TRENDSUMMARY

Preliminary reports indicate the following trends in inventories, shipments and orders at the end of August.

Manufacturers' investment in inventory at the end of August was \$3,529.3 million, an increase of \$16.4 million (0.5 per cent) over the July estimate but \$6.5 million (0.2 per cent) below last year's estimate. The largest absolute change from the previous month occurred in the Consumers' Goods Industries with an increase of \$16.7 million and the Capital Goods Industries showed the largest proportionate change with a decline of 1.9 per cent. The Consumers' Goods group increase was largely attributable to the motor vehicle industry which rose 5.7 per cent.

Inventory held but not owned (held largely under progress payments arrangements) increased \$8.3 million (1.5 per cent) to \$561.2 million at the end of August. This was \$21.2 million higher than last year's estimate.

Shipments in August were 5.0 per cent higher than the July estimate and 18.4 per cent greater than in August last year. The rise in shipments in August was general and partly seasonal, due largely to holiday periods in industry during July. The cumulative value for the first eight months of this year was 11.0 per cent greater than for the same period of last year.

Total value of orders received during August increased 2.3 per cent and was 21.9 per cent higher than last year's estimate. Their cumulative value for the first eight months of this year was 12.3 per cent greater than for the corresponding period last year. Total value of unfilled orders at the end of July was \$2,560.2 million and was of the same order as last year's estimate, but represented a decline of 0.2 per cent during the month.

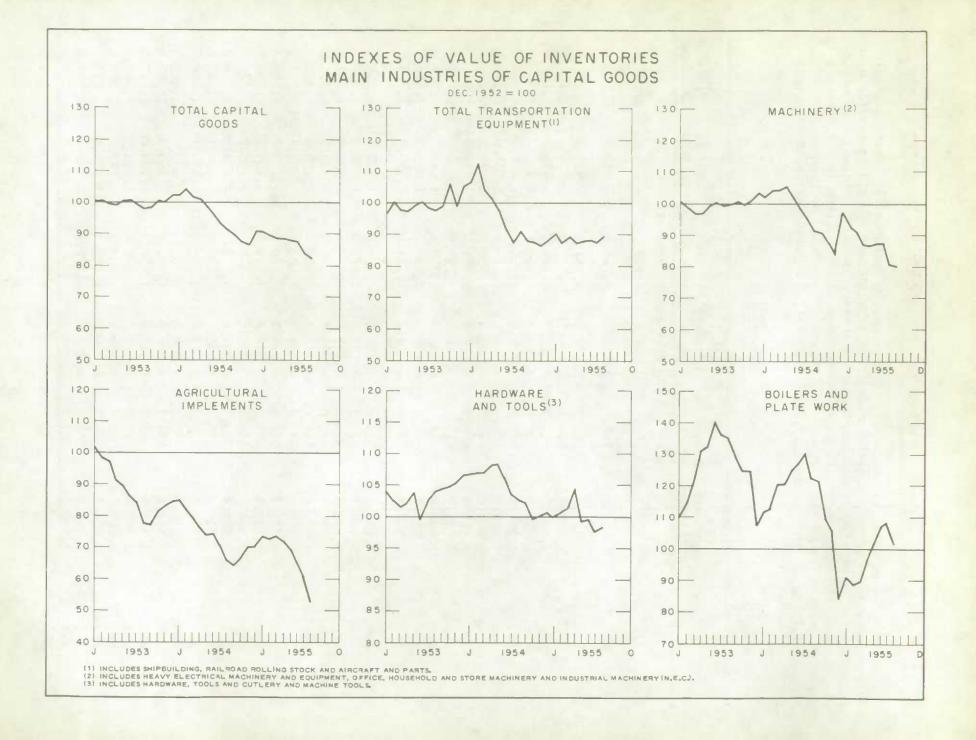

Table 1 - INVENTORY VALUES IN ALL MANUFACTURING INDUSTRIES

Estimated value of total manufacturers' Investment in Inventories, total Inventory held under Progress Payments arrangements, and total Inventory Held by manufacturers' regardless of ownership, in all manufacturing industries and in the major economicuse grouping of industries, with Total Inventory Held sub-divided into raw materials, goods in process, and finished products. Estimates are based on reports from a sample of firms or, in some industries, on the estimated value of physical stocks. For further description, see page 42.

^{* 1952} indexes represent Sawmills and Planing Mills only. Beginning 1953, Veneer and Plywoods Mills are also included.

Table 3. - INDEX NUMBERS OF VALUES OF INVENTORY INVESTMENT, BY COMPONENTS, AND SHIPMENTS IN INDIVIDUAL INDUSTRIES.

Indexes represent values for reporting plants only.

Reports are classified to the industry into which the plant's major items of production fall, but since other items may be included, the indexes are not to be taken as representing commodity movements.

In cases where total inventory is shown twice for each month, the first figure represents investment (ownership) of reporting firms and the second figure and components represent total holdings. In all other cases, there is no significant difference between investment and total holdings. Shipments in all cases represent transfers of ownership, and should be used in conjunction with inventory investment only.

⁽¹⁾ This table is published at the request of the Canadian Electrical Manufacturers' Association and is possible because of higher than average coverage in this group (although coverage varies within the different industries). This historical series is not strictly comparable for the entire period, in that new firms have been added at intervals.

CONCEPTS

Inventory Investment represents the estimated total book value of manufacturers' ownership of inventory in connection with manufacturing operations, at the end of the period stated. It includes:

(a) own raw materials on hand;

(b) own goods in process;

(c) finished goods of own manufacture at plant and warehouse;

(d) goods of own manufacture at manufacturers' sales offices, wholesale outlets and retail stores.

Total Inventory Held represents the estimated total value of inventory holdings of manufacturers regardless of ownership; it differs from inventory investment in including, wherever possible, inventory held under progress payments arrangements. Progress payments are generally made only on long-term contracts and inventory holdings and inventory investment differ, therefore, only in the relatively few industries characterized by such contracts.

Shipments represents the estimated value, during the period stated, of:

(a) manufacturers' sales;

- (b) goods-in-process transfers from one unit of a multiple-unit firm to other units of the same firm for further processing;
- (c) progress receipts on long-term contracts.

The inclusion of items (b) and (c) allows the use of the shipments indexes for projection, after allowance for inventory change, of the latest available gross value of production data. Because of the inclusion of progress receipts, this concept of shipments must be used in conjunction with inventory investment data, not with total holdings.

<u>Unfilled Orders</u> represents the estimated total value of manufacturers' orders backlogs at the end of the period stated, irrespective of work done on them or of stocks from which they can be filled, but reduced by progress receipts in industries characterized by long-term contracts.

New Orders represents the estimated selling value of total new orders net of cancellations received by manufacturers' during the period stated, regardless of whether the orders will be added to existing backlogs, or will be filled from stock, or as a result of activity during the same month (and therefore also be reported as shipments in the month received).

Groupings - All individual industry indexes are based on groupings according to the Standard Industrial Classification. The Economic-Use groupings of industries in Tables 1 and 2 is based on the major use of each industry's products, but in certain cases assignment of an industry to a specific sector is more or less arbitrary.

SOURCES

Inventories and Shipments - Monthly reports on inventory and shipments values are received on a voluntary basis from 2,200 large and medium-size plants in 96 industries. In addition, three industries are included in the total estimates by valuation of physical shipments and stock data. Industries covered held 92% of estimated total inventory, and accounted for 89% of total gross value of production, in 1950. Reporting plants represented approximately 60% of total production value in that year; coverage in individual industries varies from 15% to 98%.

Orders - Monthly reports on value of orders backlogs are received from 900 plants, representing approximately 30% of total production value in 1950.

For a detailed description of METHODS, see the December, 1954 report.

NOTES

- 1. A correction in method of reporting by one firm resulted in an increase in December 1954 values for Total Inventory Investment, Total Inventory Held, and Goods in Process of \$20.9. In addition, a decision to incorporate all inventory from the Slaughtering and Meat Packing Industry as Raw Materials resulted in an increase of \$41.8 in this component, a decrease of \$3.3 in Goods in Process and a decrease of \$38.5 in Finished Products. Values subsequent to December incorporate the corrected method in both cases.
- 2. A decision to incorporate all inventory from the Slaughtering and Meat Packing Industry as Raw Materials resulted in an increase of \$41.8 in this component in December 1954, a decrease of \$3.3 in Goods in Process, and a decrease of \$38.5 in Finished Products. Values subsequent to December 1954 incorporate the corrected method.
- 3. A correction in method of reporting by one firm resulted in an increase in December 1954 values for Total Inventory Investment, Total Inventory Held, and Goods in Process of \$20.9. Values subsequent to December incorporate the corrected method.
- 4. A correction in method of reporting by one firm resulted in an increase in the December, 1954 index for Total All Industries of 0.6; and for Capital Goods Industries of 2.5. Indexes subsequent to December, 1954 incorporate the corrected method.
- 5. A correction in method of reporting by one firm resulted in an increase in the December 1954 index of Total Inventory Investment for All Industries of 0.5; for Total Capital Goods Industries of 4.5; and for Machinery of 12.3. Indexes subsequent to December incorporate the corrected method.
- 6. A change in the method of calculating shipments indexes in the Slaughtering and Meat Packing Industry resulted in an increase in the December 1954 index of Shipments for All Industries of 1.5; for Total Consumers' Goods of 2.6; for Non-Durable Consumers' Goods of 4.1; and for Foods of 8.9. Indexes subsequent to December incorporate the new method.
