ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Preliminary estimates indicate the following trends for February:

SHIPMENTS: - Manufacturers' shipments in February were valued at \$1,822 million, an increase of slightly more than two per cent over the revised January estimate of \$1,782 million and nearly five per cent higher than shipments in February 1959, of \$1,742 million. The upward movement of shipments in February follows the same trend as last year with the decline in monthly shipments from the October high being reversed in February. In the two previous years the downward movement continued until March.

The increase in shipments in February was general; shipments in both the durable and non-durable industry groups were higher in about the same proportion and have in fact followed a similar pattern from December to February. Only three of the S.I.C. groups of industries had lower shipments in February than in January, foods and beverages, where the decline from \$347.9 million to \$347.0 million was negligible; transportation, where shipments fell from \$169 million to \$165 million, a decline of just over two per cent; and petroleum products industries where the drop from \$127 million to \$123 million was, in percentage terms, just over three and one half per cent. In absolute terms the total decline in shipments of \$9.5 million was less than one fifth of the total increase in shipments of \$49.5 million leaving a net increase in all industries of \$40 million.

The largest increase in shipments in both percentage and absolute terms was in the clothing industry where shipments rose to \$76.9 million from \$62.8 million in January, an increase of \$14 million or twenty-two per cent. A large increase in shipments in this industry is customary at the beginning of the year and in fact the level reached in the first two months this year is below that of last year by about three per cent.

Shipments in the tobacco industry, which have been rising steadily during the last four years have shown a considerable rise again in the first two months of this year.

Turning to the Economic-Use groupings the changes in shipments in the S.I.C. groups discussed above are reflected in the appropriate group here. One further change should perhaps be commented on and that is shipments in the heavy transportation equipment industries which are part of the capital goods industries. This group includes the aircraft industry, railroad and rolling stock equipment industry and the shipbuilding industry, all of which are included in S.I.C. group 11 along with the motor vehicles industry and the motor vehicles parts and accessories industry. The breakdown of S.I.C. 11 into these two economic-use groups shows up the contrast between them. Shipments in February in the motor vehicles and related industries fell by slightly less than three per cent from shipments in January, but in the first two months of this year were slightly higher, (1.5%) than in the first two months of last year. Shipments in 1959 were ten per cent above 1958 shipments although they did not regain the levels reached in either 1957 or 1956. In the heavy transportation equipment industries on the other hand, although shipments in February were three per cent higher than in January, shipments in the first two months of the year were only seventy-two per cent of the value of shipments in the first two months of 1959. Shipments in both 1959 and 1958 fell steadily from the 1957 level and in 1959 total annual shipments were only seventy-four per cent of the 1957 value.

INVENTORIES: - Levels of inventory in manufacturing industries at the end of February were higher than at the end of January. Since inventories held under progress payments rose at a rate (1.7%) comparable with inventories owned (1.5%), both total inventory owned, at \$4,131 million, and total inventory held, at \$4,472 million, were 1.5% higher than at the end of January. Inventory held at the end of January was valued at \$4,405 million and inventory owned at \$4,069 million.

All components of inventory held were higher with the largest increase shown in goods in process inventory. Raw materials inventories were \$1,963 million up one per cent from \$1,944 million at the end of January; goods in process inventories at \$1,172 million were two per cent above January's level of \$1,148 million, and finished products inventories at \$1,337 million were just less than two per cent above the \$1,313 million held at the end of January.

Although the level of inventories of finished products at the end of February this year was five per cent higher than at the same time last year, the ratio of finished products inventory to shipments in February was the same in both years, 0.73. The higher ratio reflects the customary decline in shipments from November to January.

Inventory levels at the beginning of this year reflect the general increase in manufacturing activity during the past year. The upward trend in inventory which began in December 1958 levelled off during the summer of 1959 and had risen steadily since August. This movement has carried total inventories almost up to the 1957 levels.

The two largest swings in inventories which are shown up in comparison of February 1960 with February 1959 holdings are in the transportation industries where inventory owned in the heavy transportation industry group is fifteen per cent lower this year and inventory in the motor vehicles industry group is twenty-eight per cent higher than last year's holdings.

The decline in inventory levels between February 1959 and this month in the economic-use group of industries producing largely for export reflects the decline in levels in the non-ferrous metals industries (S.I.C. 12) and in the paper products industries (S.I.C. 8). The decline in paper products is negligible, from \$338 million in February 1959 to \$334 million this month; inventory levels in this industry have been very stable for the past three years although shipments were nine per cent higher in 1959 as compared with 1958. The decline in non-ferrous metals inventories however, from \$291 million in February 1959 to \$263 million this month may indicate a downward trend in this industry as inventories in total have moved downward since July of last year. Shipments however, were higher in 1959 than in 1958 or than in any year since the previous peak in 1956 and the level goods in process inventory has been fairly stable.

ORDERS: - New orders in February were valued at \$1,802 million, down 2.5% from \$1,848 million in January and were lower than the value of shipments in this month. The level of unfilled orders which was reduced by less than 1% from the January level remains at a level higher than in any month since the middle of 1958 and nearly 11% higher than in February a year ago.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in the first two months of the new year are not only down from the level of sales in the final quarter of the previous year, a movement comparable with the trend in both 1957 and 1958, but have also fallen off from the level of sales in January and February a year ago. The decline is not large, January sales at \$212 million are just less than two per cent below sales in January 1959, \$215 million, and February sales at \$222 million are down slightly less than two per cent from February sales a year ago, \$227 million. Nor is the decline general as increases are shown in the electrical apparatus industries, iron and steel industries, chemical industries and the all other group of industries. The increase in sales in the chemical and iron and steel industries is not only large - sales in the chemical industries in the first two months of the year, at \$17.8 million, are five per cent higher than sales in the first two months of 1959, \$16.9 million; sales in the iron and steel industries at \$41 million are up nineteen per cent from the first two months of 1959, \$34 million - but in both industry groups follows three years of steadily rising sales.

Declines in sales are shown in the foods and beverages industries, the rubber industries, wood and paper and petroleum and coal industries.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1959 report, page 79.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all industry held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
