REVISIONS TO PREVIOUSLY PUBLISHED ESTIMATES

SHIPMENTS: - The annual revision of the monthly shipments series to base current survey trends on the latest available census data was advanced to July this year when the 1958 census values became available. Consequently no revisions have had to be made to 1959 and 1960 shipments at this time. The changes in the 1960 series have consisted chiefly of revisions for late returns in the earlier months and some adjustments to the group of reporting firms. One additional major revision was made to the shipments values in the petroleum industry for 1959 and 1960 which is also reflected in the total shipments figure. This revision consisted of lowering the level of valuation of petroleum products from a distributor's price to a refinery price. Since distribution operations accounted for a substantial amount in the former price it was considered preferable to separate them from the manufacturing operation and value the shipments out of refineries at this point.

INVENTORIES: - Values from the 1958 Census of Industry have been incorporated as benchmarks in the inventory series. All monthly values for 1958 have, therefore, been adjusted to spread the error in the series as at December, 1958 equally over the preceding 11 months and all monthly estimates from January, 1959 on have been adjusted to project the December, 1958 values. In addition the month end values for 1960 have been revised to include reports which arrived too late for incorporation in the estimates as they were published during the year.

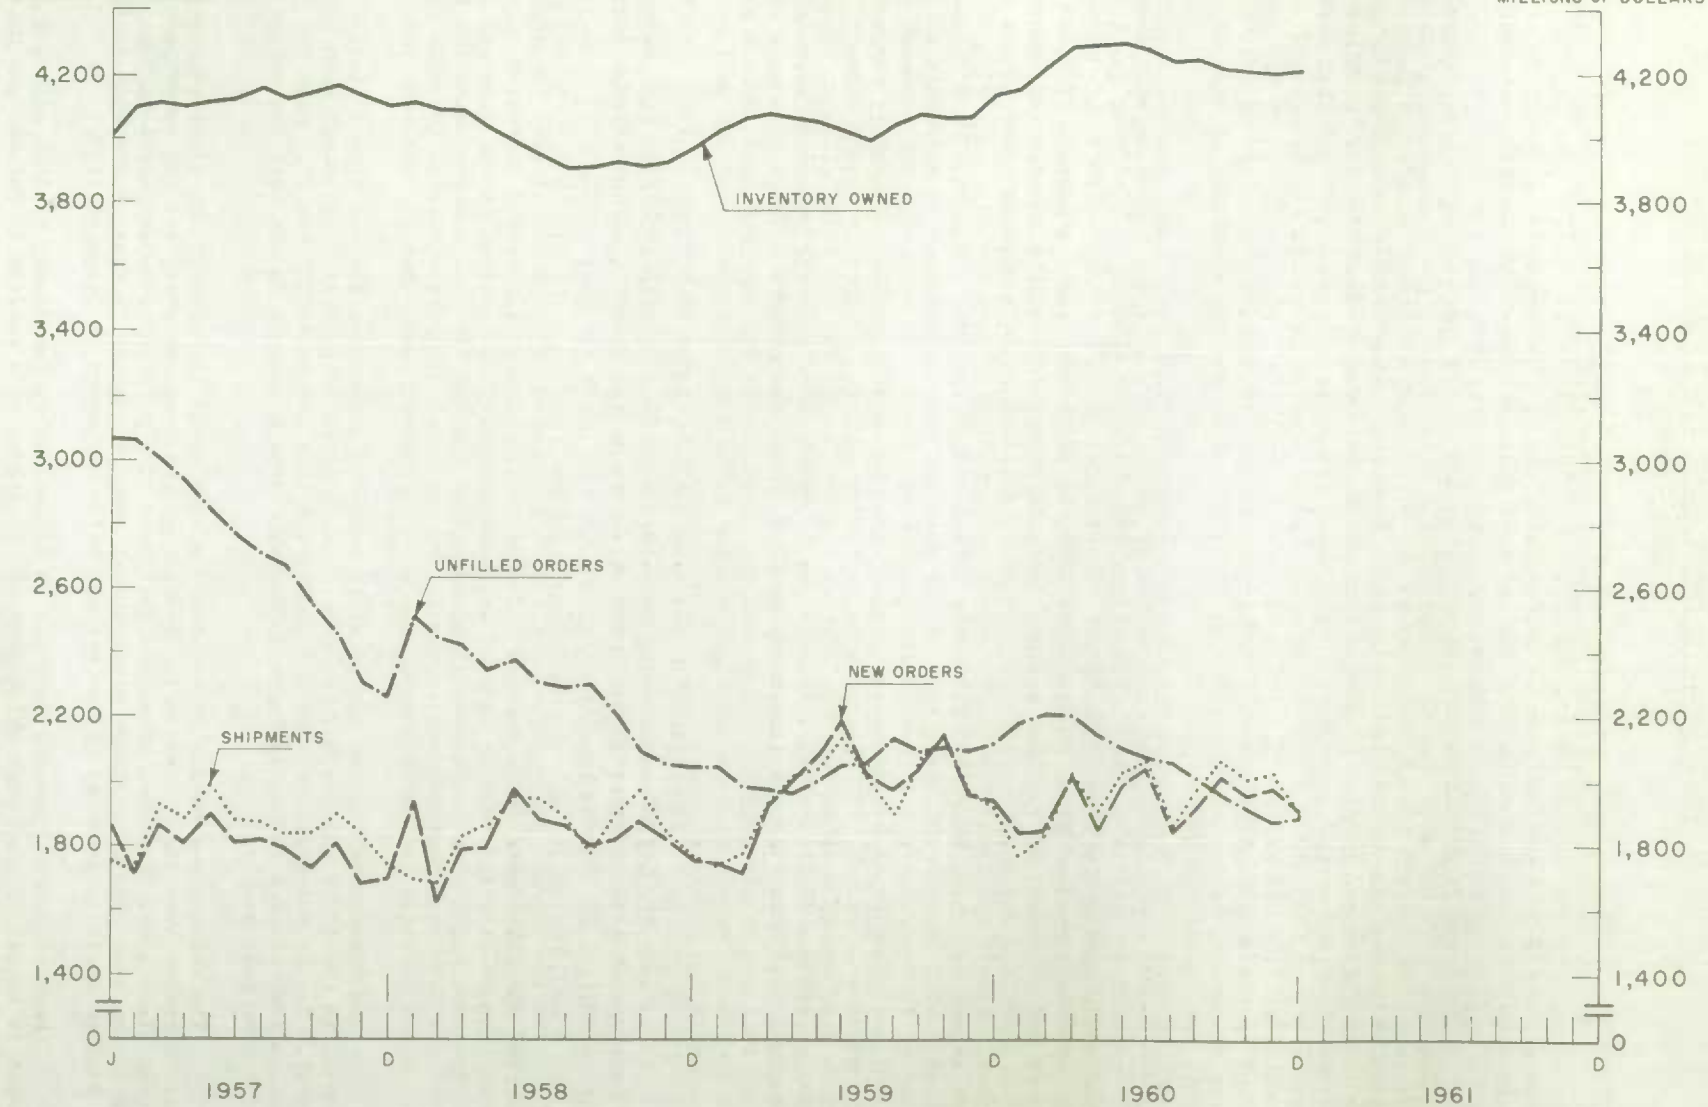

ORDERS: - Values for the 1958 orders series and for the subsequent years were revised in July this year on the basis of the 1958 census values. Changes at this time consist largely of revisions to include late returns. There were also some slight modifications in the sample in a few industries.

TRADING OUTLETS: - The trading outlets values have been revised on the basis of a special 1959 year-end survey of manufacturers' trading outlets. Values of shipments and inventories for 1960 have been revised to incorporate 1959 values. The revision in the shipments values in the petroleum industry at the refinery level for 1959 and 1960 was accompanied by revision in the trading outlet values for certain firms.

TREND SUMMARY

Manufacturers' shipments in 1960 are estimated at \$23,464 million slightly higher than the previous peak reached in 1959 of \$23,353 million. Since shipments in this past year only exceeded shipments in 1959 in the first quarter the emphasis should more properly be placed on the fact that shipments in 1960 were maintained and did not fall below the level of the previous year.

The break in shipments between the first and second quarters was fairly general throughout all industries although much greater in the durable goods than in the non-durable goods industries. Shipments in the durable goods industries in the first quarter of 1960 were eight percent above shipments in the first quarter of 1959 and in the non-durable goods industries were nearly three percent higher. In the second quarter shipments from the durable goods industries fell to ninety-five percent of shipments in the second quarter of 1959; in the non-durable goods industries they were maintained at just over the 1959 level. The only durable goods industry groups where the break did not occur were the transportation industries (S.I.C.11) which were generally lower for the first ten months of the year and in the non-metallic minerals industries (S.I.C.14) where the contrast between the first quarter shipments, ninety-eight percent of the 1959 value, and the remainder of the year, at ninety-six percent, was relatively minor.

In the non-durable goods industries shipments were in total higher in each quarter than in the corresponding quarter of 1959 although the three percent advance in the first quarter was not reached again during the rest of the year. The largest group of industries in this group, food products, however, remained fractionally below 1959 shipments throughout the year. Tobacco and paper products had shipments up by three percent over the year before with a substantial advance in the first quarter (fourteen and eight percent respectively) followed by more moderate ones in the last three quarters. Rubber and leather products were down considerably over the full year with the sharpest drop in the second and third quarter. Shipments in the primary textile industries were sustained at levels comparable with 1959 in the first half of the year but rose to exceed 1959 shipments in the third quarter by four percent and in the fourth quarter by nearly nine percent. The movement in the petroleum and coal industries was in contrast also with the general pattern in 1960 as shipments rose in the second quarter to exceed 1959 shipments by over four percent. Shipments in the chemical products industries also showed a second quarter high as compared with 1959 but this, although higher than usual, is undoubtedly the result of the increased use of fertilizers with the customary seasonal upswing in the spring. The miscellaneous industries group followed the pattern of high shipments in the first quarter followed by a decline in the second but shipments in the year were ten percent above shipments in 1959 with the year's high in the third quarter where they were twelve and one half percent above shipments in the previous year.

In knitting mills and clothing shipments were down fractionally from the previous year and were fairly consistently lower in each quarter except in the fourth quarter where shipments were one percent higher.

In the durable goods industries the wood and wood products industries, the iron and steel industries and the electrical apparatus and supplies industries all showed increases in the first quarter (from nearly six percent in wood and wood products, ten percent in the iron and steel industries and over eight percent in electrical apparatus and supplies) as compared with the first quarter of 1959 followed by a decided drop in the second quarter. During the rest of the year the lower level of shipments resulted in yearly totals five and six percent lower than the previous year.

The transportation and non-metallic minerals industries did not show a similar high level of shipments in the first quarter but ran four to five percent below 1959 shipments from the beginning of the year. In the non-metallic minerals industries this continued for the full year but in the transportation industries a sudden increase in November sent shipments in the last two months up fifteen percent over last year's.

The non-ferrous metals group showed a very large increase in the first quarter, a twenty-nine percent increase over the corresponding quarter in the previous year, but the subsequent decline did not take place until June when shipments fell over five percent below shipments in June 1959. Shipments in the year 1960 were almost nine percent above shipments in these industries in 1959 in spite of a decline again in December of two percent below shipments in December 1959.

Manufacturers' inventories began to accumulate in the summer of 1959 with a sharp upward movement in August of that year which with the exception of a decline in October and November continued until May of 1960. Since last June inventories have been moving downward, the decline in inventory

held being much more pronounced than in inventory owned as inventory held under progress payments has been declining steadily since 1958. The combination of these two trends brought inventory held at the end of 1960 below the level of inventory held at the end of 1959, the lowest point during the year and the first time inventory held had fallen below the 1959 level. Inventory owned moved down but more gradually which left the level at the year's end two percent above the level at the end of 1959 although also at the lowest point since the beginning of the year.

The movement of the components of inventory held was quite dissimilar. Inventories of raw materials remained relatively stable during 1960 continuing at very much the level which was established in the last four months of 1959. There was a minor increase in July and August this year followed by a decline again in September which largely reflects the seasonal increase in inventories in the foods industries. The difference in the level of raw materials inventories at the end of 1960 as compared with 1959 was only fractional but inventories were higher.

Finished products inventories were also higher in 1960 than in the previous year and although here also the year end difference was the lowest at any time during the year they showed an increase of nearly five percent over the previous year. The rapid accumulation of finished goods inventories from December 1959 to March 1960, an increase of ten percent, was held at this level in the second quarter of the year to be followed by a gradual decline from June to December of five percent.

Goods in process inventory in contrast to both raw materials and finished products never reached a level in 1960 above the level in the corresponding month in 1959 and ended up the year nearly eight percent lower. The spread between the level this year as compared with last year widened from August on reaching its maximum in October when goods in process inventories were nearly ten percent less. This decline probably reflects both the adjustment by manufacturers to reduce operations as shipments fell off at the beginning of the summer and the continuing downward trend in inventory held under progress payments most of which is held as goods in process.

The contrast in the movement of the three components of inventory held between 1959 and 1960 is even more evident when the non-durable and durable industry groups are considered separately. In the non-durable industries the rise in total inventory which began in August 1959 continued until March of this year with the major part of the accumulation taking place in finished products although the accumulation of raw materials stocks from October to February was marked. Raw materials stocks declined fairly regularly until mid 1960 and since August have been moving upward again in a movement very similar to the trend in the corresponding months of 1959. Goods in process inventory which is a very small proportion of inventory held in these industries remained stable throughout the year. Consequently while the accumulation of raw material stocks and stocks of finished products in these industries contributed to the general rise the decline in goods in process inventory last year was concentrated entirely in the durable goods industries.

The build up in raw materials stocks in the durable goods industries above the level of the previous year did not show up until April when the greater part of the increase, in absolute terms, had already taken place. It would appear as if the maintenance of stocks at a higher but stable level during the second and third quarter of the year in contrast to the lower level during the same months of 1959 reflected a slowing up of production as inventories of finished goods were accumulated. The decline in goods in process inventory during the year is also indicative of a lower rate of production. The level of goods in process inventory during 1960 began at a level seven percent below the level in 1959 and continued at about this much below the previous year until the end of July. From August until the year's end goods in process inventory declined at a faster rate than the previous year so that the level at the end of December was only eighty-eight percent of the level the year before. It should however be added that this decline in part reflects the decline in inventory held, but not owned, most of which is included with goods in process.

Unfilled orders during 1960 fell by eleven percent in all industries combined and by nearly thirteen percent in the durable goods industries. The rise in unfilled orders which began in May 1959 with a rather steep increase until August declined slightly in September but continued upward from September through the first quarter of 1960 at a lower rate. The drop in April 1960 of three percent was the start of a steady downward movement which did not level off until December. The level of unfilled orders in both all industries and in the durable goods industries was fractionally higher at the end of December than at the end of November.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

(1) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described on page 81.

STANDARD INDUSTRIAL CLASSIFICATION

Industrial Groupings shown in Tables 3 and 7.

S.I.C. Group 1. Foods and Beverages

- ** Slaughtering and Meat Packing (s)(i)
- ** Sausages and Casings (s)
- Animal Oils and Fats (s)
- ** Butter and Cheese Factories (s)(i)
- ** Concentrated Milk (s)(i)
- ** Processed Cheese (s)(i)
- ** Other Dairy Products (s)(i)
- Canned and Cured Fish (s)(i)
- * Fruit and Vegetable Preparations (s)(i)(o)
- * Flour Mills (s)(i)(o)
- Breakfast Foods (s)(i)
- Prepared Stock and Poultry Feeds (s)(i)
- * Biscuits and Crackers (s)(i)
- Bread and Other Bakery Products (s)
- Aerated Waters (s)
- Distilled Liquors (s)(i)
- * Breweries (s)(i)
- * Wines (s)(i)
- * Confectionery (s)(i)
- * Sugar Refineries (s)(i)
- ** Miscellaneous Food Preparations (s)(i)
- Macaroni (s)(i)
- ** Starch and Glucose (s)
- ** Malt Products (s)(i)

S.I.C. Group 2. Tobacco and Tobacco Products

- Tobacco Processing and Packing (s)(i)
- Tobacco, Cigars and Cigarettes

S.I.C. Group 3. Rubber Products

- * Rubber Footwear (s)(i)
- * Tires, Tubes and Other Rubber Products (s)(i)(o)

S.I.C. Group 4. Leather Products

- * Leather Footwear (s)(i)(o)
- Leather Gloves and Mittens (s)
- * Leather Tanneries (s)(i)(o)
- Belting Leather (s)
- Miscellaneous Leather Products (s)
- Boot and Shoe Findings (s)

S.I.C. Group 5. Textile Products (except clothing)

- Cotton Thread (s)(i)
- * Cotton Yarn and Cloth (s)(i)(o)

S.I.C. Group 5. Textile Products (except clothing) - (Concl'd)

- Miscellaneous Cotton Goods (s)
- * Woollen Cloth (s)(i)(o)
- * Woollen Yarn (s)(i)(o)
- Miscellaneous Woollen Goods (s)(i)(o)
- * Synthetic Textiles (s)(i)(o)
- Dyeing and Finishing of Textiles (s)(i)(o)
- Laces, Tapes and Bindings (s)(i)(o)
- * Canvas Products (s)(i)(o)
- * Carpets, Mats and Rugs (s)(i)(o)
- * Cordage, Rope and Twine (s)(i)
- * Cotton and Jute Bags (s)(i)(o)
- * Oilcloth, Linoleum and Other Coated Fabrics (s)(i)(o)
- ** Automobile Accessories, Fabric (s)
- ** Embroideries etc. (s)
- ** Miscellaneous Textiles, n.e.s. (s)(i)(o)

S.I.C. Group 6. Knitting Mills and Clothing (textiles and fur)

- ** Men's Clothing (s)(i)(o)
- ** Men's Clothing Contractors (s)
- ** Children's Clothing (s)(i)(o)
- ** Women's Clothing (s)(i)(o)
- ** Women's Clothing Contractors (s)
- * Hosiery (s)(i)(o)
- * Other Knit Goods (s)(i)(o)
- * Corsets and Foundation Garments (s)(i)(o)
- Fur Dressing and Dyeing
- Fur Goods (s)(i)
- Hats and Caps (s)(i)(o)
- Oiled and Waterproof Clothing (s)
- Fabric Gloves and Mittens (s)
- Miscellaneous Clothing, n.e.s. (s)(i)(o)

S.I.C. Group 7. Wood Products

- * Plywood and Veneer Mills (s)(i)(o)
- Sash, Door and Planing Mills (s)(i)
- Hardwood Flooring (s)(i)(o)
- Sawmills (s)(i)(o)
- * Furniture (s)(i)(o)
- Miscellaneous Wood Products (s)(i)(o)

S.I.C. Group 8. Paper Products

- * Paper Boxes and Bags (s)(i)(o)
- * Pulp and Paper Mills (s)(i)(o)
- * Roofing Paper (s)(i)(o)
- Miscellaneous Paper Products (s)(i)(o)

S.I.C. Group 9. Printing, Publishing and Allied Industries

Commercial Printing (s)
Engraving, Stereotype and Allied Industries (s)
Printing and Publishing (s)

S.I.C. Group 10. Iron and Steel Products

* Agricultural Implements (s)(i)(o)
* Boilers and Plate Work (s)(i)(o)
* Fabricated and Structural Steel (s)(i)(o)
* Hardware and Tools (s)(i)(o)
 Heating and Cooking Apparatus (s)(i)(o)
* Household, Office and Store Machinery (s)(i)(o)
* Iron Castings (s)(i)(o)
 Machine Shop Products
* Machine Tools (s)(i)(o)
* Industrial Machinery n.e.c. (s)(i)(o)
* Primary Iron and Steel (s)(i)(o)
* Sheet Metal Products (s)(i)(o)
* Wire and Wire Goods (s)(i)(o)
* Miscellaneous Iron and Steel Products (s)(i)(o)

S.I.C. Group 11. Transportation Equipment

Aircraft (s)(i)(o)
Bicycles and Parts (s)(i)(o)
Boat Building (s)
* Motor Vehicles (s)(i)
* Motor Vehicle Parts and Accessories (s)(i)(o)
* Railroad and Rolling Stock Equipment (s)(i)(o)
 Shipbuilding and Repairing (s)(i)(o)
 Miscellaneous Transportation Equipment (s)

S.I.C. Group 12. Non-Ferrous Metal Products

Aluminum Products (s)(i)(o)
* Brass and Copper Products (s)(i)(o)
* Jewellery and Silverware (s)(i)(o)
* Non-Ferrous Metal Smelting and Refining (s)(i)(o)
 White Metal Alloys (s)(i)(o)
 Miscellaneous Non-Ferrous Metal Products

S.I.C. Group 13. Electrical Apparatus and Supplies

* Batteries (s)(i)(o)
* Heavy Electrical Equipment and

CONCEPTS, METHODS AND LIMITATIONS

C O N C E P T S

PLANT SHIPMENTS, ORDERS, AND INVENTORIES (Tables 1, 2, 3, 4, 5 and 7):

Shipments - represent an estimated projection, on a monthly basis, of the latest available Gross Value of Factory Shipments from the annual Census of Industry. In the majority of cases, Census of Industry values include (a) sales from manufacturing plant of products made at the plant, (b) amounts received for repairs or custom work, (c) shipments of goods manufactured in the plant for further processing in another unit of the same company, and (d) shipments of finished products to manufacturers' sales branches for sale, for each establishment included. The value level used is defined as "factory selling value". Goods purchased for re-sale without further processing are not included. (1)

New Orders - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled. (Since progress payments are treated for this survey as sales in the month received, total unfilled orders reported each month by firms operating on a progress payments basis are reduced by the total of progress accounts for these firms.) This definition of Unfilled Orders is therefore an expression in terms of future shipments values.

(1) There are a few exceptions to the definition of Census of Industry values given above:

- (i) In two industries, Sawmills, and Slaughtering and Meat Packing, custom work is valued at the estimated selling value of the product rather than by the amounts received for such work.
- (ii) In nine industries (Fish Processing, Veneer and Plywoods, Sawmills, Pulp and Paper, Non-Ferrous Metals, Smelting and Refining, Coke and Gas Products, Petroleum Products, and Miscellaneous Products of Petroleum and Coal) the Census of Industry values represent production of finished goods rather than shipments. For these industries the Census of Industry values are adjusted by change in finished products inventory before projection for the monthly series.
- (iii) In four industries, Fabricated and Structural Steel, Aircraft, Railroad Rolling Stock and Shipbuilding, the Census of Industry value is for "work done during the year", i.e. production of finished goods plus change in goods-in-process inventory during the year, rather than shipments. For these industries, the Census of Industry values are also adjusted by change in finished products inventory before projection for the monthly series.

There are three industries apart from those listed under (ii) and (iii) above, for which adjustments to Census of Industry values are made before projection for the monthly series. In the Flour Milling, Brewing and Fruit and Vegetable Preparations industries, all of which are characterized by large seasonal variations, many large firms operate on fiscal year periods (which are used in Census of Industry compilations) differing from the calendar year. In unusual years the projection of Census of Industry values for these industries, as if they represent calendar year values, could cause considerable distortion in the estimates. To avoid this, the Census of Industry values from 1954 on have been adjusted to estimated calendar year values before projection. This adjustment is based on values reported to the monthly survey.

Firms operating on long-term contracts represent a special problem for the monthly series. The value levels projected are those of the Census of Industry as described in the first paragraph (except for the four industries described under (iii) above). However, for the monthly series, all progress receipts on long-term contracts are included as sales in the month received, instead of the total sale being included in the month the sale is finalized. It is felt that this treatment gives a better indication of monthly activity but it does allow possible distortion of value levels in that, for the Census of Industry value which is being projected, any final sale will be recorded in one specific year, while the monthly series may have spread this sale over more than one calendar year. Since the bulk of the value of long-term contract work falls in the four industries noted (in (iii) above), for which adjustments for work done are made in compiling the Census of Industry value, this inconsistency does not affect the all-industry or group totals to any great extent.

Total Inventory Owned - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of:

- (a) raw materials;
 - (b) goods in process;
 - (c) finished goods of own manufacture at plant and warehouse;
- less (d) value of inventory held but not owned. This item cannot be assigned to specific components.

Since the series relates to manufacturing inventory only, the value of inventory of goods purchased for re-sale without further processing is not included.

Inventory Held but Not Owned - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory - some firms treat progress receipts as sales and reduce book value of inventory as payments are received; in some of these cases they no longer have records of actual holdings above the book value level. Wherever estimates are available, these have been included, but the estimated value of inventory under this heading must be considered, to some extent, incomplete.

Total Inventory Held - represents the estimated total book value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from total inventory owned because of the inclusion of inventory held under progress payments arrangements. It includes items (a) to (c) as shown above under total inventory owned.

Inventory Components: Raw Materials, Goods in Process, and Finished Products, are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate to each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Table 3, are defined according to the Standard Industrial Classification Manual.

The Economic Use groups of industries (Table 4) were designed to facilitate the analysis of trends by a grouping based on the use made of each industry's products i.e. on the main demand factors affecting each industry. In drawing up this classification the groupings were designed to tie in with National Accounts concepts as closely as possible; as a result the three main groupings - Consumer Goods industries, Capital Goods industries, and Construction Goods industries - contain only industries producing mainly final products in each of these categories. Only industries in which substantially more than half the production is of items clearly belonging to one or other of these three specific categories or industries in which half the production falls into one such category and the remainder is scattered over two or more other categories, were assigned to one of the main groupings. All other industries were assigned to a miscellaneous category which was sub-divided into four further groupings of related industries: Industries Producing largely for Export, Intermediate Goods and Supplies, Motor Vehicles and Related Industries, and a final unclassifiable group. The latter groupings cut across the Economic Use criteria to some extent. For further detail on the considerations leading to the assignment of industries for these groupings reference should be made to the December, 1955 report.

TRADING OUTLETS SALES AND INVENTORIES (Table 8): See page 74.

Trading Outlets are defined as any establishments operated by manufacturers, apart from their plants (or plant warehouses), which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock or which carry small quantities for demonstration purposes are not included. Sales arranged by outlets carrying stock but shipped direct from plant are excluded wherever possible. Inventories of trading outlets include any holdings at warehouses which serve the outlets. Other warehouses, unless they have sales staffs, are excluded.

The Trading Outlets series has two purposes:

- (a) To clarify the manufacturing shipments and inventory series by excluding distribution activity (the extraneous activity which is most commonly included in reports by manufacturers) so that the manufacturing series is confined, as far as possible, to plant activities only at plant value levels;
- (b) To provide as complete and consistent a series as possible on manufacturers' distributional activity, so that this can be combined with the manufacturing series, if desired, for analytical purposes; or combined with data for independent wholesalers to provide a more complete picture of current wholesale activity than has previously been available.

Trading Outlets may or may not be separately incorporated wholesale companies. The majority of them are not separately incorporated. Any separately incorporated wholesale company owned by a manufacturing company or by a group of manufacturing companies is, however, included if the bulk of its sales are of goods manufactured by the owning or associated companies. Since it is obvious from the reports received that almost all unincorporated outlets handle mainly the products of the owning manufacturing company the Trading Outlets series may be taken to represent the activities of establishments the main function of which is to distribute the products of the manufacturing companies which own them.

This series was first published a year ago in the December 1958 bulletin. It is still to some extent in the experimental stage in the sense that the universes which are being projected monthly are not necessarily final, and the levels of the published data are, therefore, subject to revision over the next few years. In addition, only part of the total material collected for the series is considered adequate for publication at this time. It has, however, rectified to a large extent two areas of inconsistency in previous reports, one practical and the other conceptual.

The practical inconsistency was that many companies selling entirely or partially through their own sales organizations find it simpler to report total company sales monthly than to report "shipments leaving plant", which may be either final sales or shipments to their own selling outlets. Such reports were previously accepted in a large number of cases but were used to project the latest available Census of Industry values, which are generally defined as shipments from plant at plant selling value. For many of these companies it has now been possible to arrange for a monthly report covering an estimated value of plant shipments at plant selling value, in addition to the company sales figure. The former is now used for compilation of shipments values for Tables 1 to 5. To the extent that trends in the plant shipments series were being distorted by use of company sales values rather than plant shipments values this change represents an improvement. (It should, however, be noted that the change has not yet been possible in all relevant cases.)

The conceptual inconsistency was that, while shipments represented plant level shipments, the finished products inventories values previously represented total finished products owned by manufacturers, whether held at plant, warehouse or trading outlets, rather than plant finished products only. The two separate series, one for plant, and the other for trading outlets, now each cover sales and inventories for comparable activities.

(It should not, however, be assumed that the plant finished products series and the Trading Outlets inventory series are, when summed, the exact equivalent of the previous manufacturers' finished products series. As a matter of fact, they are reasonably close to being equivalent, but the former finished products series included some retail store operations of manufacturers (retail operations are excluded from the Trading Outlets series) and the Trading Outlet series includes a number of separately incorporated wholesale companies which were not previously included.)

The problems which have been raised by a separate series covering sales and inventories of Trading Outlets are due basically to difficulties of response. The major problems are:

- (a) In the cases remaining where it is still impossible to obtain plant level shipments values on a monthly basis it is often also impossible to obtain plant level finished products inventory holdings separately from Trading Outlets holdings. The inventory breakdown is, in these cases, available only at year-ends. There is, therefore, an element of uncertainty in the monthly finished products trends for the two series when used separately which did not exist when the two elements were combined. For one industry group, Tobacco Products, it was impossible to obtain separate Trading Outlets data, so total finished products inventory values for this group were left in the manufacturing series.

- (b) In a number of cases, Trading Outlet sales and inventory values, while easily available separately from plant values, are not available broken down as between "goods of own manufacture" and "goods purchased for re-sale". This is more often the case with separately incorporated wholesale companies than with other outlets. In most industry groups enough reports are available which distinguish between own and purchased goods to make a separation of values under this heading feasible. For one industry group, Petroleum Products, the separation is, however, not possible, so total sales and inventories have been included under the heading of "goods of own manufacture" for this group.
- (c) In a number of cases where the separation, by the appropriate reporting firms, of plant level shipments and Trading Outlets sales is not yet available it has been possible to estimate Trading Outlets sales of goods of own manufacture on the basis of the total sales figures for the companies concerned and the probable proportion of total sales which are being made through outlets. It did not, however, appear possible to estimate sales of purchased goods in these cases, because of the wide range of ratios of own to purchased goods in the sales values reported by the remaining companies. It is hoped that some improvement can be made in this area in the coming year. In the meantime, with the exception of the Electrical Apparatus and Supplies group where practically no estimating problem occurs, it is felt that the estimates of sales of goods purchased for re-sale do not yet warrant publication. This problem is not so acute for inventory values of goods purchased for re-sale, since year-end values at least are generally available for own and purchased goods separately, but it is felt that publication of this item should be postponed until comparable sales values are available.

Many of the companies operating trading outlets are multiple-unit firms with operations crossing two or more individual industries. No attempt has been made to obtain detail at this level for the Trading Outlets series. This means that the industry-group (e.g. Foods industries, Iron and Steel Industries) is the smallest unit for which data can be shown separately. There are a few cases where outlet operations cut across two industry-groups, and in these cases the values have been assigned to the group in which the bulk of the manufacturers' production falls.

Because of the relatively small number of companies included and because, on the whole, this type of operation tends to be large it can be expected that, when a company gives up its distributing organization or when new organizations are set up, the effect on the series will be to cause considerably larger sudden changes than are common in the plant shipments and inventory series.

METHODS

(a) Current Estimates -

For eight series (plant shipments, raw materials, goods in process, plant finished products, inventory held but not owned, unfilled orders, trading outlets sales, and trading outlets inventories,) current value estimates for each industry covered are made by applying the monthly percentage changes shown by the unweighted group of reporting firms in each industry to the latest available benchmark values for the same industries. Industries not covered are carried at the latest available benchmark levels.

(The above is subject to a few exceptions. In one industry, reporting firms are treated as a stratum sample, rather than as an unweighted group. In three industries, available physical data on stocks and shipments are valued using price indexes. In three industries, shipments estimates are based on employment data and price indexes.)

Total inventory held in each industry is the sum of the estimated values for raw materials, goods in process, and finished products. Total inventory owned in each industry is calculated by deducting the estimated value for inventory held but not owned from estimated total inventory held. Value of new orders in each industry is derived from estimated shipments and unfilled orders using the formula "Unfilled Orders at end of previous month plus Net New Orders during month less Shipments during month equals Unfilled Orders at end of Current month".

(b) Benchmark Revisions -

As new benchmarks become available, estimates for the year to which the benchmarks apply are revised as follows:

- For the plant shipments series, the Census of Industry value for the year for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

- For the trading outlets sales series, the estimated value for the year, obtained from the Annual Trading Outlets survey, for each industry is spread by months according to the trend shown by reporting firms in the original estimate for that year.

For the five basic inventory series (raw materials, goods in process, plant finished products, inventory held but not owned and trading outlets inventory) and the unfilled orders series, where the benchmark values apply to the Year-End rather than to the entire year as in the shipments series, the error in the original estimate for the year-end for each industry is assumed to have accumulated equally over all twelve months of the year (i.e., one-twelfth of the amount of the error is added to the original estimate for January; two-twelfths is added to the original estimate for February; three-twelfths to March and so on).

The three derived series (total inventory held, total inventory owned, and new orders) are re-calculated on the basis of the revised data for the other six series.

LIMITATIONS TO THE USES OF THE DATA IN THIS REPORT

- (1) Data for individual industries should not be interpreted as commodity data, since very few industries produce only one commodity or only one class of commodities.
- (2) Since the series are in terms of current values, changes over time may be the result of both price and volume changes. Some indication of the extent to which changes in value are due to price changes, thus isolating the physical change which has taken place, can be obtained by reference to the wholesale price index. This procedure is, however, inadequate for anything more than a general indication of trends. The main problem is that the wholesale price index is a commodity price index, while the shipments, orders, and inventory series are industry series with the possibility of changes in commodity content over time. These changes in commodity content could seriously affect the weighting pattern to be applied to price indexes considered applicable for any specific industry. In considering inventory values turnover rates and valuation methods are other important variables which should be taken into consideration but for which adequate data are seldom available.
- (3) Shipments data do not necessarily represent market sales for the manufacturing universe.
(a) Apart from the few exceptions as noted under (b) below they are defined (see page 57) to include total movement of goods out of manufacturing plants (or, in some cases, divisions of plants); shipments of goods for further processing by other plants of multiple-unit companies are, therefore, included as well as shipments for sale. (b) In a few special cases, the Census of Industry values include goods in-process change, and for these cases progress receipts on long-term contracts are included as shipments as they occur, rather than at the time sales are finalized. (c) Many manufacturers re-sell purchased goods, in addition to sales of their own products and these re-sale items are not included.
- (4) The component breakdown for inventories is on an establishment, not a commodity, basis. Since each manufacturer reports inventories as on his own books, both for the monthly and annual surveys, and since a number of industries contain plants at various stages of processing, the finished products for one plant might represent commodities which would be considered raw materials or goods in process for another plant in the same industry. The composition of each industry must be studied before attempting to use the component breakdown as applicable to the industry as such, rather than to the firms in the industry.
- (5) For Unfilled Orders, the following reservations apply:
 - (a) The series, by definition, excludes plants producing entirely for stock. Since approximately 40% of manufacturing is done by such plants the trends shown are not necessarily applicable to manufacturing in general.
 - (b) Since the series is defined as "unshipped" orders, rather than "unproduced" orders, there is always the probability that some of the Unfilled Orders are accounted for in inventory holdings. The reduction of unfilled orders by progress receipts eliminates to a considerable extent the effect of large goods-in-process holdings in connection with long-term contracts, but the amount of the remaining inventory, either goods-in-process or finished products, which is held in connection with existing unfilled orders would be difficult to evaluate.
 - (c) The series includes total orders, not just those considered as "binding", so estimates of future shipments trends based on these may be overstated due to the possibility of cancellations.
 - (d) Unfilled Orders for all industries include to some extent a duplication due to the fact that orders for final products in one industry may result in orders to firms at secondary or primary stages of processing. Since the total gross value of shipments will contain the same duplication, this does not invalidate the series for purposes of analysis. However, the total impact of any one order on future shipments levels will not necessarily be shown in the Unfilled Orders series since at any stage an order may be filled from stock rather than added to existing backlogs.

- (6) The Economic-Use grouping of industries (Table 4). The difficulties involved in classifying both commodities, and industries on the basis of commodities made, are sufficient to limit the usefulness of this compilation to indications of trends only. The main difficulty is that many commodities may be used for different purposes which cut across classification lines. Depending on the use made of it, the same product may be a "final" product or a component part; or a final product may be used for consumption, capital equipment, or in construction. A second difficulty is that the basic data for this survey are in terms of estimates for individual industries not for commodity data. An industry is a group of establishments primarily concerned with the production of a specified product or class of products. Many establishments produce other commodities in addition to those with which they are primarily concerned and, as a result, very few industries can be considered "pure" in the sense that they produce only the product or class of products implied in their title. Therefore, many industries which might fall quite clearly into specified groups on the basis of the chief use of their main products are much less clear-cut when the additional commodities produced in the establishments concerned are considered.

In this classification only those industries in which substantially more than half the production is of items clearly belonging to a specified grouping or in which half the production is of such items and the remainder is scattered over two or more groups were assigned to the main categories; all industries which could not be so assigned were placed in the "Unclassifiable" category. This means that the inclusion of extraneous commodities is kept to a minimum. It does not, unfortunately, do anything about the fact that each category does not necessarily include all important relevant items. The grouping that is most seriously affected by the forced exclusion of relevant items is the Durable Goods sub-group of the Consumer Goods category. It does not contain the consumer portion of the Automobile industry and, in addition, it does not include the stove portion of Heating and Cooking Apparatus, since the latter industry had to be assigned to the Unclassifiable group. On the other hand, it does include two large industries with important production of items which should not be assigned to Consumer Durables - these are the Furniture industry, which produces office and store furniture as well as household furniture; and the Radios and Parts industry which also produces electronic equipment. The sub-category "Other Capital Goods Industries" contains the highest proportion of industries in which only about half of total production actually should be assigned to the specific grouping but where the remainder of production is dispersed over a number of other groupings. It is, however, felt that this dispersion is not so likely to result in distortion as is possible with the large specific items involved in the Consumers' Durable Goods group.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
