States, either for re-export or retention for domestic use, from the beginning of the current crop year to March 25, 1964 amounted to 213 thousand bushels. During the comparable periods of

1962-63 and 1961-62 shipments amounted to 286 thousand and 578 thousand bushels, respectively. Of this season's total to date some 58 per cent has been shipped by vessel.

Freight
Assistance
Shipments

Claims filed for payment up to February 29, 1964 represent the movement of 8,264 thousand bushels of wheat from the Prairie Provinces to Eastern Canada and British Columbia under the freight assistance policy during the August-January period of the 1963-64 crop year. During the same months last year claims had been filed for a total of 4,988

thousand bushels, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-January shipments of wheat under the policy were running about 66 per cent above those of 1962-63. Revised data on the August-January 1962-63 shipments of wheat based on claims submitted up to February 29, 1964 place the six-month total at 5,279 thousand bushels. The bulk of the shipments during the current six months under review went to destinations in Quebec and Ontario with these two provinces accounting for 39 per cent and 34 per cent of the total, respectively.

Revised 1/	57	49	273	148	2,171	1,682	898	5,279

Preliminary data on millfeed shipments under the freight assistance policy indicate shipments of 248,131 tons during the August-January period of the current crop year. During the same six months of 1962-63 claims had been filed for a total of 218,566 tons, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-January shipments of millfeeds under the policy were running about 14 per cent above those of 1962-63. Revised data on the 1962-63 August-January shipments of millfeeds based on claims submitted up to February 29, 1964 place the six-month total at 238,816 tons. As with freight-assisted shipments of wheat, the greater portion of the millfeed shipments during the period under review went to destinations in Quebec and Ontario.

CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during February 1964 amounted to 4,495,000 hundredweight, indicating a decrease of 5 per cent from the 4,718,000 hundredweight produced during January 1964 but substantially higher than both the February 1963 figure of 2,815,000 hundredweight and the ten-year (1954-63) average production for the month of February of 3,061,000 hundredweight. Mills reporting operations during February 1964 had a total rated capacity of 175,000 hundredweight per 24-hour day and on the basis of a 25-day working period 102.8 per cent of this rated capacity was effective. Many mills because of forward commitments, continue to operate at more than the standard 25 working days in the month.

Wheat milled for flour during February 1964 amounted to 10,043,000 bushels, 3 per cent lower than the 10,404,000 bushels milled during the preceding month, but exceeding by a wide margin the 6,250,000 bushels milled during February 1963. Of the wheat milled for flour during February 1964 some 9,203,000 bushels were Western Canadian spring wheat (other than Durum) while the remainder consisted of Ontario winter wheat (513,000 bushels); Durum (228,000 bushels); and all other (99,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during February 1964 amounted to 2,917,000 hundredweight (some 6,709,000 bushels of wheat equivalent) representing an increase of 2 per cent above the 6,607,000 bushels exported during the previous month, and in sharp contrast to the adjusted February 1963 total of 1,811,000 bushels. Flour shipments during the month went to fifty-one countries with exports to the U.S.S.R. amounting to 4,008,000 bushels of wheat equivalent and accounting for 60 per cent of the February 1964 total. Shipments of Canadian wheat flour during February to Britain, at 962,000 bushels equivalent, and to Cuba, at 766,000 bushels equivalent, accounted for 14 per cent and 11 per cent of the total, respectively. Other leading markets for Canadian wheat flour during February this year with shipments in thousands of bushels of wheat equivalent were as follows: Jamaica, 190; Trinidad, 96; Hong Kong, 81; and Thailand, 74.

UNITED STATES SITUATION

Domestic Supplies
13 Per Cent
Below Record

Domestic supplies of wheat in the United States for the 1963-64 crop year (July-June) are estimated at 2,333.0 million bushels, consisting of the July 1, 1963 carryover of 1,195.4 million and the 1963 crop, placed at 1,137.6 million bushels. Domestic

supplies of the size indicated would be 3 per cent less than last year's total of 2,415.5 million and 13 per cent smaller than the record 1960-61 figure of 2,670.8 million bushels. Imports of wheat from Canada during July-February of the current United States crop year amounted to 2.5 million bushels. Domestic disappearance during 1963-64 is estimated at about 602.0 million bushels, 2 per cent more than the 588.6 million last year. After deducting anticipated domestic requirements for the current United States crop year some 1,733.6 million remained available for export and for carryover, a decrease of 5 per cent from the 1,830.1 million in 1962-63.

July-February
Exports at
Record Level

Exports of wheat and flour in terms of grain equivalent during the July-February period of the 1963-64 crop year, amounted to a record 532.9 million bushels, surpassing by a considerable margin the previous peak of some 472.3 million exported in July-February

1961-62, and exceeding last year's comparable total of 357.3 million bushels by 49 per cent. The balance remaining on March 1, 1964 for export and for carryover was estimated at 1,200.7 million bushels compared with 1,472.8 million on the same date a year ago.

^{1/} Revised. 2/ Preliminary. 3/ Excluding imports for March-June. 4/ Includes shipments to United States Territories and wheat for military food use at home and abroad. 5/ Flour exports exclude "Milled in bond". 6/ These figures now include all shipments under relief programs which formerly were not available from Census data.

Prospective Plantings of Spring Wheat

The following report on prospective plantings of spring wheat in the United States was taken from the March 18 report of the Crop Reporting Board, United States Depart-

ment of Agriculture. Based on March 1 intentions, farmers plan to seed 11.7 million acres to all spring wheat in 1964, 6 per cent above 1963 but 3 per cent below the 1958-62 average. Growers reported their intended seeded acres without the enactment of wheat legislation for the 1964 crop. Should such legislation be passed, the extent of grower participation in the program could result in a shift in the acreage finally planted.

All wheat plantings are indicated at 54.7 million acres based on March 1 intentions for spring wheat and the December estimates of winter wheat seeded last fall. This would be 3 per cent above the 1963 plantings and slightly above average.

The acreage of <u>durum wheat</u> to be planted this spring is indicated at 2.3 million acres, 16 per cent above 1963 and 44 per cent above average. All durum producing States show sharp acreage increases from a year earlier. The prospective exports to the Soviet Union, based on recent sales, apparently encouraged growers to sharply increase their planted acreage.

Other spring wheat plantings are expected to total 9.4 million acres, 4 per cent more than in 1963 but 10 per cent below average. Of the four major producing States - North Dakota, South Dakota, Minnesota, and Montana - only Montana expects an acreage reduction from last year. These four States account for 91 per cent of the intended other spring wheat acreage. Washington and Oregon are the only other States showing increases over last year. Washington shows the most substantial change with growers in this State expecting to nearly double their spring wheat acreage. This increase was caused by unfavourable weather conditions last fall which prevented seeding of some winter wheat.

If growers plant their intended acreage and yields are about average with an allowance for trend, the 1964 production of all spring wheat would total 262 million bushels. A 1964 winter wheat crop of 959 million bushels was indicated by conditions as of December 1, 1963. Combining the projected spring wheat crop with the December winter wheat forecast indicates a total wheat crop of 1,221 million bushels. This compares with the 1963 crop of 1,138 million bushels and the 1958-62 average of 1,253 million bushels.

Crop and Weather Conditions The following extract has been taken from the Weekly Weather and Crop Bulletin, published jointly by the United States Department of Commerce and United States Department

of Agriculture for the week ending March 30, 1964. In the Central and Southern Great Plains States, winter wheat continued to respond favourably to the previous week's rain and the condition of small grains improved. In Texas, winter wheat prospects were favourable except for the dryland wheat in the High Plains area of the State. Over two-thirds of the wheat in Oklahoma was in good condition and improving. Spring oats and barley in the State were in fair to good condition although there was some freeze damage to oats. Winter small grains in Kansas were generally "greening up" and the winter wheat crop was responding well to the recent rains. Strong winds caused light to severe damage to small grains in the western part of the State. Small grains in Nebraska made little progress because of low temperatures. In the Northern Plains and Mountain States, well below normal temperatures slowed the "greening up" of small grains. Fall-seeded small grains in Wyoming continued to need moisture. Strong winds caused considerable wind erosion in the State. Fall-sown small grains were greening over most of the Eastern Plains area of Colorado.

In the Corn Belt States, small grains were beginning to grow although the growth was slowed by the cold weather. Early seeded spring oats in Missouri were beginning to come up. Stands of fall-seeded small grains in Iowa appeared to be normal. The seeding of spring oats was underway in Ohio. In Kentucky, the cold weather slowed the growth of small grain crops. In the lower Mississippi River Delta States, fall-sown small grains continued to show progress - rapid growth was being made in Louisiana. The seeding of spring oats was active in Arkansas.

In the Southeastern States, small grains continued to make good to excellent progress. Topdressing continued to be delayed by wet soils in some States but was past peak in other States in the area. Winter grains were in fair to excellent condition in the mid-Atlantic States. The seeding of spring oats made good progress in Virginia and the topdressing of fall-seeded grains was active. Growth was evident in some small grain fields in Pennsylvania.

In the West, the growth of small grains was generally good in Arizona where many fields were headed. Many of the winter wheat areas of Utah were still under snow. Very little planting of spring small grains had been done in Nevada. California's irrigated small grain acreage was making excellent progress. Rains during the week were beneficial for dryland acreage but did not alleviate the effects of the prolonged dry conditions that had prevailed. In the Northwest, the development of small grains was slow as below normal temperatures prevailed. The seeding of spring grains continued in the area.

Continued from page 2.

Asia's 1963 wheat total has been reduced from the previous estimate mainly because of India's revised estimate. The present estimated total of 1,975 million bushels for Asia is moderately below the high level of 1962. Lower production in Japan as well as India adds to the decline. Turkey's outturn of both wheat and rye was well above the 1962 production. Rye is of minor importance in other countries of Asia.

The harvest in <u>South America</u> is now completed and conditions varied throughout the area. A larger total is now estimated because of Argentina's unexpectedly large outturn. This is partly offset, however, by a poor harvest in Uruguay and a smaller crop than last year in Chile. The present estimated total of 330 million bushels is 50 million above the 1962 harvest. Rye production in Argentina is getting back toward normal after the very small harvest last year. The present estimate of 24.8 million bushels contrasts with 6.5 million for 1962.

Australia's wheat crop turned out even better than expected and set a new high of 334 million bushels. Earlier predictions were that it would approximate the record crop of 307 million bushels harvested in 1962-63. The present high level of production is attributed to a combination of near record yields and acreage that has been surpassed only twice. Rye is of minor importance in Australia.

Editor's Note: The 1963-64 wheat crops in Australia and Argentina are now estimated at 328.0 million and 281.5 million bushels, respectively.

AUSTRALIAN SITUATION

Production and Total Supplies Set New Records Estimated supplies of wheat in Australia for the 1963-64 (December-November) crop year are placed at an all-time high of 351.5 million bushels, exceeding by 8 per cent the previous year's peak total of 325.4 million. Indicated supplies for the current

Australian crop year reflect an increase in carryover stocks from 18.2 million bushels at December 1, 1962 to 23.5 million in 1963 while production, now estimated at 328.0 million bushels, represents a record crop for the second consecutive year. After deducting 75.0 million for anticipated domestic requirements, an estimated 276.5 million are available for export and for carryover in 1963-64, an increase of 10 per cent over the 252.1 million the previous year.

Combined exports of wheat as grain and wheat flour in terms of grain equivalent during the period December 1-February 29 of the current Australian crop year amounted to 79.9 million bushels, 70 per cent greater than the 46.9 million exported during the corresponding period of 1962-63. The balance remaining on March 1, 1964 for export and for carryover, at 196.6 million bushels, is 4 per cent below the comparable 1963 total of 205.2 million.

^{1/} Revised. 2/ Preliminary.

The following information relative to the Australian situation has been extracted from a report from Mr. H.A. Gilbert, Commercial Counsellor for Canada, Melbourne, under date of March 16, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

Crop Position

The Australian Wheat Board has announced that the 1963-64 wheat crop has been revised to 328 million bushels, an increase of 5 million bushels over the previous official forecast. Deliveries by growers to the Board are now almost complete with some 303.5 million bushels being delivered up to the end of February. The deliveries on a State basis are as follows:

	million bushels
New South Wales	107.5
Victoria	77.0
South Australia	51.5
Western Australia	47.0
Queensland	20.25
Tasmania	0.25

It is expected that a further 2 million bushels will be delivered and about 23 million bushels to be retained on the farms for seed and feed, to take the total to 328 million bushels.

This figure is easily a record crop and it is noteworthy that but for unfavourable growing conditions in Western Australia and poor harvesting conditions in parts of New South Wales the total would have been better still. Since 1960-61, when a record harvest of 274 million bushels was established, two successive crops in 1962-63 and 1963-64, have easily surpassed this previous high level.

The Wheat Board states that there is every indication that the 1964-65 wheat crop may well establish another new production record. This promise is based on reports about growers planting preparations combined with the hope that seasonal conditions during the forthcoming year are favourable.

Marketing Position The Chairman of the Australian Wheat Board, Mr. J.V. Moroney, recently returned from an overseas trip during which he concluded a substantial bulk sales contract with India. This was for the shipment of 171,000 tons (6,384,000 bushels) of wheat by June 1964.

Since December 1, 1963 the Board has shipped a total of 1.8 million tons (67,200,000 bushels) of wheat to overseas countries and has a heavy shipping programme in its hands for some months ahead. Included in the programme is a lift of some 28,000 tons (1,045,000 bushels) by one ship due to load at Fremantle next May. This will be a record quantity for a single wheat cargo from any Australian port.

Commenting on the record harvest from the 1963-64 crop, Mr. Moroney said that from a marketing point of view the situation in Australia this year is confortable. A considerable portion of the latest crop has been sold in advance and apart from the quantities reserved for traditional and regular customers, including home consumption, the balance for which sales have still to be negotiated is relatively small.

However, should the 1964-65 crop prove to be another bumper harvest, he added, the satisfactory disposal of the increased exportable surplus could possibly present a marketing problem next year. The future of international wheat trading for even a year or two ahead is unpredictable, said Mr. Moroney, but the Wheat Board is well equipped to handle to the greatest advantage possible, any situation that may arise.

ARGENTINE SITUATION

Supply Position

Estimated total supplies of wheat in the Argentine for the 1963-64 (December-November) crop year amount to 300.0 million bushels, consisting of the December 1, 1963 carryover of 18.5 million and the new crop, officially estimated at 281.5 million. Indicated supplies for the current Argentine crop year, reflecting a substantial increase in production as well as slightly larger opening stocks are about 41 per cent more than the 1962-63 total of 212.6 million bushels. After making an allowance of 132.3 million bushels for anticipated domestic requirements, an estimated 167.7 million are available for export and for carryover in 1963-64, in contrast to 84.6 million the previous year.

Argentine Wheat Supplies

February	0.1	0.2
Total exports of wheat and wheat flour	28.9	27.4
Balance on March 1 for export and for carryover	55.8	140.3

^{1/} Revised. 2/ Preliminary. 3/ Includes allowances for farm stocks. 4/ Official estimate.

Exports of wheat and wheat flour in terms of grain equivalent during December 1963-February 1964 amounted to 27.4 million bushels, 5 per cent below the 28.9 million exported during the same months in 1962-63. The balance remaining on March 1, 1964 for export and for carryover was estimated at 140.3 million bushels, considerably higher than the March 1, 1963 total of 55.8 million.

The following account of the Argentine situation has been extracted from a report from Mr. M.B. Bursey, Commercial Counsellor, Buenos Aires, under date of March 20, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from Argentine to Canadian measures have been made for the convenience of our readers. Currency conversions have been made at the rate of 121.72 pesos per Canadian dollar the quotation in effect on March 9, 1964.

Much of February and early March was characterized by insufficient and Crops

rainfall and below-normal temperatures and certain crops, particularly corn and sunflower seed, suffered in the northern grain belt. Downpours occurred in a few areas toward the end of February, and in many more areas around mid-March, and reports are that these proved most beneficial, although sub-normal temperatures still prevail in most areas. The harvesting of the wheat crop, including durums, is now, for all intents and purposes, complete. The flax harvest is also complete in the northern grain belt and practically complete in the southern belt, and the yields of flax in both areas have been rather disappointing.

Wheat The third official production estimate for wheat of 7,660,000 metric tons (281.5 million bushels) confirms the previous optimism of the trade and represents a 52.6 per cent increase over the production of the previous season, and a 43.8 per cent and 30.5 per cent increase over the average production of the past 5 and 10-year periods, respectively.

During the period under review, most wheat sales were made to the National Grain Board who up to the end of February had purchased some 1,660,000 metric tons (60,994,000 bushels) of the new crop. Exporters claim that they are having difficulty in competing with the Board, as the minimum official price was out of line with world prices.

Exports of wheat to all destinations between the beginning of the current crop year (December 1, 1963) to March 19, 1964, have totalled some 1,106,800 tons (40,667,000 bushels), but export business during the past two or three weeks has been rather sluggish. The third official production estimate, which was 560,000 tons (20.6 million bushels) larger than the record, would indicate that the exportable surplus for the current year should be in the neighbourhood of 4,500,000 tons (165,345,000 bushels). Wheat shipments to Mainland China during the period under review were particularly large.

During late February Brazil purchased 40,000 metric tons (1,470,000 bushels) for shipment March 10 - April 10 at a price of from between \$US 68.75 and \$US 68.82 per metric ton (\$US 1.87 per bushel) f.o.b. Sales of Argentine wheat to European markets remained sluggish, as exporters claim that the minimum official producers price is too high, and the price they must pay producers does not permit them to market wheat at international prices. Some sales to the Continent have been reported at around \$US 77.60 (\$US 2.11 per bushel) c.i.f.

Prices in the Buenos Aires Futures Market during the past months have, as during the previous month, remained at the level of the minimum official producers prices. Present prices for wheat in the Buenos Aires Cereal Exchange are exactly at the minimum official producers price for the month of March, which is 860 pesos per 100 kilos (\$1.92 per bushel) for hard wheat and 840 pesos per 100 kilos (\$1.88 per bushel) for semi-hard wheat.

February	15.8	13.2
Total exports of wheat and wheat flour	72.3	64.5
Balance on March 1 for export and for carryover.	141.2	82.2

^{1/} Preliminary.

Total estimated <u>commercial</u> domestic supplies of wheat in France for the crop year (July-June) 1963-64, consisting of the July 1 carryover of 100.4 million bushels and anticipated marketings of 246.3 million amount to some 346.7 million bushels, 19 per cent less than the 1962-63 total of 429.8 million. Imports of wheat during the July-February period of the current crop year amounted to 10.7 million bushels as against only 2.7 million imported during the same period in 1962-63. After deducting 210.7 million bushels for estimated domestic use, including normal feed wheat requirements, the surplus available for export and for carryover amounts to 146.7 million bushels in contrast to 213.5 million last year.

Combined exports of wheat and wheat flour in terms of grain equivalent during the first eight months of the 1963-64 crop year amounted to 64.5 million bushels, and represented a decrease of 11 per cent from the comparable 1962-63 total of 72.3 million. The balance of commercial supplies remaining on March 1, 1964 for export and for carryover amounted to 82.2 million bushels 42 per cent below the March 1, 1963 total of 141.2 million.

The following account of the current crop situation in France has been extracted from a report by Mr. R.G. Woolham, Assistant Commercial Secretary, Canadian Embassy, Paris, under date of March 26, 1964, and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from French to Canadian measures have been made and rounded for the convenience of our readers.

Market
Situation

Description

Local market activity in wheat has been reported as being particularly calm during the last month, especially since quantities of domestic milling wheat are almost completely depleted. On the other hand, import certificates for imported hard wheats now total over 300,000 tons (11,023,000 bushels) since the beginning of this crop year and represents a post-war record. No new contracts for sales of feed wheat have been announced this month, although an East German buying mission has been reported as being in Paris to discuss cereal requirements with the French authorities.

To the end of February, durum wheat receipts totalled 231,000 tons (8,488,000 bushels) from all sources including 44,000 tons (1,617,000 bushels) from Canada and 52,000 tons (1,911,000 bushels) from the U.S.A. Import certificates for durum wheat to March 20, 1964, totalled 346,700 tons (12,739,000 bushels). The purchase of a cargo of Canadian Western Amber Durum (half No. 4 and half No. 5) by Marseilles millers has been reported this month for May delivery.

1964 were reported as follows, with comparisons:

Weather and Crops

After a dry, mild period during the first half of February, followed by considerable rain and continuing above-average temperatures during the latter half, rainfall levels approached normal averages. March brought a return of winter and cold weather including light snow in some areas, with a gradual return to cool temperatures and continuing rains. By the end of March mild weather and some sunshine moved the cereal crop condition forecasts upwards to "very satisfactory". Cereal acreage estimates as of March 1,

CALENDAR OF WHEAT EVENTS

- March 16 According to a report received from Mr. H.A. Gilbert, Commercial Counsellor for Canada, Melbourne, the 1963-64 Australian wheat crop has been revised to a record 328 million bushels.
 - Based on farmers' intention at March 1, the acreage seeded to all classes of wheat in Canada in 1964 will be a record 29.1 million acres, an increase of 6 per cent over the 1963 seedings and 18 per cent above the 1958-62 average.
 - According to a report published by the Crop Reporting Board, United States 18 Department of Agriculture, prospective plantings of all spring wheat in the United States in 1964 are expected to total 11.7 million acres. 6 per cent more than the acreage planted in 1963 but 3 per cent less than the 1958-62 average.
 - According to a report received from Mr. M.B. Bursey, Commercial Counsellor for Canada, Buenos Aires, the third official production estimate place the 1962-64 Argentine wheat crop at 7,660,000 metric tons /281.5 million bushels/.
- April 1 According to the Bureau of the Census, United States Department of commerce, wheat flour production in the United States in February 1964 amounted to 21,218,000 hundredweight, an average of 1,061,000 hundredweight per working day.
 - The 1964 season of navigation opened at the Canadian Lakehead.
