#### GOVERNMENT OF CANADA

# INVENTORIES, SHIPMENTS AND ORDERS IN MANUFACTURING INDUSTRIES DECEMBER, 1952

EDMOND CLOUTIER, C.M.G., O.A., D.S.P. QUEEN'S PRINTER AND CONTROLLER OF STATIONERY OTTAWA, 1953

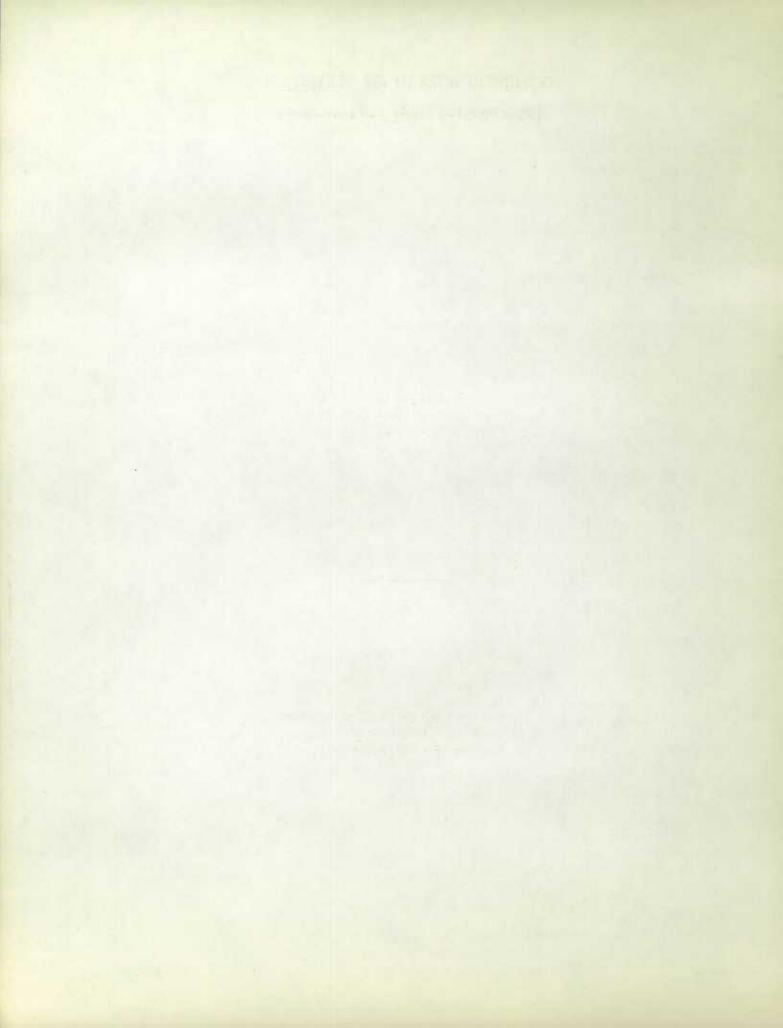

# DOMINION BUREAU OF STATISTICS

Department of Trade and Commerce

Published by
Authority of the Rt. Hon. C. D. Howe
Minister of Trade and Commerce

Prepared in the Commodity Statistics Section Industry and Merchandising Division Dominion Bureau of Statistics Ottawa

This report contains monthly and annual data on the value of manufacturers' inventories, and monthly data on manufacturers' shipments and orders. The breakdown of material presented is as follows:

	Page
REVISIONS TO 1952 SERIES	2
TREND SUMMARY - (Text)	4
ESTIMATED DOLLAR VALUES (Table 1)	6
INDEXES OF MAJOR INDUSTRY GROUPS (Table 2)	11
Indexes of Total Inventory Held, by economic-use groupings	11
economic-use groupings, and major industry groupings	12
INDEXES OF INDIVIDUAL INDUSTRIES (Table 3)	22
INDEXES OF OUTSTANDING ORDERS (Table 4)	42
YEAR-END INVENTORY VALUES, 1950-51 (Table 5)  Data reported in the year-end inventory surveys, in the same groupings used in Table 2. A list of industries included in each industry is given in an appendix, beginning on page 51.	45
SOURCES AND METHODS	54

#### REVISIONS TO SERIES

This report incorporates two revisions to previously published data for 1952:

(1) The first is the customary annual adjustment to correct the level of estimated total inventory values, by taking into account the latest available benchmark data. The monthly estimates are based on sample coverage, and whenever complete coverage is available from the Year-End Surveys (see Sources and Methods, page 54) the estimates are linked to this level and the indexes re-weighted from that point on. Thus 1951 data were revised a year ago to allow for final figures from the Year-End Survey for 1950. In this report, 1952 estimates have been revised to incorporate data from the December 1951 survey.

#### It should be noted that:

- (a) No adjustments are made in the series to months prior to
  December 1951 for corrections in the December 1951 level. Any such
  adjustment could be a mechanical one only, since nothing more is known
  of the intervening months than the data available from the sample, on
  which the monthly estimates are already based.
- (b) The adjustment affects only the value estimates in Table 1, and (by re-weighting) the composite index series in Table 2, but not the individual industry indexes in Tables 2 and 3. The latter represent the indexes of the group of reporting firms in each case, and, as such, are not subject to the above correction.
- (2) The second revision to 1952 data incorporated this month involves a change in concept, and affects both inventory and shipments. Previous inventory estimates were made on the basis of "investment" in inventory by manufacturers i.e. manufacturers' ownership of inventory; and sales data, in the majority of cases, represented final sales only. In a number of industries where long-term commitments are common, it is often the practice for the manufacturer to be paid as work progresses. In these cases, investment in inventory understates considerably the manufacturers' total holdings, and the use of final sales only understates "work done" except in the month of delivery, when there is a considerable overstatement. In addition, some firms operating on this basis write off progress payments to sales as received, so that it is impossible to obtain a pure figure of final sales only. Although the amount of inventory held but not owned by manufacturers is not a large proportion of total inventory, it is chiefly confined to 9 industries, which are, therefore, somewhat distorted if one is interested in actual inventory movements by industries.

In the revised series, inventory is now shown under both the total holdings and investment concepts whenever there is a significant difference between the two. In all other cases, the concept used is total holdings, but except for the 9 industries mentioned, this is generally identical with investment. Components apply to total holdings only, since Progress Payments may be applicable to any or all components, though normally applying to Work in Process. "Shipments" in most cases continue to mean all shipments from the plant, whether for sale or for transfer to other units of the same firm; in addition, they include all progress payments received during the month i.e. all transfers of ownership in the industries characterized by progress payments. Since progress billings are normally made on the basis of "work done", the new shipments series should be an improvement

as an actual production indicator. This will not be exact, since there may be time lags in payment and, in some cases, payment in advance of work done. This concept of shipments appears, however, to be a more meaningful one; and it is also the only one in which all reports from firms can be on a comparable basis. The shipments indexes on this basis must be compared with inventory investment, not with total holdings.

Revised data for 1952 incorporate the following changes:

TABLE 1, Inventory Values, represents the value of total inventory held; the amount of total inventory value which has been covered by Progress Payments (i.e. held but not owned by the reporting manufacturers) is included, but is also shown separately, and by deducting the value of Progress Payments from total inventory value, the amount of manufacturers' own investment in inventory can be obtained. The latter is comparable in concept with the previous 1952 series, any difference in actual values being due to the first revision described above.

TABLE 2, Indexes of Inventory and Shipments by Major Industry Groups, has been divided into two parts. Table 2 (a) contains indexes of the value of total inventory holdings. Table 2 (b) contains indexes of the value of inventory investment (ownership), as in the unrevised series, and indexes of shipments which include all transfers of ownership by progress payments in the month in which they took place.

TABLE 3, Indexes of Inventory and Shipments in Individual Industries, is unchanged except in the cases of the 9 industries where Progress Payments represent a significant proportion of holdings. For these industries, each month's data now include both concepts of inventory. The first line for the month contains indexes of shipments (on the revised basis) and of total inventory investment. The second line contains indexes of total inventory holdings with components, but with no shipments data since the shipments values are not comparable with total holdings. Figures for the entire year 1952 for these industries are included in an Appendix to Table 3, beginning on page 41.

It will be noted that, in Tables 2 and 3, the inventory investment indexes for some of the industries affected by the progress payments revision have been revised downward considerably. This is due to the fact, although all firms were previously asked to report own investment, it was discovered, when they were asked to report both own investment and total holdings, that a number had actually been reporting total holdings instead. The correction to put these firms on an investment basis resulted in the downward revision.

#### TREND SUMMARY

The most outstanding feature of inventory values in 1952 was the change in direction of inventory investment. During 1950, manufacturers' own investment in inventory rose from \$2498.2 million to \$2772.4 million, an increase of almost 11%; during 1951 it rose to \$3531.3 million, a further increase of 27%; but 1952 witnessed a very gradual but steady decline in which December presented the first reversal of trend. By November, 1952, inventory investment had fallen to \$3360.7 million. In December preliminary estimates indicate a rise to \$3428.9 million, representing a drop over the 12-month period of almost 3%.

Actual inventory holdings, as distinct from inventory investment, rose slightly during 1952 although the increase was very small in comparison with that of the previous year. The Bureau has commenced collection of data on total holdings as well as investment, because of the increase in manufacturing on this basis as a result of the defence programme. (The new series is explained in detail on page 2.) Inventory held but not owned by manufacturers was not collected prior to December 1951; but it is estimated that such holdings approximated \$75 million at the end of 1950, and reported values at December 1951 were \$187.5 million. During 1952 they rose steadily to \$379.8 million at the end of December. An addition of these values to inventory investment results in estimates for total inventory holdings of \$2847.4 million for December 1950, \$3718.8 million for December 1951, and \$3808.7 million for December 1952. The percentage change in total holdings during 1951 amounts to 31%, while in 1952 a further increase of 2% occurred.

Total shipments values in 1952 rose above the 1951 level by slightly over 3%. This represented a considerable decline in the rate of increase as compared with 1950 when shipments values for the year were over 15% above 1949, and with 1951, when they were 19% above 1950 levels.

While any estimate of actual volume change can be an approximation only, it is evident that there were not such wide fluctuations in inventory volume as were apparent in values. During 1950 and the first half of 1951, wholesale prices rose steadily, and average hourly earnings in manufacturing industries were rising all through both years, thus causing value increases independent of volume change. Rough deflation estimates, based on these indexes, indicate that inventory volume remained almost unchanged throughout 1950, and rose 16% during 1951. Wholesale prices declined slowly but steadily throughout 1952, while average hourly earnings continued to rise though at a reduced rate, resulting in an estimate of a slight (2%) increase in volume of inventory investment during the year. Volume of total inventory holdings appears to have increased approximately 6%.

The relative stability of total inventory and shipments values for 1952 as a whole conceals definite divergences in trend within different industry groups. The most striking change during the year was the decline in inventories in the Consumers' Durable and Semi-Durable Goods industries. Sharp declines in shipments during the last half of 1951 had led to very high Year-End Inventories in the Clothing, Textiles, Furniture, Leather Tanneries, Leather Footwear, Electrical Apparatus, and Motor Vehicle and Parts industries, despite reduced production levels. 1952 shipments levels were considerably higher than those of the last half of the previous year; in most of the industries mentioned, shipments for the year as a whole were slightly above the total for 1951. Since production remained well below the 1951 levels during the first half of the year, the result was a steady

decline in inventory until November, which carried the Year-End values well below the level prevailing in mid-1951. In total, inventory investment declined in these two groups by \$137 million, or 14% during 1952, while shipments values for the year were 3% above total shipments in 1951.

The Consumer's Non-Durable Goods industries showed no unusual inventory changes during 1952 and ended the year very slightly below December 1951 levels. Value of shipments increased by less than 1%.

Investment in inventory in the Capital Goods Industries rose somewhat during the first part of the year, but ended the year at the same level as in December 1951. This group contains the bulk of inventory held but not owned, and actual inventory holdings rose by 28% during the year. An exact comparison of shipments (change of ownership) is difficult, due to the change in concept explained on Page 4, which has little effect on shipments for the all-industry total, or in the other main industry groups, but which does result in a significant change in the Capital Goods group. The increase appears to have been about 17%, allowing for this change.

Investment in inventory in the Producers' Goods industries increased by \$28 million, or 4%, during 1952. Almost all large industries in the group shared in the increase. Shipments values were 3% above 1951.

In the Construction Goods industries, inventory investment rose by \$14 million, or 5%, while total inventory holdings rose by 10%. The bulk of the increase came from the Fabricated and Structural Steel industry, which showed a 39% rise in inventory investment. Cement and Cement Products also showed a large increase in inventory, while the Paints industry, Sawmills and Planing Mills declined to some extent. Shipments for the group were 2% above 1951, with the Fabricated and Structural Steel industry showing a 34% increase. Sawmills and Planing Mills shipments were 2% lower for the year.

There was a similar divergence between the major groups in the change in holdings of the various components of inventory. (Component breakdowns are made on the basis of total holdings, rather than investment; they are available to the end of November only.) Raw materials in total had declined by 5% from December 1951 to November 1952, but in the Consumers' Goods industries there was a 12% drop, while the Capital and Producers' Goods industries increased by 22% and 4% respectively. Goods in Process increased in all three groups, but the rise was 1% in the Consumers' Goods industries, 37% in Capital Goods industries and 10% in Producers' Goods industries. Finished Products declined by 4% in the Consumers' Goods industries, and by 2% in the Capital Goods industries, but rose by 5% in the Producers' Goods industries. The Construction Goods industries have not been included in this comparison, since the large seasonal change characteristic of this group makes it unlikely that the November component ratios provide an adequate indication of actual year-end trends.

Further declines in inventory value do not appear probable in the immediate future, and, in fact, some increase seems likely. The decline in wholesale prices appears to have stopped for the time being. Also inventories in the Consumers' Goods industries appear somewhat low in relation to existing levels of business, while total holdings in the Capital Goods industries have probably not yet reached their peak under the present defense program, particularly in the Transportation Equipment industries.

# Monthly Report on Manufacturers' Inventories, Shipments and Orders - December, 1952 Table 4. - Outstanding Orders at End of Month

Note - The following table represents indexes of value of shipments during the month and total outstanding orders at the end of the month, and the ratio of outstanding orders to shipments (number of current month's shipments value represented by outstanding orders) as reported by 900 manufacturing plants in the Monthly Inventory Survey. These plants accounted for approximately 28 percent of total production value in 1950. The data have been grouped according to the Standard Industrial Classification, as well as into larger singificant groupings; the larger groupings represent reporting firms only, with no industry weightings. The base for the indexes is January 1952.

Coverage in the individual industries shown varies from 20 to 94 percent of total production value in these industries. Group totals include firms in appropriate industries which are not shown separately due to insufficient coverage. The industry coverage is not as extensive as in Tables 2 and 3 because, in many industries, backlogs of orders are negligible. Within industries included, the coverage of firms is smaller than in Table 3 because a number of firms do not keep value records of unfilled orders. Separate shipments indexes for firms reporting orders have, therefore, been compiled, thus giving comparable data.

"Outstanding Orders" are defined as total backlogs of orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled. In industries where long-term projects are common, this concept is not as satisfactory as is "work still to be done on orders." It is expected that a series covering the latter, in selected industries, will be available within the next few months.

### Industries Included in Each Grouping in Table 5

Industries marked with an asterisk are represented in Table 2 by sample coverage. Other industries are allowed for in the estimates as described on Page 44.

### CONSUMERS' GOODS INDUSTRIES

# NON-DURABLE CONSUMERS GOODS INDUSTRIES

1. Foods Industries

\*Slaughtering and Meat Packing \*Sausages and Sausage Casings

\*Canned and Preserved Fruits and

Vegetables

\*Fish Curing and Packing

\*Miscellaneous Foods

\*Rice Mills

Dairy Products

\*Butter and Cheese

\*Processed Cheese

\*Concentrated Milk

\*Other Dairy Products

Ice Cream

\*Sugar Refineries

\*Biscuits and Crackers

\*Confectionery

2. Tobacco and Beverages

\*Breweries

\*Distilleries

\*Tobacco Packing and Processing

\*Tobacco Manufacturing

3. Drugs

\*Medicinal and Pharmaceutical

Preparations

4. Petroleum Products

\*Petroleum Products

\*Lubricating Oils and Greases

5. \*Pulp and Paper Mills

6. \*Feed and Flour

7. Other

Bread and Bakery Products

Aerated and Mineral Waters

Starch

Macaroni

Prepared Breakfast Foods

Animal Oils and Fats

Vegetable Oil Mills

\*Soaps and Washing Compounds

\*Toilet Preparations

\*Adhesives

\*Polishes and Dressings

Paper Products

Wallpaper

Mortician Goods

Printing and Writing Inks

Candles

Artificial Ice

Commercial Printing

Trade Composition

Printing and Publishing

Lithographing

Wines

\*Malt and Malt Products

Census of Periodicals

### SEMI-DURABLE CONSUMERS' GOODS INDUSTRIES

8. Rubber Goods

\*Rubber Footwear

\*Tires, Tubes and Other Rubber

Products

9. Clothing

\*Hosiery

\*Other Knitted Goods

\*Corsets and Foundation Garments

\*Men's Factory Clothing

Men's Clothing Contractors

\*Women's and Children's Factory

Clothing
\*Women's Clothing Contractors

\*Hats and Caps

\*Misc. Clothing

Oiled and waterproofed Clothing

10.\*Leather Footwear

11. Textiles

\*Cotton Yarn Broad Woven Goods

\*Woollen and Worsted Woven Goods

\*Woollen and Worsted Yarn

\*Miscellaneous Woollen Goods

\*Dyeing and Finishing of Textiles

\*Synthetic Textiles and Silks

\*Laces, Tapes and Bindings

\*Carpets, Mats and Rugs

\*Oilcloth, Linoleum and Coated

Fabrics

\*Canvas Products

\*Linen Goods

\*Auto Accessories Fabric

12.\*Leather Tanneries

Belting Leather

# SEMI-DURABLE CONSUMERS' GOODS INDUSTRIES (CONCLUDED)

13. Other

Gloves and Mittens, Leather Gloves and Mittens, Fabric Miscellaneous Leather Products Boot and Shoe Findings Cotton Thread Cotton Textiles, Miscellaneous Fur Dressing and Dyeing Fur Goods Sporting Goods Toys and Games Buttons Hair Goods, Human and Animal Artificial Flowers and Feathers Pipes and Other Smokers' Supplies Statuary Art Goods Novelties Umbrellas \*Brooms, Brushes and Mops \*Glass and Glass Products \*Fountain Pens and Pencils

### DURABLE CONSUMERS! GOODS INDUSTRIES

and Typewriter Supplies

\*Fabricated Plastic Products

14. \*Motor Vehicles

15. Electrical Apparatus

\*Batteries

\*Radios and Radio

Parts

\*Refrigerators and

Appliances

16. \*Furniture

Mattresses and Springs

17. \*Motor Vehicle Parts and

Accessories

18. Other

\*Jewellery and Silverware

\*Heating and Cooking

Apparatus

\*Miscellaneous Iron and

Steel Products

\*Bicycles

\*Miscellaneous Transportation

Equipment

\*Musical Instruments

Boat Building

Electric Lamps and Shades

### CAPITAL GOODS INDUSTRIES

TOTAL TRANSPORTATION EQUIPMENT INDUSTRIES

19.\*Shipbuilding and Repairs

20. \*Railroad and Rolling Stock

21. \*Aircraft and Parts

### OTHER CAPITAL GOODS INDUSTRIES

22. Machinery

\*Heavy Electrical Machinery and Equipment

\*Office, Household and Store

Machinery

\*Machinery, n.e.c.

23. \*Agricultural Implements

24. Hardware and Tools

\*Hardware and Tools

\*Machine Tools

25. \*Boilers Tanks and Platework

26. Other

\*Professional and Scientific

Equipment

Machine Shop Products

### PRODUCERS' GOODS INDUSTRIES

27. Iron and Steel Products

\*Primary Iron and Steel

\*Sheet Metal Products

\*Iron Castings

\*Wire and Wire Goods

28. Non-Ferrous Metals

\*Non-Ferrous Metals, Smelting

and Refining

\*Brass and Copper Products

\*Aluminum Products

\*White Metal Alloys

29. \*Coke and Gas Products

30. \*Acids, Alkalies and Salts

31. \*Fertilizers

32. \*Miscellaneous Klectrical Products

33. Other

Miscellaneous Chemical Products

Boiler Compounds, Insecticides

Matches

Disinfectants

Sweeping Compounds

Hardwood Distillation

Coal Tar Distillation.

\*Miscellaneous

Chemicals, n.e.c.

\*Abrasive Products

\*Cordage, Rope and Twine

\*Miscellaneous Non-Metallic

Mineral Products

\*Compressed Gases

\*Stoneware and Pottery from

Domestic Clay

Salt

\*Primary Plastics

\*Bags, Cotton and Jute

## PRODUCERS GOODS INDUSTRIES (CONCLUDED)

33. Other

\*Asbestos
Miscellaneous Non-Ferrous Metals
Boxes and Bags, Paper
Wooden Boxes
Cooperage
Models and Patterns
Excelsior
Lasts, Trees and Wooden Shoe
Findings
Wood Turning
Wood Turning
Wood Preservation
Miscellaneous Wooden Products
All Other Wood Using Industries
Stock and Poultry Feeds

Feed and Chopping Mills
Stamps and Stencils
\*Miscellaneous Industries

### CONSTRUCTION GOODS INDUSTRIES

34. \*Fabricated and Structural Steel

35. \*Paints and Varnishes

36. Sawmills and Planing Mills
\*Sawmills

\*Sash, Door and Planing Mills Hardwood Flooring

37. Other

\*Cement and Cement Products

\*Clay Products from Imported Clays
Plywood and Veneer Mills
Stone Products
Lime and Gypsum Products

### MONTHLY REPORT ON MANUFACTURERS INVENTORIES, SHIPMENTS AND ORDERS, DECEMBER, 1952

### SOURCES AND METHODS

Sources: The tables contained in this report have been compiled from three types of material. In 96 industries, which in 1950 accounted for 73% of total gross value of production and 79% of total manufacturers' inventories, values of inventories and shipments are reported monthly by a sample of leading firms. Though the size of the sample varies from industry to industry, the average share of total inventory in the industries thus covered held by reporting firm is 72%. In one large industry, monthly reports on shipments and inventories are made by a stratum sample of firms. In 5 industries, information is available on the physical volume of the chief types of stocks held by all or a representative sample of firms. Estimates of the current value of these stocks are made by means of data on prices or labour costs and rates of turnover in each industry. For three of these industries, shipments are calculated from production and inventory data. In total, these three groups hold 92% of all manufacturing inventories, and account for 87% of total gross value of production in Canada.

Methods: Individual indexes for each industry covered in the monthly survey are derived from the values reported by the sample of firms described above and based on the values reported by corresponding firms in December, 1946 adjusted to the average 1947 value. Since the industry indexes are designed to give a comparable historical series for reporting firms, no adjustment has been made to the individual industry indexes in Table III or to the industry-group indexes in Table II to allow for differences in the annual inventory change as shown in these series and in the complete Annual Survey (See December, 1951 report).

Inventory values for all-industry totals are obtained by applying the sample industry indexes for total inventory for each December to the corresponding December total inventory values for the same industries (as obtained from the annual surveys described above) and projecting from the last December for the intervening month's. The small percentage of inventory held by industries not covered in the monthly survey is allowed for by projecting the latest December values for these industries on the trends shown by reporting industries in the same field. (1949 values were projected backward from December 1949 rather than forward from December 1948, because annual inventory data, prior to 1949 was compiled under the old industrial classification, and the industry totals for previous years do not, therefore correspond exactly with the groupings used in the sample series). The projection of December values has the effect of reweighting the sample once a year, thus correcting sampling errors. All-industry totals in Table l are therefore not strictly comparable from year to year (with the exception of 1949-50), and to indicate the extent of incomparability, both the estimated and actual December values are shown in the table (actual values are in brackets).

The breakdown of total inventory into main components - raw material, goods in process, and finished products - was derived by using the monthly component ratio for each sample industry against the projected total inventory value for the corresponding industry. Trends of reporting industries were again used to allow for industries not covered in the survey. This method was adopted because the alternative - applying the December, 1949 component indexes to the December, 1949 component values for each industry and projecting as for total inventory - required that the industry samples should be based on component, as well as total

coverage. The present samples are based on total coverage only. Beause the method is based on reporting firms only, the component totals do not correspond exactly with similar values obtained in the complete Annual Surveys.

Group totals for shipments were compiled by weighting the various industry indexes by their 1949 gross values of production, since no complete survey of shipments is available.

Factors to be noted in using the material presented in this report. When considering the individual industry series presented, it must be borne in mind that the divisions are industry divisions, not commodities. Industries and firms are classified according to the chief commodity produced, but since many firms produce more than the one commodity or commodity group which governs their classification, it follows that the figures shown apply to all commodities produced by reporting firms. The index numbers are, therefore, descriptive of the behaviour of industries only and should not be construed as a measure of commodity movement.

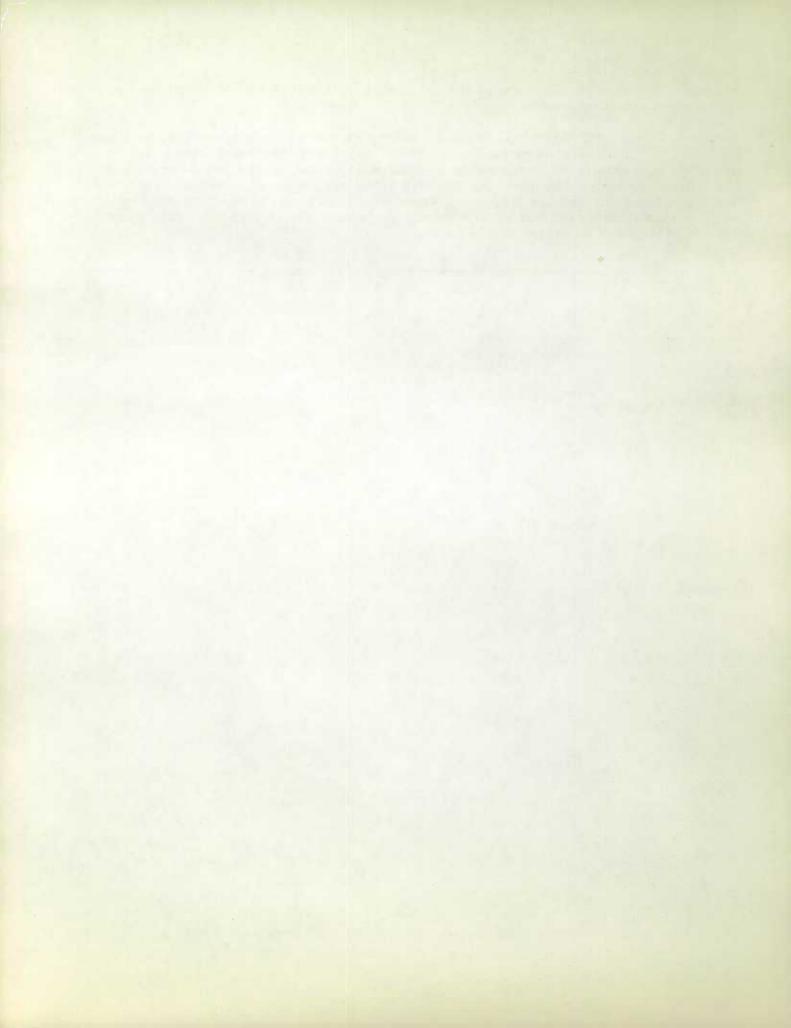

Also, it must be emphasized that the index numbers shown in this series are based on the dollar values of inventories held, not on actual physical quantities. Apart from the fact that dollar values are required by economists interested in investment in inventory, it is obvious that the value approach is the only practical one, considering the wide range of commodities held by manufacturers in all stages from raw materials to finished products ready for sale. However, the value of commodities in stock is the result not only of raw material costs, but also of the cost of making them. Thus, if prices or labour costs rise, the value of the goods held increases, even though the quantity may remain the same. Therefore, changes shown from month to month by the index numbers represent not only quantity changes, but also the changes in the value of each item included.

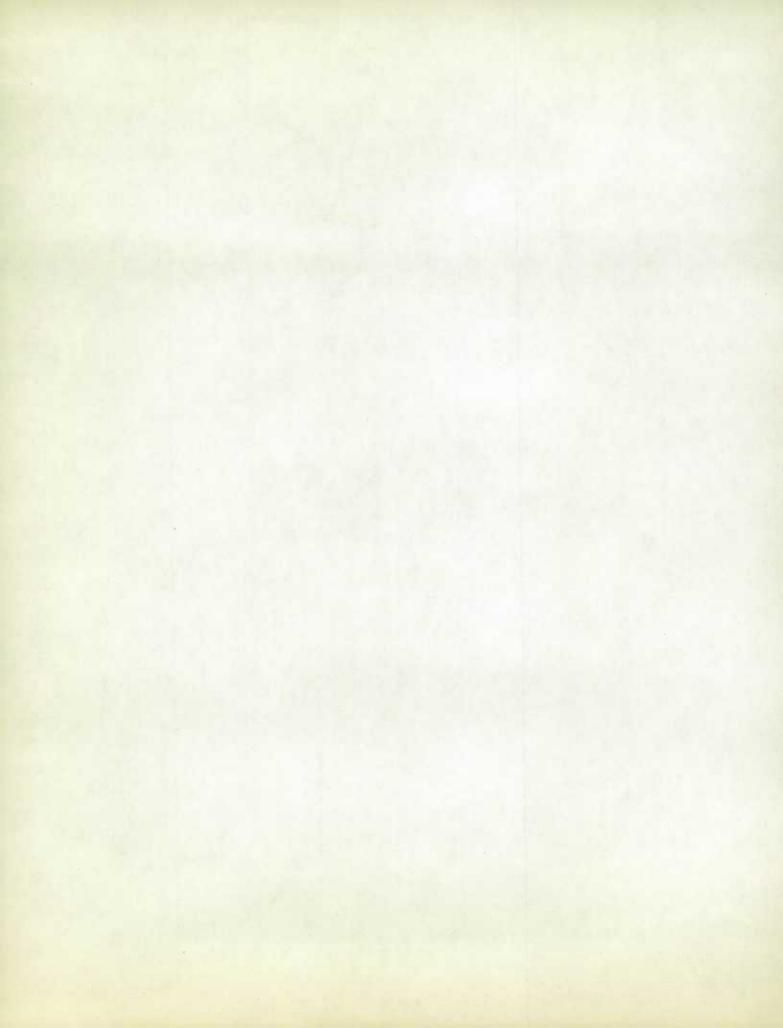

Factors involved in separating physical changes from value changes for inventories: Some indication of the extent to which changes in value of inventories are due to changes in prices (both of goods and labour), thus isolating the physical changes which has taken place, can be obtained by reference to the trend in price changes as shown in the index of wholesale prices published in the "Canadian Statistical Review". This method should, however, be used with caution. While each industry has its own average turnover rate which can be estimated roughly, it is difficult to estimate a rate which can accurately be applied to raw materials, goods in process and finished goods. Moreover, all firms within a given industry do not value inventories on the same basis, the most common methods being lower of cost or market and standard cost. These considerations make it difficult to determine the length of time necessary before a change in wholesale prices will be reflected in inventory values. Added to this is the fact that the wholesale price index and the index of inventory values are compiled differently. The wholesale price index is computed from selling prices, and weighted according to quantities sold; while, as noted above, most firms report inventories at some variation of cost and the index is automatically weighted according to quantities held.

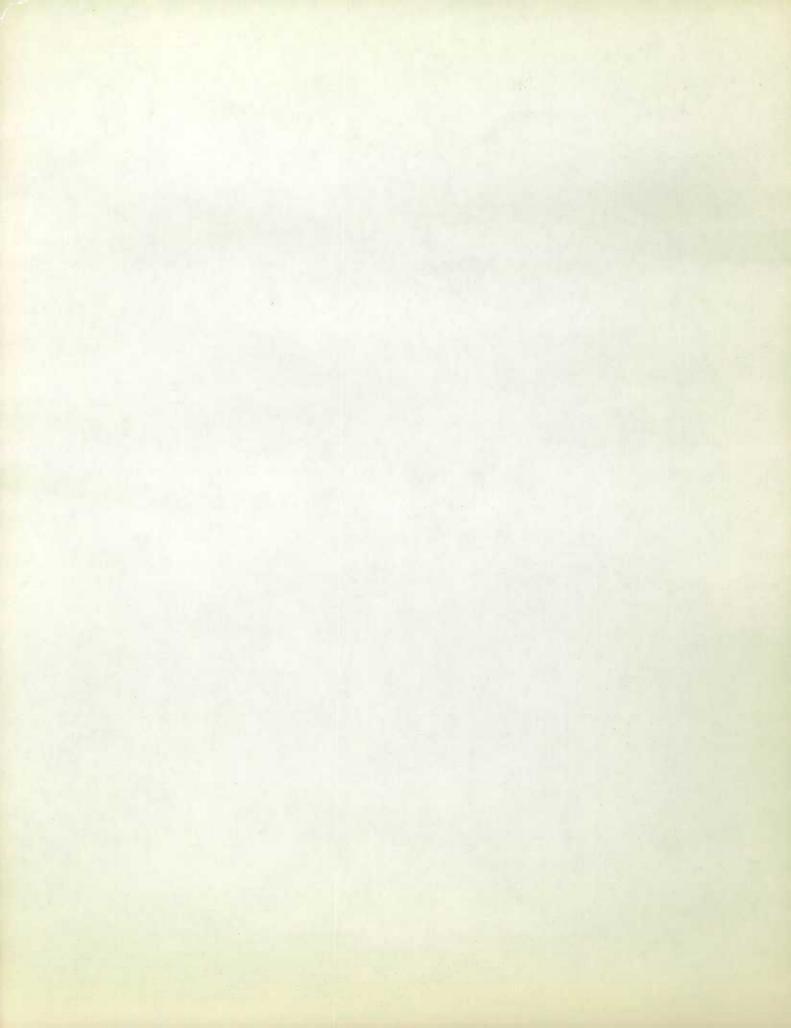

An adequate deflating technique would require knowledge of inventory content commodity price indexes, turnover rates and accounting methods on a detailed industry basis. Since such data are not available, estimates of physical change involved in total inventory have been made, based on changes in the wholesale price index and in average hourly earnings, and on estimated turnover rates. These are discussed in the Trend Summary on page 1. They are presented as a

matter of interest, but in view of the difficulties discussed above, must be considered as approximations only.

Historical Data: All individual industry inventory and shipments series, on a month-ly basis, are available from January, 1947 to date, and may be obtained on request. In each case, data from comparable groupings of firms, on the Standard Industrial Classification basis, have been compiled for the entire period. Since, prior to 1949, these groupings do not correspond to annual inventory and production data which were at that time on the old classification system, estimates of total inventory have been carried back to January, 1949 only.
