#### WORLD WHEAT SITUATION

World Wheat Exports
Exceeding Record
Level of 1963-64

Total exports of wheat and wheat flour in terms of wheat from the four traditional major exporters during the August-March period of the current crop year have amounted to 1,239.4 million bushels, surpassing by 6 per cent the

previous peak of 1,167.1 million bushels exported during the same eight months in 1963-64 and exceeding by a margin of 30 per cent the 1964-65 comparable figure of 953.8 million bushels. This year's August-March exports of wheat and flour were also in sharp contrast to the ten-year (1954-55-1963-64) average shipments for the same eight months of some 710.2 million bushels. As indicated in the accompanying table, based on the Canadian crop year, wheat shipments from United States, Canada and Argentina were sharply higher than last year's comparable levels while exports from Australia were only slightly lower.

Exports of Wheat and Flour in Terms of Wheat, August 1965-March 1966 with Comparisons

August-March	United States	Canada	Argentina	Australia	Total
		I	million bushel	S	
1950-51	198.3	135.9	54.4	80.3	468.9

<sup>(1)</sup> Revised.

Wheat Supplies of Four Major Exporters Below Previous Year Supplies of wheat held by the four traditional major exporters at April 1, 1966 for export and for carryover at the end of their respective crop years amounted to 1,724.0 million bushels compared with 2,145.5 million at the same

time a year ago. Although supplies were larger in Canada this increase was more than offset by declines in the totals for United States, Argentina and Australia. Supplies at April 1, 1966, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 844.0 (1,024.6); Canada, 676.9 (647.7); Argentina, 63.3 (260.6); and Australia, 139.8 (212.6).

<sup>(2)</sup> Preliminary.

### Sowings of Winter Wheat in Western Europe

A report on the Wheat Market for January and February released by the International Wheat Council stated in part that owing to the early onset of winter many

European countries have sown considerably less winter wheat than in 1964-65, and while this may be partly compensated in some countries by an increased acreage of spring wheat, it is likely that the total wheat area in Western Europe will be significantly lower than in 1965. Sowings, which had been proceeding normally in early autumn, were brought to a halt in mid-November in most European countries by frost and snow and could not be resumed during the remainder of the winter wheat seeding period due to the subsequent alternations of very wet periods and spells of severely cold weather. Areas under winter wheat are lower than in 1964-65 by about a quarter in Belgium, Sweden and the United Kingdom, and in Denmark where there is the added disincentive of a lower support price for the 1966 crop. Areas have declined by nearly one-sixth in France, and by small amounts in F.R. Germany, the Netherlands and Switzerland. On the other hand, it is thought that Italian area might expand by some 7 per cent to the highest level since 1959. The condition of the winter crops appears to be moderately good in most European countries.

#### Trade

In reviewing the current world trade in wheat the Wheat Council stated in part that for the seven months August 1965 to February 1966 total commercial trade between member exporters and member importers amounted to 15 million tons (551.1 million bushels), exceeding the volume in the corresponding period of 1964-65 by 4.2 million tons (154.3 million bushels) and reaching a total only a little short of the exceptionally high figure of 15.3 million tons (562.2 million bushels) in the corresponding seven months of 1963-64.

Total commercial trade in wheat in the world in 1965-66 appears to be repeating the experience of 1963-64 with heavy U.S.S.R. purchases again the main factor contributing to the high level of trade. On the other hand, in contrast to the experience of 1963-64 when special trade showed a decline for the first time for many years, this sector of world trade in 1965-66 is expected to reach a new peak. This is principally due to the large import requirements of India against which heavy shipments are being made from the U.S.A. and. to a smaller extent, from other countries; the additional shipments from U.S.A. over the comparable figures for 1964-65 are reported to amount to about 1.5 to 2.0 million tons (55.1 million to 73.5 million bushels). On the other hand, imports by Eastern Europe, where wheat production appears to be better than had been estimated, may in the event be smaller and China is also now thought to be buying somewhat less than was previously forecast.

Total sales (commercial and special) by member countries for the six months (August-January) rose to the unprecedented level of 40.5 million tons (1,488.1 million bushels) which was 11.8 million tons (433.6 million bushels) larger than in the same period of 1964-65 and 2.4 million tons (88.2 million bushels) above the previous peak in 1963-64.

An analysis of trade in the first six months of 1965-66 shows that the increase mainly occurred in the commercial sector; commercial transactions totalled 31.2 million tons (1,146.4 million bushels) in the period August 1965-January 1966, nearly twice the comparable figure for 1964-65 of 16.3 million tons (598.9 million bushels). The large purchases of the U.S.S.R. will be a very important element in total world trade over the whole 1965-66 year, but the apparent sharp increase in Western European imports may be no more than the result of the

concentration of normal purchases in the early part of the year. Special transactions, showed a decline in the August-January period from 12.3 million tons (451.9 million bushels) in 1964-65 to 9.3 million tons (341.7 million bushels) in 1965-66 but this is unlikely to be an accurate reflection of trade over the year as a whole in view, for example, of the anticipated heavy shipments to India.

Total Sales (Commercial and Special) by Member Countries to all Destinations
August-January

Destination	1963-64	1964-65	1965-66
	million bus	hels (wheat equ	ivalent)
Western Europe	341.7	220.5	367.4
Eastern Europe	80.8	80.8	55.1
U.S.S.R	367.4	11.0	330.7
N. and C. America	22.0	11.0	18.4
South America	58.8	99.2	117.6
Asia (excluding China)	305.0	393.2	363.8
China (Mainland)	121.3	139.6	143.3
Africa	84.5	73.5	69.8
Oceania	3.7	3.7	3.7
Unspecified	14.7	22.0	18.4
Totals	1,399.9	1,054.5	1,488.1

As to the exporting countries, larger sales by Canada and Australia accounted for the greater part of the increase in trade in August-January of 6.4 and 4 million tons (235.2 million and 147.0 million bushels), respectively. The United States sales rose by a relatively small amount, 1.6 million tons (58.8 million bushels), but a significant feature of these sales is the fact that commercial sales showed a rise of 4.1 million tons (150.6 million bushels) and special transactions declined by 2.5 million tons (91.9 million bushels).

Taking into account the further information available since the publication of the 1964-65 edition of the World Wheat Situation, it is now estimated that world trade in wheat and flour in 1965-66 will exceed the Council's previous estimate at least by 1.3 million tons (47.8 million bushels). The revised estimate is now placed at 57.9 million metric tons (2,127.4 million bushels).

#### CANADIAN SITUATION

### 1965-66 Wheat Supplies Only 2 Per Cent Below Record Level

With increases occurring in both opening stocks and production, total supplies of Canadian wheat for the 1965-66 crop year are estimates at 1,190.9 million bushels, an increase of 12 per cent over the 1,059.9 million of the

previous year and only slightly less than the record total of 1,210.7 million bushels in 1963-64. This year's total supplies consist of 513.0 million bushels carried over from the previous year, as against the August 1, 1964 figure of 459.4 million, and the 1965 crop estimated at 677.9 million bushels or 13 per cent more than the 600.4 million harvested in 1964. After deducting some 150.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1965-66 amount to 1,040.9 million bushels, exceeding by a margin of 14 per cent the 1964-65 comparable figure of 912.6 million.

### August-March Exports Highest on Record

Exports of wheat and flour in terms of wheat equivalent reached the unprecedented total of 364.1 million bushels during the August-March period of the current Canadian

crop year. This volume surpasses by some 4 per cent the previous high of 349.6 million exported during the same months of the 1963-64 crop year and exceeds by 37 per cent the 264.9 million shipped during the same period a year ago. This year's August-March total consisted of 340.6 million bushels of wheat in bulk, 612 thousand of seed wheat and 22.9 million of flour in terms of wheat. During the comparable period of last year these figures were 244.6 million of wheat in bulk, 853 thousand of seed wheat and 19.4 million of flour in terms of wheat equivalent. The balance remaining on April 1, 1966 for export and for carryover amounted to 676.9 million bushels, and exceeded by 4 per cent the April 1, 1965 total of 647.7 million.

<sup>(3)</sup> Less than 50,000 bushels.

<sup>(4)</sup> As reported by the Board of Grain Commissioners.

<sup>(5)</sup> Customs returns, 1964-65 adjusted for time lag.

Marketings, Disappearance and Visible Supplies

Total primary deliveries of wheat (both east and west) up to April 20 of the current crop year have amounted to 331.8 million bushels compared with 316.4 million

marketed during the same period of the previous crop year. During the four-week period March 24 to April 20, 1966, primary marketings (east and west) amounted to some 36.7 million bushels as opposed to 38.5 million entering domestic and export channels and, as a result, the total visible supply of Canadian wheat decreased from a level of 298.0 million bushels at March 23 to 296.1 million at April 20.

The total visible supply of Canadian wheat at April 20 this year represented a decrease of 7 per cent from the 1965 comparable total of 319.8 million and was 12 per cent below the 1964 figure of 334.5 million. Country elevator stocks amounting to 182.3 million bushels, were above the 176.4 million at April 21, 1965 but below the 189.4 million at the same date in 1964. This year's supplies in country elevators at April 20 accounted for 62 per cent of the total visible wheat supply compared with the 1965 and 1964 corresponding percentages of 55 per cent and 57 per cent, respectively. Wheat stocks at interior terminals totalled only 0.9 million bushels as against both the 1965 and 1964 comparable levels of 5.1 million and 5.6 million bushels, respectively. Wheat stocks "in transit rail" (western division) amounted to 10.4 million bushels, above the 9.8 million of a year ago but sharply below the 24.7 million of two years ago. Supplies at the Canadian Lakehead, totalling some 38.8 million bushels, were 40 per cent less than the 65.2 million at April 21, 1965 and 35 per cent below the 60.1 million at the same date in 1964. The 15.3 million bushels "in transit lake" this year were in sharp contrast to both the 1965 comparable total of 1.1 million and the 1964 figure of 5.6 million. The 8.7 million bushels in Bay, Lake and Upper St. Lawrence ports, were below the 13.5 million a year ago but above the 8.4 million two years ago. Supplies in Lower St, Lawrence and Maritime ports, at 21.3 million bushels were 19 per cent below the 1965 total of 26.4 million but 14 per cent above the 1964 volume 18.8 million bushels. The 8.8 million bushels in West Coast ports (Vancouver-New Westminster, Prince Rupert and Victoria) were lower than the 9.2 million of the previous year but above the total of 8.3 million in these positions in 1964.

March 1966 Exports of Wheat and Flour Total 35.4 Million Bushels Combined exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent amounted to 35.4 million bushels during March 1966, some 36 per cent above both the previous month's figure of 26.1

million and the March 1965 total of 25.9 million and 53 per cent larger than the tenyear (1955-64) average for the month of March of 23.2 million bushels. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during March 1966 totalled 32.4 million bushels and exceeded the February 1966 figure of 23.5 million and the March 1965 total of 23.4 million by margins of 38 per cent and 39 per cent, respectively. In addition, this year's March total was 71 per cent greater than the ten-year average for the month of 18.9 million bushels. Based on Canadian Customs returns, the equivalent of 2.8 million bushels of wheat was exported in the form of flour during March 1966, 10 per cent more than the previous month's total of 2.6 million and 23 per cent larger than the March 1965 adjusted figure of 2.3 million.

Cumulative exports of wheat in bulk during the August-March period of the current crop year amounted to an all-time high of 340.6 million bushels, some 39 per cent higher than the comparable 1964-65 total of 244.6 million, an increase of 10 per cent over the previous 1963-64 record of 310.5 million and sharply above the ten-year average for the period of 181.8 million. This year's shipments of wheat to the U.S.S.R. (Russia) totalled some 118.8 million bushels and

accounted for 35 per cent of the eight-month total exports of wheat in bulk form. Shipments of wheat to Britain amounted to 47.8 million and accounted for 14 per cent of the August-March 1965-66 total. During the same period of 1964-65 shipments to Britain amounted to 48.6 million and accounted for 20 per cent of the August-March total. Other principal markets for Canadian wheat in bulk during the first eight months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: Communist China, 45.5 (40.4); Japan, 30.6 (30.8); Federal Republic of Germany, 16.1 (14.8); Belgium and Luxembourg, 8.7 (11.1); India, 8.6 (4.3); Cuba, 7.7 (4.4); Poland, 7.7 (14.7); and Czechoslovakia, 7.5 (18.7).

Cumulative exports of bagged seed wheat during August-March of the current crop year, based on Canadian Customs returns, amounted to 612 thousand bushels compared with last year's corresponding total (adjusted to remove time lag) of 853 thousand.

Cumulative exports of wheat flour during the first eight months of the 1965-66 crop year, based on Customs returns, were the equivalent of 22.9 million bushels, an increase of 18 per cent over the adjusted August 1964-March 1965 total of 19.4 million bushels. The leading markets for Canadian wheat flour in terms of wheat equivalent during the August-March period of the 1965-66 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Cuba, 7,629 (2,086); Britain, 6,169 (6,739); Jamaica, 1,037 (1,162); Trinidad and Tobago, 876 (917); Ceylon, 814 (438); Costa Rica, 690 (621); Leeward and Windward Islands, 653 (641); United States, 625 (635); Ghana, 560 (1,267); U.S.S.R. (Russia), 467 (1,355); and Hong Kong, 455 (493).

By April 25, 1966 out of a total of 1,908 shipping points in the western division, the Canadian Wheat Board had placed 341 points on a delivery quota of 10 bushels per specified acre, 498 points on an 8-bushel quota and 628 points on a 6-bushel quota. Of the remainder, 339 points were on a 5-bushel quota and 92 points on a 4-bushel quota. Only 10 stations were reported as "closed".

### Crop and Weather Conditions

The telegraphic crop report, published by the Dominion Bureau of Statistics on May 4, 1966 summarized crop conditions in each of the Prairie Provinces as follows:

Very limited field work had been done in Manitoba prior to the heavy snowfall of April 27. Snow is still on the ground in most areas and it will be one or two weeks before field work is possible. Moisture conditions are good to excessive, with parts of the Red River Valley flooded or waterlogged.

Late-season snowfalls and low temperatures have delayed developments and, as a result, very little spring work has been done in <u>Saskatchewan</u>. Warmer weather during the present week will enable farmers to commence next week. Moisture reserves generally are exceptionally good in all areas and seed supplies appear adequate. Grass growth has been slow but it is now expected to develop rapidly. Although the winter was long, cattle came through in fairly good shape.

Seeding operations are well under way in parts of Southern Alberta, but elsewhere very little has been done. Cool weather with snow in some areas has delayed field operations but, given favourable weather, field work will get under way next week in most regions. Soil moisture levels are good to excellent. Over-wintered crops generally came through in good condition. Pasture growth has been negligible. Livestock came through a long winter in fairly good condition.

### I.W.A. Extended to July 31, 1967

Following is the text of an announcement made in the House of Commons on May 4, 1966 by the Honourable Robert H. Winters, Minister of Trade and Commerce:

"I should like to advise the House that on April 28, our Charge d'affaires in Washington signed on behalf of the Government of Canada a Protocol extending the current International Wheat Agreement without amendment for a further year to 31st July, 1967. The International Wheat Council agreed at its Session last November to recommend to member governments this second one-year extension of the Agreement, in view of the continuing negotiations in the Kennedy Round for comprehensive arrangements covering cereals generally."

Background Note on the International Wheat Agreement: The current I.W.A. is the fifth since 1949. On July 31, 1965, it was extended by Protocol without amendment for one year. Membership of the Agreement comprises ten exporting countries and thirty-eight importing countries, including all the principal exporters of wheat and flour and most of the major importers. The price range under the Agreement is established at a maximum of U.S. \$2.025 and a minimum of U.S. \$1.625 per bushel for No. 1 Manitoba Northern basis in store Fort William-Port Arthur. Under the Agreement, when prices are at or above the maximum, exporting countries undertake to provide to member importing countries at not greater than the maximum price the average of their commercial purchases from them over a base period; importing countries undertake to purchase a specified percentage of their total commercial requirements from member exporting countries when prices are within the price range but below the maximum price. The Agreement provides for an annual review of performance and of the world wheat situation.

Canadian Wheat Stocks at March 31, 1966 Total stocks of Canadian wheat at March 31, 1966 were estimated at 750.0 million bushels compared with 717.7 million on the same date in 1965 and the record 904.4 million in 1957. The ten-year (1956-65) average was 752.1 million bushels. Data for these

estimates were obtained from the Dominion Bureau of Statistics' annual March 31 survey of grain held on farms, from mill returns, and from information supplied by the Board of Grain Commissioners for Canada relative to grain in commercial positions at the close of business on March 30. An estimated 450.4 million bushels, representing 60 per cent of the total were held on farms, 18 per cent more than last year's total of 381.0 million and 4 per cent above the 431.6 million at March 31, 1964. All but 5.4 million bushels of the total farm stocks of wheat were held on farms in the Prairie Provinces. Farm-held stocks in Saskatchewan were placed at 307.0 million while those in Alberta and Manitoba were estimated at 99.0 million and 39.0 million bushels, respectively. Of the 299.6 million bushels held in off-farm positions, 181.6 million were in country elevators compared with 182.1 million a year ago and 201.8 million two years ago. Stocks in Lakehead positions amounted to 57.4 million bushels, 12 per cent below last year's corresponding total of 65.0 million and 14 per cent less than the 1964 level of 66.7 million. Supplies in eastern elevators, at 20.0 million bushels were sharply below the 37.1 million of 1965 and 6 per cent less than the 21.3 million of 1964.

### WEEKLY VISIBLE SUPPLY OF CANADIAN WHEAT

(Data in both charts for crop years beginning August 1)

Lake Shipments of Canadian Grain

Total shipments of the five major grains out of Lakehead terminals from the opening of navigation to April 20 this year amounted to 40.0 million bushels, second only to the 51.3

million shipped during the same period in 1945. In 1966 the season of navigation opened on April 3 while the 1965 season opened on April 20. Shipments of wheat, at a record 31.9 million were 7 per cent more than the 1945 figure of 30.0 million bushels and accounted for 80 per cent of the total five grains.

Freight-Assisted Shipments Claims filed for payment up to March 31, 1966 represent the movement of some 10.2 million bushels of wheat from the Prairie Provinces to Eastern Canada and British Columbia under the freight assistance policy during the August-February period of the 1965-66 crop year. During the same months last year claims had been filed for a total of 6.2 million bushels,

indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-February shipments of wheat under the policy were running about 64 per cent above those of 1964-65. Revised data on the August-February 1964-65 shipments of wheat based on claims submitted up to March 31, 1966 place the seven-month total at 6.6 million bushels. The bulk of the shipments during the current seven-month period under review went to destinations in Quebec and Ontario with these two provinces accounting for 42 per cent and 25 per cent of the total, respectively.

Preliminary data on millfeed shipments under the freight assistance policy indicate shipments of 307,477 tons during the August-February period of the current crop year. During the same seven months of 1964-65 claims had been filed for a total of 253,080 tons, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-February shipments of millfeeds under the policy were running about 21 per cent more than those of 1964-65. Revised data on the 1964-65 August-February shipments of millfeeds based on claims submitted up to March 31, 1966 place the seven-month total at 288,297 tons. As with freight-assisted shipments of wheat, the greater portion of the millfeed shipments during the period under review went to destinations in Quebec and Ontario.

Provincial Distribution of Millfeed Shipments under the Freight Assistance Policy August-February 1965-66 and 1964-65

#### CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during March 1966 amounted to 4,056,000 hundredweight, representing an increase of 9 per cent over the February 1966 total of 3,733,000 hundredweight, 19 per cent greater than both the March 1965 figure of 3,410,000 hundredweight and the ten-year (1956-65) average production for the month of March of 3,422,000 hundredweight. Mills reporting operations during March 1966 had a total rated capacity of 169,000 hundredweight per 24-hour day and on the basis of a 27-day working period 88.8 per cent of this rated capacity was effective.

Wheat milled for flour during March 1966 amounted to 9,092,000 bushels, 9 per cent over the 8,374,000 bushels milled during the preceding month and 20 per cent more than the 7,595,000 bushels milled during March 1965. Of the wheat milled for flour during March 1966 some 8,020,000 bushels were Western Canadian wheat (other than Durum) while the remainder consisted of Ontario winter wheat (623,000 bushels); Durum (339,000 bushels); and all other (110,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during March 1966 amounted to 1,223,000 hundredweight (some 2,814,000 bushels of wheat equivalent) representing an increase of 10 per cent over the 2,554,000 bushels exported during the previous month and 23 per cent above the adjusted March 1965 exports of 2,289,000 bushels. Flour shipments during the month went to fifty countries. Exports to Cuba, at 1,288,000 bushels accounted for 46 per cent of the March total while shipments to Britain totalled some 571,000 bushels and accounted for 20 per cent of the March exports of wheat flour. Other leading markets for Canadian wheat flour in terms of wheat during the month, with shipments in thousands of bushels were as follows: Ceylon, 315; Costa Rica, 67; Jamaica, 61; Leeward and Windward Islands, 52; United States, 50; and Bermuda, 43.

### UNITED STATES SITUATION

Total Supplies
Slightly Less Than
Previous Year

Total domestic supplies of wheat in the United States for the 1965-66 crop year are estimated at 2,144.4 million bushels, 2 per cent below the previous year's total of 2,191.8 million, with a decline in carryover stocks more than offsetting an

increase in production. The 817.7 million bushels carried over at July 1; 1965 were the lowest stocks in twelve years and the fourth consecutive decline since July 1, 1961. The 1965 production, estimated at 1,326.7 million bushels, is 3 per cent more than the 1964 crop and 12 per cent larger than the 1959-63 average of 1,189.8 million. Domestic disappearance during 1965-66, estimated at about 685.0 million bushels, is 4 per cent above the 657.1 million of last year. After deducting anticipated domestic requirements for the current United States crop year, some 1,460.5 million remain available for export and for carryover, a decrease of 5 per cent from the 1,536.0 million in 1964-65.

Exports of wheat and wheat flour in terms of grain equivalent during the period July 1965-March 1966 amounted to 616.5 million bushels, 21 per cent more than the 511.4 million exported during the same months last year. The balance remaining on April 1, 1966 for export and for carryover was estimated at 844.0 million bushels compared with 1,024.6 million on the same date a year ago.

## United States Wheat Supplies

Less estimated domestic requirements for crop year (4)	657.1	685.0
Available for export and for carryover	1,536.0	1,460.5
Deduct: Exports of wheat as grain, July-March Exports of wheat flour in terms of wheat, July-March (5)	452.2 59.2	564.8 51.8
Total exports of wheat and wheat flour (6)	511.4	616.5
Balance on April 1 for export and for carryover	1,024.6	844.0

<sup>(1)</sup> Revised. (2) Preliminary. (3) Excluding imports for April-June. (4) Includes shipments to United States Territories and wheat for military food use at home and abroad. (5) Flour exports exclude "Milled in bond". (6) These figures now include all shipments under relief programs which formerly were not available from Census data.

Winter Wheat Crop Estimated at 1,110 Million Bushels In a report released on April 11, 1966 the Crop Reporting Board of the United States Department of Agriculture stated in part that winter wheat production is forecast at 1,110 million bushels, 8 per cent larger than the 1965 crop and

12 per cent above average. Seeding of the 1966 winter wheat crop began early with favourable moisture but in many areas where fields were too wet progress was slow. Mild fall weather promoted good growth even in late seeded fields. The crop wintered well and on April 1 prospects were unusually favourable in nearly all areas. Production is now forecast 5 per cent above the December 1 estimate.

The expected harvest of acreage for grain, 38.6 million, is 91.7 per cent of the seeded acreage compared with 83.5 per cent harvested in 1965 and the average of 88.7 per cent. The indicated yield per seeded acre is 26.3 bushels compared with 22.8 in 1965 and the average of 23.5 bushels. These forecasts are based on growing conditions reported by crop correspondents about April 1. In the past ten years, the average change in U.S. production estimate from April 1 to harvest has been 63 million bushels, ranging from 13 million to 210 million bushels.

In the Great Plains April 1 prospects were much brighter than a year earlier. Wheat had an excellent start last fall and plants developed a good root system. Precipitation was ample, except in the extreme Southern Plains, and the crop wintered with a minimum of damage. Early spring moisture was light from Kansas southward but subsoil reserves permitted good early growth of the crop. Wheat began to show stress from dryness in the area centering in eastern New Mexico and the Panhandle of Texas where moisture was urgently needed to maintain present prospects.

In the Corn Belt, weather conditions have been favourable and growers expect an excellent wheat crop. In the South, dry weather last fall retarded early development but conditions have improved since December.

April 1 growth in Montana was more advanced than a year ago and current conditions point to another high-yielding crop. In the Pacific Northwest the crop has been favoured with good weather, and growers reported prospects on April 1 as "best in several years".

Stocks of Wheat in All Positions April 1, 1966 On April 25, 1966 the United States Department of Agriculture reported that all wheat in storage on April 1 was 901 million bushels, 21 per cent less than a year earlier and the smallest April 1 stocks since 1953. The decline occurred in off-farm

holdings which totalled 644 million bushels, the smallest in 13 years. Farm stocks, at 257 million bushels, were 3 per cent below April 1, 1965 but 26 per cent above average. About 65 per cent of the total stocks were either owned by the Government or under Government loan compared to 72 per cent on April 1 a year ago. Indicated disappearance during the January-March quarter was 438 million bushels, the largest of record.

Durum wheat stocks on April 1 totalled 82 million bushels, the largest April 1 holdings since records were started in 1962. Farm stocks made up 48 million bushels of this total, 23 per cent more than a year earlier. Off-farm holdings, at 34 million bushels, were 20 per cent smaller than April 1, 1965. Indicated disappearance during the January-March quarter was 17 million bushels compared with 12 million bushels during the same period a year earlier.

## Stocks of Grains, April 1, 1966 with Comparisons

Participating in the 1966 wheat program will be 827,662 farms having 85 per cent of the eligible national effective allotment for the current crop year, according to an announcement by the U.S. Department of Agriculture on May 5, 1966. The final report, based on State returns through the close of the January 31-April 15 sign-up period, also shows a total of 2,050,055 acres of agreed diversion for payment. No payment is being made for required diversion of 15 per cent which is reflected in each wheat farm's 1966 allotment. Spring wheat growers were asked not to divert additional acreage. Farms signed for 1966 program participation have wheat allotments totalling 42,364,053 acres. This is about 5 per cent less than last year's total of 44,785,271 acres. The 827,662 farms signed up for 1966 is 7 per cent less than the 889,778 in 1965. Added voluntary diversion of 2 million acres agreed for this year is 20 per cent below the 2.5 million acres in 1965.

Increased export demand caused principally by food shortages in India, became an important consideration after the U.S. winter wheat crop had been seeded in 1965 for harvest this summer. Since these growers already had voluntarily arranged to divert allotment acreage to conserving use, the agreement to pay for this added diversion had to be kept. However, winter wheat growers were encouraged not to reduce below their allotments wherever possible. Spring wheat growers were notified prior to the start of the sign-up in January that they would not be eligible to receive incentive payments for additional diversion. The 1966 wheat program, on a per bushel comparison basis, offers income returns to participants nearly 50 per cent greater than to non-participants, as a national average. Price support loan level on a national average will be \$1.25 per bushel. In addition to acreage diversion payments for eligible producers, all participants can qualify for domestic marketing certificates payable in cash and based on the projected yield of 45 per cent of their allotment acreage. These certificates will be worth 100 per cent of parity as of July 1, 1966, minus the \$1.25 per bushel price support.

Increase in Wheat Acreage Allotment Announced On May 5, 1966 Secretary of Agriculture Orville L. Freeman announced a 15 per cent increase in the national acreage allotment for wheat for the 1967 crop. This represents a regular allotment of 55 million acres plus small farm

increases to make an effective allotment of 59.3 million acres.

The Secretary said this means that U.S. farmers will be permitted to plant an additional 7.7 million acres of wheat this fall and next spring for harvest in 1967.

He forecast a "substantial increase" in farm income as a result.

The effective allotment in 1966 was 51.6 million acres. The 1967 allotment is the largest in six years. It will mean that wheat acreage on most farms in 1967 will be at a level equal to the period of 1955 through 1961.

"The strong demand for wheat exports both for dollars and for food assistance programs has reduced our stocks sharply," said Mr. Freeman. "For the first time in 13 years, our June 30 carryover will be under 600 million bushels." Six hundred million bushels is about one year's supply for domestic food consumption and seed.

"Stocks will be further reduced during the coming year despite good crop prospects," the Secretary said. "With continued strong demand in the market, and more acres of wheat, farm income will be substantially increased."

Production in 1967 is expected to range between 1.5 billion and 1.6 billion bushels, depending upon yields and other program features to be announced later. This compares with a 1966 wheat crop presently estimated at about 1.4 billion bushels.

Secretary Freeman said the allotment announcement was being made earlier than usual this year so that wheat producers would have every opportunity to make their plans for the 1967 crop. The action came also in response to suggestions by Members of Congress, during debate last year on the four-year Agricultural Act of 1965, that early announcements be made once a long-term wheat program was enacted.

The Secretary explained that there are, in effect, two acreage allotments for wheat under the law. The basic 1967-crop acreage allotment applicable to most wheat farms in major wheat-producing States is 55 million acres, compared with 47.8 million acres this year. Another allotment of slightly more than 4 million acres will be available to producers who planted small acreages under previous legislation which gave farmers an opportunity to plant wheat in excess of their farm allotment, up to 15 acres. The comparable total in 1966 was 3.8 million acres.

As in previous years, eligibility for price support loans and wheat marketing certificates is contingent upon the producer planting within his allotment and complying with other conservation or program provisions. However, because of the increased allotments, no acreage diversion will be required for the 1967 crops.

Further details of the 1967 wheat program, including States and farm allotments, price support, and marketing certificates will be announced shortly, but no later than June. Farmers can expect to have their 1967 farm allotment notice by July 1.

## AUSTRALIAN SITUATION

Wheat Supplies
30 Per Cent Less
Than Previous Year

After harvesting three consecutive record crops, Australian wheat growers experienced a substantial decline in production in 1965-66. The current crop is now estimated at some 250.4 million bushels in contrast to the record harvest of 370.0

million a year earlier with most of this decline due to drought conditions and particularly in New South Wales. Although carryover stocks at December 1, 1965, were about 4 million bushels larger than a year previous, this increase was sharply offset by the smaller harvest in 1965-66 and, as a result, total supplies for the current crop year amount to an estimated 274.8 million bushels as against 390.5 million in 1964-65. After deducting 79.0 million for anticipated domestic requirements, an estimated 195.8 million are available for export and for carryover in 1965-66, a decrease of 33 per cent from the 291.4 million bushels the previous year.

Exports Down 30 Per Cent

Combined exports of wheat as grain and wheat flour in terms of grain equivalent during the period December 1-March 26 of the current Australian crop year amounted to 56.0 million

bushels in contrast to 78.8 million exported during the corresponding period of 1964-65. The balance remaining on March 27, 1966 for export and for carryover was estimated at 139.8 million bushels, as against the March 28 1965 comparable total of 212.6 million.

<sup>(1)</sup> Revised. (2) Preliminary.

The following information relative to the Australian situation has been extracted from a report from Mr. D. I. Campbell, Assistant Commercial Secretary for Canada, Canberra, under date of April 13, 1966 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

Crop Position The outlook for Australia's forthcoming seeding is generally quite good. The exceptions are in parts of New South Wales, the major wheat state, and Queensland, where conditions are very poor indeed. Both Victoria and South Australia have had good early rains that enabled soil preparation in most areas. Fallows have been worked and stubble and pasture fields ploughed. Growers are ready for further activity when more rain comes and are generally optimistic in these two states. In Western Australia there has been no rain since January 1 but soils have much more moisture than usual at this time because of the ample rains of last spring and early summer. In New South Wales the position is difficult to judge.

Marketing

Australia is selling wheat steadily but only to what it regards as its regular markets. Over the last couple of months India and Japan have been the best customers.

Storage

The Graziers Association of New South Wales is to press for the urgent completion of the current New South Wales wheat storage construction program. The Association considers this necessary because of the likelihood of a large acreage of wheat being sown to compensate for depletion of the State's livestock. The Association will also press the Grain Elevators Board to provide ample storage for the 1966-67 season's wheat.

Queensland
Production

Good markets existed in Asia for all the premium wheat Queensland could grow, the Australian Wheat Board Chairman, Dr. A.R. Callaghan, said recently. He said Queensland could go on expanding its wheat production at a steady rate and would have no problems selling the wheat. Much Queensland high protein wheat was being shipped to Asian markets which previously bought flour from Australia. These countries now had flour mills, thus causing a decline in the flour trade from Australia, but an increase in wheat sales. Dr. Callaghan said he did not predict a colossal development of wheat growing in Queensland. The increase would be gradual and would be accompanied by similar expansion in other grains.

Balance on April 1 for export and for carryover	260.6	63.3

<sup>(1)</sup> Revised.

<sup>(2)</sup> Preliminary.

<sup>(3)</sup> Includes allowances for farm stocks.

1965-66 Wheat Supplies Lower Than Previous Year Estimated total supplies of wheat in the Argentine for the 1965-66 (December-November) crop year amount to 300.1 million bushels, consisting of the December 1,

1965 carryover of 92.9 million and the new crop, placed at 207.2 million. Indicated supplies for the current Argentine crop year, reflecting a relatively sharp decline in production, are about 35 per cent less than the 1964-65 total of 459.3 million. After making an allowance of 135.2 million bushels for anticipated domestic requirements, an estimated 164.9 million are available for export and for carryover as against 324.2 million in 1964-65.

Preliminary exports of wheat and wheat flour in terms of wheat equivalent during December 1965-March 1966 amounted to 101.6 million bushels, 60 per cent larger than the 63.6 million exported during the same months in 1964-65. The balance remaining on April 1, 1966 for export and for carryover was estimated at 63.3 million bushels, in sharp contrast to the April 1, 1965 total of 260.6 million.

The following account of the Argentine situation has been extracted from a report from Mr. H. E. Ryan, Assistant Commercial Secretary (Agriculture), Buenos Aires, under date of April 29, 1966 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions to Canadian measures and currency have been made for the convenience of our readers.

Weather

There has been heavy rainfall during much of the late summer and fall. This has not adversely affected the Argentine grain belts. Some regions of the grain area, in fact, required additional moisture and this has been beneficial for growing summer crops and for preparation of the soil for the forthcoming sowing of winter grains.

The weather conditions did however, have an effect on some of the rural roads and thus hindered the flow of grain to railway stations and terminal elevators.

Delivery of grain during the month was hampered in some Wheat areas by adverse weather conditions. Labour problems also affected transportation, storage and port handling. There is some indication that producers may be withholding stocks, awaiting higher prices which they feel will occur due to decreasing supplies being available. Local millers at present are experiencing a shortage of wheat, which has prompted meetings between their representatives and the National Grain Board. At these meetings, the millers were urged to obtain their supplies from private sources, failing which the Grain Board would offer them stocks.

By the end of March, exporters were willing to pay 860 pesos per 100 kilos (\$1.34 per bushel) for bread wheat delivered in Rosario, and 880 pesos (\$1.37 per bushel) in Buenos Aires, while millers were offering as high as 920 pesos per 100 kilos (\$1.43 per bushel).

By mid-March prices in the Buenos Aires Futures Market were as follows: April delivery pesos 820 per 100 kilos (\$1.28 per bushel), for May delivery 903 (\$1.40 per bushel), for June 933 (\$1.45 per bushel), and for July delivery pesos 963 per 100 kilos (\$1.50 per bushel). By mid-April these prices had risen to 942 (\$1.46 per bushel) for May, 975 (\$1.52 per bushel) for June, and 985 (\$1.53 per bushel) for July and 1,008 (\$1.57 per bushel) for August. At present

Futures prices are: pesos 1,000 (\$1.56 per bushel) for May delivery, 1,100 (\$1.71 per bushel) for June, 1,130 (\$1.76 per bushel) for July and pesos 1,160 per 100 kilos (\$1.80 per bushel) for August delivery. Present prices in the Buenos Aires Cereal Exchange are: for hard wheat pesos 1,030 (\$1.60 per bushel); for semi-hard pesos 990 (\$1.54 per bushel); and for Durums pesos 1,100 (\$1.71 per bushel).

It will be noted from the above, that prices are now beginning to rise in the Argentine markets and present spot prices now exceed the 1,000 pesos per 100 kilos (\$1.56 per bushel) minimum price established for the 1966-67 crop.

Producers are concerned about the minimum price level set for next year, claiming that pesos 1,000 per 100 kilos (\$1.56 per bushel) for Buenos Aires is insufficient to cover the costs, in spite of the fact that the 5 per cent production tax of 1965 has been eliminated. Recently, the Ministry of Economy announced that the government, in an attempt to achieve its goal of a minimum wheat crop of 8,000,000 tons (293.9 million bushels) next year, was considering establishing a pricing system whereby the minimum level would be increased as production costs rose. Thus the 1,000 pesos price (\$1.56 per bushel) could be adjusted upwards with a maximum level of pesos 1,200 (\$1.87 per bushel) being set. Other measures are to be adopted by the government in an attempt to influence a larger production of all winter crops including wheat. This includes a new credit policy for the purchase of agrarian machinery and equipment which is now under study.

Shipments of wheat during the month of March totalled 939,175 metric tons (34,508,000 bushels) as compared to 475,534 tons (17,473,000 bushels) during the same month last year. More than half of the exports were required to fulfill existing agreements and consisted mainly of old crop wheat, this included 342,024 metric tons (12,567,000 bushels) to Russia; 231,305 tons (8,499,000 bushels) to Mainland China; and 106,102 tons (3,899,000 bushels) to Brazil. Total exports so far for crop year 1965-66 equalled 2,760,387 metric tons (101,426,000 bushels) as compared to 1,723,826 tons (63,339,000 bushels) during the same period last year.

Quantities of wheat remain for sale in Argentina, although most of this is controlled by the National Grain Board. During the month the Board concluded a sale to South Africa of 25,000 metric tons (919,000 bushels) on a cash payment basis. As of April 22, Grain Board purchases of 1965-66 wheat totalled 1,789,671 metric tons (65,758,000 bushels), valued at 14.6 billion pesos (\$83.4 million). This is considerably below the 5,971,569 tons (219,415,000 bushels) purchased during the same period last year.

Exporters were selling small parcels during March, at prices varying from U\$S 64.50 to U\$S 67.75 per ton (\$1.89 to \$1.98 per bushel) CIF continental ports. The Durums were moving to Italy at approximately U\$S 81 per ton (\$2.37 per bushel) for March-April shipments and at U\$S 78.75 (\$2.31 per bushel) for April-May shipments. By the end of March, Durum was being sold at U\$S 75.50 (\$2.21 per bushel) for grain afloat destined to the Netherlands and at U\$S 75 per ton (\$2.20 per bushel) for March-April shipments to Austria.

#### CALENDAR OF WHEAT EVENTS

- April 3 The 1966 season of navigation opened at the Canadian Lakehead.
  - According to a report published by the Crop Reporting Board, U.S.D.A. the 1966 winter wheat crop in the United States is forecast at 1,110 million bushels, 8 per cent larger than the 1965 crop and 12 per cent above average.
  - Total stocks of Canadian wheat at March 31, 1966 were estimated at 750.0 million bushels compared with 717.7 million of the same date in 1965 and the record of 904.4 million in 1957.
  - Wheat stocks in all positions in the United States on April 1, 1966 were estimated at 901.3 million bushels, 21 per cent less than a year earlier and the smallest April 1 stocks since 1953.
- May 4 The Hon. Robert H. Winters, Minister of Trade and Commerce announced that 'bn April 28, our Charge d'affaires in Washington signed on behalf of the Government of Canada a Protocol extending the current International Wheat Agreement without amendment for a further year to 31st July, 1967."
  - The Secretary of the United States Department of Agriculture Mr. Orville L. Freeman announced a 15 per cent increase in the national acreage allotment for wheat for the 1967 crop. The Secretary said this means that U.S. farmers will be permitted to plant an additional 7.7 million acres of wheat this fall and next spring for harvest in 1967.
