PRELIMINARY REPORT ON MINERAL PRODUCTION

1961

Producers in the Canadian mineral industry in 1961 shipped \$2.57 billion worth of mineral commodities according to a preliminary estimate prepared by the Dominion Bureau of Statistics, Ottawa. This was a modest increase of about 3.2 per cent above the total value of minerals in 1960 which amounted to \$2,492 million. Valuations of the leading minerals were, crude petroleum, \$487 million; nickel \$357 million, copper \$258 million; uranium \$204 million, iron ore \$180 million; gold \$157 million and asbestos \$131 million.

The value of metals declined to \$1,397 million from \$1,406 million in the preceding year. Uranium shipments decreased by \$65 million. This was anticipated some time ago when it was announced that the deliveries of uranium would be extended over a longer period of time. The new nickel mine in Manitoba helped to increase the total tonnage of that metal to over 237,000. The prices of gold and base metals were increased at mid year when the exchange rate on the Canadian dollar changed from a premium to a discount. The demand for iron ore continued to be rather limited.

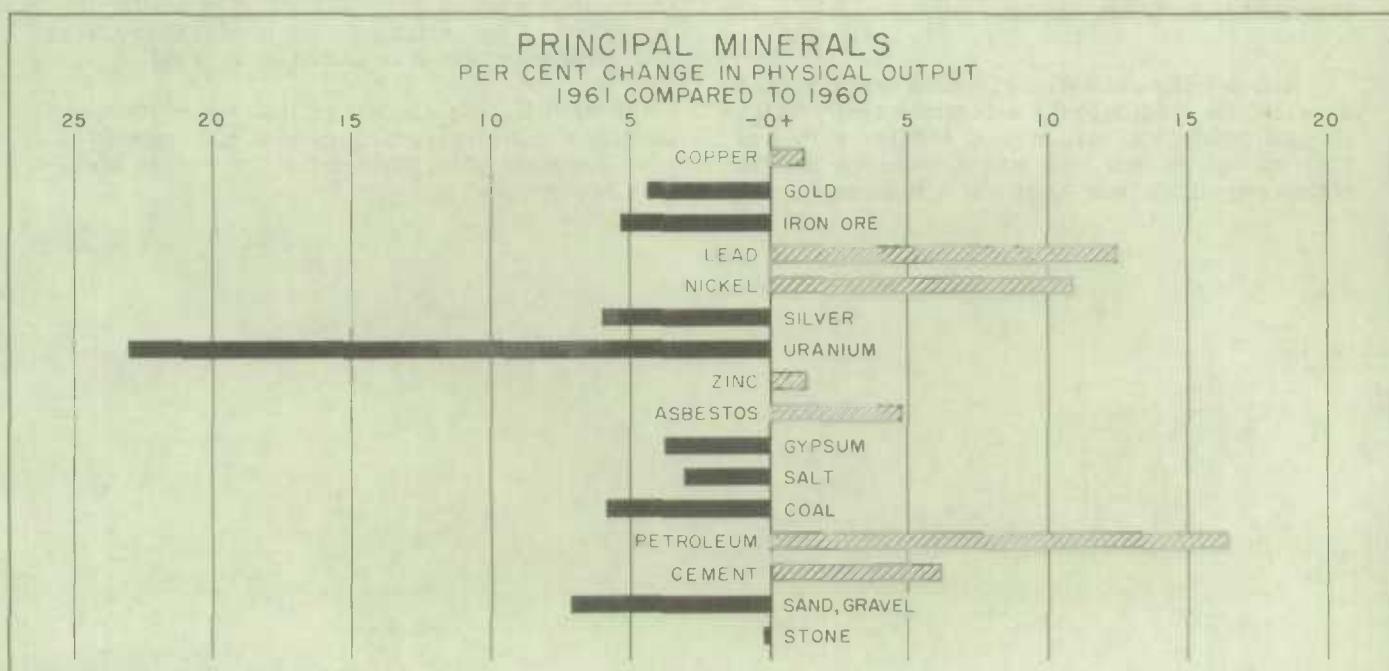

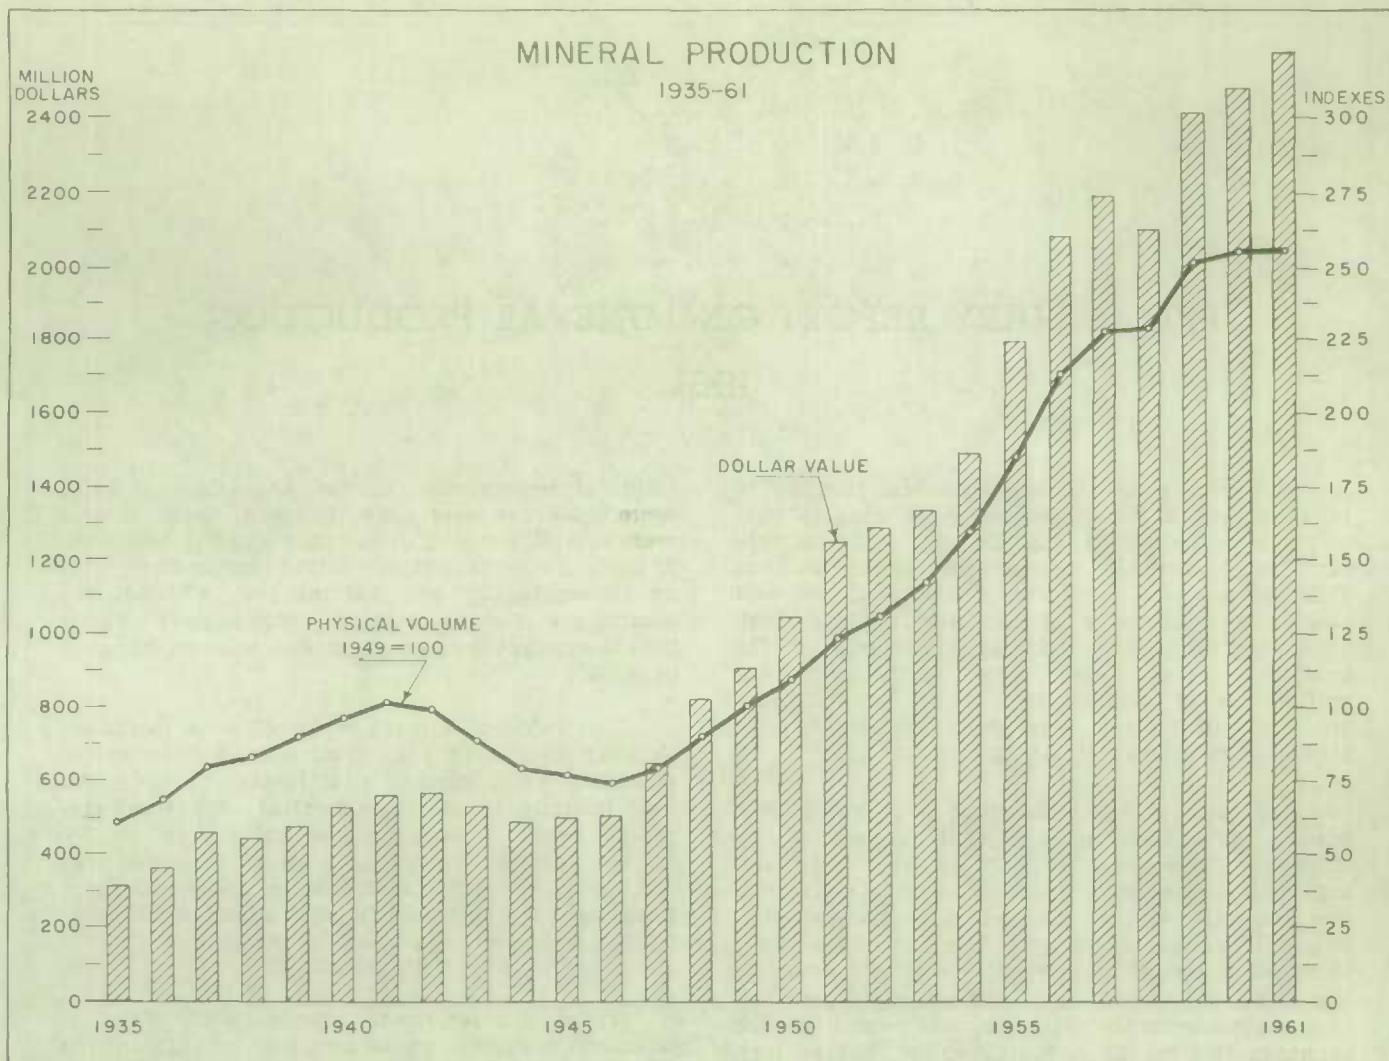

Non-metallic minerals exceeded \$210 million in value, due chiefly to the asbestos industry which shipped nearly 1.2 million tons of fibre valued at \$131 million. A new high was established despite of the competition from Asian and African producers.

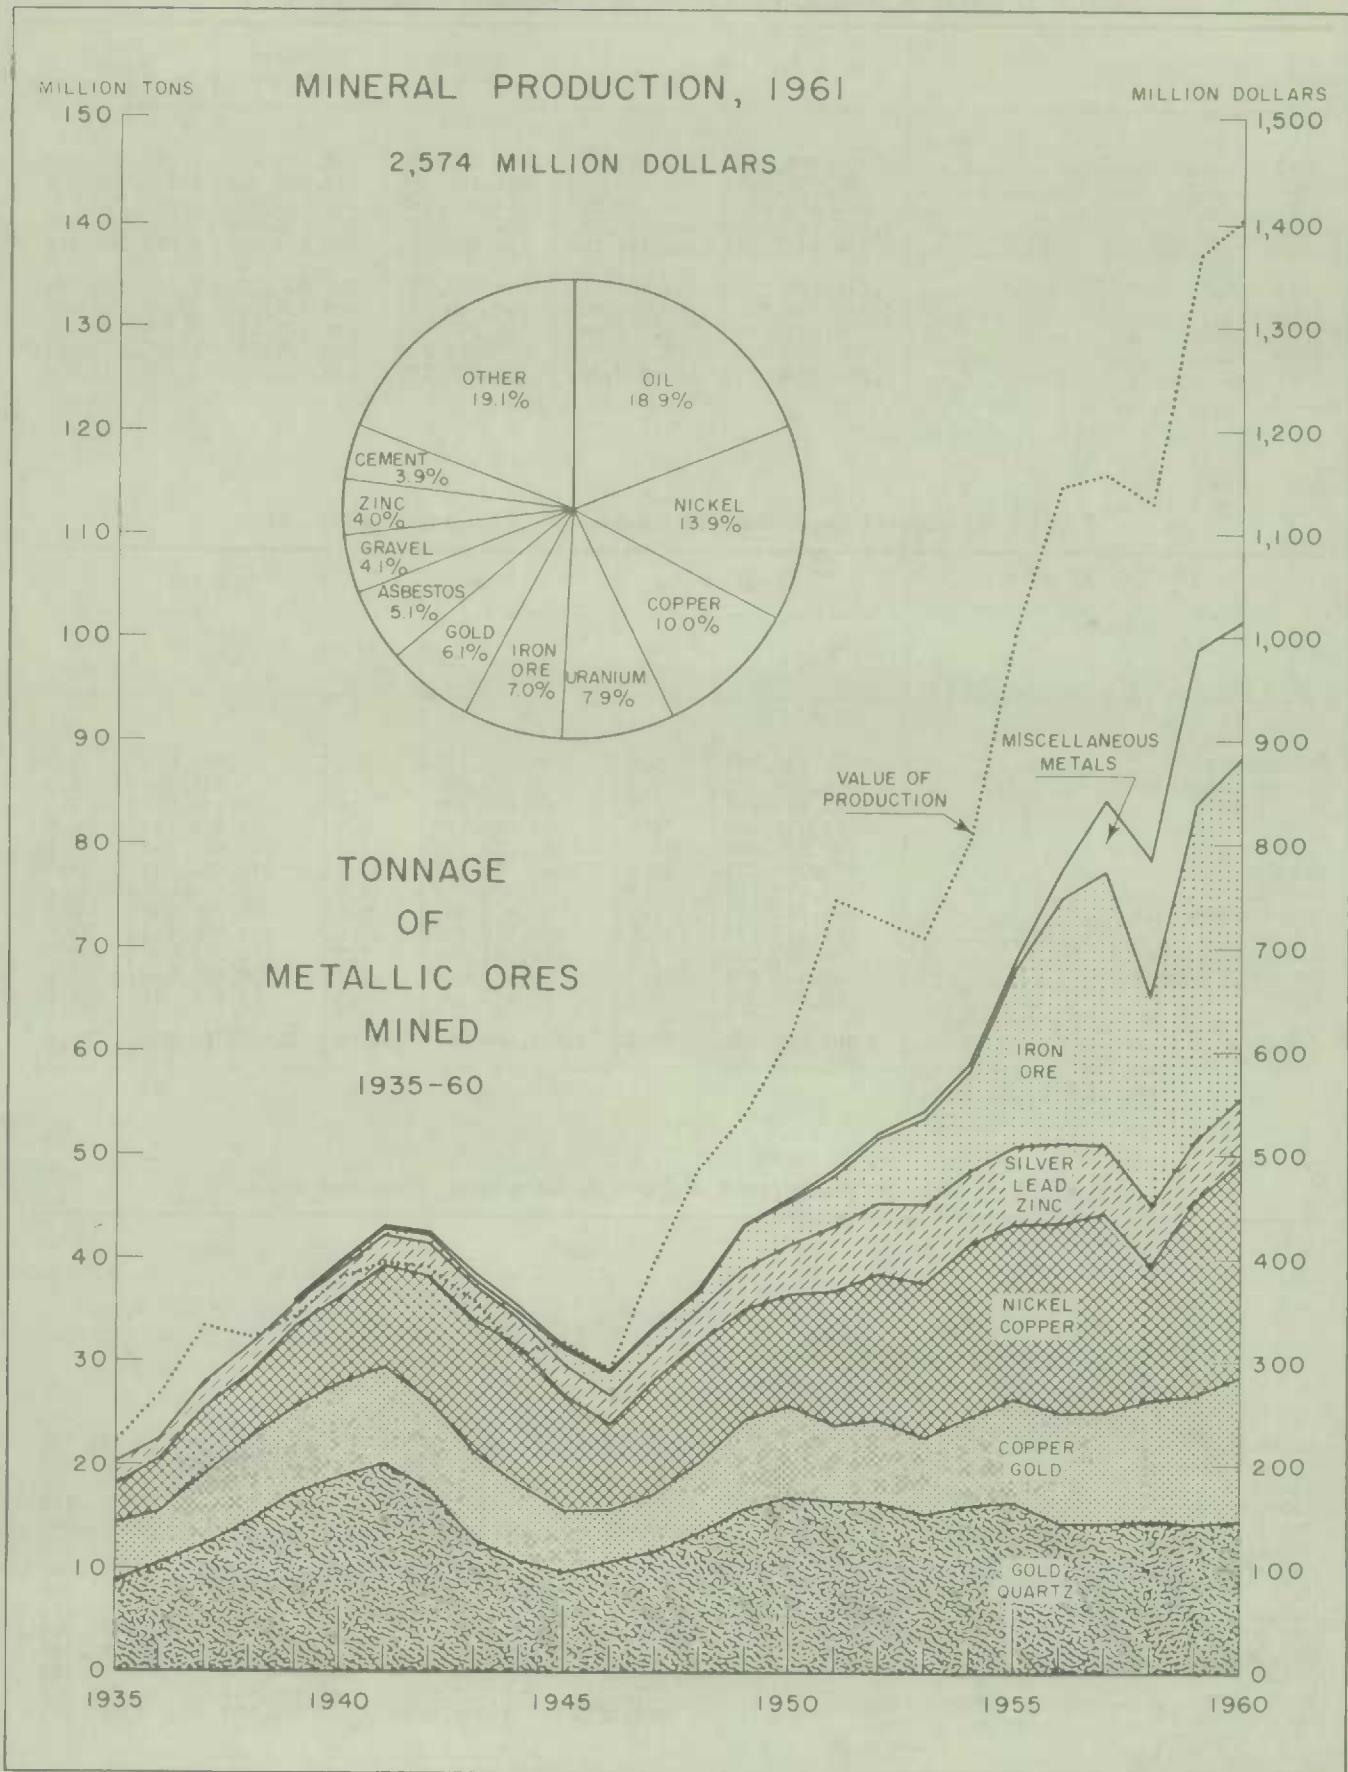

Lithia in concentrates, oxides carbonates and salts were valued at over \$360 thousand. Sales of salt were \$19 million which was only slightly less than in 1960. Elemental sulphur output increased directly as the output of sour natural gas. Although the natural gas processing plants produce more sulphur than the market demand, there has been an increase in sales.

The value of mineral or fossil fuels increased to \$643 million in 1961 from \$566 million in the preceding year. After a mild revival in 1960, the coal industry resumed the decline of several preceding years. Crude oil production rose to 220 million barrels. The volume of natural gas was 646,000 million cubic feet. Natural gas by-products which include condensate, natural gasoline, propane, butane, etc. were obtained by processing natural gas in the vicinity of the gas fields.

There was not much change in the value of structural materials which amounted to \$323 million in 1961 and over \$322 million in 1960. Cement shipments exceeded \$100 million in value for the first time. Lime shipments declined. There was less stone, sand and gravel used during 1961.

Note: All 1961 figures in this report are preliminary and are subject to revision upon receipt of more complete data. Figures for the earlier years have been revised.

Note: Output of aluminum metal in Canada is not included in the mineral production figures for the country. Although Canada has some of the world's largest aluminum smelters, all of the ores for use in same are imported.
