WORLD WHEAT SITUATION

World Wheat Exports
Lower than Previous
Year

Total exports of wheat and wheat flour in terms of wheat from the <u>four traditional major exporters</u> during the August-May period of the current crop year have amounted to 1,334.1 million bushels, a decrease of 15 per cent

from the previous peak of 1,574.2 million bushels exported during the same ten months in 1965-66 but exceeding by a margin of 35 per cent the ten-year (1955-56-1964-65) average shipments for the same ten months of some 988.0 million bushels. As indicated in the accompanying table, based on the Canadian crop year, Australia was the only one of the four major exporters with shipments higher this year than last, while those from Argentina were sharply down from the previous year and shipments from the United States and Canada decreased moderately.

Exports of Wheat and Flour in Terms of Wheat, August 1966-May 1967 with Comparisons

⁽¹⁾ Revised.

Wheat Supplies of Four Major Exporters Above a Year Ago Supplies of wheat held by the four traditional major exporters at June 1, 1967, for export and for carryover at the end of their respective crop years amounted to 1,437.8 million bushels compared with 1,347.3 million

at the same time a year ago. Although supplies were smaller in United States and Argentina these decreases were more than offset by increases in the totals for Canada and Australia. Supplies at June 1, 1967, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 471.8 (624.8); Canada, 679.5 (549.1); Argentina, 47.2 (66.0); and Australia, 239.3 (107.4).

CANADIAN SITUATION

Decline in Carryover Offset by Record Production Stocks of Canadian wheat carried into the 1966-67 crop year were the smallest since 1962 and represented a decline of some 92.9 million bushels from the July 31, 1965 total. This decrease in stocks of Canadian wheat

was offset by a wide margin by the unprecedented 1966 harvest. The 1966 Canadian wheat crop was estimated at an all-time high of 844.4 million bushels and reflected a combination of record average yields per acre and record seeded acreage. The 1966 wheat production was in sharp contrast to both the 1965 figure of 648.9 million bushels and the previous record of 723.4 million in 1963. As a consequence, total supplies, at 1,264.6 million bushels, are some 4 per cent above the previous peak of 1,210.7 million in 1963-64 and 9 per cent larger than the 1965-66 total of 1,161.9 million bushels. After making an allowance of 155.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1966-67 amounted to 1,109.6 million bushels, 10 per cent larger than the 1,005.0 million in 1965-66.

August-May Exports
6 Per Cent Below
Record

During the August-May period of the current Canadian crop year, exports of wheat and flour in terms of wheat equivalent amounted to 430.0 million bushels. This was 6 per cent below the previous high of 456.0 million

exported during the same period a year ago. This year's exports consisted of 400.2 million bushels of wheat in bulk, 692 thousand of bagged seed and 29.1 million of flour in terms of wheat. These figures were 422.7 million of wheat in bulk, 753 thousand of bagged seed and 32.5 million of flour in wheat equivalent during the comparable period of last year. On June 1, 1967, the balance remaining for export and for carryover amounted to 679.5 million bushels, some 24 per cent above the June 1, 1966 total of 549.1 million.

Canadian Wheat Supplies

⁽¹⁾ Revised. (2) Preliminary. (3) Less than 50,000 bushels. (4) As reported by the Board of Grain Commissioners. (5) Customs returns, 1965-66 adjusted for time lag.

Marketings, Disappearance and Visible Supplies

Total primary deliveries of wheat (both east and west) up to June 21 of the current crop year have amounted to 526.3 million bushels as against 454.9 million

marketed during the same period of the previous year and the highest marketings on record. Some 70.8 million bushels of this year's total were delivered during the four weeks May 25 to June 21, 1967. During the same period, the volume of Canadian wheat entering domestic and export channels amounted to 52.7 million bushels. As a result, the total visible supply of Canadian wheat increased from 300.4 million at May 24 to a level of 318.7 million at June 21, 1967.

The total visible supply of Canadian wheat at June 21 this year represented an 8 per cent increase over the 1966 comparable total of 296.2 million bushels but was 3 per cent less than the 1965 figure of 327.7 million. Country elevator stocks, amounting to 175.8 million bushels, were 11 per cent above the 1966 comparable total of 158.6 million but 8 per cent below the 190.5 million of 1965. Wheat stocks at interior terminals, at June 21, 1967, totalled 13.5 million bushels, in contrast to the 1.3 million of the previous year and more than double the 1965 total of 5.0 million. Wheat stocks "in transit rail" (western division) amounted to 14.9 million bushels, 25 per cent less than the 19.7 million of a year ago but 26 per cent more than the 11.8 million of two years ago. Supplies at the Canadian Lakehead, totalling some 27.8 million bushels, were below the 43.8 million at June 22, 1966 and lower than the 33.8 million in 1965. The 11.8 million bushels "in transit lake" this year were 2 per cent lower than the comparable 12.0 million of 1966 but above the 9.1 million of two years ago. The 21.9 million bushels in Bay, Lake and Upper St. Lawrence ports, were higher than the 13.8 million of 1966 but less than the 26.8 million of 1965. Supplies in Lower St. Lawrence and Maritime ports, at June 21, 1967, at 32.5 million bushels, were higher than both the 24.3 million of 1966 and the 29.6 million of 1965. The 10.8 million bushels in West Coast ports (Vancouver-New Westminster, Prince Rupert and Victoria) registered a decline from the 11.8 million of the previous year but was above the 7.3 million in these positions in 1965.

May 1967 Exports of Wheat and Flour Total 59.7 Million Bushels Combined exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent, amounted to 59.7 million bushels during May 1967. This volume was 93 per cent above last month's total

of 30.9 million, 56 per cent more than the ten-year (1956-65) May average of 38.3 million, and 31 per cent above the May 1966 total of 45.6 million. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during May 1967 totalled 57.1 million bushels, more than double the April 1967 total of 27.8 million, 64 per cent larger than the ten-year average of 34.9 million and 29 per cent above the 44.4 million of May 1966. Based on Canadian Customs returns, the equivalent of 2.5 million bushels of wheat was exported in the form of flour during May 1967 a decrease of 13 per cent from the previous month's figure of 2.9 million but more than double the May 1966 adjusted total of 1.2 million.

Cumulative exports of wheat in bulk during the August-May period of the current crop year amounted to 400.2 million bushels, a decrease of 5 per cent from the record 1965-66 comparable figure of 422.7 million, but sharply above the ten-year average for the period of 252.6 million. This year's shipment of wheat to the U.S.S.R. (Russia) and to China Communist each totalled 80.8 million bushels and accounted for a combined 40 per cent of the ten-month total exports of wheat in bulk form. Shipments of wheat to Britain amounted to 54.0 million and accounted for 13 per cent of the August-May 1966-67 total. During the

same period of 1965-66 shipments to the U.S.S.R. (Russia) amounted to 157.7 million and accounted for 37 per cent of the August-May total, while China Communist received shipments of 58.7 million or 14 per cent of the total and Britain, at 57.2 million accounted for 14 per cent of total. Other principal markets for Canadian wheat in bulk during the first ten months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: Japan, 49.6 (38.7); India, 31.1 (9.4); Federal Republic of Germany, 18.8 (18.2); Belgium and Luxembourg, 12.2 (9.2); and Poland, 10.6 (7.7).

Cumulative exports of bagged seed wheat during August-May 1966-67, based on Canadian Customs returns, amounted to 692 thousand bushels compared with the 1965-66 corresponding total (adjusted to remove time lag) of 753 thousand.

Cumulative exports of wheat flour during the first ten months of the 1966-67 crop year, based on Customs returns, were the equivalent of 29.1 million bushels, a decrease of 10 per cent from the adjusted August 1965-May 1966 total of 32.5 million. The leading markets for Canadian wheat flour in terms of wheat equivalent during the August-May period of the 1966-67 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Cuba, 11,142 (9,776); Britain, 5,114 (7,318); India, 1,500 (1,512); Jamaica, 1,432 (1,301); Ghana, 1,119 (747); Ceylon, 1,049 (898); Leeward and Windward Islands, 912 (843); Trinidad and Tobago, 903 (1,116); and Costa Rica, 862 (855).

General Quota Position

By July 17, 1967, the Canadian Wheat Board had placed 1,881 of the 1,895 shipping points in the Western Division on a quota of 8 bushels per

specified acre and fourteen stations were reported as "closed". In addition a supplementary quota on wheat of 5 bushels per seeded acre was in effect in 1,878 shipping points.

Summary of Elevator Shipping Points in the Western Division as at July 17, 1967

WEEKLY VISIBLE SUPPLY OF CANADIAN WHEAT

CUMULATIVE RECORD OF WHEAT MARKETINGS IN THE PRAIRIE PROVINCES BY WEEKS

(Data in both charts for crop years beginning August 1)

Lake Shipments of Canadian Grain

Total shipments of the six major grains out of Lakehead terminals from the opening of navigation to June 21 this year amounted to 146.3 million bushels, only one per cent

below the 148.3 million shipped during the comparable period of the previous year. In 1967 the season of navigation opened on April 13 while the 1966 season opened on April 3. Shipments of wheat, at 105.5 million were 8 per cent below the 1966 figure of 114.4 million bushels and accounted for 72 per cent of the total six grains.

CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during May 1967 amounted to 2,989,000 hundredweight, indicating an increase of 2 per cent over the April 1967 output of 2,923,000 hundredweight, but 1 per cent less than the May 1966 total of 3,010,000 hundredweight and 10 per cent below the ten-year (1957-66) average production for the month of May of 3,336,000 hundredweight.

Mills reporting operations during May 1967 had a total rated capacity of 165,000 hundredweight per 24-hour day and on the basis of a 26-day working period 69.5 per cent of this rated capacity was effective.

Wheat milled for flour during May 1967 amounted to 6,707,000 bushels, 2 per cent over the 6,571,000 bushels milled during the preceding month, but 1 per cent less than the 6,760,000 bushels milled during May 1966. Of the wheat milled for flour during May 1967 some 5,701,000 bushels were Western Canadian spring wheat (other than Durum) while the remainder consisted of Ontario winter wheat (591,000 bushels); Durum (326,000 bushels); and all other (89,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during May 1967 amounted to 1,109,000 hundredweight (some 2,550,000 bushels of wheat equivalent) 13 per below the 2,940,000 bushels exported during the previous month but more than double the adjusted May 1966 exports of 1,241,000 bushels. Flour shipments during the month went to fifty countries with exports to Cuba amounting to 999,000 bushels of wheat equivalent and accounting for 39 per cent of the May total. Other principal markets for Canadian wheat flour in terms of wheat during the month, with shipments in thousands of bushels were as follows: Britain, 360; India, 273; Ghana, 166; Jamaica, 114; Leeward and Windward Islands, 103; and Sierra Leone, 84.

UNITED STATES SITUATION

Current Crop Year
Supplies Below
Previous Year

At July 1, 1966, carryover stocks of wheat in the United States totalled some 536.0 million bushels; this was the lowest opening stocks in thirteen years and the fifth consecutive decline since 1961. The 1966 U.S. production

was estimated at 1,310.6 million bushels and 5.0 million less than the 1965 outturn. As a consequence, total domestic supplies of wheat in the United States for the 1966-67 crop year were estimated at 1,846.7 million bushels, 13 per cent lower than the 1965-66 total of 2,133.3 million. Anticipated domestic requirements are placed at 688.0 million bushels leaving some 1,160.4 million bushels available for export and for carryover in 1966-67, a decrease of 17 per cent from the 1,405.3 million in 1965-66.

Exports 12 Per Cent Below Previous Year During the period July 1966-May 1967, exports of wheat and wheat flour in terms of grain equivalent amounted to 688.6 million bushels. This was a decrease of 12 per

cent from the 780.5 million exported during the same months last year. On June 1, 1967, the balance remaining for export and for carryover was estimated at 471.8 million bushels as against 624.8 million on the same date a year ago.

1967 Wheat Crop Forecast at 1,550 Million Bushels In a report released on June 9, 1967 the Crop Reporting Board of the United States Department of Agriculture stated in part that all wheat production is forecast at a record 1,550 million bushels, topping the high

established in 1958 by 93 million bushels. The June forecast is 18 per cent above last year and 28 per cent above average.

Winter Wheat A record winter wheat crop continues in prospect. The June 1 forecast of 1,237 million bushels is 4 per cent above a month earlier and 17 per cent above last year. Prospects improved in the Central Plains States as cool May weather and timely moisture more than offset early May freeze damage. Wheat in Montana, the Pacific Northwest, and the Corn Belt, continued to make generally excellent progress with prospects mostly improved from a month earlier. Yield prospects declined in Texas, New Mexico, and South Dakota because of damage from freezing temperatures and dry weather. In the East and South, prospects changed only slightly during May. By June 1, harvest was well under way in the Gulf Coast States, South Carolina, Arkansas, and Oklahoma. Combining was also under way in Arizona and California.

The yield per harvested acre of 27.7 bushels compared with 27.4 bushels in 1966 and the average of 26.2 bushels. In the past decade, the average change in the United States production estimate from June 1 to harvest has been 50 million bushels -- ranging between 0 and 105 million bushels.

Cool weather and timely May rains boosted yield prospects in Kansas, Colorado, and Oklahoma, more than offsetting earlier freeze damage. Nebraska wheat was showing stress toward the end of the month from dry weather. However, widespread late May rains arrived during the critical development period enabling the crop to maintain the previous month's good prospects.

Late May precipitation, along with early June rains, covered the entire Plains area providing excellent filling conditions. The rains came too late to greatly benefit the earlier maturing Texas and New Mexico crops where prospects are below a month ago.

In the Pacific Northwest and Montana, moisture continues in good supply and record to near record yields are in the offing.

Wheat prospects in the eastern half of the Nation showed only slight changes from the generally favourable conditions of a month earlier. Cool weather slowed growth, but with adequate to abundant moisture, yield prospects are mostly excellent.

All Spring Wheat Production of all spring wheat is forecast at 313 million bushels, 23 per cent larger than in 1966 and 28 per cent above average. The current estimate is based on June 1 yield prospects and the intended acreage established in March.

Soil moisture is in good supply throughout the major spring wheat area. Seeding was completed by the end of May except for minor acreages along the Canadian border. Planting, however, was later than usual and most of the acreage in North Central areas ranges from barely emerged to tillering. In North Dakota, only 4 per cent of the crop had reached the jointing stage by June 6 compared with 10 per cent last year and the 10-year average of 16 per cent. Seeding also was later than usual in most other spring wheat areas and cold, wet weather retarded development.

Durum wheat production is placed at 86 million bushels compared with 63 million bushels in 1966 and the average of 56 million bushels. Prospects indicate the largest durum crop since 1928. Other spring wheat is estimated at 227 million bushels, up 36 million bushels from last year and 39 million bushels above average.

Secretary Freeman
Announces State Wheat
Acreage Allotments
for 1968

On June 29, Secretary of Agriculture, Orville L. Freeman, announced 1968 crop wheat State acreage allotments based on the national allotment of 59.3 million acres announced June 23.

The 1968 national allotment compares to a 1967 allotment of 68.2 million acres and a 1966 allotment of 51.6 million acres.

As indicated in the announcement of June 23, the 1968 acreage allotment would provide a crop of approximately 1.5 million bushels with average weather. A crop of this size will balance with estimated domestic use of 735 million bushels and an export target of at least 750 million bushels during the 1968-69 marketing year which begins July 1, 1968.

As directed in the Food and Agriculture Act of 1965, State, county, and farm allotments for 1967 and subsequent years are determined on the basis of the preceding year's State, county and farm allotments, respectively. Thus, for 1968, the State allotments are based on those of 1967.

As in previous years, eligibility for price-support loans and wheat marketing certificates will depend on farmers' meeting program provisions. Other operating details for next year's crop will be announced soon.

Major Operating
Provisions of 1968
Wheat Program
Announced by
Secretary Freeman

On July 7 major operating provisions of the 1968 wheat program were announced by Secretary of Agriculture, Orville L. Freeman. They will be virtually identical to those in effect for the 1967 crop.

"The 1968 wheat program will assure an ample supply of wheat to meet all needs, both domestic and foreign, and will protect farm income," Secretary Freeman said. "Total wheat income for 1968 will be around the levels for the 1967 and 1966 crops, or between \$500 and \$600 million more than under programs which were in effect prior to the Food and Agriculture Act of 1965," the Secretary declared.

The 1968 wheat program provisions are:

- 1. Price-support loan level will be at a national average of \$1.25 per bushel.
- 2. Domestic marketing certificates will be issued on an estimated 530 million bushels. They will be valued at the difference between full wheat parity and the \$1.25 loan value. (For the 1967 crop, domestic certificates worth \$1.36 per bushel are to be issued on 520 million bushels of wheat.)
- 3. Marketing certificates issued to co-operating farmers, and which are an important part of their income, in 1968 will reflect the projected production on 40 per cent of farm allotments based on the national allotment of 59.3 million acres. (For 1967, the marketing allocation percentage is 35 per cent on a national allotment of 68.2 million acres.)

- 4. There will be no acreage diversion program for the 1968 wheat crop.
- 5. Wheat may continue to be planted on feed grain acreage on farms participating in both programs, and feed grains may be planted on wheat allotment acreage. Producers will be able to substitute wheat for oats and rye on the same basis as in the 1967 program. If barley is not included in the 1968 feed grain program, wheat can be substituted for barley on an acre for acre basis in the same manner as for 1967.
- 6. The "excess wheat option" in the 1967 program will be continued in 1968. Under this option, a producer can plant in excess of his allotment acreage and be eligible for marketing certificates and price-support loans, if: the wheat acreage does not exceed the allotment by more than 50 per cent, the excess production is stored, and the farmer complies with other terms and conditions similar to those in effect for 1967.
- 7. Program participation requirements for 1968 will be the same as for 1967. Producers will need to:
 - Stay within their farm wheat allotment. (Unless the excess wheat option or substitution provisions are used.)
 - Meet the conserving base established for the farm. (The 1968 conserving bases will be increased by the same amount they were decreased when the last 15 per cent increase in acreage allotments was made for 1967.)
 - Remain within any other crop acreage allotments established for the farm.
 - Be in compliance with wheat allotments, substitution provisions, or excess wheat option on other farms in which the producer has an interest.

As in 1967, the production of alternate nonsurplus crops will not apply in 1968 because there will be no wheat acreage diversion requirement.

The value of domestic certificates purchased by processors to cover wheat used for domestic food will be 75 cents a bushel, unchanged from 1967.

As announced December 23, 1966, the resale policy for Commodity Credit Corporation-owned wheat for the 1967 crop marketing year (ending July 1, 1968) will continue at a minimum of 115 per cent of the loan rate, plus carrying charges for sales for unrestricted use.

The Bureau of the Census, Department of Commerce, estimated wheat flour production in May at 21,000,000 hundredweight, averaging 936,000 hundredweight per working day. This compared with an average output per working day of 988,000 hundredweight last month and 982,000 hundredweight in May 1966. Wheat flour mills during May operated at 82.4 per cent of capacity compared with 87.0 and 89.0 per cent, respectively, for the previous month and the same month a year ago.

Flour mills in May ground 46,000,000 bushels of wheat, compared with 44,000,000 bushels in the previous month. Wheat offal output was 361,000 tons.

AUSTRALIAN SITUATION

Wheat Supplies At Record Level Due to Record Production For the 1966-67 marketing year, total supplies of wheat in Australia are estimated at an all-time high of 478.4 million bushels in contrast to the previous year's total of 284.1 million. The crop recently harvested, at some 461.8 million

bushels, is approximately 25 per cent larger than the previous record of 370.0 million harvested in 1964-65. Carryover stocks declined from 24.4 million bushels at December 1, 1965, to 16.5 million in 1966. As a result, an estimated 393.4 million bushels are available for export and for carryover during 1966-67 after deducting some 85.0 million for anticipated domestic requirements; these available supplies are sharply above the comparable total of 191.2 million in 1965-66.

During the period December 1 - May 20 of the current Australian crop year, combined exports of wheat as grain and wheat flour in terms of grain equivalent amounted to a record 154.1 million bushels and was 84 per cent larger than the 83.8 million exported during the corresponding period of 1965-66. On May 21, 1967, the balance remaining for export and for carryover at 239.3 million bushels exceeds by a wide margin the comparable 1966 total of 107.4 million.

⁽¹⁾ Revised.

The following information relative to the Australian situation has been extracted from a report from Mr. J.E.G. Gibson, Assistant Commercial Secretary for Canada, Canberra, under date of June 13, 1967, and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

⁽²⁾ Preliminary.

Australian Wheat and The Kennedy Round The Kennedy Round negotiations on wheat which resulted in a new basic minimum price of Australian \$1.55 (\$1.88 Canadian) per bushel have met with a mixed reaction from wheat-growers

and officials here. Commenting on these developments Dr. Callaghan, Chairman of the Australian Wheat Board, said that to translate the new minimum price into f.o.b. prices for Australian wheat, freight rates have to be considered, as well as an agreed quality differential of minus 5 cents (Canadian) for Australian wheat, in comparison with the U.S. Hard Winter Ordinary. These adjustments bring the minimum f.o.b. price per bushel for Australian wheat down to \$ A. 1.44, which is the equivalent to \$1.74 Canadian currency - this will, of course, vary with movements in relevant freights.

The new minimum of \$A.1.44 (\$1.74) per bushel is approximately A. 19° to A.20° (23 cents to 24 cents) above the minimum in the present International Wheat Agreement. While the minimum price finally obtained in the Kennedy Round negotiations is below that sought by exporters, the lift in the minimum price to \$A1.44 (\$1.74) per bushel is an added protection against any substantial fall in price, and to this extent is a decided gain.

The new agreement also includes an arrangement which is an advance on previous international agreements, in that it provides for wheat price quality differentials which will act as guide lines when prices are at the minimum, and will thus remove a good deal of the uncertainty of the floor price which exists in the present International Wheat Agreement.

Australia's Minister of Trade and Industry stated that it cannot yet be predicted what the average price improvement for wheat will be as a result of the agreement. However, on the basis of early estimates ranging from 8 cents to 16 cents per bushel (Canadian), Mr. McEwen predicted foreign exchange increased earnings of between \$A.20 million and \$A.40 million (\$24.2 million and \$48.4 million) per year.

However, it has been noted here that the best wheat type has been charged from No. 1 Northern Manitoba to U.S. Hard Winter Ordinary. Taking into account the differences between these two wheats plus the fact that Australian F.A.Q. wheat sells at between five and ten cents per bushel less than the U.S. variety, it is possible that Mr. McEwen's predictions were a bit overly optimistic.

Wheat-growers were somewhat dismayed with the new price. One association termed it "a concession to the importing countries" while another stated that "the result of those negotiations appears a victory for the agricultural protectionists." Most of their disappointment stems from the fact that they, as well as the Minister of Trade, according to earlier public statements, expected to secure a substantially higher price. Nonetheless, it is clear that Australian wheat-growers will not lose anything as a result of the Kennedy Round.

The Australians were delighted with the news that agricultural importers have agreed to share with exporters in providing 4.5 million tons (168,000,000 bushels) of wheat to the under-developed nations. For years, the Australian government has publicly advocated a scheme of this nature but has been met with a stony silence from several of the "industrial nations". Australia's share of the food-aid programme will amount to 225,000 metric tons (8,400,000 bushels) which will necessitate a fifty percent increase over the average of recent years.

In general, the Australian reaction to the results of the Geneva talks has been one of mild satisfaction in that the new minimum price level will put Australian wheat on a somewhat more favourable selling level. In summarizing his views, the Australian Wheat Board Chairman said:

"All in all the agreement represents a substantial advance in international understandings, and means that the wheat trade of the world will continue on an orderly basis, with additional protection afforded by the higher minimum prices."

Production and Exports Rain finally began to fall in eastern Australia during the latter part of May and fortunately many areas received a good, steady, soaking rain which enabled farmers to commence sowing this year's wheat. Wheat planting should normally have taken place during April and early May but had to be postponed owing to the lack of rain. In spite of delayed sowings, it still would appear that this year's acreage sown will be a new record.

The expected wheat sale to Mainland China was announced on May 26. The new contract is worth about \$A.90 million (\$108.9 million Canadian) and covers 1.5 million tons (56,000,000 bushels) of F.A.Q. and off-grade, weather-damaged wheat to be shipped during the period July - December 1967. A ten per cent optional margin is included in this contract and, if this is exercised, China's wheat purchases from Australia during the past year will amount to 3.3 million tons (123.2 million bushels) which would represent an all time high.

The news of this sale has been happily received here and it is the first "cash sale" to China for some time and of course it virtually assures successful disposal of the surplus from last year's record wheat harvest. Surplus wheat stocks from last year's crop are now down to about 70 million bushels with six months of the current selling year remaining.

ARGENTINE SITUATION

Total Supplies
Considerably
Below Previous
Year

The 1966-67 Argentine production of wheat is now estimated at 234.4 million bushels; this was 6 per cent larger than the 220. million harvested in 1965-66. A sharp reduction in opening stocks from 130.1 million bushels at December 1, 1965, to only 13.8 million in 1966 offset the increased

1966 production. As a consequence, total supplies are estimated at 248.2 million bushels and some 20 per cent less than the level of 350.5 million of the previous year. An estimated 104.3 million remain available for export and for carryover in 1966-67 in contrast to 219.0 million in 1965-66 after making an allowance of 144.0 million bushels for anticipated domestic requirements.

During December 1966 - May 1967, based on preliminary data exports of wheat and wheat flour in terms of wheat amounted to 57.1 million bushels. This was in sharp contrast to the 153.0 million exported during the same months in 1965-66. On June 1, 1967, the balance remaining for export and for carryover was estimated at 47.2 million bushels in contrast to the June 1, 1966 total of 66.0 million.

⁽¹⁾ Revised.

The following account of the Argentine situation has been extracted from a report from Mr. H.E. Ryan, Assistant Commercial Secretary (Agriculture), Buenos Aires, under date of June 22, 1967 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions to Canadian measures and currency have been made for the convenience of our readers.

⁽²⁾ Preliminary.

⁽³⁾ Includes allowances for farm stocks.

Weather and Crops

There was practically no rainfall during the month of May and certain areas, particularly in the province of La Pampa, where April rainfall was minimum, suffered from dry conditions. As well, abnormally high temperatures existed during much of May which worsened the situation. At the end of the month, rains began to fall throughout the grain areas with the exception of parts of Santa Fe and La Pampa. This became general during early June and latest reports indicate that normal cereal moisture exists throughout most of the regions. Temperatures have now fallen and a cold wave covers the country. This will favour normal seasonal development of winter crops.

The drought which occurred during April and May prevented some sowing of dual purpose lots, but the soil condition in most of the wheat area has improved. Ploughing was in full progress by late May, and at present, seeding is occurring throughout the region. Normally, the bulk of the Argentine wheat crop is sown between June and July and with the present favourable weather and soil conditions, it is expected that a large area may be planted this year. It is, however, by no means certain that the eight-million-hectare (19.8 million acres) objective of the Government will be met. The minimum price for the new crop has not been announced but with the strong prices currently in effect, producers have been given considerable incentive.

There is now a noticeable shortage of supply. During the month of May, both exporters and millers were obliged to raise their prices almost daily. Even with this increase, stocks were slow to come on to the market as producers held back in speculation of even higher prices. By the end of May, exporters were paying 1,920 pesos per 100 kilos (\$1.62 per bushel) delivered Buenos Aires and 1,780 pesos (\$1.50 per bushel) for delivery in Bahia Blanca. This was approximately 200 pesos (17 cents per bushel) more than quotations of the previous month. Millers were forced to pay as much as 1,950 pesos (\$1.64 per bushel) for grain in Buenos Aires. The price was maintained during early June, reaching a level of 2,000 pesos (\$1.69 per bushel). However, the trade was expecting some Government measures designed at counteracting the speculative market forces and by the second week rumours of an export ban on bread wheat had resulted in a price of 1,800 pesos (\$1.52 per bushel) for Buenos Aires.

The Argentine Government, on June 13, issued a decree banning exports of bread wheat, the only exception being shipments to Brazil under the existing Argentine-Brazilian Agreement. This should require 117,000 metric tons (4,299,000 bushels) moving to the neighbouring country. The ban has met with mixed reactions in local trade circles. Although in keeping with the Government policy of controlling prices in an endeavour to help fight inflation, it did again place the Argentine Government in the country's grain trade and affect private participation. The ban will likely, it is felt, prejudice some of the country's foreign customers, particularly Peru and possibly the new market of South Africa. Three months ago, the National Grain Board offered 90,000 metric tons (3,307,000 bushels) of bread wheat to South Africa, and it would now appear that this commitment cannot be fulfilled. The trade have indicated that existing foreign commitments will now likely have to be met by purchases from other wheat exporting countries.

At the time of writing, prices in the Buenos Aires Cereal Exchange were as follows: for hard wheat 1,680 pesos per 100 kilos (\$1.42 per bushel); for semi-hard 1,640 pesos (\$1.38 per bushel) and for durums 1,720 (\$1.45 per bushel). At Bahia Blanca, the respective prices were 1,530, 1,490 and 1,630 (\$1.29, \$1.26 and \$1.37 per bushel). In the Buenos Aires, Futures Market prices

in early June rose as high as 2,051 pesos (\$1.73 per bushel) for July delivery and 2,065 pesos (\$1.74 per bushel) for September delivery. The market stabilized, however, and after the announcement of the ban on exports, prices decreased to 1,850 pesos (\$1.56 per bushel) for July delivery; 1,880 (\$1.58 per bushel) for August; 1,890 (\$1.59 per bushel) for September and 1,919 pesos (\$1.62 per bushel) for October delivery f.o.r. Buenos Aires. At present, prices average 1,810 pesos (\$1.53 per bushel) for July delivery, increasing by 10 pesos (nearly one cent per bushel) per month.

Even prior to the ban on exports no export sales were reported. Export prices for durums by the end of May averaged U\$S 68.50 per metric ton (\$2.02 per bushel) f.o.b. Buenos Aires, full cargo June-July shipment. Durums were being quoted at U\$S 80.75 (\$2.38 per bushel) c.i.f. Italy.

GRAIN SITUATION IN BRITAIN

The following account of the current grain situation in Britain has been extracted from a recent report received from Mr. F.G. Beaudette, Assistant Commercial Secretary (Agriculture), London and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

Weather and Crops

Cold, wet conditions prevailed throughout May, but from early June there has been a continuous period of dry, sunny weather with temperatures well up to average. Cereal crops are generally satisfactory, although waterlogging from the heavy May rains has caused some yellowing and patchiness and has made cultivations difficult. Winter wheat has made good growth although there has been some yellow rust. Early-sown spring wheat is in reasonable condition, but later sown crops are somewhat backward. Winter barley has progressed well and in some areas is coming into ear. Spring barley has been generally slow in growth with damage by disease, pests and waterlogging. Both winter and spring oats have made satisfactory growth and are healthy.

Production Forecast Acreage figures available for England and Wales based on the March survey indicate that acreages for all types of cereals are only marginally higher than the 1966-67

acreages. It should be noted, however, that the March returns are in respect of a date prior to the announcement at the Annual Price Review when the guaranteed price for barley was reduced. This assessment implies an acreage increase of 1.4 per cent for wheat and a reduction of 1.1 per cent for barley with an 18 per cent increase on the considerably higher acreages for oats and mixed corn. In obtaining an indication of total cereals production for the United Kingdom by applying the 1966-67 yield estimates to the 1967-68 acreages, the following assessment is resolved:

	1966-67 million	
Wheat Barley Oats	130.7 410.7 72.5	130.7 406.0 85.7
Totals	613.9	622.4

The final figures of the estimated acreages of cereals to be harvested in the 1967-68 crop year will not be available until publication of the June returns which will enable a more accurate assessment of production to be made in conjunction with the first Ministry estimates of yields which are also expected to be released shortly.

CALENDAR OF WHEAT EVENTS

- June 9 According to a report published by the Crop Reporting Board, United States Department of Agriculture, wheat production in that country in 1967, based on conditions at June 1, was forecast at a record 1,550 million bushels, topping the high established in 1958 by 93 million bushels. The June forecast was 18 per cent above last year and 28 per cent above average.
 - According to a report received from Mr. J.E.C. Gibson, Assistant Commercial Secretary for Canada, Canberra, rain finally began to fall in eastern Australia during the latter part of May and fortunately many areas received a good, steady soaking which enabled farmers to commence sowing this year's wheat. In spite of delayed sowings, it still would appear that this year's acreage sown will be a new record.
 - A report released by Mr. H.E. Ryan, Assistant Commercial Secretary (Agriculture) for Canada, Buenos Aires, indicated that rain became general during early June and latest reports indicate that normal moisture conditions exist throughout most of the cereal-growing regions. Temperatures have now fallen and a cold wave covers the country. This will favour normal seasonal development of winter crops.
 - United States Secretary of Agriculture, Orville L. Freeman, has announced the 1968-crop wheat State acreage allotments. The 1968 national allotment, of 59.3 million acres, compares with the 1967 allotment of 68.2 million and the 1966 allotment of 51.6 million acres.
- July 1 The United States Secretary of Agriculture, Orville L. Freeman announced the major provisions of the 1968 wheat program. For details see page 24 of this publication.
