PRELIMINARY REPORT ON MINERAL PRODUCTION 1959

A new high was reached in 1959 in the Canadian mineral industry when the value of mineral commodities exceeded \$2.4 billion according to a preliminary estimate prepared by the Dominion Bureau of Statistics at Ottawa. There was an increase of 13.7 per cent above the value of \$2,100,739,038 in 1958. The minerals which showed the larger gains were copper \$59 million, iron ore \$60 million, nickel \$63 million, uranium \$45 million, asbestos \$14 million and petroleum \$28 million. The quantities of gold, lead and zinc showed a downward trend.

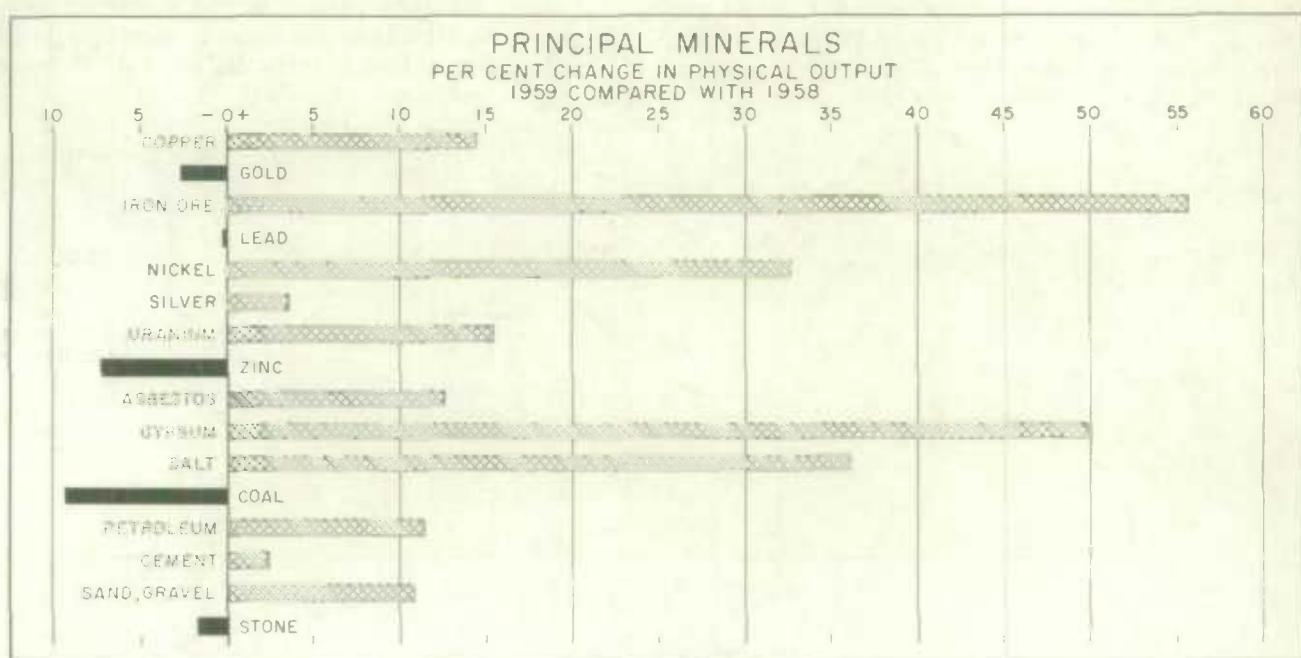

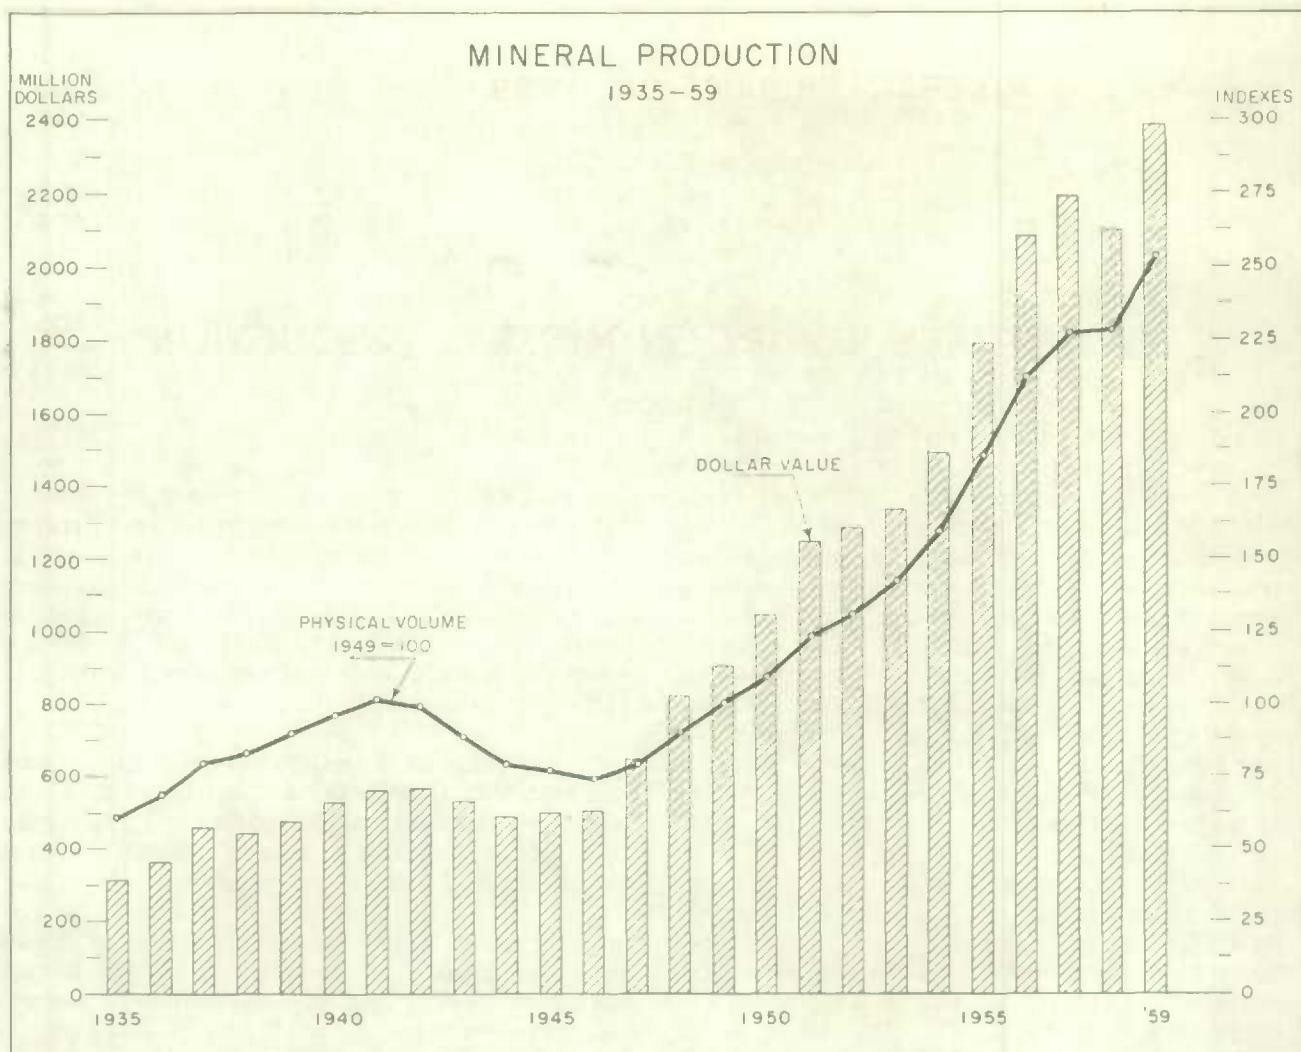

Metals were valued at \$1,359 million in 1959 compared with \$1,130 million in 1958. Uranium continued to be the leading metal with a value of over \$324 million. Nickel shipments were valued at \$257 million. The increase in both tonnage and price brought the value of copper to \$233 million. Silver output was up but there was less gold produced at a lower price. The lead and zinc producers did not put as much metal on an over-supplied market. Iron ore shipments of 24.5 million short tons were valued at \$186 million. This was a new high.

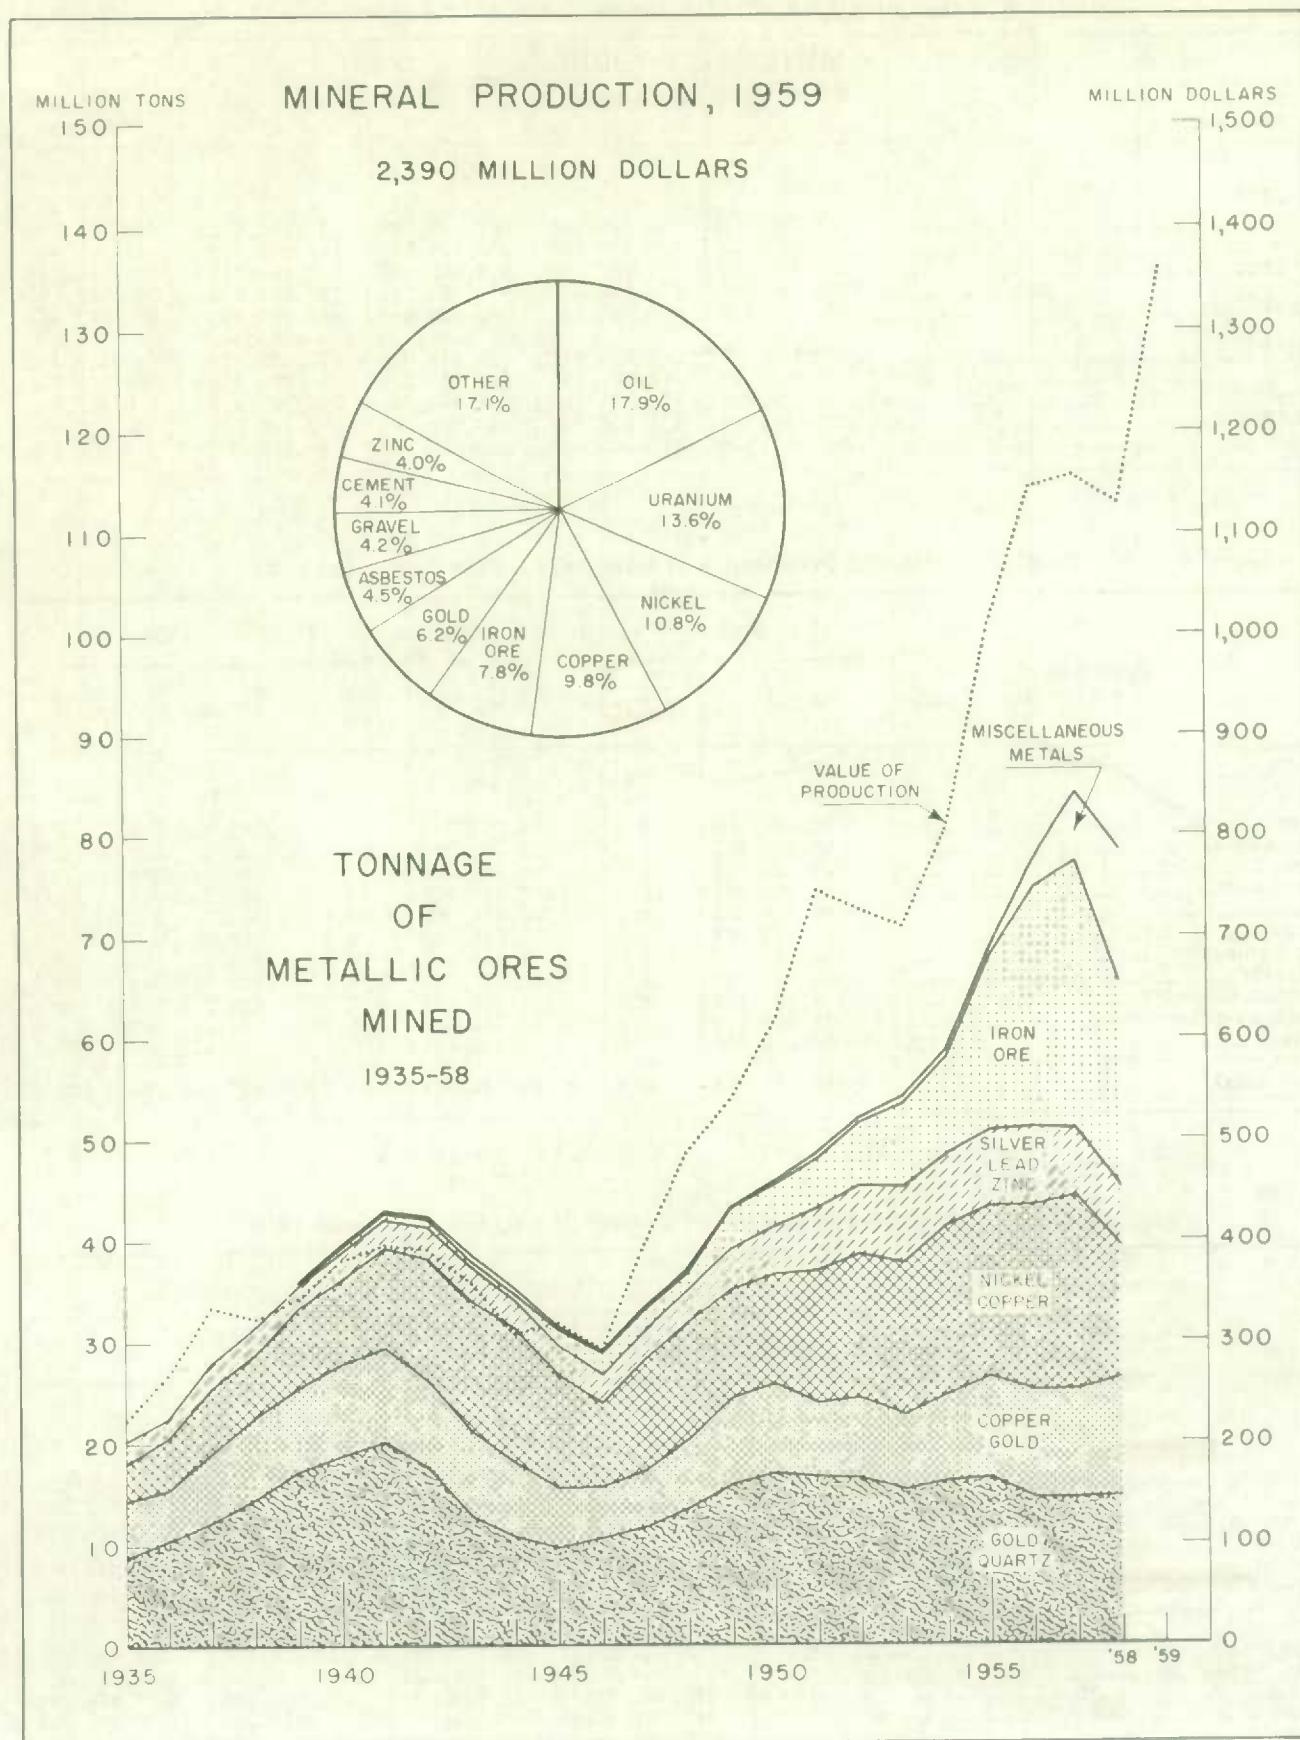

Non-metallic minerals increased in value in 1959 to \$176 million compared with \$150 million in 1958. A million tons of asbestos were valued at \$106.6 million. Crude gypsum output in the maritimes increased substantially. The first commercial shipments of potash were made from the Saskatchewan deposits. Rock salt and brine increased in volume to exceed 3.2 million tons.

The value of mineral fuels was \$540.1 million an increase of about \$30 million. Crude petroleum amounted to nearly 185 million barrels. There were 428 billion cubic feet of natural gas utilized. Coal shipments declined a million tons.

Structural materials were produced at about the same level as in previous years, with upward trends in clay products, sand and gravel but a downward trend in stone.

Note: All 1959 figures in this report are preliminary and are subject to revision upon receipt of more complete data. Figures for the earlier years have been revised.

Note: Output of aluminum metal in Canada is not included in the mineral production figures for the country. Although Canada has some of the world's largest aluminum smelters, all of the ores for use in same are imported.
