ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS  
IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Preliminary estimates indicate the following trends for September:

SHIPMENTS: - The value of manufacturers' shipments in September was estimated at \$2,022 million, an increase of 1.6 percent from the revised August value of \$1,991 million, but a decrease of 2.7 percent from the September 1959 value of \$2,079 million.

Shipments for 1960 to date have maintained their edge over last year although this edge has been gradually reduced from almost five percent for the first quarter to 0.2 percent for the three quarters. However, any comparison of current shipments with last year must recognize that 1959 shipments were at a record high level and that the seasonal patterns in each year have been markedly different. In 1959, shipments built up month by month from a low level at the beginning of the year to a peak in June, fell off sharply in July and August before rising to another high peak in October. In 1960, shipments started at a high level which has been maintained although the initial and large decline at the beginning of the second quarter was repeated again in July at the beginning of the third quarter wiping out the advance which had taken place in May and June. Increased shipments in August and September have brought third quarter 1960 shipments up to \$5,906 million, two percent below third quarter shipments in 1959 and three percent below second quarter shipments this year.

Although, total shipments of all manufacturing industries for 1960 to date have shown little change from the same period last year changes of some magnitude have occurred among the different industrial groups. In the Economic-Use Classification, the total consumers' group, total capital goods group, and construction goods industries all scored declines in this period from last year. Only in the miscellaneous group was any increase recorded. In this group, industries producing largely for export increased \$256 million (which amount almost compensates for the declines in the other groups) and gains also were recorded in the intermediate goods and supplies industries and the unclassifiable industries. The greatest declines were in motor-vehicles and related industries of two percent, the heavy transportation equipment industries of fourteen percent and construction goods industries of seven percent. For this same nine month period, the larger changes from 1959 among the Standard Industrial Classification major groups were: non-ferrous metallic mineral products up eleven percent, miscellaneous manufacturing up twenty-six percent, transportation equipment industries down six percent, rubber goods down seven percent, leather goods down ten percent.

Examination of the current month-to-month changes shows that the largest increases in shipments from August to September among the industries grouped according to the Standard Industrial Classification were recorded in tobacco and tobacco products of nineteen percent, transportation equipment industries of twenty-seven percent, electrical products industries of twelve percent and miscellaneous manufacturing industries of eight percent. Declines in the Standard Industrial Classification Major Groups were minor in percentage terms.

Among the industries classified according to the Economic-Use Classification, three groups showed declines over August, viz. perishable consumers' goods of one percent, construction goods of two percent and industries producing largely for export of two percent. The larger increases were: durable consumers' goods of seven percent, heavy transportation equipment industries of six percent, and motor vehicles and related industries of thirty-four percent.

INVENTORIES: - Total inventory owned by manufacturers at the end of September of \$4,140 million was down fractionally from the revised August total of \$4,148 million but up four percent from the September 1959 total of \$3,991 million.

Total inventory held, of \$4,119 million was down slightly from the revised August value of \$4,441 million but up nearly one percent from the September 1959 value of \$4,383 million. Inventory held under progress payments arrangements at a September value of \$279 million were down five percent from the revised August value of \$293 million and down twenty-nine percent from the September 1959 value of \$392 million. The large year to year decline occurred mostly in the transportation industries.

Inventory components showed some interesting changes. Raw materials were down one percent, goods in process down 0.3 percent, finished products were virtually unchanged, and goods in process minus progress payments were up 1.3 percent.

Since the recent peak value in October 1957, raw materials inventory has, until recently, shown a persistent downward trend. The decline in value terms halted in the last quarter of 1959 but the decline of raw materials as a percentage of total inventory held has been continuing in 1960. Raw materials inventory in 1960 is evincing a fairly level trend with more moderate swings than have characterized its movements in the last few years. Goods in process inventory in 1957 and 1958 remained at a steady level but declined in 1959 and in 1960. The fluctuations in goods in process inventory shown in 1959 have been duplicated in 1960 with remarkable fidelity but a lower level. Finished products inventory, declining throughout most of 1958, reached a low level at the year end. During early 1959, finished products rapidly built up to a peak in March and fell back during the following months as shipments were increasing. In 1960, the pattern is similar to that of 1959. The accumulation of finished products at a considerably higher level than 1959, built up rapidly to a high in March and went on to a slightly higher peak in June. Since June, finished products have declined rapidly although the preliminary September value shows a levelling off.

Among the industry groups classified according to the Economic-Use Classification, all groups except perishable consumers' goods showed increases in total inventory owned since September 1959. The largest increase was in construction goods of eight percent. The other groups showed increases of five percent or less. Changes from August for these groups show moderate declines for six groups and increases for four groups. Three of the increases were quite nominal but the fourth, motor vehicles and related industries, showed an eight percent increase.

These August-September changes were reflected in the Standard Industrial Classification by eleven groups scoring decreases and five groups increases. The declines were five percent for tobacco and tobacco products, four percent for knitting mills and clothing and lesser percentages for the other groups showing decreases. The increases were nominal except for transportation equipment which shows a six percent increase.

The ratio of finished products to shipments fell from 0.68 in August to 0.67 in September. The ratio of total inventory owned to shipments fell from the August value of 2.08 to the September value of 2.05. The ratios in last September were 0.60 and 1.92, respectively.

ORDERS: - Unfilled orders declined one percent from the revised August value of \$2011 million to the preliminary September value of \$1,997 million. The current September value is five percent below the September value of \$2,093 million.

Among the industry groups of the Economic-Use Classification the following increases in unfilled orders were: perishable consumers' goods (2%), motor vehicles and related industries (3%).

Declines were nominal except for semi-durable consumers' goods (13%) and industries producing largely for export (3%).

New orders increased four percent from the revised August value of \$1,929 million to \$2,009 million in September and declined one percent from \$2,035 in September 1959.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in September at \$244 million showed a three percent increase over the revised August value of \$237 million but a seven percent decrease from the September 1959 value of \$262 million. Most groups shared in the August to September increase although the few declines were moderate in percentage terms. Inventories held at trading outlets increased two percent but the increase in total largely reflected the increase in petroleum and coal inventory of \$8 million. Most groups showed lower inventories in September.

#### INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1959 report, page 79.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlog.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 52 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries group. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
