ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Total shipments of all manufacturing industries in August were off 2.2 per cent to \$2,689.8 million from \$2,750.0 million of July; the seasonally adjusted estimate of \$2,769.2 million for August is 3.0 per cent lower than the July value. Comparing with August of last year, however, manufacturers' shipments this month were higher by 7.6 per cent, or by 5.4 per cent after seasonal adjustment. Durable goods manufacturers' shipments in August, as in many previous months of the year, changed much more than the non-durables; the former dropped 10.3 per cent and the latter rose 4.8 per cent. Manufacturers' shipments in the year to date reached \$21,976.8 million, 6.7 per cent above the same period of 1964.

The major contributors to the gain in shipments in the non-durable industry groups were the clothing industries, the paper and allied products industries and the leather industries; the highest relative increases were reported in, again, the leather industries, 55.3 per cent, and the clothing industries, 44.5 per cent, which were at their seasonal high. The only substantial decline in shipments occurring in the non-durable goods category in August was recorded in the foods and beverages industries which declined 3.1 per cent. Shipments in the transportation equipment industries which fell 46.0 per cent reflecting the seasonal low in automobile shipments in August accounted for more than the decline in the whole durable goods manufacturing group. Within the durable goods group, industries which showed considerable advances were the furniture and fixture industries, 16.8 per cent, and the metal fabricating industries, 6.0 per cent.

In August, new orders received by manufacturers valued at a preliminary estimate of \$2,759.5 million and at a seasonally adjusted estimate of \$2,864.9 million were both fractionally above the estimates of last month. Non-durable goods producers reported an increase of 4.7 per cent in new orders during August, while the durable goods producers recorded a fall of 4.7 per cent.

Unfilled orders at the end of August reached a new high at the level of \$3,059.1 million and \$3,043.0 million seasonally adjusted, and were 2.3 per cent and 3.3 per cent respectively over the revised estimates of the previous month. In comparison with the comparable level of 1964, the average monthly level of unfilled orders in the year to date was 17.1 per cent higher. The small decrease of 1.7 per cent in unfilled orders in the non-durable industries was more than offset by the considerable increase of 3.2 per cent reported by the durable industries, both of which were higher than the levels of last year by 19.3 per cent and 18.0 per cent respectively.

At the end of August, both manufacturers' inventories owned and inventories held showed just 1.0 per cent ahead of last month, rising from \$5,341.4 million to \$5,397.2 million and from \$5,641.2 million to \$5,699.2 million. After adjustment for seasonal variation, inventories owned in August rose by only 0.5 per cent and inventories held by 0.6 per cent; more than one-half of the small accumulation in inventories came from raw materials, while goods in process and finished products showed small changes from the month before. Inventories owned by durable goods

manufacturers at the end of August were 1.3 per cent higher than last month, and non-durable goods producers reported a rise of 0.8 per cent. Comparatively marked increases in inventories owned were shown by the transportation equipment industries, 7.9 per cent, and the petroleum and coal products industries, 3.4 per cent, and decreases were reported by the tobacco industries of 3.6 per cent, and the leather industries and the clothing industries of 2.8 per cent each. Nearly all major industry groups contributed to the 6.8 per cent advances in manufacturers' inventories owned at the end of August comparing with the same month of last year, except the foods and beverages industries and the petroleum and coal products industries which showed decreases.

In August the ratio of manufacturers' inventories owned to shipments rose again from 1.94 in July to 2.01 and the ratio of finished products inventories to shipments increased from 0.70 to 0.72 largely reflecting the more than seasonal low in shipments in the month.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
