### WORLD WHEAT SITUATION

August-September Exports Below Last Year's Level Total exports of wheat and wheat flour in terms of wheat from the <u>four traditional major exporters</u> during August — September 1968 have amounted to 191.0 million

bushels, a decrease of 20 per cent from the 239.4 million shipped during the comparable first two months of the 1967-68 crop year, and 8 per cent less than the ten-year (1957-66) average shipments for the same two months of some 207.4 million bushels. As indicated in the accompanying table, based on the Canadian crop year, United States and Australia's shipments were at lower levels this year than last while Canada and Argentina were higher.

Exports of Wheat and Flour in Terms of Wheat August - September, 1968 with Comparisons

p Preliminary figures.

Wheat Supplies of Four Major Exporters Above a Year Ago Total supplies of wheat remaining in United States, Canada, Argentina and Australia at October 1, 1968 for export and for carryover at the end of their respective crop years, amounted to 2,530.3 million

bushels, 15 per cent above the 2,206.9 million at the same time a year ago. This increase reflected larger supplies for United States, Canada and Argentina which more than offset a decrease in Australia. Supplies on or about October 1, 1968, in millions of bushels, were held as follows, with last year's comparable figures in brackets: United States, 1,317.7 (1,100.8); Canada, 1,064.6 (953.6); Argentina, 65.9 (17.6); and Australia, 82.1 (134.9).

r Revised figures.

### CANADIAN SITUATION

Supplies Above Previous Year Total estimated supplies of wheat for the 1968-69 (August-July) crop year are placed at 1,295.5 million bushels consisting of the August 1 carryover of 667.5 million and the 1968 crop now estimated at 627.9 million bushels. Supplies of the size indicated represent an increase of 11 per cent over the 1,169.7 million of 1967-68. After making an

increase of 11 per cent over the 1,169.7 million of 1967-68. After making an allowance of 165.0 million bushels for anticipated domestic requirements, supplies available for export and for carryover during 1968-69 amount to 1,130.5 million bushels, 13 per cent more than the 1,003.2 million in 1967-68.

August-September Exports
Higher than Previous Year

Exports of wheat and flour, in terms of wheat equivalent, during August-September 1968 amounted to 65.9 million bushels, 33 per cent more than the

49.6 million exported during the same two months of 1967. This year's exports consisted of 61.1 million bushels of wheat in bulk, 45 thousand of seed and 4.7 million of flour in terms of wheat. During the August-September period last year these figures were 44.6 million of wheat in bulk, 113 thousand of seed and 4.8 million of flour in wheat equivalent. The balance remaining on October 1, 1968 for export and for carryover amounted to 1,064.6 million bushels, 12 per cent above the October 1, 1967 total of 953.6 million.

Marketings, Disappearance and Visible Supplies

Total primary deliveries of wheat (both east and west) up to October 23 of the current crop year have amounted to 64.0 million bushels compared with 104.5

million marketed during the same period of the previous year. Some 39.9 million bushels of this year's total were delivered during the five weeks September 19 to October 23. During the same period the volume of Canadian wheat entering domestic and export channels amounted to 46.4 million bushels. As a result, the total visible supply of Canadian wheat decreased from 399.6 million at September 18 to a level of 392.4 million at October 23, 1968.

The total visible supply of Canadian wheat at October 23 this year represented a slight increase over the 1967 comparable total of 389.1 million and was 39 per cent above the 1966 figure of 281.3 million. Country elevator stocks, amounting to 237.7 million bushels, were 4 per cent above the 1967 comparable total of 227.9 million, and 50 per cent more than the 158.1 million of two years ago. Wheat stocks at interior terminals at October 23, 1968, totalled 13.0 million bushels compared with 12.4 million a year ago and considerably above the 2.0 million of two years ago. The 12.1 million bushels "in transit rail" (western division) were 45 per cent above the 1967 figure of 8.3 million but 7 per cent less than the 12.9 million in this position in 1966. Supplies at the Lakehead, totalling some 38.3 million bushels, registered a decrease from last year's comparable level of 45.4 million but were considerably higher than the 20.6 million of 1966. Stocks "in transit lake", amounting to 6.4 million bushels were smaller than both the 1967 level of 7.8 million and the 1966 figure of 10.5 million. The 27.8 million bushels in Bay, Lake and Upper St. Lawrence ports were lower than the 33.5 million of a year ago but above the 26.7 million of two years ago. Supplies in Lower St. Lawrence and Maritime ports at October 23, 1968, at 39.7 million bushels, registered increases of 17 per cent and 11 per cent, respectively, over the 33.9 million of 1967 and the 35.7 million at the same date in 1966. The 10.2 million bushels in West Coast ports (Vancouver-New Westminster, Prince Rupert and Victoria) were smaller than the 10.4 million at October 25, 1967 but above the 6.7 million at the comparable date in 1966.

September 1968 Exports of Wheat and Flour Total 32.5 Million Bushels

Combined exports of wheat in bulk, seed wheat and wheat flour in terms of grain equivalent, during September 1968 amounted to 32.5 million bushels, 3 per cent below the 33.4 million of the previous month,

11 per cent less than the ten-year (1957-66) average for the month of September of 36.5 million but 46 per cent above the 22.3 million of September 1967. Exports of wheat in bulk (as reported by the Board of Grain Commissioners) during the month of September 1968 at 30.0 million bushels represented declines of 4 per cent and 11 per cent, respectively, from the August 1968 total of 31.1 million and the ten-year average of 33.8 million but was 49 per cent larger than the September 1967 figure of 20.2 million. Based on Canadian Customs returns, the equivalent of 2.4 million bushels of wheat was exported in the form of flour during September 1968, 7 per cent above the 2.3 million of the previous month, 19 per cent larger than the September 1967 adjusted total of 2.0 million but 4 per cent lower than the ten-year average of 2.5 million bushels.

Cumulative exports of wheat in bulk during the August-September period of the current crop year amounted to 61.1 million bushels, sharply above the 44.6 million shipped during the first two months of the 1967-68 crop year but 8 per cent smaller than the ten-year average for the period of 66.7 million. Communist China and Britain were the two leading markets for Canadian wheat in bulk during the first two months of the current crop year with shipments to these countries amounting to

16.4 million and 14.7 million bushels, and accounted for 27 per cent and 24 per cent, respectively, of the August-September total. During the same period last year Communist China accounted for 6 per cent and Britain 29 per cent of the August-September 1967 total. Other principal importers of Canadian wheat for the first two months of the current crop year with figures for the same period of the preceding crop year in brackets, were as follows, in millions of bushels:

Japan, 8.9 (5.0); Italy, 4.7 (2.6); Poland, 3.4 (2.5); Federal Republic of Germany, 1.9 (2.2); Belgium and Luxembourg, 1.5 (2.9); Cuba, 1.3 (1.0); Netherlands, 1.2 (1.2); and Switzerland, 1.2 (0.7). Cumulative exports of seed wheat during August-September of the current crop year, based on Canadian Customs returns, amounted to 45 thousand bushels compared with last year's comparable total (adjusted to remove time lag) of 113 thousand.

Cumulative exports of wheat flour during the first two months of the 1968-69 crop year, based on Customs returns, were the equivalent of 4.7 million bushels of wheat, 2 per cent less than the adjusted August-September 1967 total of 4.8 million bushels. Cuba's purchases, the leading market for Canadian wheat flour during the period under review, amounted to the equivalent of 1.7 million bushels and accounted for 36 per cent of the August-September 1968 total. Other principal markets for Canadian wheat flour in terms of grain equivalent during the August-September period of the 1968-69 crop year, with revised data for the same months of the preceding crop year in brackets, were as follows, in thousands of bushels: Ceylon, 828 (13); Britain, 507 (521); Ghana, 421 (300); Leeward and Windward Islands, 166 (151); Trinidad and Tobago, 114 (77); and United States, 102 (72).

Exchange of Board Wheat, Oats and Barley for Seeding Purposes 1968-69 Crop Year The Canadian Wheat Board in its Instructions to the Trade No. 27 under date of October 30 stated in part that to enable producers to secure their seed requirements, the Board will allow companies, effective immediately, to exchange Board stocks of wheat, oats and such grain without regard to quota regulations on the

barley for lower grades of such grain without regard to quota regulations on the following basis:

- (a) Any grade of wheat (excluding Durum) for a lower grade of wheat.
- (b) Any grade of Durum for a lower grade of Durum.
- (c) Any grade of oats for a lower grade of oats.
- (d) Any grade of barley for a lower grade of barley.

The grain delivered by producers and the grain received by producers in exchange must both be delivered and received at the same time. All grain delivered by producers must be entered in the producer's permit book on page 9. The letters "S.G.E." should be shown in the column headed "grain" as well as particulars of that grain. The exchange will be on a bushel-for-bushel basis and cash settlement must be made for the difference in grade, basis the Board's initial payment prices plus elevator charges for such services as may be assessed.

Where it is necessary for producers to exchange their wheat, oats or barley at a point other than their regular delivery point, it is in order for them to do so without obtaining special permission from the Board. However, entries must be made in the delivery permit book at the time the exchange is completed and in all other respects the exchange must be completed on the basis outlined herein.

By October 28, 1968 out of a total of 1,827 shipping points in the Western Division, the Canadian Wheat Board had placed 794 points on a delivery quota of one bushel per specified acre and 246 points on a two-bushel quota. Some 779 points remained on the Initial Unit Quota while only 8 stations were reported as "closed".

Lake Shipments of Canadian Grain

Total shipments of the six major grains out of Lakehead terminals from the opening of navigation to October 23 this year amounted to 171.0 million bushels, 38 per cent less than

the 273.9 million shipped during the comparable period of 1967 and 32 per cent lower than the 10-year (1957-66) average for the period of 249.9 million. In 1968 the season of navigation opened on April 10 while the 1967 season opened on April 13. Shipments of wheat, at 133.2 million bushels accounted for 78 per cent of the total six grains.

Wheat Shipments from Churchill During 1968 Season

Shipments of wheat from the port of Churchill during the 1968 season of navigation amounted to 22.5 million bushels compared with last year's figure of 20.6 million and ten-year 1957-66 average of 20.9 million. The first grain shipment of the 1968

season ex Churchill, began loading July 29, and the last vessel completed loading on October 17.

#### CANADIAN FLOUR MILLING SITUATION

Production Wheat flour production by Canadian mills during September 1968 amounted to 3,099,000 hundredweight representing a decrease of 4 per cent from the August 1968 total of 3,240,000 hundredweight, 7 per cent below the adjusted September 1967 figure of 3,330,000 hundredweight and 8 per cent lower than the ten-year (1958-67) average production for the month of September of 3,381,000 hundredweight. Mills reporting operations during September 1968 had a total rated capacity of 156,000 hundredweight per 24-hour day and on the basis of a 24-day working period 82.5 per cent of this rated capacity was effective.

Wheat milled for flour during September 1968 amounted to 6,999,000 bushels, 5 per cent less than the 7,337,000 bushels milled during the preceding month and 6 per cent below the 7,498,000 bushels milled during September 1967. Of the wheat milled for flour during September 1968 some 5,607,000 bushels were Western Canadian spring wheat (other than Durum) while the remainder consisted of Ontario winter wheat (955,000 bushels); Durum (318,000 bushels); and all other (118,000 bushels).

According to preliminary Customs returns, exports of Canadian wheat flour during September 1968 amounted to 1,055,000 hundredweight (some 2,427,000 bushels of wheat equivalent) 7 per cent above the 2,270,000 bushels exported in August 1968 and 19 per cent greater than the adjusted September 1967 exports of 2,037,000 bushels. Flour shipments during the month went to forty-eight countries with exports to Cuba amounting to 1,136,000 bushels and accounted for 46 per cent of the September total. Other leading markets for Canadian wheat flour in terms of wheat during the month, with shipments in thousand of bushels were as follows: Ghana, 256; Britain, 250; Leeward and Windward Islands, 92; Israel, 78; Guinea Republic, 77; and Haiti Republic, 71.

### UNITED STATES SITUATION

Supply Above Previous Year 1968-69 crop year are currently placed at 2,135.0 million bushels, 10 per cent above the previous year's total of 1,949.4 million reflecting increases in both production and carryover stocks. The 537.2 million bushels carried over at July 1, 1968 were 26 per cent above the 1967 stocks of 425.0 million while the current crop now estimated at 1,597.9 million, exceeded by 5 per cent the 1,524.3 million of last year's outturn. In addition, current crop year domestic supplies may be supplemented by imports of about 1 million bushels. Domestic disappearance during 1968-69 is estimated at about 685.0 million bushels, 5 per cent more than the 652.2 million last year. After deducting anticipated domestic requirements for the current United States crop year, some 1,450.2 million remain available for export and for carryover, an increase of 12 per cent over the 1,297.3 million in 1967-68.

Exports Below
Previous Year

Control of wheat and wheat flour in terms of grain equivalent during the period July-September 1968 amounted to 132.5 million bushels, 33 per cent less than the 196.5 million exported during the same months last year. The balance remaining on October 1, 1968 for export and for carryover was estimated at 1,317.7 million bushels compared with 1,100.8 million on the same date a year ago.

1968 Wheat Crop Forecast at 1,598 Million Bushels

In a report released on October 10, the Crop Reporting Board of the United States Department of Agriculture stated that production of all wheat is estimated at a

record 1,598 million bushels, up 1 million bushels from September 1, 5 per cent above 1967 and 30 per cent above average. An increase in other spring wheat from a month earlier more than offset a slight decline in durum. Yield per acre of all wheat, at 28.5 bushels per acre, is record high and 2.7 bushels above 1967. During the past decade, changes in production estimates between October 1 and the final production estimate have averaged 15 million bushels, ranging from 1 to 38 million bushels.

<u>Durum wheat</u> production is estimated at 101 million bushels, 61 per cent above 1967 and 57 per cent above average. The yield per acre of 28.5 bushels has been exceeded by only two previous crops—1965 with 30.4 and 1962 at 29.7 bushels.

Harvest of durum was delayed and quality reduced by rain and snow during September. Combining was 85 per cent complete in North Dakota by October 1, considerably later than in most recent years. Some acreage remained to be harvested in the North Central counties of Montana.

Production of other spring wheat is estimated at 245 million bushels, 2 per cent below the 1967 crop but 24 per cent above average. Yield per acre, at 25.9 bushels, is 0.2 bushel above a month earlier, well above the 23.5 bushels of 1967 and the 5-year average of 22.7 bushels.

Combining of other spring wheat progressed slowly during September in several important producing States because of rain and snow. Considerable loss of colour, reduced test weight, and overall quality reduction occurred. However, some late maturing fields benefited from the rain in late August and early September. Harvest in North Dakota was 93 per cent complete by October 1 whereas in 1967 combining was virtually finished by September 10. The Montana crop was 90 per cent harvested by October 1, much of the remaining acreage was at higher elevations. In Minnesota, harvest was not yet complete in the northern part of the Red River Valley where some acreage may be abandoned.

Wheat Stocks of all wheat on farms totalled 744 million bushels, 24 per cent above a year earlier and a record high for this date. The previous high for October 1 wheat stocks was 1958. Disappearance from farms during the July-September quarter was 1,083 million bushels compared with 1,068 million a year earlier. Montana, North Dakota, South Dakota, Nebraska, and Kansas accounted for 71 per cent of the U.S. farm wheat stocks. Farm stocks estimated include grain to be harvested remaining in the field on October 1.

<u>Durum wheat</u> stocks on farms, at 93 million bushels, were up 67 per cent from last year. Disappearance from farms in the July-September quarter was 26 million bushels, about the same as a year earlier.

Stocks of Wheat in all Positions October 1, 1968 In a report released on October 24, 1968 the Crop Reporting Board of the United States Department of Agriculture stated in part that all wheat in storage October 1 totalled 1,690 million bushels, 9 per cent more than a year earlier but 6 per

cent below the 1962-66 October 1 average. Off-farm stocks at 946 million bushels were 1 per cent lower than a year earlier but farm holdings, at 744 million bushels were up 24 per cent. Disappearance from all storage positions during the July-September quarter is indicated at 446 million bushels compared with 393 million for Continued on page 33.

#### AUSTRALIAN SITUATION

Wheat Supplies
Lower Than
Previous Year

Total supplies of wheat in Australia for the 1967-68 crop year are estimated at 357.8 million bushels as against 483.2 million in 1966-67, reflecting the effect of a sharp decline in production, which more than offset a substantial increase in carryover stocks.

The current harvest, now estimated at 277.4 million bushels, is 41 per cent below the previous record of 466.6 million bushels harvested in 1966-67. Carryover stocks, at a record 80.4 million bushels, exceeded by a wide margin the 16.6 million at December 1, 1966. After deducting some 102.0 million bushels for anticipated domestic requirements, an estimated 255.8 million are available for export and for carryover during 1967-68, some 35 per cent below the 393.7 million in 1966-67.

Exports Decline
from Previous Year

of grain equivalent during the period December 1 — September 21

of the current Australian crop year amounted to 173.7 million
bushels, 33 per cent less than the 258.8 million exported during the corresponding
ten months of the 1966-67 crop year. The balance remaining on September 22, 1968 for
export and for carryover, at 82.1 million bushels, was in sharp contrast to the
comparable 1967 total of 134.9 million.

p Preliminary figures.

The following information relative to the Australian situation has been extracted from a report from Mr. W. Boychuk, Assistant Commercial Secretary for Canada, Canberra, under date of October 16, 1968 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible, conversions to Canadian measures and currency have been made for the convenience of our readers.

r Revised figure.

Crop Outlook for 1968-69. — Seasonal developments of the last 30 days (end October 10) have led to some downward revision in the 1968-69 official crop forecasts and the likelihood of some deterioration in the quality of the New South Wales harvest.

Overall prospects for the New South Wales crop are still good despite the marked deterioration in western areas of the wheat belt due to the dry September and reports of a moderate setback in some districts caused by late frosts.

Mr. C.W. Brown, Cereal Specialist of the State Department of Agriculture said recently that useful light to moderate rainfall since the end of September, accompanied by cool weather improved the position. More rain was needed in most districts by late October or early November to stabilize crop prospects in the State. Primary Industry officials have confirmed that reports from the area indicate 'some frost damage' although not serious, is likely, whereas sources from the Wheat Board are more pessimistic. Wheat infestation and water logging continues to be a problem in some areas of the southern district. Previous estimates for the State wheat crop of 240 to 250 million bushels are now being revised downward to between 220 and 230 million bushels.

In Queensland the dry conditions have been limited to some outlying areas of the wheat belt. Western Australia has reported limited waterlogging but the prospects for a record 115 to 120 million bushel harvest are excellent. Dry windy conditions around the Murray Plain in South Australia have not affected the State's limited wheat acreage. Victoria has reported continued satisfactory conditions.

Recent official estimates indicate a slight downward revision in the 550 million bushels being mentioned in early September. Trade and Industry officials indicate that estimates within the Department and from Wheat Board members are at 530 to 535 million bushels.

Wheat Payment. — A further payment will be distributed on wheat delivered into No. 30 pool (season 1966-67). The payment will cover 425.6 million bushels of bulk wheat and 13.6 million bushels of bagged wheat, both at A.10 cents (12 cents Canadian) a bushel, bringing payments to A.\$1.30 (\$1.55) a bushel, (less freight) for bulk wheat and A.\$1.37 (\$1.64) a bushel (less freight) for bagged. This will mean a payment of approximately A.\$43.9 million (\$52.5 million) to growers and will bring total disbursements for No. 30 pool to A.\$495.4 million (\$592.5 million) after deducting A.\$76.5 million (\$91.5 million) for rail freight.

As this payment was announced by the Wheat Board, Mr. Anthony denied in parliament that there was any delay in announcing the first advance payment for wheat grown this season. Some wheat industry spokesmen are reported to be concerned that the advance may be reduced, first to deter growers from continuing to plant larger acreages next season in view of tight world markets and secondly to limit the total advance in the face of the record crop expected this harvest. The first payment has been A\$1.10 (\$1.32 Canadian) for 11 successive years with the exception of 1960-61 when the government chose for deflationary measures to pay A.90 cents (\$1.08) a bushel for bulk wheat. In the normal course the government will not announce its decision until November 30.

The New Wheat Stabilization Scheme. — The September 1968 report outlined the principal features of the new scheme which Mr. Anthony, the Minister for Primary Industry, publicly announced as the 'final offer' to the wheat growers. After unsuccessful last minute appeals to both the Prime Minister and the Minister for

Primary Industry, the Australian Wheat Growers Federation (A.W.F.) accepted the 68 million five-year scheme on September 20. The Federation later issued a statement praising the scheme as one which would ensure the industry of rising stability.

Following acceptance by the A.W.F., all States except Victoria have agreed to pass the necessary legislation. The Victorian Farmers' Union is the one wheat-growing organization still opposed to the Government's new stabilization scheme and the Victorian Government has assured the V.F.U. it would not agree to the scheme until it is acceptable to the Union. Recently the V.F.U.'s grains division carried a resolution rejecting the proposed two-tier system of wheat pricing and insisting on a one-price plan as well as certain changes in the cost of production formula for determining guaranteed prices.

Mr. Anthony has attacked the Union publicly:

'a few irresponsible men at the head of the Victorian Farmers' Union grains division were leading Victorian wheatgrowers astray and could lead the whole Australian wheat industry into disaster.'

The Wheat Industry Stabilization Bill 1968 was given second reading in parliament on October 10, 1968. In introducing the Bill Mr. Anthony stated again as he has done in the past that the basic profitability of wheatgrowing and increasing land value were important considerations in the Government's decision to break with the old scheme. He pointed out in the House that the average net income of wheat farmers in the three years 1964-65 to 1966-67 was A.\$9,400 (\$11,260 Canadian) and that three per cent of this income or A.\$330 (\$395) per farm per year was represented by Commonwealth subvention.

Mr. Anthony went on to explain that in the first year of the new scheme (1968-69) the export guaranteed price of A.\$1.45 (\$1.73) per bushel f.o.b. will return about A.\$1.41 1/2 cents (\$1.69) per bushel f.o.r. on 200 million bushels and home consumption sales, nearly about 60 million bushels a year, will return the grower A.\$1.70 (\$2.03) per bushel f.o.r. so that in 1968-69 Australian wheat growers are provided by legislation with a minimum average return of just over A.\$1.48 (\$1.77) f.o.r. per bushel or an aggregate of A.\$355 million (\$425 million).

In addition to the price and guarantee provisions, the Bill contains several significant administrative changes:

- (1) The Wheat Board's marketing powers will be extended for two seasons beyond the five-year duration of the scheme (in the past the Board's powers have been limited to 5 years). According to the Minister this change will improve the Board's powers for receiving and marketing of new season's wheat in the final year of the wheat stabilization plan and will put the Board in a better position to enter into long term contracts up to the final year of the five-year scheme.
- (2) Several loopholes in the Act debarring trading outside the Wheat Board have been closed. The wide gap between the home consumption price and the guaranteed export price necessitates stricter controls of private trading to ensure orderly marketing. (Flour millers and feed manufacturers have been criticized in the past of taking advantage of the provisions under section 92 of the

Commonwealth Constitution which guarantees freedom of inter-State trading. At the moment the amount traded outside the Board, mostly destined for the feed trade, is estimated at 5 to 8 million bushels.)

Production Controls on Wheat. — The Australian Wheatgrowers' Federation representative of the nation's 55,000 wheat growers has appointed a special committee to examine the future of wheat and the possible need for restrictions to be placed upon Australian wheat production. The mere fact that restrictions will be considered is being interpreted as a startling about-face on the part of the wheatgrowing industry's leadership which has in the past objected strenuously any suggestion of production controls.

In view of the rate of expansion of wheat acreage in recent years and the record crop predicted this year, this move by the Wheatgrowers' Federation has been described in the national press as 'revealing a realistic and intelligent appreciation of the present situation'. To date the biggest crop Australia has harvested was 466.6 million bushels in 1966-67. This season, short of an unexpected change in seasonal conditions, a crop in excess of 500 million bushels is almost certain. This will face the Australian Wheat Board with the task of selling almost 50 per cent more wheat than it has ever sold in a single season. It has been suggested that with the heavy crops in other countries-world wheat production this year is expected to reach 294 million metric tons (10.8 billion bushels), 6 per cent above last year-and with wheat prices at or marginally above the international minimum, a substantial unsold carryover approaching 150 million bushels is likely at the start of 1969-70 crop season. Another big crop would present substantial problems of transport, shipping and particularly storage.

The Special Committee will bring out its report after the wheat harvest in late December. However, even if the Australian Wheatgrowers' Federation requests it, what form, if any, production controls could take is highly debatable. The Commonwealth Government has in the past flatly rejected all moves for restrictions on food production on the grounds that such action would rouse strong feelings in Asia. State rivalries would probably result in strong political opposition to production contract in any particular state. Separate Commonwealth and State Legislation would be required as the powers to implement acreage control do not exist under the stabilization scheme. In the circumstances it has been suggested that the A.W.F. move will result in nothing more concrete than a warning by the Federation to wheatgrowers against over-production.

## ARGENTINE SITUATION

Wheat Supplies

Above Previous Year

Total estimated supplies of wheat in Argentina for the 1967-68 (December-November) crop year are placed at some 288.3 million bushels some 18 per cent above the previous season's total of 243.3 million. Current crop year supplies consist of the December 1 carryover of 16.4 million compared with 13.8 million the year before, while the 1967 production, at 271.9 million, registered an increase over the 229.5 million harvested in 1966. After making an allowance of 156.1 million for anticipated domestic requirements, an estimated 132.1 million are available for export and for carryover in 1967-68, some 33 per cent more than the 99.1 million the previous year.

Exports Decline
from Last Year

Preliminary exports of wheat and wheat flour in terms of wheat equivalent during December 1967 - September 1968 amounted to 66.2 million bushels, some 19 per cent less than the 81.5 million exported during the same ten months in 1966-67. The balance remaining on October 1, 1968 for export and for carryover was estimated at 65.9 million bushels, in sharp contrast to the October 1, 1967 total of 17.6 million.

The following account of the Argentine situation has been extracted from a report from Mr. S.E. Kidd, Assistant Commercial Secretary (Agriculture) Buenos Aires, under date of October 21, 1968 and is reproduced with the permission of the Trade Commissioner Service, Department of Trade and Commerce. Where possible conversions to Canadian measures and currency have been made for the convenience of our readers.

Wheat. — Crop conditions are satisfactory throughout the wheat growing areas and a good harvest is expected. Weather conditions were very unsettled during September. Abrupt changes in temperature including some frosts, strong drying winds and a lack of rain caused some damage, particularly in the north. However, the general condition of the crop was helped by abundant rains throughout the grain area early in October.

Early in October, the traditional ceremony of selling the first lot of wheat from the new crop took place at the Buenos Aires Cereals Exchange. The first sale was of 22 metric tons (800 bushels) of wheat produced in the northern province of Santiago del Estero.

Harvesting operations have commenced in Chaco province but yields are only fair. Yields are expected to be better in Santa Fe, Cordoba and Entre Rios where the harvest commences early November. Farther south, in Buenos Aires and La Pampa provinces, crop conditions are good to excellent but harvesting does not begin until early December.

The condition of the Durum crop is also excellent at this time but harvesting will not begin until late December.

Rumours persist that the export taxes on wheat will be reduced and this may account, in part, for the general weakness in the market. Hard bread wheat prices during September fell to only 1,500 pesos per 100 kilos (\$1.26 per bushel) f.o.r.

Preliminary figures.

Revised figures.

Buenos Aires compared with 1,540 pesos (\$1.29 per bushel) at the end of August. This is the fourth month in a row in which a decrease has been recorded in the price of wheat. At Bahia Blanca, prices firmed slightly to 1,460 pesos per 100 kilos (\$1.22 per bushel) from 1,440 pesos (\$1.21 per bushel) at the end of August. It is reported that a small parcel was sold to Italy during the last week of September at U\$\$ 58.00 per metric ton (\$1.69 per bushel) f.o.b. Necochea, for shipment in October. By October 15, prices at Buenos Aires had fallen to 1,410 pesos (\$1.18 per bushel) but recovered to 1,450 pesos (\$1.21 per bushel) by the 19th. Prices at Bahia Blanca were also 1,450 pesos per 100 kilos (\$1.21 per bushel) at October 19. At the same date, prices on the Buenos Aires Futures Exchange were 1,500 pesos per 100 kilos (\$1.26 per bushel) for November delivery; 1,510 (\$1.26 per bushel) for December; 1,513 (\$1.27 per bushel) for January; 1,518 (\$1.27 per bushel) for February; and 1,540 (\$1.29 per bushel) for March.

Candeal (Durums) prices were somewhat firmer in September, closing at 1,920 pesos per 100 kilos (\$1.61 per bushel) f.o.r. Buenos Aires and 1,950 (\$1.63 per bushel) f.o.r. Bahia Blanca compared with 1,880 and 1,780 pesos (\$1.57 and \$1.49 per bushel), respectively, at the end of August. However, stocks are almost depleted and very little was sold. At October 19, Durum prices were 1,920 and 1,970 pesos per 100 kilos (\$1.61 and \$1.65 per bushel) f.o.r. Buenos Aires and Bahia Blanca, respectively. Prices for Durums from the new crop were firmer at U\$S 68 per metric ton, (\$1.99 per bushel) f.o.b. Necochea for February shipment and U\$S 69.50 per ton (\$2.03 per bushel) for March shipment to Italy.

During September, the Argentines signed the third and concluding contract under their agreement with Brazil for one million metric tons (36,743,000 bushels) of wheat. This contract was for 343,000 metric tons (12,603,000 bushels) for shipment in October to December period at a price of U\$S 55.75 per ton (\$1.63 per bushel) f.o.b. Buenos Aires. The first contract under this agreement was for 350,000 tons (12,860,000 bushels) for shipment in April - June at U\$S 57.52 (\$1.68 per bushel) and the second was for 307,000 tons (11,280,000 bushels) for shipment in July - September at U\$S 57.05 (\$1.67 per bushel). This agreement is expected to be renewed in 1969.

The Japanese Food Agency has purchased a sample lot of 3,600 metric tons (132,000 bushels) of Argentine wheat. One lot of 2,400 tons (88,000 bushels) is of 11.5 per cent protein content and sold for U\$S 70.30 (\$2.05 per bushel). The second lot of 1,200 tons (44,000 bushels) of 12.5 per cent protein, sold for U\$S 73.30 (\$2.14 per bushel). This was the first sale of Argentine wheat to Japan since 1950.

the same quarter last year. Of the total October 1 wheat stocks 102 million bushels were owned by the Commodity Credit Corporation and CCC loans were outstanding on an additional 473 million bushels.

Durum wheat stocks in all positions on October 1 totalled 110.0 million bushels, 47 per cent above last year. Farm holdings of about 92.6 million were 67 per cent above last year while off-farm stocks at 17.4 million were down 11 per cent. Disappearance during the July-September quarter is indicated at 14.8 million bushels compared with 17.2 million bushels for the comparable period in 1967.

## CALENDAR OF WHEAT EVENTS

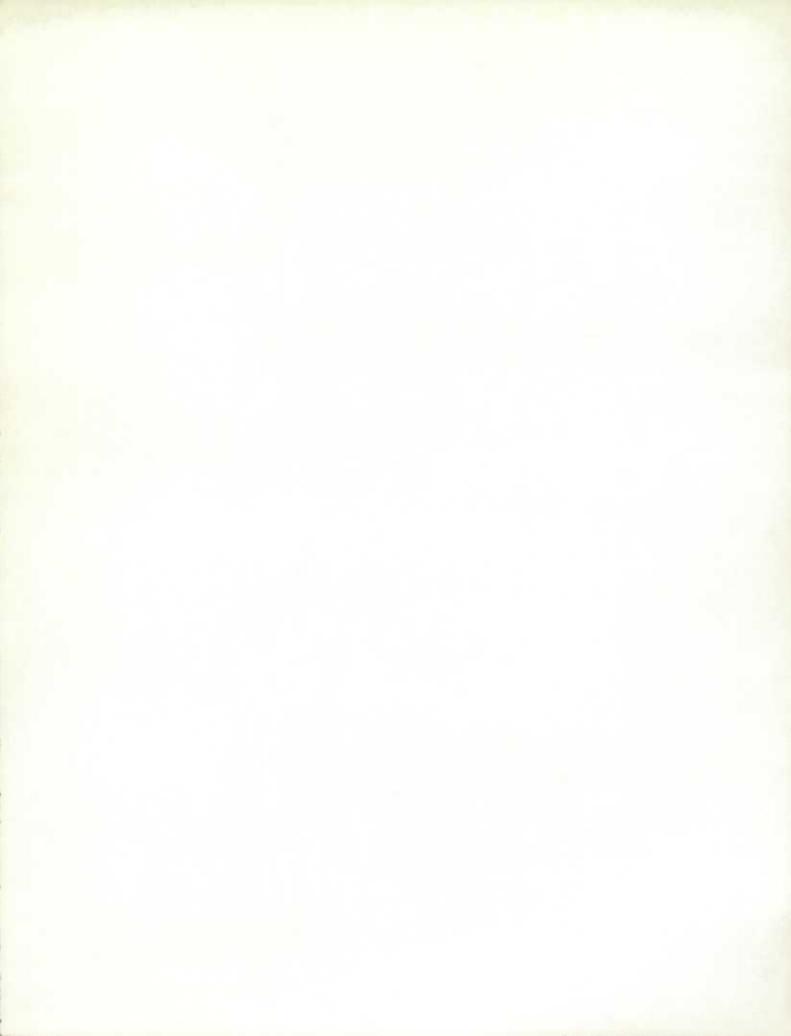

- October 10

  According to a report published by the Crop Reporting Board
  U.S.D.A., production of all wheat in the United States in 1968,
  based on conditions at October 1, was estimated at a record
  1,598 million bushels.
  - 17 The 1968 season of navigation closed at the port of Churchill.
  - According to the Bureau of the Census, United States Department of Commerce, wheat flour production in the United States in September 1968 was 21,402,000 hundredweight compared with 21,873,000 hundredweight the previous month and 20,990,000 hundredweight in September 1967. Flour mills in September 1968 ground 48,203,000 bushels of wheat compared with 48,950,000 bushels in the previous month and 47,180,000 bushels at the same month a year ago.
