WORLD WHEAT SITUATION

1966-67 Wheat Exports
Third Highest on Record

Total exports of wheat and wheat flour in terms of wheat from the <u>four traditional major exporters</u> during the August-March period of the current crop

year have amounted to 1,073.2 million bushels, 14 per cent below the previous peak of 1,244.6 million bushels exported during the same eight months in 1965-66 but exceeding by a margin of 42 per cent the ten-year (1955-56-1964-65) average shipments for the same period of 754.1 million. As indicated in the accompanying table, based on the Canadian crop year, Australia was the only one of the four major exporters with shipments higher this year than last, while those from Argentina were sharply down from the previous year and shipments from the United States and Canada decreased moderately.

Exports of Wheat Flour in Terms of Wheat, August 1966-March 1967 with Comparisons

August-March	United States	Canada	Argentina	Australia	Total
			million bushels		7-1-1

(1) Revised. (2) Preliminary.

World Wheat Supplies Slightly Above Previous Year Supplies of wheat held by the <u>four traditional major</u> exporters at April 1, 1967 for export and for carry-over at the end of their respective crop years amounted to 1,697.6 million bushels compared with

1,677.6 million at the same time a year ago. Although supplies were smaller in United States and Argentina these decreases were more than offset by increases in the totals for Canada and Australia. Supplies at April 1, 1967, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 576.0 (787.1); Canada, 769.4 (637.0); Argentina, 78.4 (118.3); and Australia, 273.8 (135.2).

I.W.C. Report

In its report on the Wheat Market for January-March, the International Wheat Council stated in part as follows:

Sowings and Crop Prospects for 1967-68 On the basis of the first indications of sowings or sowing intentions for a number of the main producing countries which are now available, it seems likely that the world wheat area for the 1967-68 harvest will equal or perhaps even exceed the area sown for the record crop of 1966-67.

In the United States, the U.S.D.A. April 1 production estimate forecast a winter wheat harvest of 1,162 million bushels (31.6 million metric tons). This compares with 1,057 million bushels (28.8 million metric tons) last year but is 120 million bushels (3 1/4 million metric tons) below the December 1966 forecast. On the basis of a 20 per cent increase in spring sowings 2.2 million acres (0.9 million hectares) the overall United States wheat crop may thus reach 1,500 million bushels (40.8 million metric tons), compared with the final estimate of the 1966 total crop of 1,310.6 million bushels (35.7 million metric tons). The Dominion Bureau of Statistics reports that Canadian farmers intend to plant a record 31.1 million acres (12.6 million hectares) to all classes of wheat during 1967 - 3 per cent more than last year. It is reported that winter wheat was sown under dry conditions in some parts of the U.S.S.R. and that these areas may be partly re-sown with spring wheat.

Mild conditions in Europe have enabled farmers in many countries to bring their total winter wheat sowings to levels comparable with those for the previous crop, although in a number of cases, winter wheat areas are well below the average levels of the early 1960's. In France the area sown to March 1, 1967 was equal to that of a year earlier, although still 1.5 million acres (0.6 million hectares) below the corresponding figure for 1965. Mainly as a result of last autumn's severe flooding Italian winter wheat areas have been reduced by 10 per cent 1.0 million acres (400,000 hectares). In the Federal Republic of Germany where winter wheat sowings were 6 per cent greater than last year, spring areas are expected to fall by 10 per cent, leading to an overall increase of 3 per cent 0.1 million acres (about 50,000 hectares). Wheat areas are also expected to increase in Spain, Sweden, Yugoslavia and the Netherlands, but will probably be lower in Denmark and Greece. Winter wheat sowings were sharply lower in the United Kingdom and these reductions may not be wholly offset by spring plantings.

Good rains have fallen over wide areas in both Argentina and Australia, providing a favourable environment for the forthcoming sowings. Areas of wheat are likely to be again extensive in Australia, and in Argentina the government has asked growers to sow 19.8 million acres (8 million hectares) with wheat, compared with sown area of 15.6 million acres (6.3 million hectares) in 1966-67, in order to reach a target production of 477.7 million bushels (13 million metric tons).

Trade Commercial trade between member exporting and member importing countries in January-February 1967 was about 18.4 million bushels (0.5 million tons) larger than in November-December 1966 and in January-February 1966. Up to the end of February 1967 the cumulative total of this trade for the crop year 1966-67 amounted to 606.3 million bushels (16.5 million tons), an increase of 55.1 million bushels (1.5 million tons) over that for the same period in the previous crop year.

SOURCE: I.W.C. records,

() Net (minus) adjustment,

As can be seen in the accompanying table the main regional increases in the August-February period occurred in trade with the Far East, Japan 29.4 million and India 18.4 million bushels (0.8 and 0.5 million tons) and with Africa, South Africa 25.7 million and U.A.R. 18.4 million bushels (0.7 and 0.5 million tons). The increase in sales to South America is mainly due to higher sales to Peru. Transactions reported to Western Europe showed a decline of about 51.4 million bushels (1.4 million tons) of which those to the U.K. accounted for 25.7 million bushels (0.7 million tons).

Reports to the Council of the total trade of member countries, available at present up to the end of January 1967, indicate that in this period commercial and special transactions together were 165.3 million bushels (4.5 million tons) less than in the same period in 1965-66. The main factors underlying this decline were reduced purchases by the U.S.S.R. and western Europe of 191.1 million and 77.2 million bushels (5.2 and 2.1 million tons), respectively. Africa, on the other hand, increased its purchases considerably by just over 73.5 million bushels (2 million tons), which reflected not only substantially higher sales to South Africa but also the larger needs of countries in North Africa whose crops had been badly affected by drought. Algeria, Morocco and Tunisia, for example, have together taken 36.7 million bushels (1 million tons) more than in the previous year. An analysis of trade by type of transactions shows that total commercial purchases dropped by 136.0 million bushels (3.7 million tons) and special transactions by 29.4 million bushels (0.8 million tons). A decline in the special transactions of the U.S.A. of 106.6 million bushels (2.9 million tons) was partly offset by increased trade in this sector by Canada, Australia and U.S.S.R.

CANADIAN SITUATION

Record Production
Results in Record
Supplies

The 1966 wheat crop in Canada was estimated at an alltime high of 844.4 million bushels due to a combination of a record seeded acreage and record average yields per acre. The 1966 harvest exceeded by wide margins

both the 1965 outturn of 648.9 million bushels and the previous record of 723.4 million harvested in 1963. Although carryover stocks declined by some 92.9 million bushels to a level of 420.1 million, total supplies are estimated at a record 1,264.6 million bushels. Supplies of the size indicated represent an increase of 4 per cent above the previous peak of 1,210.7 million of 1963-64 and 9 per cent over the 1965-66 total of 1,161.9 million bushels. After making an allowance of 155.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1966-67 amounted to 1,109.6 million bushels, 10 per cent larger than the 1,005.0 million in 1965-66.

August-March Exports
8 Per Cent Below
Record

Exports of wheat and flour, in terms of wheat equivalent, during the August-March period of the current Canadian crop year, amounted to 340.1 million bushels, 8 per cent below the previous high of 368.0 million exported during

the same period a year ago. This year's exports consisted of 315.2 million bushels of wheat in bulk, 569 thousand of bagged seed and 24.4 million of flour in terms of wheat. During the comparable period of last year these figures were 340.6 million of wheat in bulk, 654 thousand of bagged seed and 26.8 million of flour in wheat equivalent. The balance remaining on April 1, 1967 for export and for carryover amounted to 769.4 million bushels, 21 per cent above the April 1, 1966 total of 637.0 million.

Canadian Wheat Supplies

Item	1965-66(1)	1966-67(2)

⁽¹⁾ Revised. (2) Preliminary. (3) Less than 50,000 bushels. (4) As reported by the Board of Grain Commissioners. (5) Customs returns, 1965-66 adjusted for time lag.

Marketings, Disappearance and Visible Supplies

Total primary deliveries of wheat (both east and west) up to April 19 of the current crop year have amounted to 401.2 million bushels compared the same period of the previous year and the

with 331.8 million marketed during the same period of the previous year and the highest marketings for that period since 1928-29. Some 30.8 million bushels of this year's total were delivered during the four weeks March 23 to April 19, 1967. During the same period the volume of Canadian wheat entering domestic and export channels amounted to 29.6 million bushels. As a result, the total visible supply of Canadian wheat increased from 311.2 million at March 22 to a level of 314.2 million at April 19, 1967.

The total visible supply of Canadian wheat at April 19 this year represented a 6 per cent increase over the 1966 comparable total of 296.1 million bushels but was 2 per cent less than the 1965 figure of 319.8 million. Country elevator stocks, amounting to 159.3 million bushels, were below both the 1966 comparable total of 182.3 million and the 176.4 million of 1965. Wheat stocks at interior terminals, at April 19, 1967 totalled 13.5 million bushels, in contrast to the 0.9 million of the previous year and more than double the 1965 total of 5.1 million. Wheat stocks "in transit rail" (western division) amounted to 17.3 million bushels, 67 per cent above the 10.4 million of a year ago and 76 per cent more than the 9.8 million of two years ago. Supplies at the Canadian Lakehead, totalling some 66.3 million bushels, were above both the 38.8 million at April 20, 1966 and the 65.2 million at April 21, 1965. The 2.1 million bushels "in transit lake" this year were in sharp contrast to the comparable 15.3 million of 1966 but slightly above the 1.1 million of two years ago. The 11.8 million bushels in Bay, Lake and Upper St. Lawrence ports, were higher than the 8.7 million of 1966 but less than the 13.5 million of 1965. Supplies in Lower St. Lawrence and Maritime ports, at April 19, 1967, at 23.8 million bushels, were above the 21.3 million of 1966 but below the 26.4 million of 1965. The 11.5 million bushels in West Coast ports (Vancouver-New Westminster, Prince Rupert and Victoria) exceeded both the 8.8 million of the previous year and the 9.2 million in these positions in 1965.

March 1967 Exports of Wheat and Flour Total 24.8 Million Bushels

Combined exports of wheat in bulk, bagged seed wheat and wheat flour in terms of grain equivalent, amounted to 24.8 million bushels during March 1967. This volume, while above last

month's total of 22.7 million and the ten-year (1956-65) March average of 23.7 million was well below the March 1966 total of 36.3 million. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during March 1967 totalled 21.7 million bushels, 8 per cent above the February 1967 total of 20.1 million and 11 per cent more than the ten-year average of 19.6 million but one-third less than the 32.4 million of March 1966. Based on Canadian Customs returns, the equivalent of 3.0 million bushels of wheat was exported in the form of flour during March 1967, an increase of 21 per cent over the previous month's figure of 2.5 million but 18 per cent below the March 1966 adjusted total of 3.7 million.

Cumulative exports of wheat in bulk during the August-March period of the current crop year amounted to 315.2 million bushels, a decrease of 7 per cent from the record 1965-66 comparable figure of 340.6 million, but sharply above the ten-year average for the period of 191.7 million. This year's shipments of wheat to China Communist totalled some 70.5 million bushels and to the U.S.S.R. (Russia), 66.9 million and accounted for 22 per cent and 21 per cent, respectively, of the eight-month total exports of wheat in bulk form. Shipments of

wheat to Britain amounted to 42.2 million and accounted for 13 per cent of the August-March 1966-67 total. During the same period of 1965-66 shipments to China Communist amounted to 43.5 million and accounted for 13 per cent of the August-March total, while U.S.S.R.(Russia) received shipments of 118.8 million or 35 per cent of the total and Britain, at 47.8 million accounted for 14 per cent of total. Other principal markets for Canadian wheat in bulk during the first eight months of the current crop year, with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels: Japan, 39.4 (30.6); India, 17.6 (8.6); Federal Republic of Germany, 12.5 (16.1); Belgium and Luxembourg, 10.6 (8.7); Poland, 8.3 (7.7); Italy, 5.8 (4.7); and Cuba, 5.6 (7.7).

Cumulative exports of bagged seed wheat during August-March of the current crop year, based on Canadian Customs returns, amounted to 569 thousand bushels compared with last year's corresponding total (adjusted to remove time lag) of 654 thousand.

Cumulative exports of wheat flour during the first eight months of the 1966-67 crop year, based on Customs returns, were the equivalent of 24.4 million bushels, a decrease of 9 per cent from the adjusted August 1965-March 1966 total of 26.8 million. The leading markets for Canadian wheat flour in terms of wheat equivalent during the August-March period of the 1966-67 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Cuba, 9,771 (8,515); Britain, 4,543 (6,299); Jamaica, 1,155 (1,104); Ceylon, 1,049 (814); India, 921 (1); Ghana, 879 (624); Trinidad and Tobago, 797 (951); Costa Rica, 776 (684); and Leeward and Windward Islands, 750 (671).

Delivery Quota on Alberta Winter Wheat

The Canadian Wheat Board, in its Instructions to the Trade, re Quotas (General), No. 25 under date of May 2, 1967, announced in part

that, "effective immediately and until June 15, 1967, the delivery quota on Alberta Winter Wheat is declared open at all delivery points. The purpose of temporarily opening the quota is to meet overseas requirements for Alberta Winter Wheat and the Board is anxious to have as much of this wheat as possible at Vancouver in time to meet the demand."

Trade Agreement With Bulgaria On April 26, 1967, Trade and Commerce Minister Winters signed, on behalf of the Canadian Government, a renewal of the Trade Agreement

with the People's Republic of Bulgaria providing for a three-year extension of the most-favoured-nation treatment between the two countries and for further sales of Canadian wheat.

Bulgaria has undertaken to purchase a minimum of 7.4 million bushels of wheat during the next three years with an option, subject to Wheat Board's ability to supply, on a further 3.7 million bushels. The basic quantity together with the additional option would represent about \$24 million of trade at current prices. Purchases of wheat under the present Agreement will be facilitated by the extention of credit arrangements under the Export Credits Insurance Act, providing for payment over three years. During the three-year period of the previous Agreement, Canada was able to provide 17.1 million bushels reflecting the particularly short supply situation in Bulgaria in 1964. The Agreement was signed for Bulgaria by Mr. Dimitar Kostov, Chairman of the Trade Delegation of the People's Republic of Bulgaria.

General Quota Position By April 24, 1967 out of a total of 1,895 shipping points in the Western Division, the Canadian Wheat Board had placed 1,256 points on a delivery quota of 8 bushels per specified

acre, 559 points on a 6-bushel quota and 67 points were on a 5-bushel quota. Thirteen stations were reported as "closed".

Summary of Elevator Shipping Points in the Western Division as at April 24, 1967

Province		al Quota in B r Specified A	Closed	Total	
	Five	Six	Eight(1)		2000
Ontario	- 1119	-	1		1
Manitoba	-	39	291	4	334
Saskatchewan	67	437	518	7	1,029
Alberta	_	83	440	2	525
British Columbia	_	_	6	_	6
All Provinces	67	559	1,256	13	1,895

(1) In addition, 147 of these stations in Manitoba, 135 of the stations in Saskatchewan, 260 of these stations in Alberta and the 6 stations in British Columbia have a supplementary quota on wheat of 5 bushels per seeded acre.

Wheat Shipments to the United States

Rail shipments of wheat to the United States, either for re-export or retention for domestic use, from August 1, 1966 to April 19, 1967 amounted to 55,000 bushels. No

shipments of wheat were reported during the corresponding periods of 1965-66 and 1964-65.

Rail Shipments
of Wheat to
Maritime Ports

Rail shipments of wheat to Maritime ports from Bay, Lake and Upper St. Lawrence ports during the first eight months of the current crop year totalled 30.1 million bushels compared with the August 1965-March 1966 figure of 33.0 million.

Canadian Wheat Stocks at March 31, 1967 Total stocks of Canadian wheat at March 31, 1967 were estimated at 848.3 million bushels compared with 750.2 million on the same date in 1966 and the record 904.4 million in 1957. The ten-year (1957-66) average was 748.1 million bushels. Data for these

estimates were obtained from the Dominion Bureau of Statistics' annual March 31 survey of grain held on farms, from mill returns, and from information supplied by the Board of Grain Commissioners for Canada relative to grain in commercial positions at the close of business on March 29. An estimated 532.8 million bushels, representing 63 per cent of the total were held on farms, 18 per cent above last year's total of 450.4 million and 40 per cent more than the 381.0 million at March 31, 1965. All but 5.8 million bushels of the total farm stocks of wheat were held on farms in the Prairie Provinces. Farm-held stocks in Saskatchewan were placed at 377.0 million while those in Alberta and Manitoba were estimated at 108.0 million and 42.0 million bushels, respectively. Of the 315.5 million bushels held in off-farm positions, 159.2 million were in country elevators compared with 181.6 million a year ago and 182.1 million two years ago. Stocks in Lakehead positions amounted to 66.0 million bushels, 15 per cent above last year's corresponding total of 57.4 million and only one per cent more than the 1965 level of 65.0 million. Supplies in eastern elevators, at 31.3 million bushels were sharply above the 20.0 million of 1966 but less than the 37.1 million of 1965.

⁽¹⁾ Excluding bagged seed.

Freight-Assisted Shipments Claims filed for payment up to March 31, 1967 represent the movement of 10.3 million bushels of wheat from the Prairie Provinces to Eastern Canada and British Columbia under the freight assistance policy during the August-February period of the 1966-67 crop year. During the same months last year claims had

been filed for a total of 10.2 million bushels, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-February shipments of wheat under the policy were running about 2 per cent above those of 1965-66. Revised data on the August-February 1965-66 shipments of wheat based on claims submitted up to March 31, 1967 place the seven-month total at 10.5 million bushels. The bulk of the shipments during the current seven months under review went to destinations in Quebec and Ontario, with these two provinces accounting for 51 per cent and 20 per cent of the total, respectively.

Provincial Distribution of Wheat Shipments under the Freight Assistance Policy August-February 1966-67 and 1965-66

Preliminary data on millfeed shipments under the freight assistance policy indicate shipments of 293,327 tons during the August-February period of the current crop year. During the same seven months of 1965-66 claims had been filed for a total of 307,477 tons, indicating on the assumption of approximately the same rate of submission of claims during both the current and preceding crop years that the August-February shipments of millfeeds under the policy were running about 5 per cent less than those of 1965-66. Revised data on the 1965-66 August-February shipments of millfeeds based on claims submitted up to March 31, 1967 place the seven-month total at 323,020 tons. As with freight-assisted shipments of wheat, the greater portion of the millfeed shipments during the period under review went to destinations in Quebec and Ontario.

CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during March 1967 amounted to 3,809,000 hundredweight, representing an increase of 26 per cent greater than the February 1967 total of 3,016,000 hundredweight, 9 per cent above the ten-year (1957-66) average production for the month of March of 3,494,000 hundredweight, but 6 per cent less than the adjusted March 1966 figure of 4,056,000 hundredweight. Mills reporting operations during March 1967 had a total rated capacity of 168,000 hundredweight per 24-hour day and on the basis of a 26-day working period 86.9 per cent of this rated capacity was effective.

Wheat milled for flour during March 1967 amounted to 8,442,000 bushels, 24 per cent over the 6,793,000 bushels milled during the preceding month, but 7 per cent below the 9,092,000 bushels milled during March 1966. Of the wheat milled for flour during March 1967 some 6,583,000 bushels were Western Canadian spring wheat (other than durum) while the remainder consisted of Ontario winter wheat (1,403,000 bushels); durum (352,000 bushels); and all other (105,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during March 1967 amounted to 1,318,000 hundredweight (some 3,031,000 bushels of wheat equivalent) 21 per cent greater than the 2,512,000 bushels exported during the previous month, but 18 per cent below the adjusted March 1966 exports of 3,695,000 bushels. Flour shipments during the month went to forty-nine countries. Exports to Cuba, at 1,206,000 bushels accounted for 40 per cent of the March total while shipments to India totalled some 915,000 bushels and accounted for 30 per cent of the March 1967 exports of wheat flour. Other leading markets for Canadian wheat flour in terms of wheat during the month, with shipments in thousands of bushels were as follows:
Britain, 230; Costa Rica, 131; Jamaica, 81; Hong Kong, 70; Leeward and Windward Islands, 69; and Trinidad and Tobago, 58.

UNITED STATES SITUATION

Current Crop Year
Supplies 13 Per
Cent Less than
Year Previous

Total domestic supplies of wheat in the United States for the 1966-67 crop year are estimated at 1,846.7 million bushels compared with 2,133.3 million the year previous. Opening stocks, at 536.0 million bushels, represented the lowest opening stocks in thirteen years

and the fifth consecutive decline since July 1, 1961. The 1966 harvest, estimated at 1,310.6 million bushels, was some 5.0 million less than the 1965 production. Anticipated domestic requirements during 1966-67 are placed at 688.0 million compared with 729.4 million last year. After deducting anticipated domestic requirements for the current United States crop year, some 1,160.1 million remain available for export and for carryover, a decrease of 17 per cent from the 1,405.0 million in 1965-66.

Exports 5 Per Cent Below Previous Year Exports of wheat and wheat flour in terms of grain equivalent during the period July 1966-March 1967 amounted to 584.2 million bushels, a decrease of 5 per cent from the 618.0 million exported during the same

months last year. The balance remaining on April 1, 1967 for export and for carryover was estimated at 576.0 million bushels as against 787.1 million on the same date a year ago.

United States Wheat Supplies

Item	1965-66(1)	1966-67(2)

Total estimated domestic supplies	2,133.3	1,846.7
Imports of wheat and wheat flour in terms of wheat for domestic use, July-March	1.1	1.5
Total estimated supplies (3)	2,134.4	1,848.1
Less estimated domestic requirements for crop year (4)	729.4	688.0
Available for export and for carryover	1,405.0	1,160.1
Deduct: Exports of wheat as grain, July-March Exports of wheat flour in terms of wheat, July-	566.5	533.8
March (5)	51.5	50.4
Total exports of wheat and wheat flour (6)	618.0	584.2
Balance on April 1 for export and for carryover	787.1	576.0

⁽¹⁾ Revised. (2) Preliminary. (3) Excluding imports for April-June.

(6) Data include shipments for relief.

⁽⁴⁾ Includes shipments to United States Territories and wheat for military food use at home and abroad. (5) Flour exports exclude "Milled in bond".

In a report released on April 10, 1967 the Crop Reporting Board of the United States Department of Agriculture stated that.....

Crop and Weather Conditions

Continued dry weather in the Central and Southern Great Plains caused a rather sharp reduction in winter wheat prospects since last December. Winter wheat production

is now forecast at 1,162 million bushels, 121 million bushels below the December 1 forecast, but 10 per cent above 1966 and 20 per cent above average. The indicated yield per seeded acre is 21.5 bushels compared with 24.6 in 1966 and the average of 22.7 bushels. The expected acreage for harvest as grain, 43.9 million, is 81.1 per cent of the seeded acreage, compared with 90.0 per cent in 1966 and the average of 86.7 per cent.

Conditions generally favoured seeding 1967 winter wheat, except in the Great Plains, from central Kansas southward, where seeding was completed ahead of usual, but very little precipitation has been received since planting. The crop deteriorated rapidly in March because mild temperatures and winds sapped the already critically short supplies of moisture. April 1 prospects were poor from central Kansas and eastern Colorado southward. Moisture is urgently needed to halt further deterioration.

Winter and spring precipitation also has been below normal in Nebraska and South Dakota. However, the crop was still mostly in good condition due to reserves of subsoil moisture. More moisture will be needed soon to maintain current prospects. In the eastern half of the Nation, the crop wintered well and April 1 prospects are favourable.

The Montana crop was just starting to emerge; moisture is adequate and growers are mostly optimistic about yield potentials. Much of the crop in the Pacific Northwest was seeded in dry soils last fall but is now in good to excellent condition because of abundant late fall and winter rains. Nearly all of precipitation was absorbed with little run-off, but the mild, moist conditions have caused some concern over a possible outbreak of striped rust.

Wheat Stocks on Farms Stocks of all wheat on U.S. farms on April 1 totalled 241 million bushels, down 6 per cent from a year earlier but 11 per cent above average. April 1 stocks were 18.4

per cent of total 1966 production. Disappearance of wheat from farms during January-March totalled 168 million bushels, the largest of recent years and about 17 per cent above average.

Durum wheat stocks on farms in Minnesota, the Dakotas, and Montana totalled 29 million bushels on April 1, only 59 per cent of those a year earlier but 17 per cent more than average. Most of the stocks were in North Dakota. Disappearance of durum wheat from farms in the January-March quarter totalled 11 million bushels, about 1/3 more than a year earlier and the second largest January-March disappearance in a 6-year record.

The Bureau of the Census, Department of Commerce, estimated wheat flour production in March at 22,000,000 hundredweight, averaging 948,000 hundredweight per working day. This compared with an average output per working day of 970,000 hundredweight last month and 1,001,000 hundredweight in March 1966. Wheat flour mills during March operated at 83.4 per cent of capacity compared with 86.1 and 90.7 per cent, respectively, for the previous month and the same month a year ago. Flour mills in March ground 49,000,000 bushels of wheat, compared with 44,000,000 bushels in the previous month. Wheat offal output was 377,000 tons.

ARGENTINE SITUATION

Stocks Decline
But Production
Increases

Total supplies of wheat in Argentina for the 1966-67 (December-November) crop year are presently estimated at 261.0 million bushels, representing a decline of some 26 per cent from the level of 350.5 million of the previous year. Opening stocks,

at 14.9 million bushels, reflected a sharp decline from the December 1, 1965 total of 130.1 million and were the lowest carryover stocks since 1952. The current harvest is presently estimated at 246.2 million bushels or an increase of 12 per cent over the 1965-66 outturn of 220.5 million. After making an allowance of 138.2 million bushels for anticipated domestic requirements, an estimated 122.9 million remain available for export and for carryover in 1966-67 in contrast to 220.1 million in 1965-66.

Based on preliminary data exports of wheat and wheat flour in terms of wheat during December 1966-March 1967 amounted to 44.5 million bushels, in sharp contrast to the 101.8 million exported during the same months in 1965-66. The balance remaining on April 1, 1967 for export and for carryover was estimated at 78.4 million bushels, as against the April 1, 1966 total of 118.3 million.

- (1) Revised.
- (2) Preliminary.
- (3) Includes allowances for farm stocks.

The following account of the Argentine situation has been extracted from a report from Mr. H.E. Ryan, Assistant Commercial Secretary (Agriculture), Buenos Aires, under date of April 28, 1967 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions to Canadian measures and currency have been made for the convenience of our readers.

Weather and Crops

Dry weather during the first half of March coupled with abnormally high temperatures caused some alarm among producers who were beginning to prepare for winter crops and were already sowing dual-purpose lots to be used as winter pasture. During latter March, however, the situation changed significantly with abundant rainfall occurring throughout most of the cereal area. With this rainfall and temperature returning to normal, conditions can be considered favourable.

Wheat The final official production estimate for 1966-67 has yet to be published and it is now felt that the crop approximated 6.7 million tons (246.2 million bushels). Exporters showed limited interest in purchasing during the month in accordance with discussions held with the National Grain Board in which the Board requested that future contracts be postponed until the existing stock position became known. In early April it was announced that with the exception of a shipment of 50,000 metric tons (1,837,000 bushels) to Chile and normal shipments to Brazil under the existing contract, no further exports were to take place.

The Grain Board announced recently that under the existing contract with Brazil a further 400,000 metric tons (14,697,000 bushels) had been negotiated for April-June shipment at U\$S 62.15 per metric ton (\$1.83 per bushel Canadian) f.o.b. Buenos Aires in bulk. The Interventor of the Board in making this announcement indicated that, although the price was somewhat lower than that realized for sales to other countries, it had been contracted in the spirit of a three-year agreement which necessitated a steady and stable demand and price. During the first quarter of 1967, 250,000 metric tons (9,186,000 bushels) were exported to Brazil, making a total of 650,000 tons (23,883,000 bushels), and likely the final figure with the above contract will exceed the one-million-ton figure (36,743,000 bushels).

While further sales by the private trade are being curtailed, the Board also announced during the period under review a sale to South Africa of 90,000 metric tons (3,307,000 bushels), although the prices were not revealed.

The local market remained active during March as millers continued to ensure their requirements and by the end of the month prices remained unchanged at 1,350 pesos per 100 kilos (\$1.14 per bushel) with deferred payment. Durum prices remained at the same level during the month with no contracts reported as concluded. Exporters were offering 1,460 pesos (\$1.23 per bushel) at the end of March in Buenos Aires and 1,465 pesos (\$1.23 per bushel) in Bahia Blanca. Prices for durums to Italy were U\$S 66.50 per ton (\$1.96 per bushel) f.o.b. Necochea, April-May shipment, with buyers reported to be interested only at U\$S 63.00 (\$1.86 per bushel). For the rest of the Continent offers of durums were made at U\$S 77.50 (\$2.28 per bushel) c.i.f., also for April-May shipment.

Prices in the Buenos Aires Futures Market were at the end of March 1,335 pesos (\$1.12 per bushel) for April delivery; 1,393 (\$1.17 per bushel) for May; 1,442 (\$1.22 per bushel) for June and 1,495 pesos (\$1.26 per bushel) for July per 100 kilos. By mid-April prices had strengthened and at present are: 1,588 (\$1.34 per bushel) for May delivery; 1,610 (\$1.36 per bushel) for June; 1,644 (\$1.39 per bushel) for July and 1,678 (\$1.41 per bushel) for August. Present prices in the Buenos Aires Cereal Exchange are quoted at 1,575 pesos (\$1.33 per bushel) for hard; 1,535 (\$1.29 per bushel) for semi-hard and 1,530 (\$1.29 per bushel) for Grade 2 durums, all basis f.o.b. Buenos Aires. In Bahia Blanca these prices were 1,450 (\$1.22 per bushel); 1,410 and 1,510 (\$1.19 and \$1.27 per bushel), respectively.

The Secretary of Agriculture reiterated the Government's interest in promoting an expanded wheat production with the target of 8 million hectares (19.8 million acres) set for the coming season. However, the Grain Board has yet to establish minimum prices for the coming year and this will have a considerable effect on actual sowings.

The Argentine Government is not only interested in improving acreage but also yield and the marketing structure. The National Grain Board recently announced a reduction of 80 per cent in its rates charged to farmers for use of government grain storage facilities. Also a credit policy has recently been implemented to assist in the construction of silos and the purchase of grain driers and other equipment.

During the month of March total wheat shipments were 314,798 metric tons (11,567,000 bushels) destined mainly to Brazil. During April exports are declining and it is likely that less than 200,000 tons (7,349,000 bushels) will be shipped. Total purchases of wheat by the National Grain Board as of April 13 amounted to 185,515 metric tons (6,816,000 bushels).

AUSTRALIAN SITUATION

Wheat Supplies at Record Level Due to Record Production Total supplies of wheat in Australia for the 1966-67 marketing year are estimated at an all-time high of 469.5 million bushels as against the previous year's total of 284.1 million. Although carryover stocks

declined from 24.4 million bushels at December 1, 1965 to 16.5 million in 1966, the crop recently harvested, at some 453.0 million bushels, is about 22 per cent greater than the previous record of 370.0 million harvested in 1964-65. After deducting some 85.6 million bushels for anticipated domestic requirements, an estimated 383.9 million are available for export and for carryover during 1966-67, sharply above the 191.2 million in 1965-66.

Combined exports of wheat as grain and wheat flour in terms of grain equivalent during the period December 1 - March 25 of the current Australian crop year amounted to a record 100.1 million bushels, 79 per cent larger than the 56.0 million exported during the corresponding period of the 1965-66 crop year. The balance remaining on March 26, 1967 for export and for carryover, at 273.8 million bushels, exceeds by a wide margin the comparable 1966 total of 135.2 million.

⁽¹⁾ Revised.

The following information relative to the Australian situation has been extracted from a report from Mr. J.E.G. Gibson, Assistant Commercial Secretary for Canada, Canberra, under date of April 14, 1967 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

The latest estimate for the 1966-67 wheat harvest is 453 million bushels according to the Australian Wheat Board. Of this total the Board expects to receive 434 million bushels of which 350 million bushels will be available for export.

Exports

To date, total export sales from the current crop have exceeded 180 million bushels. During the past month the Wheat Board announced a major break-through in Latin American markets when 3,670,000 bushels were sold to Brazil and 750,000 bushels to Peru. The announcement of these sales followed hard on the recent sale of 2,760,000 bushels to Chile. All of these sales resulted from a Wheat Board Sales Mission to South America.

Another new customer this year is Norway which to date has purchased 3,630,000 bushels of f.a.q. wheat. According to the Wheat Board, further sales are expected in the Norwegian market. Pakistan has become Australia's second most important wheat customer as their total purchases from the current crop now amount to 18,670,000 bushels on the strength of a recent sale of 1,865,000 bushels.

⁽²⁾ Preliminary.

It will be recalled that the Australian Wheat Board recently announced its first consignment of wheat sold under the trans-shipment arrangements to buyers in the United Kingdom and Western Europe. These included sales to Holland of 770,000 bushels and to West Germany of 880,000 bushels. In addition significant quantities were subsequently delivered to small ports in Britain which in the past it had not been practical to supply on a direct shipment basis.

With wheat exports now in excess of half this year's total availability the Wheat Board remains confident about further sales during the coming months.

1966-67 Wheat Standards Wheat standards for the current crop were recently announced by the Australian Wheat Board. The standards cover each of the five main wheat producing States of

Australia and include for the first time, as a separate heading, wheat from the State of Queensland. The following are the wheat standards for 1966-67:

Classification	Weight per bushel (Schopper)	Classification	Weight per bushel (Schopper)
New South Wales Prime Hard		South Australian Hard	64 pounds
New South Wales Northern F.A.Q	63 "	South Australian F.A.Q	62 "

GRAIN SITUATION IN BRITAIN

The following account of the current situation and grain markets in Britain has been extracted from a report received from Mr. G.E. Woollam, Agricultural Counsellor for Canada, London, under date of April 28, 1967 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce.

Weather and Crops

Weather during April was very changeable with cold wet conditions and below average temperatures interspersed by warm sunny periods. Conditions however have enabled spring cultivations and sowing to proceed well particularly in areas with lighter soils. Autumn sown crops have made good growth generally although some later sown crops of wheat are somewhat backward due to waterlogging and cold winds. Germination of early sown crops has generally been satisfactory. Some pest damage has been reported but attack by wheat bulb fly has been below normal.

Requirements and Supplies

The Home Grown Cereals Authority in their sixth statistical statement as at the end of February 1967, announced a reduction of 100,000 long tons (3,733,000 bushels) in

estimated wheat imports attributed to 50,000 long ton (1,867,000 bushels) decreases, respectively, in anticipated requirements for human consumption and animal feed. The domestic supply position for both wheat and coarse grains shows no change but barley exports are expected to increase by 100,000 long tons (4,667,000 bushels) to an estimated 950,000 (44,333,000 bushels) for the total year. Exports of barley to date are at 760,000 long tons (35,467,000 bushels), 490,000 long tons (22,867,000 bushels) higher than at the same time last year and the February return of 169,000 long tons (7,887,000 bushels) exceeds the high January figure.

Both wheat and barley imports for the period July 1966 to February 1967 are down on the comparable period for the previous year. Wheat imports are 275,000 long tons (10,267,000 bushels) lower at 2,815,000 (105,093,000 bushels) and coarse grains down by 240,000 long tons to 2,600,000. Cumulative intake of wheat by flour millers at 1.12 million long tons (41,813,000 bushels) is 70,000 long tons (2,613,000 bushels) more than the comparable period in the previous year and by other processors 270,000 long tons (10,080,000 bushels) less at 780,000 long tons (29,120,000 bushels). Intake of barley and other coarse grains by maltsters and distillers is up by 45,000 long tons at 1.1 million and by other processors higher by 245,000 long tons at 1.57 million.

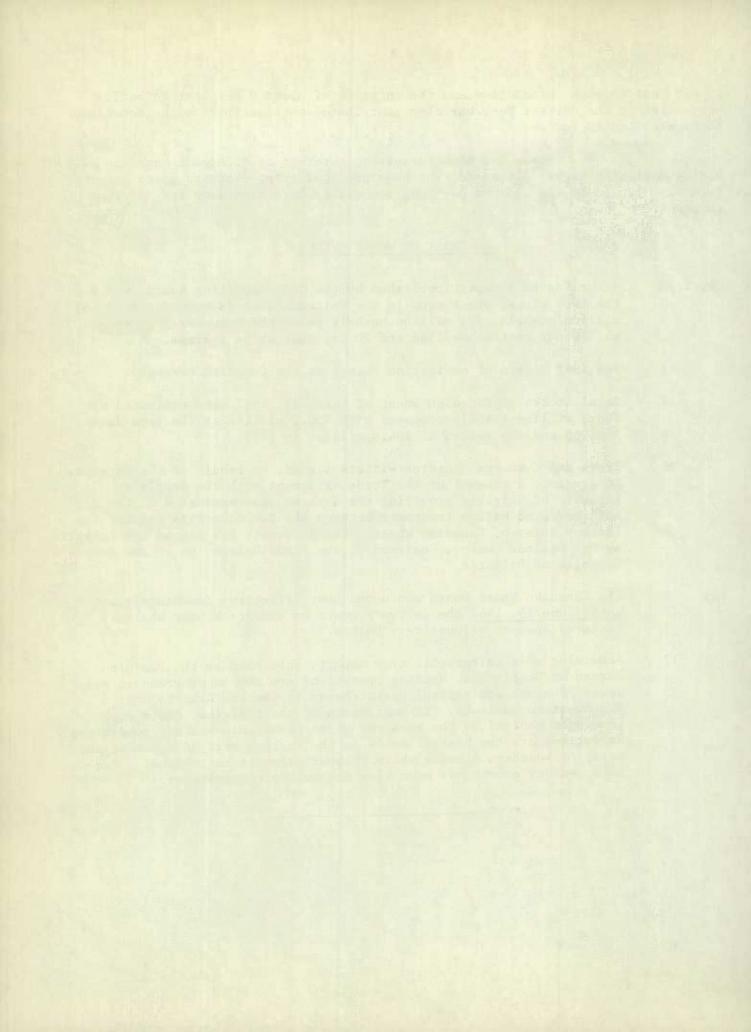

Grain Markets Offers of grain on the markets have been generally light but there is a good demand for wheats particularly of feed grade and prices are averaging between £22 10 Od and £23 O Od per long ton (\$1.82 to \$1.87 per bushel) on the farm. The outlook is firm with prices tending to rise. The market for malting barleys has improved averaging £24 10 Od per long ton (\$1.58 per bushel) on the farm. Prices of feed barleys are firm at £22 10 Od per long ton (\$1.45 per bushel) ex farm. Final figures have been published by the Home Grown Cereals Authority in respect of forward contract registrations for the current year. These indicate that a total of 1.5 million long tons (56,000,000 bushels) of wheat and 2.5 million long tons (116,667,000 bushels) of barley has been contracted for delivery between November 1966 and June 1967. This compares with 1.7 and 2.2 million long tons (63,467,000 and 102,667,000 bushels), respectively, for 1965-66 but account should be taken of the fact that the 1965-66 Bonus Scheme did not include November 1965 deliveries. The reduction of some

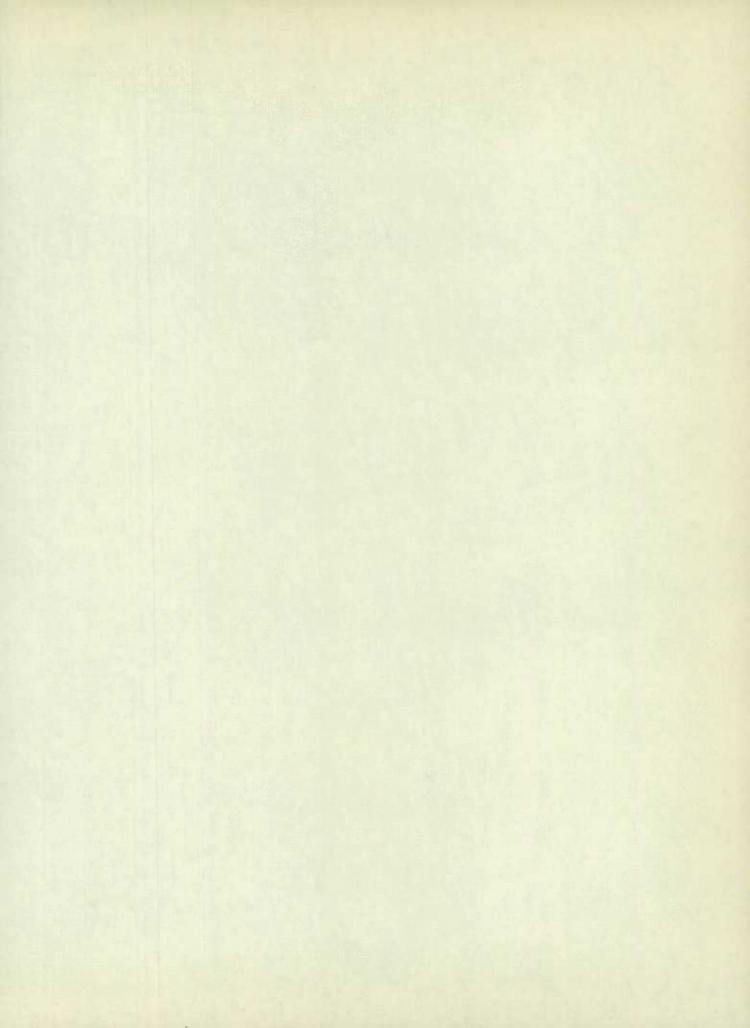

15 per cent in wheat production and the increase of about 9 per cent in barley production in the current year has also contributed considerably to the decreased tonnage estimated for wheat.

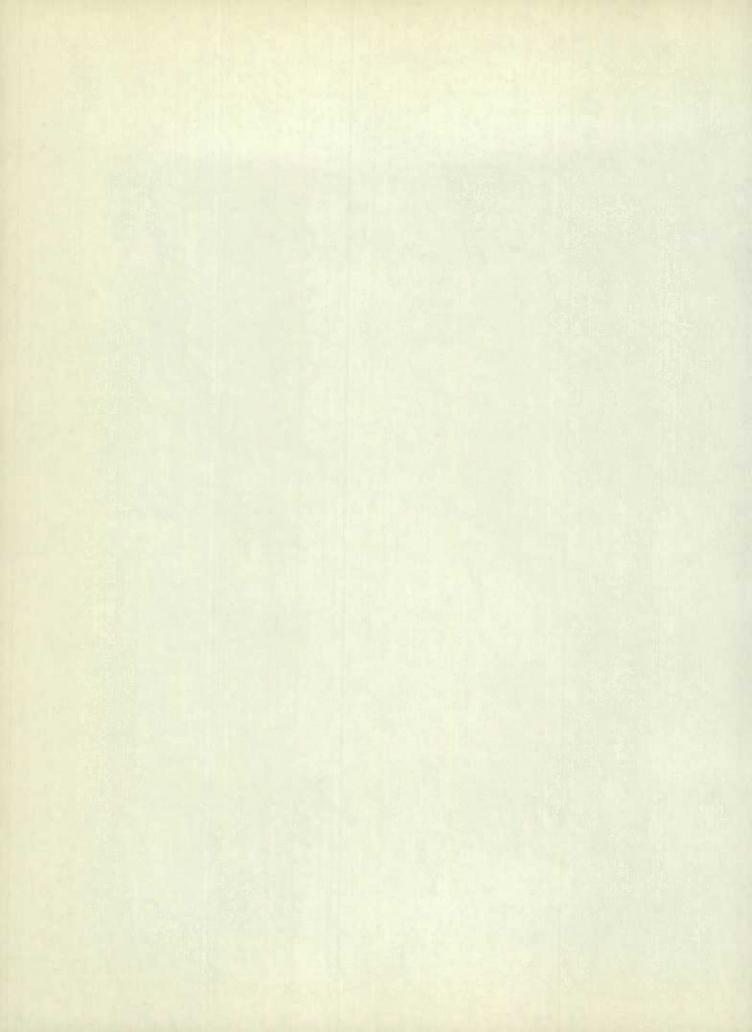

There has been increasing interest in offers of Canadian No.2 barley following higher prices for the home produced crop. Forward sales ranging from £23 12 6d to £23 15 Od per long ton c.i.f. have been made for May-June shipment.

CALENDAR OF WHEAT EVENTS

- April 10 According to a report published by the Crop Reporting Board, U.S.D.A. the 1967 winter wheat crop in the United States is forecast at 1,162 million bushels, 121 million bushels below the December 1 forecast, but 10 per cent above 1966 and 20 per cent above average.
 - 13 The 1967 season of navigation opened at the Canadian Lakehead.
 - Total Stocks of Canadian wheat at March 31, 1967 were estimated at 848.3 million bushels compared with 750.2 million at the same date in 1966 and the record of 904.4 million in 1957.
 - Trade and Commerce Minister Winters signed, on behalf of the Canadian Government, a renewal of the Trade Agreement with the People's Republic of Bulgaria providing for a three-year extension of the most-favoured-nation treatment between the two countries and for further sales of Canadian wheat. The Agreement was signed for Bulgaria by Mr. Dimitar Kostov, Chairman of the Trade Delegation of the People's Republic of Bulgaria.
- May 2 The Canadian Wheat Board announced that "effective immediately and until June 15, 1967 the delivery quota on Alberta Winter Wheat is declared open at all delivery points."
 - According to a telegraphic crop report, published by the Dominion Bureau of Statistics, seeding operations are now in progress in many areas of south and central Saskatchewan in Central Alberta and Southwestern Manitoba. In most parts of the prairies, field work should be general by the week-end given favourable weather conditions. Exceptions are the heavier soils in the eastern half of Manitoba and parts of southern Alberta where further delay is anticipated. Pasture and hay growth has been slow due to low temperatures.
