Preliminary estimates indicate the following trends for July:-

SHIPMENTS -

Manufacturers' shipments in July were valued at an estimated \$1,815 million, only fractionally lower than the revised June total of \$1,817 million and some \$52 million (2.9%) above last year's July total of \$1,764 million. Cumulative shipments for the first seven months of 1957 were valued at \$12,559 million, some 3.0% higher than the total of \$12,192 million for the same period in 1956.

Since shipments in the month of June did not maintain the advance above the 1956 levels shown in all previous months of the year, it might have been expected, if the general increase were to be maintained for the year, that July would show a somewhat higher level than in the previous year. This has occurred, with shipments declining by 0.1% as compared with a decrease of 5.6% in July 1956 and decreases of 9.0%, 8.7% and 6.2% in the previous three years.

Changes in value of shipments in July by industry groups (Standard Industrial Classification) were mixed. Increases occurred in foods and beverages (3.2%), clothing (11.9%), paper products (3.7%), iron and steel products (1.2%), non-metallic mineral products (7.0%) and products of petroleum and coal (10.5%). Decreases were registered in tobacco and tobacco products (4.8%), rubber products (2.2%), textile products (9.1%), wood products (6.9%), transportation equipment (7.5%), non-ferrous metal products (4.7%) and electrical apparatus and supplies (7.4%). Leather products, chemical products and miscellaneous manufacturing industries were unchanged.

Using the Economic Use classification, changes by industry groups were also mixed with increases occurring in perishable consumer goods (1.8%), semi-durable consumer goods (10.3%), construction goods (1.5%) and unclassifiable industries (4.0%). Decreases were registered in durable consumer goods (3.3%), heavy transportation equipment (5.9%), other capital goods (3.1%), export industries (2.1%), motor vehicles and related industries (8.0%) and intermediate goods and supplies (1.2%).

INVENTORIES -

The slower pace of inventory gain evidenced this year, in contrast with 1956, was apparent again in July when the value of inventory owned by manufacturers declined fractionally to \$4,268 million from \$4,279 million in the preceding month and remained 8.4% above last year's July value of \$3,937 million. The value of inventory held by manufacturers under progress payments arrangements increased slightly during the month and stood at \$556 million as compared with \$551 million at the end of June and \$454 million at the end of July 1956. The July value of total inventory held at \$4,824 million was practically unchanged from the June value of \$4,830 million and was \$432 million (9.8%) above the value of \$4,392 million at the end of July last year. Raw materials increased by \$9 million (0.5%) while goods in process declined by \$2 million (0.2%) and finished products declined by \$13 million (0.9%).

Changes in value of total inventory owned for Standard Industrial Classification groups were small and, in general, downward. The largest increase occurred in products of petroleum and coal (2.0%), while the largest decreases occurred in tobacco and tobacco products (4.5%), rubber products (2.2%) and transportation equipment (2.8%). Using the Economic Use Classification, changes in the value of total inventory owned again were generally downward and in most cases marginal. The largest increase occurred in perishable consumer goods (1.4%) while the largest decreases were registered in other capital goods (1.8%) and motor vehicles and related industries (4.4%).

The July ratio of total inventory owned to shipments at 2.35 was below the June ratio of 2.36 and the average ratio for the first seven months of 1957 of 2.37 but above the ratio of 2.23 in July 1956. The ratio of finished products inventory to shipments at 0.83 showed no change from the June ratio and was the same as the average ratio for the first seven months of 1957 but above the ratio of 0.76 in July 1956.

ORDERS -

The value of shipments during the month was slightly higher than the value of new orders resulting in a drop in the value of unfilled orders for the sixth successive month. The value of unfilled orders at the end of July stood at \$2,917 million as compared with \$2,927 million at the end of June and \$2,905 million at the end of July 1956.

The decline in value of unfilled orders in July was mainly due to decreases in iron and steel products (1.4%), transportation equipment (0.7%) and electrical apparatus and supplies (0.8%).

The ratio of unfilled orders to shipments at 1.61 was unchanged from the June ratio but was below the ratio of 1.65 in July of last year and the average ratio of 1.72 for the first seven months of 1957.

(1) See footnote 1, page 1. (2) See footnote 2, page 1. (3) The value of Unfilled Orders for industries in this group is small and sample coverage is not adequate to provide separate estimates for the group. (4) The value of Inventory Held but Not Owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well. (5) Preliminary.

(1) See footnote 1, page 1. (2) See footnote 2, page 1. (3) The value of Unfilled Orders for this group cannot be published separately, since less than 3 firms predominate. (4) The value of Inventory Held but Not Owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well. (5) Preliminary

(1) See footnote 1, page 1. (2) See footnote 2, page 1. (3) The value of Unfilled Orders for industries in this group is small, and sample coverage is not adequate to provide separate estimates for the group. (4) The value of Inventory Held but Not Owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well. (5) Preliminary.

(1) See footnote 1, page 1. (2) See footnote 2, page 1. (3) The value of Unfilled Orders for industries in this group is small, and sample coverage is not adequate to provide separate estimates for the group. (4) Shipments values in the Petroleum Products industry for 1954 are affected by a change in method of valuation for Census of Industry purposes. This change accounted for an increase of approximately \$140 million for the year. (5) Preliminary.

Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well. (5) Preliminary.

 MISCELLANEOUS INDUSTRIES
 (d1) - Industries Producing Largely For Export

(For definitions, see Page 48)

(For industries included, see Page 46)

This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports

INDUSTRIES INCLUDED IN EACH ECONOMIC USE GROUPING IN TABLE 3

The bracketed numbers following each industry title indicate the Standard Industrial Classification Grouping (Table 2) to which the industry belongs.

The bracketed letters following the individual industry titles indicate the series in which the industry is included on the basis of monthly reports from firms or from special estimates - (s) means that the industry is covered for the shipments series; (i) for the inventory series; (o) for the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group total estimates as described on page 49.

A single asterick preceding the individual industry title indicates that the data for the industry are shown separately in Table 4. A double asterick indicates that the data for the industry are shown in Table 4 combined with data for one or more similar industries as indicated in the footnotes for that table.

CONCEPTS AND SOURCES

For further detail, and for description of Methods Used, see April, 1957 report, page 49.

C O N C E P T S

Shipments - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of:

- (a) raw materials;
- (b) goods in process;
- (c) finished goods of own manufacture at plant and warehouse;
- (d) goods of own manufacture at manufacturers' sales offices, wholesale outlets and retail stores;
- less (e) value of inventory held but not owned which cannot be assigned to specific components.

Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common, although because of the nature of the item, the value per industry is high.

Because of variations in accounting methods, there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered, to some extent, incomplete.

Total Inventory Held - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of progress payments inventory. It includes items (a) to (d) as shown above under total inventory owned.

Inventory Components - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate for each industry as a whole.

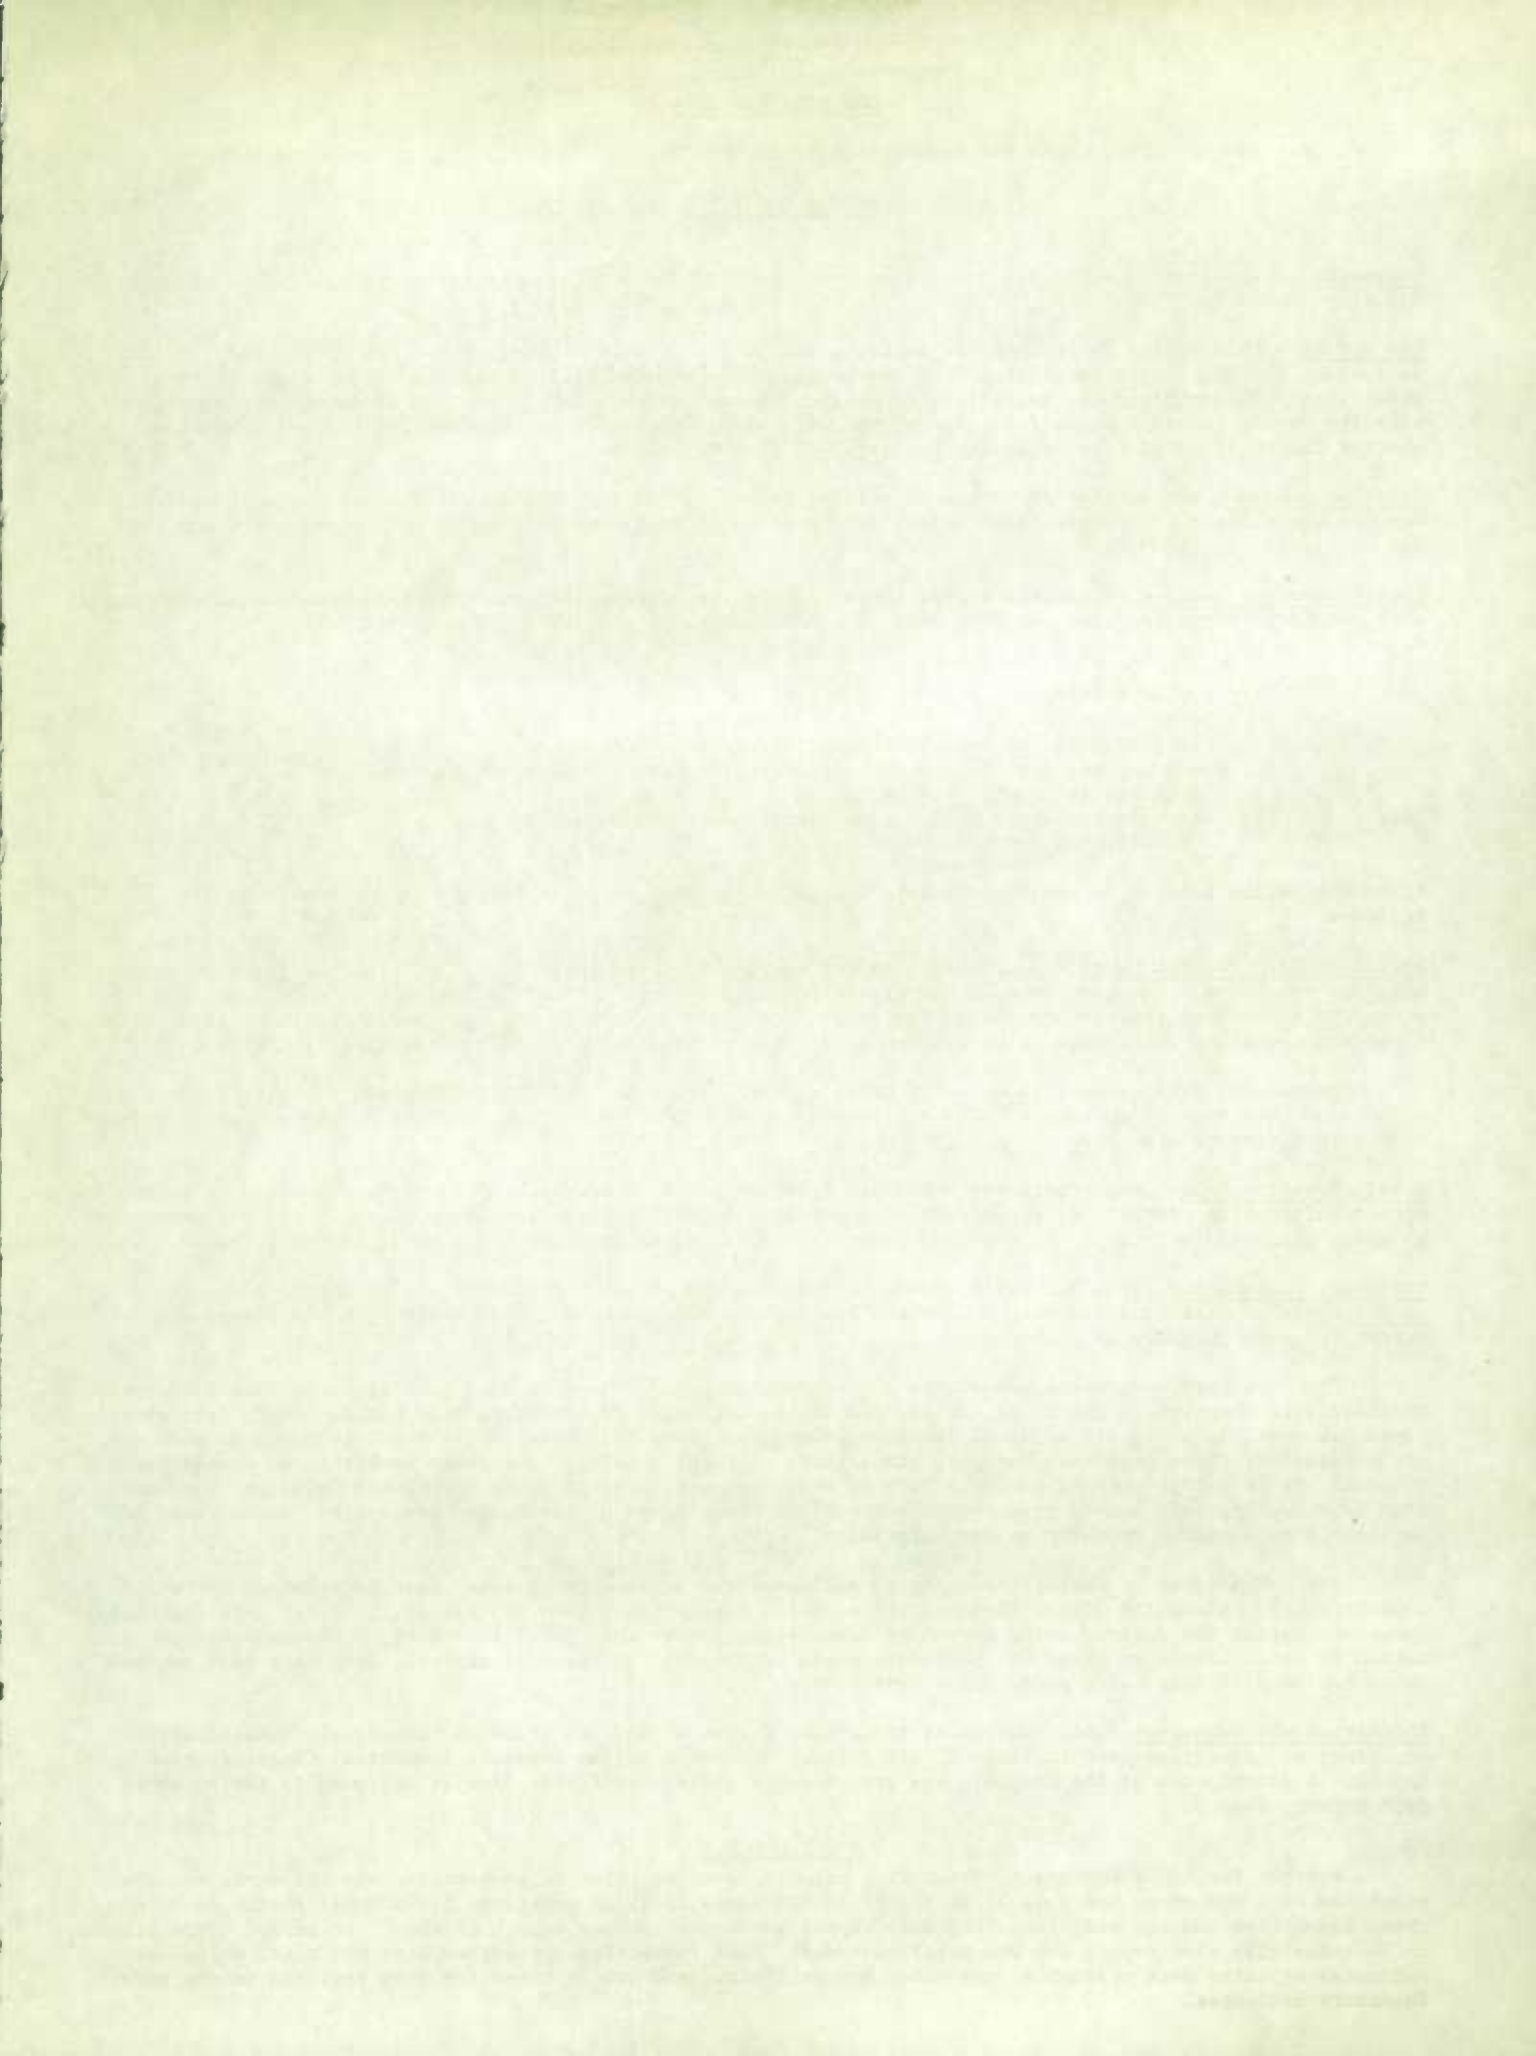

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings, but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Industries and Groupings - All individual industries (Table 4) and the Standard Industrial Classification groupings of industries used in Table 2, are defined according to the Standard Industrial Classification Manual. A description of the Economic-Use groupings of industries (Table 3) will be found in the December 1955 report, Page 5.

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 2,700 plants in 119 industries; in addition, 2,600 small plants in 20 of these industries and one additional industry report monthly shipments only. Of the first group, 1,034 plants in 94 industries also report new and unfilled orders. Six industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.
