TREND SUMMARY

Preliminary estimates indicate the following trends for August:

SHIPMENTS: - Manufacturers' shipments in August, valued at \$1,890 million, continued the downward trend which started in July. This preliminary estimate for August places shipments, in total, 3% lower than July shipments (\$1,957 million) which were in turn 6% below those in June. The upward movement in shipments which, beginning in February, had not only begun a month earlier than in the two previous years, 1957 and 1958, but continued a month longer to a new peak in June. August shipments were, however, higher than shipments in August 1958 by 8% and the cumulative shipments for the year up to the end of August (\$15,169 million) were 6% higher than in 1958 (\$14,297 million).

The decline in shipments in August was concentrated in the motor vehicle and related industries, down 39% from July, capital goods industries, down 9%, and the construction industry, down 10%. Perishable consumers' goods shipments also declined, by 4%, reflecting the decline in the foods and beverages industry of 3% and in the tobacco industry of 16%. Shipments in the semi-durable and durable consumers' goods industries were however higher in August than in July; the semi-durable group by 24% and the durable group by 6%. Changes in the three remaining groups in the classification by economic-use were very small, the value of shipments in the industries producing goods largely for export, in industries producing intermediate goods and supplies and in the unclassifiable group were practically unchanged from July.

It is interesting to note that not only have total shipments declined in August in the past three years but that all but one of the groups, the construction industry, showing declines this month, also registered declines in each of these years. Shipments in the capital goods and motor vehicles and related industries have shown consistent August over July declines for the past seven years. Similarly the two groups with increases in shipments in August over July, semi-durable and durable consumers' goods industries have displayed the same pattern in the past seven years.

Since the total value of shipments in August this year was considerably higher, by 8%, than shipments in August 1958, it is not surprising that in only two of the economic-use groups of industries were shipments lower this year. Shipments of semi-durable consumers' goods were 2% lower than in August 1958 and shipments of goods in the construction industry were down by 6%. The lower level of shipments in the semi-durable goods this August as compared with last year, reflects the level of shipments in the clothing industry (S.I.C. group No. 6); shipments in this group were \$83 million this year as compared with \$87 million last year, and, it may be noted, this is the first month in 1959 in which shipments have been lower than shipments in the comparable month last year. The cumulative total of shipments of clothing in 1959 up to the end of August (\$585.5 million) is 5% higher than the comparable total for 1958 (\$558.3 million).

INVENTORIES: - The level of inventories in manufacturing at the end of August was up slightly from the July level. At an estimated value of \$4,412 million total inventories are not quite 1% above the revised July estimate of \$4,375 million, and less than half of 1% above the August 1958 level of \$4,396 million. Levels of inventory, in total, characteristically move slowly and this month's change is not unusual.

However, the slight movement in total does result from some fairly wide changes in certain components. The greatest shift is in progress payments which are considered a part of goods in process in inventory held and, of course, excluded from inventory owned by manufacturers. Progress payments in August, at \$443 million, were nearly 4% higher than in July but were 14% below the level they had been the year before. The level of inventory owned in August (\$3,969 million) was accordingly somewhat closer to the July estimate of inventory owned (\$3,947 million) but the increase over August 1958 was much greater, at 2.3%, than the comparison in total inventory had shown.

The decline in progress payments in 1959 which has been reversed in July and August actually began in October last year. It has been largely confined to the capital goods industries and in particular to the heavy transportation equipment group; aircraft, railroad rolling stock and shipbuilding. The decline in progress payments in the other capital goods industries although pronounced between mid-1958 and 1959 had also declined in 1958 from the previous year. Progress payments in construction have been running about 9% lower this year than last and here again a peak appears to have been reached in the late summer of 1958. Progress payments in the telecommunication part of the radio industry, which is included in the consumers' durable goods group, had however, begun to increase in February and have been higher in 1959 than in 1958.

A comparison of the level of manufacturers' inventories held as goods in process with and without progress payments also points up the shift in this part of inventory held over the past year. The increase of goods in process inventory in August 1959 as compared with last August was less than 1%; excluding progress payments, the increase was nearly 12%. Raw materials held in inventory were fractionally higher at the end of August than they had been at the end of July and slightly lower than the level in August 1958. Finished goods inventories were lower at the end of August as compared with July but 3% higher than they'd been in August 1958.

Although the increase in the level of manufacturers' owned inventories in August is only slightly above the July level one group, the automobile industry, stands out with an increase of more than 4%. The change in this group from August 1958 was also one of the largest, 12%, along with durable consumers' goods inventories which are 14% higher this year than last. Only two groups in the economic-use groups showed inventory decline in August as compared with July and both of these in consumers' goods; semi-durable consumers' goods inventories were 1% lower in August than in July and durable consumers' goods inventories were 2% lower. The slight increase of 1% in inventories of perishable consumer goods, however, reflects opposing movements in inventories of the food and beverage industry (S.I.C. No. 1) which rose by 3% and in the tobacco industry (S.I.C. No. 2) where inventories fell by 4%.

The generally higher level of inventories in August this year as compared with last is not as much indicative of a high level of inventories as a reflection of the very low levels to which they had fallen in the last half of 1958 when, from July to December, they were at their lowest levels since the autumn of 1956. The long period of inventory accumulation which had begun in September 1955 reached a plateau early in 1957 and began to decline in October of that year; it was not until January of this year that an upward movement began again. The comparative increase is not without exceptions; the heavy transportation industries have inventories slightly below August 1958 - 1%, and the industries producing largely for export have inventories of 7% below those held a year ago.

The ratio of inventory owned to shipments in August was 2.10 as compared with 2.02 in July reflecting both the slight increase in inventories and the slightly greater decline in shipments. The ratio of inventories of finished products to shipments was also up slightly in August, 0.65 as compared with July, 0.63. Both ratios are below the comparable August 1958 ratios.

ORDERS: - New orders received in August, \$1,989 million, were slightly higher than new orders received in July; this, combined with the decline in shipments left a total of \$2,262 million unfilled orders on manufacturers' books at the end of the month. This increase in unfilled orders is not only the largest month over month increase in 1959 but also marks the fourth successive month in which unfilled orders have risen. During the previous two years, 1957 and 1958, the movement of unfilled orders has shown a steady decline from month to month to the end of the year following a rise in January. The one exception in 1958 was in August when unfilled orders moved up slightly before continuing their downward course. This year's downward movement appears to have been checked in May and the upward movement has continued since then. The level of unfilled orders in August is at the highest point since August 1958 and within 2% of unfilled orders at that time (\$2,316 million).

TRADING OUTLETS: - Sales from manufacturers' trading outlets increased fractionally in August, \$242.2 million, as compared with July, \$241.7 million although up by slightly more than 4% as compared with August 1958 sales of \$232.1 million. Inventories held at trading outlets declined fractionally in August but in fact since June have remained almost constant at \$270 million.

The stable level of total sales reflected a fairly narrow range in changes by industrial groups; the largest increase in August was in sales in the iron and steel industries, up 8% with sales values at \$28.9 million and the largest decline in the "all other" group where sales dropped by 5% to \$15.5 million. Sales also rose in the rubber industries group, at \$15.7 million they were up 5% over July's sales of \$15.0 million, and in the wood and paper industries to \$10.0 million, up 7% over July sales. Sales in the foods and beverages industries (\$22.6 million) the electrical apparatus industries (\$22.3 million) and the chemical industries (\$11.3 million) declined by 2%, 3% and 4%, respectively. Sales of purchased goods in the electrical apparatus industries and sales in the petroleum and coal industries were less than 1% off from the July sales level.

Stability in the inventories held at the manufacturers' trading outlets was also characteristic of each of the industries covered as well as for trading outlets in total. Only two industries showed changes from the July level of more than 2%, the electrical apparatus industries' inventories of goods of their own manufacture were up by 3% in August, to \$25.6 million, as compared with July and inventories in the chemical industries trading outlets fell by just less than 4% to \$10.9 million.

(1) See footnote 1, page 2. (2) See footnote 2, page 2. (3) The value of Unfilled orders for industries in this group is small, and sample coverage is not adequate to provide separate estimates for the group. (4) The value of Inventory Held but Not Owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well. (5) Preliminary.

(1) See footnote 1, page 2. (2) See footnote 2, page 2. (3) The value of Unfilled Orders for industries in this group is small and sample coverage is not adequate to provide separate estimates for the group. (4) The value of Inventory Held but Not Owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes, this can be considered the equivalent of Inventory Owned as well. (5) Preliminary.

MISCELLANEOUS INDUSTRIES

(d1) - Industries Producing Largely For Export
(For definitions, see Page 52.)

(For industries included, see Page 50.)

This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports

(1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) Part of the change in values from December 1958 to January 1959, is a result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups. (3) Preliminary.

Total						

(1) Includes sales and inventories of purchased goods.

(2) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet data could not be separated from plant values.

(3) Preliminary.

INDUSTRIES INCLUDED IN EACH ECONOMIC USE GROUPING IN TABLE 3

The bracketed numbers following each industry title indicate the Standard Industrial Classification Grouping (Table 2) to which the industry belongs.

The bracketed letters following the individual industry titles indicate the series in which the industry is included on the basis of monthly reports from firms or from special estimates - (s) means that the industry is covered for the shipments series; (i) for the inventory series; (o) for the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group total estimates as described in the December, 1958 publication, page 89.

A single asterick preceding the individual industry title indicates that the data for the industry are shown separately in Table 5. A double asterick indicates that the data for the industry are shown in Table 5 combined with data for one or more similar industries as indicated in the footnotes for that table.

CONCEPTS AND SOURCES

For further detail, and for description of Methods Used, see December, 1958 report, Page 89.

C O N C E P T S

Shipments - (Tables 1 to 6) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 6) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common, although because of the nature of the item, the value per industry is high.

Because of variations in accounting methods, there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered, to some extent, incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 6) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate for each industry as a whole.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings, but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

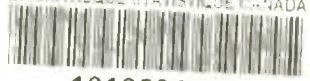

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded, except for the Petroleum Products industry group, where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A description of the Economic-Use groupings of industries (Tables 4, and 6) will be found in the December 1955 report, Page 5.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 2,700 plants in 119 industries; in addition, 2,700 small plants in 95 of these industries and one additional industry report monthly shipments only. Of the first group, 1,034 plants in 94 industries also report new and unfilled orders. Six industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.
