ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Revisions to the previously published series of shipments, inventories and orders have been made from 1961 to the current month of this year and are contained in this report. But despite changes in the values, the year to year movements of all series generally remain about the same.

The annual revision to the monthly series has been included in the regular January issue for the past several years, but since the 1962 census values have become available it seems reasonable and correct to improve the series now even if faster processing of the 1963 census should bring another revision based on 1963 census values fairly soon.

A number of factors contributed to the changes in the revised values. Shipments and inventories in 1961 are now based on final 1961 census values. Actual values of the 1962 census of manufactures reports were used for 1962, replacing estimates based on 1961 values, and these 1962 census values are now used as the base values for the following years. The 1963 values, however, also incorporate preliminary 1963 census of manufactures values where necessary when these values were available. The values for all months in 1963 have also been corrected for errors both in estimates and in processing.

All these improvements are reflected in the new 1964 and 1965 monthly series which have been further refined by additions to and deletions from the group of reporting firms and by inclusion of data from individual reports received too late for use in earlier issues.

The transfer of railway repair and maintenance shops from manufacturing activity to the transportation sector of the economy accounts for the major part of the revision in 1961. It meant a change in 1961 shipments of \$117 million which shows up in the railway rolling stock industry, in major group number 15 and in total shipments by provinces, where Quebec's figures reflected a \$45 million decline and Manitoba and Ontario, declines of \$27 million and \$26 million respectively. Since the railway rolling stock industry included repair and maintenance activity in the series published up to June 1965, the years 1962 to 1964 and the months from January to July 1965, will show a comparable decline for this adjustment.

The major changes in the 1964 estimates of shipments show up in three major groups: number 6, knitting mills; number 8, wood industries; and number 14, machinery industries. The substantial revision of shipments in the knitting mills industry group in 1964 is mainly because of a correction of low preliminary estimates for some firms that reported late in the hosiery industry and the correction up to 1963 to census values for the estimates of other knitting mills. In the wood industries, the downward revision in the shipments estimate is chiefly the result of the change in the value of saw mills shipments in the base year. The trend of monthly shipments in this industry is being revised from a primarily physical value series adjusted for price changes to a survey covering sales from a representative group of mills; the trend shown here may be subject to further revision. The revision to estimated shipments in the machinery industries is almost entirely the result of revision to the base values in 1962.

The largest changes in the revisions of unfilled orders in 1964 appear in the leather industries and the textile industries where the higher 1962 base and the corrections for late returns are the main causes. Since the estimate of new orders is derived from the estimate of shipments and unfilled orders, this series reflects revisions to both.

The overall revision has had a generally smaller effect on inventory level figures than on other series in the report. The transfer of railway repair shops from manufacturing to transportation mentioned above was principally responsible for the downward change in the revised estimates of inventories held in the transportation equipment industries.

TREND SUMMARY

The preliminary estimate of manufacturers' shipments in July, based on the 1962 census values, totalled \$2,793.1 million, a drop of 7.5 per cent from the revised June estimate of \$3,018.9 million but 10.6 per cent higher than the revised estimate of shipments in July 1964. After allowance for seasonal variation, the July shipments were brought up to \$2,898.7 million which was 2.6 per cent higher than the seasonally adjusted estimate of June shipments and 12.3 per cent over the level of July last year.

Cumulative shipments for the seven months period of 1965 reached \$19,330.2 million showing an increase of 6.8 per cent over the same period in 1964. During this period shipments in the durable goods industry groups showed greater strength in general than shipments in the non-durable industry groups. Total shipments in the durable goods industry groups were up by 9.7 per cent over the comparable period in 1964 while the non-durable goods industries rose by 4.3 per cent.

In July shipments in each of the durable goods industry groups declined substantially as compared with shipments in the previous month but were also considerably higher than shipments in July 1964. The more pronounced changes occurred in the transportation equipment industries and the furniture and fixtures industries. Within the non-durable goods category, relatively larger decreases in July were reported by the tobacco industries, the rubber industries, the textiles industries, and the chemical and chemical products industries. Increases of shipments in July over last month were reported in only three industry groups—the clothing industries, the knitting mills, and the petroleum and coal products industries.

New orders received by manufacturers during July were valued in the preliminary estimate at \$2,790.8 million, lower than the revised estimate of new orders in June by 7.8 per cent but higher than the July 1964 estimate by 8.5 per cent. Seasonally adjusted, the estimate of new orders for this month was brought up to \$2,891.2 million, an advance of 2.2 per cent over the \$2,829.3 million in June. Durable goods producers' new orders in July were down 8.4 per cent from June but were up 15.1 per cent from the level of last year.

At the end of July, unfilled orders dropped slightly to \$2,986.5 million from \$2,988.8 million in June, and to \$2,944.4 million from \$2,951.9 million after seasonal adjustment. In comparison with the same month in 1964, manufacturers' unfilled orders in July this year were 14.5 per cent higher. Unfilled orders in the durable goods industries showed an increase of 0.3 per cent in July while the non-durable goods industries reported a drop of 1.9 per cent; both the durable and the non-durable industry groups have about the same relative increase of just over 14 per cent in July as compared with the level at the same time a year ago.

Total manufacturers' inventories owned at the end of July amounted to \$5,352.6

million according to the preliminary estimate, which is slightly less than the level at the end of June of \$5,361.1 million. The seasonally adjusted values, however, show a slight increase in total inventory owned at the end of July at \$5,413.3 million which is 0.5 per cent above the level at the end of June. These estimates of inventories owned in July, both seasonally adjusted and unadjusted, were up 7.3 per cent from the corresponding estimates a year earlier. At an estimate of \$5,657.8 million total inventories held were also slightly lower at the end of July as compared with \$5,673.4 million at the end of June. Seasonally adjusted, however, total inventories held rose by 0.5 per cent to \$5,716.1 million; the larger part of the increase was in finished products which rose by 1.8 per cent to \$1,956.7 million, while goods in process rose fractionally and raw materials declined. In the major industry groups, more pronounced decreases of inventories owned in July were reported by the tobacco industries, 5.6 per cent, and the transportation equipment industries, 5.4 per cent, although the latter in fact showed a rise in inventory owned of 21.1 per cent over the end of July last year. Relatively marked increases in July inventories owned were shown by the primary metal industries of 2.5 per cent and the paper and allied products industries of 1.8 per cent, and both of which were also higher by 7.8 per cent and 7.2 per cent respectively over the level of inventories at the end of 1964.

The ratio of total inventories owned to shipments as well as the ratio of finished products inventories to shipments, rose in July by the customary large amount, to 1.92 and 0.70 respectively from 1.78 and 0.64 in June.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 92 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
