PRELIMINARY REPORT ON MINERAL PRODUCTION, 1949

The mineral production of Canada reached a new high value of \$890.2 millions in 1949, according to a preliminary estimate just completed. This value was 8.5 per cent greater than the \$820.2 millions for 1948, but it included data for Newfoundland for the first time. If the \$25.7 millions for Newfoundland were excluded, the gain over 1948 would be reduced to 5.4 per cent.

Metals were valued at \$534.8 millions in 1949, an increase of 9.5 per cent from the \$488.2 millions of the preceding year. The prices of base metals fluctuated widely during the year, but the calculated averages were lower in most cases than in 1948. In comparison with figures for the preceding year, the tonnage of copper was up 9.5 per cent while the value was down 2.2 per cent; the quantity of zinc increased 23.3 per cent, but the value was up only 17 per cent; lead production decreased 5.7 per cent in tonnage and 7.5 per cent in value. The devaluation of the Canadian dollar on September 18, 1949 raised the price of gold from \$35.00 to \$38.50 per troy ounce, and with more skilled labour available the gold mining industry was able to increase its output in 1949, the amount recovered from all sources exceeding 4.1 million ounces worth \$147.7 millions. Silver production worth \$12.6 millions was slightly higher than in 1948.

The value of mineral fuels reached \$184.2 millions in 1949, exceeding by 15 per cent the previous record in 1948. Coal production at 19.3 million tons was 5 per cent greater than in 1948. The rapid development of the Alberta oil fields increased the crude petroleum output by 66 per cent, and the volume of natural gas, which is usually associated with crude oil, increased 28 per cent.

Non-metallics, or industrial minerals, were valued at \$62.3 millions compared with \$67.2 millions in 1948. Due to labour disputes, the asbestos production declined to 573,610 tons worth \$38.7 millions from the record high of 716,769 tons valued at \$42.2 millions in 1948. The gypsum industry maintained the approximate level of production in 1948. The value of salt at \$5.3 millions was 9.7 per cent higher than in 1948. The fluorspar industry was given a substantial increase by the Newfoundland shipments. Sulphur produced in the form of pyrite and sulphuric acid remained fairly constant in quantity and value.

Reflecting the high level of activity in the construction industry, the output of cement reached an all-time high of 16 million barrels valued at \$32.8 millions. Clay products, which include brick, tile, etc., made from Canadian clay, were valued at \$18.4 millions. Lime production was over one million barrels valued at \$10.9 millions. There was an increased demand for stone amounting to nearly 13 million tons. As formerly, a large portion of the 59.2 million tons of sand and gravel was used in highway construction.

Table 1 - VALUE OF MINERAL PRODUCTION, BY CLASSES, 1938-1949

Year	Metallics	Mineral fuels	Other non-metallics	Clay products	TOTAL
				and other structural materials	
(Dollars)					
1938	323,018,616	64,803,294	20,122,661	33,878,666	441,823,237
