WORLD WHEAT SITUATION

Wheat Exports
Exceed Billion
Bushel Level

Exports of wheat and flour in terms of wheat, from the four traditional major exporters, after slackening somewhat during the mid-winter months of December and January, have gained new momentum and reached a peak of 171.3 million bushels in March

alone. The total of 1,163.1 million bushels of wheat and flour exported from Canada, United States, Argentina and Australia during the August-March period of the current Canadian crop year, was 27 per cent higher than the previous record of 917.1 million exported during the same months in 1961-62 and marked the first time that this figure surpassed the billion bushel level at this stage of the crop year. This year's August-March shipments of wheat and flour also registered a margin of 59 per cent over last year's comparable level of 733.4 million and surpassed by 89 per cent the ten-year (1952-53—1961-62) average for the period of 613.9 million bushels. Present indications are that the total world trade in wheat and flour will reach close to the two billion bushel level when the 1963-64 crop year is completed.

Canadian wheat shipments, moving in unprecedented volume from Pacific and Maritime ports will be enhanced, by the early opening of Lakehead and Seaway navigation. United States exports of wheat, also pushing to a new peak, represent almost one half of the total August-March shipments from the four traditional major exporters. Both Argentina and Australia have recently harvested large wheat crops and, as a result, exports from these two countries will add considerably to the total world trade in this commodity. Recent unofficial reports indicate that negotiations are proceeding for several relatively substantial sales of Argentine wheat. Australia has just reported another large sale to Mainland China.

Exports of Wheat and Flour in Terms of Wheat, August 1963-March 1964 with Comparisons

1/ Revised. 2/ Preliminary.

Wheat Supplies of Four Major Exporters Continue to Decline Supplies of wheat, for export and for carryover, held by the four traditional major exporters at April 1, 1964, (less estimated domestic requirements to the end of their respective crop years) amounted to 2,103.1 million bushels,

representing a decline of 7 per cent from the 2,253.8 million at the same time a year ago. The relative supply situation among the four major exporters remains unchanged with reduced supplies in the United States and Australia more than offsetting larger totals in Canada and Argentina. Supplies at April 1, 1964, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 1,109.0 (1,407.2); Canada, 707.7 (606.6); Argentina, 117.0 (52.4); and Australia, 169.4 (187.6).

CANADIAN SITUATION

Supplies Remain at Record Level placed at an all-time high of 1,210.7 million bushels, consisting of the August 1 carryover of 487.2 million and the 1963 crop, estimated at a record 723.4 million bushels. Supplies of the size indicated represent a 27 per cent increase over the 956.6 million of a year ago and surpass by 5 per cent the previous peak of 1,152.8 million bushels established in 1956-57. After making an allowance of 155.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1963-64 amount to 1,055.7 million bushels, 29 per cent above the 818.5 million in 1962-63.

Exports 10 Per Cent
Ahead of Record

period of the current crop year amounted to the unprecedented level of 348.0 million bushels, exceeding by 10 per cent the previous peak of 315.3 million shipped during the same period in 1928-29 and surpassing by 64 per cent last season's comparable total of 211.9 million. Of the current total, shipments of wheat as grain accounted for some 313.0 million bushels as against 193.9 million a year ago. The equivalent of 34.9 million bushels was exported in the form of wheat flour compared with 18.0 million during the August-March period last year. The balance remaining on April 1, 1964 for export and for carryover amounted to 707.7 million bushels, 17 per cent larger than the April 1, 1963 total of 606.6 million.

^{1/} Revised. 2/ Preliminary. 3/ Less than 50,000 bushels. 4/ Not available.
5/ As reported by the Board of Grain Commissioners. (Includes overseas clearances and imports into the United States). 6/ Customs returns, 1962-63 adjusted for time lag.

March 1964 Exports of Wheat and Flour Total 28.4 Million Bushels Total exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent during March 1964 amounted to 28.4 million bushels, 24 per cent above the 22.9 million exported last year, 32 per cent more than the

ten-year (1953-62) average for the month of March of 21.5 million, but 2 per cent less than the February 1964 total of 28.9 million bushels. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during March 1964 totalled 22.5 million bushels, 4 per cent above the February 1964 figure of 21.7 million, 17 per cent more than the 19.2 million of March last year and 29 per cent greater than the 10-year (1953-62) average for the month of March of 17.4 million. Exports of bagged seed wheat during March 1964, based on Canadian Customs returns, amounted to 605 thousand bushels compared with the February figure of 501 thousand and the March 1963 total (adjusted to remove time lag) of 1,251 thousand bushels. Customs returns also indicate that the equivalent of 5.3 million bushels of wheat was exported in the form of flour during March 1964 below the 6.7 million recorded last month and in sharp contrast to the adjusted March 1963 total of 2.5 million bushels.

Cumulative exports of wheat in bulk during the period August 1963-March 1964 amounted to 310.5 million bushels, representing increases of 63 per cent over the comparable 1962-63 total of 190.5 million and 89 per cent more than the ten-year average for ther period of 164.5 million. Clearances to the U.S.S.R. (Russia) totalled 6.9 million bushels during the month of March 1964 and raised the cumulative crop year total to that destination to 111.5 million. This total represented 36 per cent of the eight-month total exports of Canadian wheat in bulk form. Shipments of wheat to Britain amounted to 47.6 million bushels and accounted for 15 per cent of the August-March 1963-64 total. During the same period of 1962-63 there were no shipments of wheat to the U.S.S.R. while those to Britain amounted to 49.5 million bushels and represented 26 per cent of the August-March total. Other principal markets for Canadian wheat in bulk during the first eight months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: Japan, 32.3 (28.1); Federal Republic of Germany, 25.2 (18.8); China Communist, 24.8 (37.2); Belgium and Luxembourg, 13.1 (6.4); Poland, 7.3 (14.2); Switzerland, 4.3 (1.7); Venezuela, 4.5 (4.4); and Philippines, 4.3 (4.3). Cumulative exports of bagged seed wheat during August-March of the current crop year, based on Canadian Customs returns, amounted to 2,553 thousand bushels compared with last year's comparable total (adjusted to remove time lag) of 3,448 thousand.

Cumulative exports of wheat flour during the first eight months of the 1963-64 crop year, based on Customs returns, were the equivalent of 34.9 million bushels, nearly double the adjusted August 1962-March 1963 total of 18.0 million bushels. The U.S.S.R. (Russia) and Britain were the two major markets for Canadian wheat flour during the period under review. Shipments of wheat flour to the U.S.S.R. during the August-March period of the current crop year amounted to the equivalent of 13.7 million bushels and accounted for 39 per cent of the eightmonth total while those to Britain, at 8.2 million bushels, represented 24 per cent of the August 1963-March 1964 exports of wheat flour. During the same months of the 1962-63 crop year there were no shipments of flour to the U.S.S.R. but shipments of wheat flour to Britain amounted to the equivalent of 7.9 million bushels and represented 44 per cent of the total. Other leading markets for Canadian wheat flour in terms of grain equivalent during the August-March period of the 1963-64 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Cuba, 3,981 (nil); Jamaica, 1,114 (944); Trinidad, 914 (869); Leeward and Windward Islands, 711 (626); Hong Kong, 710 (660); Ghana, 659 (1,209); United States, 619 (877); and Ceylon, 586 (1).

Visible Supply

Continues Decline

channels exceeding farmers' marketings by a considerable margin, the total visible supply of Canadian wheat maintained a relatively sharp decline during the period March 26 to April 22, 1964. The combined total of 40.8 million bushels moving into export and domestic markets was sharply above the 22.2 million bushels delivered from farms and, as a result, the total visible supply of Canadian wheat decreased from 353.3 million bushels at March 25 to a level of 334.5 million at April 22.

The total visible supply of Canadian wheat at April 22 this year represented a decrease of 10 per cent from the 1963 comparable total of 373.2 million but 2 per cent more than the 1962 figure of 328.3 million. Stocks in country elevators amounted to 189.4 million bushels compared with 208.2 million in this position a year ago and 159.9 million two years ago. This year's supplies in country elevators at April 22 accounted for 57 per cent of the total visible wheat supply compared with the 1963 and 1962 corresponding percentages of 56 per cent and 49 per cent, respectively. Interior terminal stocks, at 5.6 million bushels were slightly above the 1963 figure of 5.4 million but considerably less than the 9.9 million of 1962. The 24.7 million bushels "in transit rail" (Western Division) represented relatively substantial increases over both the 1963 total of 18.4 million and the 1962 figure of 20.6 million. Supplies at the Canadian Lakehead, at April 22 this year, amounted to 60.1 million bushels, 17 per cent above last year's comparable total of 51.5 million but 1 per cent less than the 60.7 million bushels in this position two years ago. Supplies in Bay, Lake and Upper St. Lawrence ports, at 8.4 million bushels, were in sharp contrast to both the 29.0 million of last year and the 28.1 million of 1962. Stocks of Canadian wheat "in transit lake" at April 22, 1964, amounted to 5.6 million bushels as against 10.2 million the previous year and 3.4 million in 1962. The 18.8 million bushels in Lower St. Lawrence and Maritime ports were reduced from both the 23.1 million of last year and the 19.6 million of two years ago. On the west coast, total supplies in Vancouver-New Westminster, Victoria and Prince Rupert at April 22, 1964, at 8.3 million bushels, were lower than both the previous year's corresponding total of 12.8 million and the 1962 figure of 11.4 million bushels.

By April 27, 1964 out of a total of 1,921 shipping points in the Western Division, the Canadian Wheat Board had placed 388 points on a delivery quota of 8 bushels per specified acre, 725 on a 7-bushel quota and 746 on a 6-bushel quota. Of the remainder 52 points were on a 5-bushel quota and ten stations were reported as "closed".

Lake Shipments of Total shipments of the five major grains out of Lakehead

Canadian Grain terminals from the opening of navigation to April 22 this year
amounted to 26.5 million bushels, 35 per cent greater than the
14.3 million during the comparable period of 1963. In 1964 the season of navigation
opened on April 2 while the 1963 season opened on April 19. Shipments of wheat, at
20.6 million bushels accounted for 73 per cent of the current total. Shipments of
each of the five grains were above last year's corresponding levels.

Crop and Weather Conditions

The telegraphic crop report, published by the Dominion Bureau of Statistics on May 6, 1964 summarized crop conditions in each of the Prairie Provinces as follows:

Rain last week delayed field operations in Manitoba. There is enough moisture to start the crop but subsoil reserves are only fair in much of the province. Little seeding has been done yet, even in southern and western areas. Seeding and tillage will resume shortly and could be general in one week. Pasture, hay and weed growth has been slow due to cool, cloudy weather. Farmers are planning to sow more wheat, flax, rapeseed and some other special crops than last year. Less oats and barley will be sown.

General weekend rains in Saskatchewan greatly improved the moisture situation in that province and conditions are now favourable to start crops and also to promote grass growth in pastures and haylands. The rains also eased the threat of serious soil drifting in many regions. Crop and grass growth to date has been slow due to cool temperatures. Seeding is underway in southern and central districts and will be general in these areas as soon as field conditions permit. Operations in northern districts are expected to commence next week.

In Alberta, seasonally cold, windy weather together with dry surface soils, and some snow in the south, have delayed spring soil preparation and seeding operations. Field work is just now becoming general in all regions, but seeding to date is still very limited in the south, and only occasional fields have been sown at widely scattered points in other areas.

Stocks at March 31, 1964 Total stocks of Canadian wheat at March 31, 1964 were estimated at 784.3 million bushels compared with 669.0 million on the same date in 1963 and the record 904.4 million in 1957. The ten-year (1954-63) average was 745.4 million bushels. Data for these

estimates were obtained from the Dominion Bureau of Statistics' annual March 31 survey of grain held on farms, from mill returns, and from information supplied by the Board of Grain Commissioners for Canada relative to grain in commercial positions at the close of business on April 1. An estimated 431.6 million bushels, representing 55 per cent of the total were held on farms, 54 per cent more than last year's total of 280.8 million and 83 per cent greater than the 235.9 million at March 31, 1962. All but 5.6 million bushels of the total farm stocks of wheat were held on farms in the Prairie Provinces. Farm-held stocks in Saskatchewan were placed at 320.0 million while those in Alberta and Manitoba were estimated at 78.0 million and 28.0 million bushels, respectively. Of the 352.7 million bushels held in offfarm positions, 201.8 million were in country elevators compared with 210.8 million a year ago and 173.6 million two years ago. Stocks in Lakehead positions amounted to 66.7 million bushels, 14 per cent above last year's corresponding total of 58.6 million and 18 per cent more than the 1962 level of 56.5 million. Supplies in eastern elevators, at 21.3 million bushels represented sharp decreases from both the 51.6 million of 1963 and the 49.8 million of 1962.

Freight Assistance Shipments Claims filed for payment up to March 31, 1964 represent the movement of some 9.2 million bushels of wheat from the Prairie Provinces to Eastern Canada and British Columbia under the freight assistance policy during the August-February period of the 1963-64 crop year. During the same months last year claims had been filed for a total of 5.8 million

bushels, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-February shipments of wheat under the policy were running about 59 per cent above those of 1962-63. Revised data on the August-February 1962-63 shipments of wheat based on claims submitted up to March 31, 1964 place the seven-month total at 6.0 million bushels. The bulk of the shipments during the current seven-month period under review went to destinations in Quebec and Ontario with these two provinces accounting for 40 per cent and 33 per cent of the total, respectively.

Preliminary data on millfeed shipments under the freight assistance policy indicate shipments of 294,609 tons during the August-February period of the current crop year. During the same seven months of 1962-63 claims had been filed for a total of 261,255 tons, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-February shipments of millfeeds under the policy were running about 13 per cent above those of 1962-63. Revised data on the 1962-63 August-February shipments of millfeeds based on claims submitted up to March 31, 1964 place the seven-month total at 277,163 tons. As with freight-assisted shipments of wheat, the greater portion of the millfeed shipments during the period under review went to destinations in Quebec and Ontario.

CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during March 1964 amounted to 4,725,000 hundredweight, indicating an increase of 5 per cent over the 4,495,000 hundredweight produced during February 1964 and substantially higher than both the March 1963 figure of 2,952,000 hundredweight and the ten-year (1954-63) average production for the month of March of 3,340,000 hundredweight. Mills reporting operations during March 1964 had a total rated capacity of 175,000 hundredweight per 24-hour day and on the basis of a 25-day working period 108.1 per cent of this rated capacity was effective. Many mills because of forward commitments, continue to operate at more than the standard 25 working days in the month.

Wheat milled for flour during March 1964 amounted to 10,505,000 bushels, 5 per cent more than the 10,043,000 bushels milled during the preceding month, and exceeding by a wide margin the 6,548,000 bushels milled during March 1963. Of the wheat milled for flour during March 1964 some 9,657,000 bushels were Western Canadian spring wheat (other than Durum) while the remainder consisted of Ontario winter wheat (515,000 bushels); Durum (231,000 bushels); and all other (103,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during March 1964 amounted to 2,295,000 hundredweight (some 5,278,000 bushels of wheat equivalent) representing a decrease of 21 per cent from the 6,709,000 bushels exported during the previous month, but in sharp contrast to the adjusted March 1963 total of 2,454,000 bushels. Flour shipments during the month went to fifty-three countries with exports to the U.S.S.R. amounting to 2,459,000 bushels of wheat equivalent and accounting for 47 per cent of the March 1964 total. Shipments of Canadian wheat flour during March to Britain, at 1,132,000 bushels equivalent, and to Cuba, at 834,000 bushels equivalent, accounted for 21 per cent and 16 per cent of the total, respectively. Other leading markets for Canadian wheat flour during March this year with shipments in thousands of bushels of wheat equivalent were as follows: Jamaica, 183; Leeward and Windward Islands, 86; Trinidad, 77; United States, 60; Costa Rica, 60; Hong Kong, 59; and Ghana, 54.

UNITED STATES SITUATION

Domestic Supplies

3 Per Cent Below

Previous Year

Domestic supplies of wheat in the United States for the 1963-64 crop year (July-June) are estimated at 2,333.0 million bushels, consisting of the July 1, 1963 carryover of 1,195.4 million and the 1963 crop, placed at 1,137.6 million bushels. Domestic

supplies of the size indicated would be 3 per cent less than last year's total of 2,415.5 million and 13 per cent smaller than the record 1960-61 figure of 2,670.8 million bushels. Imports of wheat from Canada during July-March of the current United States crop year amounted to 3.2 million bushels. Domestic disappearance during 1963-64 is estimated at about 602.0 million bushels, 2 per cent more than the 588.6 million last year. After deducting anticipated domestic requirements for the current United States crop year some 1,734.2 million remained available for export and for carryover, a decrease of 5 per cent from the 1,831.4 million in 1962-63.

July-March Exports Maintain Record Level Exports of wheat and flour in terms of grain equivalent during the July-March period of the 1963-64 crop year, amounted to a record 625.2 million bushels, surpassing by a considerable margin the previous peak of some 535.2 million exported in

July-March 1961-62, and exceeding last year's comparable total of 424.2 million bushels by 47 per cent. The balance remaining on April 1, 1964 for export and for carryover was estimated at 1,109.0 million bushels compared with 1,407.2 million on the same date a year ago.

^{1/} Revised. 2/ Preliminary. 3/ Excluding imports for April-June. 4/ Includes shipments to United States Territories and wheat for military food use at home and abroad. 5/ Flour exports exclude "Milled in bond". 6/ These figures now include all shipments under relief programs which formerly were not available from Census data.

United States Wheat and Flour Approaching Record Level Exports of U.S. wheat and flour (grain equivalent) reached a total of 533 million bushels during July 1963-February 1964 or 49 per cent more than in a similar period last year. Increased shipments of wheat and flour occurred in

all areas, particularly those to the Common Market countries and to the Eastern European countries. U.S. wheat went to Czechoslovakia for the first time since October 1948 and to East Germany as a separate entity for the first time in history. Shipments to Eastern European countries totalled 124 million bushels or 23 per cent of the U.S. total. Larger exports to the EEC countries - 43 million bushels - were 127 per cent higher than at the same time last year. This was principally due to winter kill and heavy rains at harvest which reduced the quality of wheat. This was also the reason for increased shipments to other Western European countries. Japan, plagued by severe crop losses due to bad weather, took almost twice as much wheat and flour as it did between July 1962 and February 1963.

Wheat shipped as grain increased 58 per cent in the first 8 months of the marketing year over the 298 million bushels shipped during a similar 8 month period last year. The Soviet Union has been the third or fourth largest exporter of wheat during the past several years, but is now one of the world's largest importers. This reversal is also reflected in the needs of satellite countries who have turned to the Free World to supply their requirements. Exports to EEC and other Western European countries increased because much of the harvested wheat was so heavily damaged that it was suitable only for livestock feed. India was by far the greatest single buyer of U.S. wheat, taking 101 million bushels during the first 8 months of the 1963-64 marketing year. Even the high exports to Pakistan and Japan totalled less than those to India. Even though total production in Asia is at a near record level, bad weather sharply reduced Japan's crop. Also, exports to Asia increased by 46 per cent, with India, Pakistan, and Japan receiving 41 per cent of the U.S. total.

Flour shipments of 61 million bushels during the July 1963-February 1964 period were only slightly greater than those last year. Almost a third of this commodity or 19 million bushels was consigned to Egypt. Exports of wheat and flour by country of destination for July 1962-February 1964 are shown in Table A. Shipments of wheat to Canada are principally for transhipment to other destinations. United States wheat inspections for export from Canadian ports as shown in Table B were almost four times greater than those for July 1963-February 1964. Exports for specified countries as adjusted to include these inspections, also shown in Table B, were 80 per cent higher in the same period. Total exports of wheat and flour are expected to reach 625 million bushels by the end of March 1964 as compared to 424 million bushels for July-March 1962-63. This amount will represent an all-time high for any July-March period.

Winter Wheat Crop Estimated at 1,011 Million Bushels In a report released on April 10, 1964 the Crop Reporting Board of the United States Department of Agriculture stated that the Nation's winter wheat crop prospects are for a production of 1,011 million bushels, 12 per cent more than

the 1963 crop but 1 per cent below the 5-year average. Production is forecast 5 per cent above that indicated on December 1. Estimates of production and acreage for harvest relate to growers appraisal of the crop and plans as of April 1, prior to passage of wheat legislation pertaining to the 1964 crop and do not reflect changes that may result from grower participation in the program.

The 1964 winter wheat crop season to date points to an excellent crop. Planting conditions last fall were no better than average with many areas short of both surface and sub-soil moisture. Early development progressed slowly and the crop entered dormancy with limited top growth and root development. The winter was relatively mild with limited moisture but winterkill was a minimum. Late winter precipitation arrived in abundance in the area starting along the Atlantic Coast and working westward to the Mississippi River Valley. Moisture supplies remain limited across much of the Plains States and the eastern Rocky Mountain slopes but the late March and early April rains should be beneficial. Rocky Mountain and Pacific Coast States had limited moisture at seeding time, but received sufficient winter moisture for satisfactory crop progress.

The indicated yield is 23.5 bushels per seeded acre compared with 21.5 bushels in 1963. This forecast is based on growing conditions about April 1 as reported by crop correspondents. In addition to the usual factors of weather, insects, and disease the final outturn will be dependent on the growers' participation in the 1964 wheat program enacted after April 1. In the last ten years, the average of increases or decreases in the United States production estimate from April 1 to harvest has been 77 million bushels ranging from a maximum change of 210 million bushels to a minimum of 22 million bushels.

The acreage expected to be harvested for grain, at 38.6 million acres, is 89.7 per cent of the seeded acreage compared with 82.3 per cent harvested in 1963 and the 5-year average of 91.8 per cent.

April 1 were much brighter than a year earlier. In contrast to last year, wheat entered the winter showing much less growth and appeared vulnerable to serious winter losses. However, moderate winter weather protected the crop with only limited losses due to cold temperature and soil blowing. Welcome late winter moisture stimulated the crop and added to production prospects. However, considerable acreage has limited soil moisture supplies and will require timely moisture to insure present prospects. This acreage is largely centered around the 5 State juncture in the Oklahoma Panhandle area. Fields are "greening" throughout the Central and Southern Plains with development reaching the "boot" stage in north Texas.

Wheat prospects in the Corn Belt lag behind the outstanding yields obtained in 1963. Much of the Belt experienced short soil moisture supplies at seeding time which limited fall growth. Light winter moisture along with favourable temperatures carried the crop through the winter in fair condition. The arrival of rains in early March over much of the Belt maintained or improved yield prospects. Loss of some acreage by flooding occurred adjacent to the Ohio River.

The Pacific Coast and Northern Rocky Mountain States expect yields below the level of 1963. Soil moisture supplies are limited in some areas and cool weather in late March slowed plant development. During winter an abundance of snow fell in eastern Oregon and Washington with some acreage still covered. The lack of frost in the ground permitted maximum soil absorption of the snow melt. Drying March winds caused heavy depletion of soil moisture in Coastal States with some areas needing added moisture to maintain current prospects.

The Atlantic and Gulf Coast States received generous amounts of winter moisture that largely restored surface and sub-soil moisture supplies. Clear skies and warming temperatures will promote plant growth. The crop wintered well and yields are expected to equal or exceed last year for most States.

Stocks of Wheat in All Positions April 1, 1964 On April 24, 1964 the United States Department of Agriculture reported that all wheat stocks in storage on April 1 totalled 1,207 million bushels - 20 per cent less than a year earlier and the smallest April 1 stocks since 1958. Current stocks

are 500 million bushels below the record April 1, 1961 holdings. Both farm and offfarm stocks were down sharply from April 1 a year ago, with declines of 22 and 20 per cent, respectively.

Durum wheat stocks on April 1 totalled 44.6 million bushels. Farm stocks totalled 10.5 million bushels, while off-farm holdings were 34.1 million bushels.

USDA Announces 1964 Wheat Program

On April 11, 1964, the United States Department of Agriculture announced the price support loan level, certificate values and acreage diversion payment rates for the 1964 Wheat Program.

Signup to qualify for the new program will take place from May 1 through May 15 in ASCS offices throughout the Nation.

The program is entirely voluntary. A farmer, whether he agrees to participate in the program or not, is free to sell his entire production to anyone, at any time, at such prices as he can get. There are no restrictions on sales of 1964-crop wheat.

A producer desiring to receive a price-support loan, certificates and acreage diversion payment, can voluntarily sign up to participate and become a co-operator. He can co-operate by:

- 1. Staying within his 1964 acreage allotment which already has had the minimum qualifying acreage diversion deducted. (He can divert additional acreage if he wishes.) (Growers were notified of 1964 allotments last spring.)
- 2. Devoting to conserving use all the diverted land (in addition to maintaining the normal acreage in conserving use;)
- 3. Not exceeding acreage on any other allotment crop on the farm, and
- 4. Not exceeding the wheat allotment on any other farm in which he has interest in the wheat.

A co-operating wheat producer will be eligible for price-support loans at a national average of \$1.30 per bushel on his entire production. In addition, he will receive negotiable certificates based on the normal production of his eligible acreage planted for harvest. The certificates will have fixed face values - 70 cents per bushel for the domestic marketing certificates, covering the producer's share in the national marketing allocation for U.S. food wheat production, and 25 cents per bushel for the export marketing certificates, covering his share of the export marketing allocation.

Forty-five per cent of the normal wheat production of the farm allotment if planted will be covered by domestic wheat marketing certificates and up to 45 per cent by export wheat marketing certificates. In case of underplanting or extra diversion, certificates will be issued first on the "domestic" portion and then on the remaining "export" portion covered by certificates.

Growers last year were notified of their 1964 allotments along with their farm's normal yield figures. Farm allotments were based on the national allotment of 49-1/2 million acres. Thus, individual allotments now are already reduced by the acreage required to be diverted for minimum participation in the wheat program for 1964 recently enacted by the Congress. (The reduction is the equivalent of 11.11 per cent of the 1964 allotment.)

There will be an acreage diversion payment of 20 per cent of the county's wheat loan rate multiplied by the farm normal yield on the 11.11 per cent minimum qualifying diversion and on additional diversion of up to 20 per cent of the allotment or up to a total of 15 acres if this is larger.

If growers comply with the requirements for minimum acreage diversion but don't keep their agreement on extra diversion, they lose all diversion payments but still can receive certificates and be eligible for price support loans.

Price support on wheat by loans and purchases will be made available to eligible producers. Commodity Credit Corporation, through ASC county committees, will assist producers to market their wheat certificates. No advance acreage diversion payments will be made. Payments covering acreage diversion and purchase of certificates will begin after July 1. Detailed program explanations and regulations are being issued to all State and county ASCS offices.

Final date for application for price support loans will be January 31, 1965. Unless demand is made earlier, price support loans will mature on February 28, 1965, in some States and on March 31, 1965, in others.

Since the new legislation provides for continuing the voluntary wheat program for the 1965 crop, this supersedes previous law which required the Secretary of Agriculture to consider the need for 1965-crop wheat marketing quotas and make his decision prior to April 15.

USDA Announces Further Certificate
Provisions on Old Crop Wheat

On April 24, 1964 the United States Department of Agriculture announced further operating provisions of the wheat certificate program

which are aimed at maintaining normal wheat processing and milling activities during the transition period.

AUSTRALIAN SITUATION

Supply Position

Estimated supplies of wheat in Australia for the 1963-64

(December-November) crop year are placed at an all-time high of 351.5 million bushels, exceeding by 8 per cent the previous year's peak total of 325.4 million. Indicated supplies for the current Australian crop year reflect an increase in carryover stocks from 18.2 million bushels at December 1, 1962 to 23.5 million in 1963 while production, now estimated at 328.0 million bushels, represents a record crop for the second consecutive year. After deducting 75.0 million for anticipated domestic requirements, an estimated 276.5 million are available for export and for carryover in 1963-64, an increase of 10 per cent over the 252.1 million the previous year.

Combined exports of wheat as grain and wheat flour in terms of grain equivalent during the period December 1-March 28 of the current Australian crop year amounted to 107.1 million bushels, 66 per cent more than the 64.5 million exported during the corresponding period of 1962-63. The balance remaining on March 29, 1964 for export and for carryover, at 169.4 million bushels, is 10 per cent below the comparable 1963 total of 187.6 million.

Balance on March 29 for export and for carryover	187.6	169.4

^{1/} Revised. 2/ Preliminary.

The following information relative to the Australian situation has been extracted from a report from Mr. H.A. Gilbert, Commercial Counsellor for Canada, Melbourne, under date of April 15, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Currency conversions have been made at the rate of £1 equals \$2.4197 (Canadian) the quotation in effect on April 6, 1964.

Crop Position

As Australian wheat farmers are now preparing the ground for their next sowing there is very little to report at this stage.

Indications are, however, that an increased acreage will be sown and that another heavy crop can be expected, should the results of the previous harvests be any guide.

A sense of security and confidence highlights the wheat situation in this country due primarily to the new stabilization plan and attractive economic conditions on the world market. Consequently, more land is being used for wheat production each year. Another factor which produces confidence is the negligible carryover of exportable surplus wheat in spite of a run of record-breaking crops.

Marketing Position During the period under review Mainland China purchased an additional 21 million bushels of wheat from Australia. This new contract is estimated to be worth £16 million (\$38.7 million) and is on identical credit terms as previous sales.

In announcing the latest sale, the Wheat Board chairman (Mr. J.V. Moroney) explained that it was not the Board's policy to publicly announce its selling prices for bulk contracts. He said that more than 8 million bushels of off-grade wheat, damaged by unfavourable growing and harvesting conditions in several States were included in this contract.

China has now purchased more than 62 million bushels of wheat from the 1963-64 Australian crop. The Board's ability to enter into this new contract stemmed from the fact that total deliveries from New South Wales and Victoria had considerably exceeded official crop forecasts made some months ago when a tentative export programme was drawn up.

It is unlikely that any further big bulk sales will be considered by the Board until more is known regarding the 1964-65 wheat crop.

ARGENTINE SITUATION

Supply Position Estimated total supplies of wheat in the Argentine for the 1963-64 (December-November) crop year amount to 300.0 million bushels, consisting of the December 1, 1963 carryover of 18.5 million and the new crop, estimated at 281.5 million. Indicated supplies for the current Argentine crop year, reflecting a substantial increase in production as well as slightly larger opening stocks are about 41 per cent more than the 1962-63 total of 212.6 million bushels. After making an allowance of 132.3 million bushels for anticipated domestic requirements, an estimated 167.7 million are available for export and for carryover in 1963-64, in contrast to 84.6 million the previous year.

Exports of wheat and wheat flour in terms of grain equivalent during December 1963-March 1964 amounted to 50.7 million bushels, sharply above the 32.2 million exported during the same months in 1962-63. The balance remaining on April 1, 1964 for export and for carryover was estimated at 117.0 million bushels, more than double the April 1, 1963 total of 52.4 million.

^{1/} Revised.

The following account of the Argentine situation has been extracted from a report from Mr. J.G. Ireland, Assistant Commercial Secretary, Buenos Aires, under date of April 20, 1964 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from Argentine to Canadian measures have been made for the convenience of our readers.

There was widespread rainfall throughout Argentina during the end of the first half of March, and although conditions were mostly dry during the second half of the month, heavy storms occurred in the southern areas towards the end of the month. Unusually heavy frosts occurred in several of the Andean Provinces in early April, causing losses in vineyard and orchard crops, particularly in the Provinces of Mendoza, Rio Negro and San Juan. Widespread rainfall also occurred during the first two weeks of April; but at present the weather is fine and settled and on the cool side. These conditions are normal for the early autumn in Argentina.

The wheat and flax crops are now in, and the recent rainfall has proved very beneficial for the sowing of winter pastures and for soil moisture build-up for the coming season. In some areas, however, excessive rainfall caused damage to the grain and oilseed crops being harvested at present, namely, corn, sorghum, sunflower seed and peanuts.

^{2/} Preliminary.

^{3/} Includes allowances for farm stocks.

^{4/} Official estimate.

Wheat Export sales of wheat are practically at a standstill at present, as exporters claim that the high prices they are forced to pay producers do not permit them to sell abroad at international prices. Shipments of wheat during the first 4 months of the 1963-64 crop year (December 1, 1963 to March 31, 1964) were 1,372,083 metric tons (50,415,000 bushels) compared to 868,790 tons (31,922,000 bushels) shipped during the same period of the previous crop year. However, this year's figure includes nearly half a million metric tons (18,372,000 bushels) shipped to Mainland China, as well as other sales to Poland and to Russia. Just two days ago, the Secretary of Transport announced that wheat shipments to Mainland China were being made on a normal basis and will be concluded by the end of May.

As Argentina, like other wheat exporting nations, must sell her wheat at international prices, the exchange rate of the Argentine peso has a very direct influence on exports. For several months, up to around the third week of March, the Argentine peso held firm at approximately 132 pesos to the US dollar. and it was during the latter part of this period that exporters claimed that they were unable to sell wheat at a profit. Towards the end of the third week of March, the peso began to weaken on the Free Exchange Market and, apparently, stabilizing at a level of somewhere between 138 and 140 pesos per US dollar. On April 13, 1964, the Government brought into effect a partial control of foreign exchange, which in essence forces exporters to bring into the country all foreign currency obtained from the export of Argentine products and negotiate it on the exchange market here within a specified period. At the same time, the new regulations permit only very nominal amounts of foreign exchange to be purchased by Argentines for travel and other purposes, and they subject purchases of forward exchange to a prior deposit of 50 per cent, with certain exemptions. The new regulations are designed to slow down the exodus from the country of foreign exchange and gold, but they have already had the effect of creating a "parallel" market, for the first time since 1958, when a free exchange market was reinstated. The legal selling rate for US dollars at the present time is approximately 138 pesos, while the current "parallel" rate is approximately 143 pesos. It is not yet known how these new exchange regulations will affect the export of wheat, but to-date, most individuals, associations, etc. involved in any way with grain exports have spoken out loudly against the new regulations.

At the present time, the National Grain Board is, by far, the most important buyer of wheat, despite the fact that the Board has delayed payments to producers in many cases. Such delays, of course, are contrary to the Argentine system of marketing wheat, but the fact is that the Board simply does not have sufficient funds to meet its obligations. It is reported that the Grain Board, so far, has purchased more than 3 million tons (110.2 million bu.) of wheat. The Minister of Economy has just announced, however, that the financial problems facing the Grain Board "have now been solved", but no further details are given. It is estimated, however, that at the present time, total Argentine wheat stocks are not in excess of available storage facilities, hence the Grain Board will no longer be under pressure to make export sales in order to make space for further purchases from producers.

At present, millers are sporadic buyers, and when they buy from producers, payment terms are usually 25 per cent every 30 days. Despite the fact that, at the present time, durums are being offered by producers at prices even less than the minimum official producers price, buyers are still very hesitant.

The only important export sale reported during the period under review is 80,000 metric tons (2,939,000 bushels) bought by Brazil at \$US 68.74 per metric ton (\$1.87 per bushel) f.o.b., for April shipment. A few days ago, however, it was reported in the press that negotiations are being carried out for the sale of some 500,000 tons (18,372,000 bushels) to Russia, 200,000 tons (7,349,000 bushels) to East Germany, 140,000 tons (5,144,000 bushels) to Britain, 70,000 tons (2,572,000 bushels) to Uruguay, and some 120,000 tons (4,409,000 bushels) to Chile. No information of any kind has been forthcoming from official circles on these reported negotiations.

Prices in both the Buenos Aires Futures Market and Buenos Aires Cereal Exchange during the period under review have been right at the minimum official producers price level.

FRENCH SITUATION

Supply Position

Total estimated commercial domestic supplies of wheat in France for the crop year (July-June) 1963-64, consisting of the July 1 carryover of 100.4 million bushels and anticipated marketings, now revised to 260.9 million, amount to some 361.3 million bushels, 16 per cent less than the 1962-63 total of 429.8 million. Imports of wheat during the July-March period of the current crop year amounted to 11.6 million bushels as against only 3.2 million imported during the same period in 1962-63. After deducting 210.7 million bushels for estimated domestic use, including normal feed wheat requirements, the surplus available for export and for carryover amounts to 162.1 million bushels in contrast to 214.0 million last year.

French Supplies of Soft Wheat

Item	1962-63	1963-64 1/
	- millio	n bushels -
Commercial carryover, July 1	58.7 371.1	100.4 260.9 <u>2</u>
Total estimated domestic supplies Imports, July-March	429.8 3.2	361.3 11.6
Total estimated commercial supplies Less domestic requirements for crop year	433.0 219.0	372.9 210.7
Available for export and for carryover	214.0	162.1
Deduct: Exports of wheat as grain, July-March	69.4	58.3
Exports of wheat flour in terms of wheat, July-	17.9	15.1
Total exports of wheat and wheat flour	87.4	73.4
Balance on April 1 for export and for carryover	126.6	88.7

^{1/} Preliminary. 2/ Revised.

Combined exports of wheat and wheat flour in terms of grain equivalent during the first nine months of the 1963-64 crop year amounted to 73.4 million bushels, and represented a decrease of 16 per cent from the comparable 1962-63 total of 87.4 million. The balance of commercial supplies remaining on April 1, 1964 for export and for carryover amounted to 88.7 million bushels 30 per cent below the April 1, 1963 total of 126.6 million.

The following account of the current crop situation in France has been extracted from a report by Mr. R.G. Woolham, Assistant Commercial Secretary, Canadian Embassy, Paris, under date of April 21, 1964, and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions from French to Canadian measures have been made and rounded.

Farmers'
Marketings

Heavy wheat movements from farms to commercial positions during the month of March brought total deliveries to 6,754,000 tons (248,164,000 bushels) as of April 1, 1964.

Original forecasts of total deliveries for the crop year therefore have had to be revised upwards, and it is now expected wheat supplies entering commercial channels will total about 7,100,000 tons (260,877,000 bushels) or approximately 400,000 tons (14,697,000 bushels) more than earlier forecasts.

Farm Deliveries of Cereals - France as of April 1

Grain	1963 - thousand	1964 bushels -
Wheat	349,208	248,164
Barley	117,625	175,955
Oats	17,442	24,030
Corn	17,637	39,289

Stocks of wheat reported as of April 1, 1964, amounted to 2,652,000 tons (97,443,000 bushels) and about 400,000 tons (14,697,000 bushels) less than at the same date a year ago.

Cereal Stocks Reported in Commercial Positions as of April 1

Grain	1963 - thousand	bushels -
Wheat	111,883	97,443
Barley	37,570	49,420
Oats	5,382	9,272
Corn	5,669	5,236

Market Situation

Commercial activity has continued at moderate levels for most cereals during the past month, and only the surplus in low quality wheat would appear to present a problem in disposal

before the end of June. Since last month, gains in export sales as indicated by export certificate registrations, were 213,000 metric tons (7,826,000 bushels) for wheat, 373,000 tons (17,132,000 bushels) for barley and 140,000 tons (5,512,000 bushels) for corn. These new registrations were made almost entirely to E.E.C. and Third country destinations rather than under "Special" sales to East European countries or to China. Slightly higher export subsidies and somewhat more attractive prices to E.E.C. markets helped maintain a steady level of export business during recent weeks.

France and East Germany have also been negotiating a threeyear wheat contract involving 400,000 tons (14,697,000 bushels) per year. Contract details however, have yet to be concluded.

Imports of hard milling wheats reached a record of over 350,000 tons, (12,860,000 bushels) and durum wheat purchases totalled 375,000 tons (13,779,000 bushels) as of April 10, 1964.

Exports of wheat have developed satisfactorily despite belowaverage quality considerations of the crop. Sales, especially to France's E.E.C. markets, have shown considerable improvement over last year, and special sales to East European countries have been substantial. Exports as indicated by applications for export certificates, are given below to April 10, 1964.

thousand bushels
16,356
25,508
16,868
3,761

Weather and Crops

or slightly better than average levels.

Weather conditions during April were excellent and considerably superior to those of the previous month. Spring arrived, characterized with plenty of sunshine and elevated temperatures, although occasional heavy rainstorms were reported in some areas. Growing conditions were therefore very satisfactory during the past month.

The wheat acreage as of April 1, 1964, was reported at 4,343,000 hectares (10,727,000 acres) considerably above the figure registered a year ago, although last year's acreage was affected by the severe winter. This year's wheat seedings are therefore only slightly higher than the last five year average. Spring barley seedings are progressing well and will likely be close to,

Estimated Area Seeded to Cereals

Grain	5-yr. Average Actual	April 1 1963	April 1 1964
	- thousand acres -		
Wheat	10,455	8,355	10,728
Wheat and rye	42	25	28
Rye	676	584	592
Barley	5,442	1,556	2,066
Oats	3,457	914	1,488
Mixed Cereals	263	162	128

Continued from page 30.

These new provisions are designed particularly to meet the problem of processors of types and qualities of wheat that will not be readily available during the transition period from new crop supplies or from Commodity Credit Corporation stocks.

Under these provisions, sales of wheat by CCC during the transition period will be reduced to a minimum because flour millers and other wheat processors will be enabled to carry their own inventories of old-crop wheat after July 1.

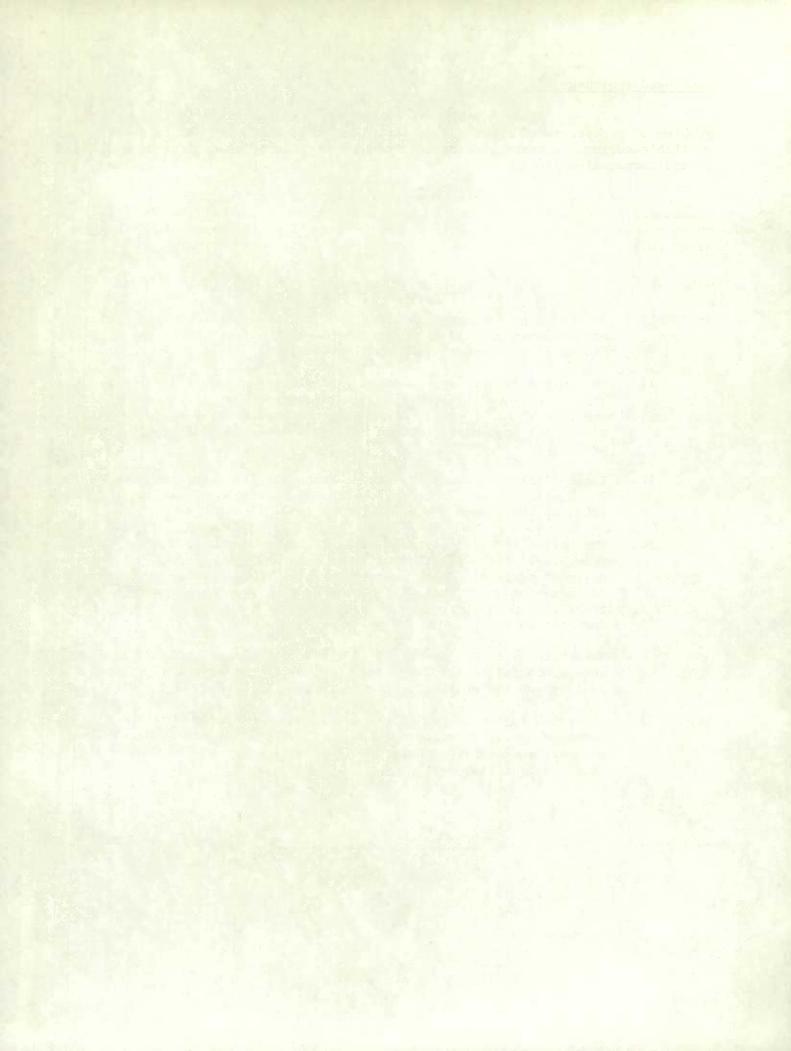

CALENDAR OF WHEAT EVENTS

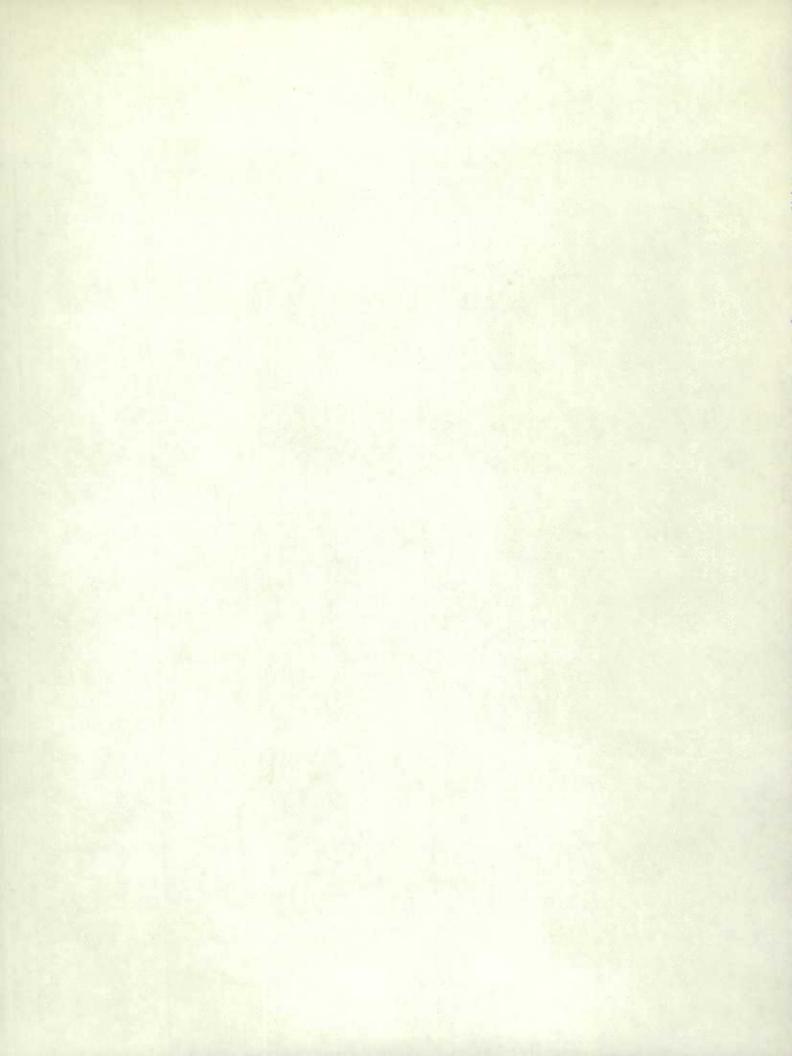

- April 10 According to a report published by the Crop Reporting Board, United States Department of Agriculture, the 1964 winter wheat crop in United States is forecast at 1,011 million bushels.
 - The United States Department of Agriculture announced price support loan level, certificate values and acreage diversion payment rates for the 1964 Wheat Program. Signup to qualify for the new program will take place from May 1 through May 15 in ASCS offices throughout the nation.
 - Total stocks of Canadian wheat at March 31, 1964 were estimated at 784.3 million bushels compared with 669.0 million on the same date in 1963 and the record 904.4 million in 1957.
 - The United States Department of Agriculture announced further operating provisions of the wheat certificate program. These new provisions are designed particularly to meet the problem of processors of types and qualities of wheat that will not be readily available during the transition period from new crop supplies or from Commodity Credit Corporation stocks.

Wheat stocks in all positions in the United States on April 1, 1964 were estimated at 1,207 million bushels, 20 per cent less than a year earlier and the smallest April 1 stocks since 1958.

May

According to the Bureau of the Census, United States Department of Commerce, wheat flour production in the United States in March 1964 amounted to 21,956,000 hundredweight, an average of 998,000 hundredweight per working day.
