NEW SERIES

In this issue of the bulletin of Inventories, Shipments and Orders in Manufacturing Industries a table is included, table 2(B), showing the seasonally adjusted values of shipments, orders and inventory at plant in all manufacturing industries for the years 1957 to 1960 and for 1961 to date. A table covering the back years, 1952 to 1956, is included on page 60. Consideration will be given to publishing seasonally adjusted series for the separate groups of industries published in the bulletin when the revisions are completed to bring the current series into the revised standard industrial classification. Two additional series, shipments and new orders in the capital goods industries, not including heavy transportation equipment, and in the construction goods industries are being adjusted for seasonal variation and will be published in the Canadian Statistical Review.

The seasonally adjusted series in table 2(B) are derived from the series published in table 2(A) by removing from each series the month to month variations in the values which result from seasonal changes. In a country like Canada situated in the Northern latitudes with a continental climate over much of its area the month to month variation in weather results in considerable variation both in industrial activity and in the demand for end products.

In considering economic time series this seasonal variation is one of four generally accepted types of variation or movement. The first is called the trend or secular movement of the series and is characterized by a smooth regular movement covering many years related to such basic factors as the size and structure of the economy. The second, called the cyclical movement, consists of successive roughly similar phases of expansion and contraction with the complete cycle covering a period of more than one year. The third is the seasonal variation which covers the month to month changes during the year which are repeated from year to year. The fourth movement covers the irregular movements which may or may not be identified in terms of cause.

The series are adjusted on the electronic computer using the United States Bureau of the Census Method II. It is based on the traditional ratio to moving average method but is developed further. Because of the speed with which the calculations are performed it is possible at one stage to make a better estimate of the trend cycle by fitting a fifteen term moving average to the data. Increased speed has the further advantage of making possible the mass adjustment of data, thus extending the seasonal adjustment process to series which would otherwise be prohibitive.

The main steps of Census Method II are given briefly below:-

ROUND I -

- 1) A 12-month centered moving average of the original series is computed.
- 2) Ratios of original observations to the centred 12-month moving average are computed.
- 3) Ratios more than two standard deviations from their moving average are eliminated and replaced by more representative values.
- 4) Moving averages are run through these ratios to obtain the preliminary seasonal factors.
- 5) The preliminary seasonal factors are divided into the original observations to obtain the preliminary seasonally adjusted series.

ROUND II -

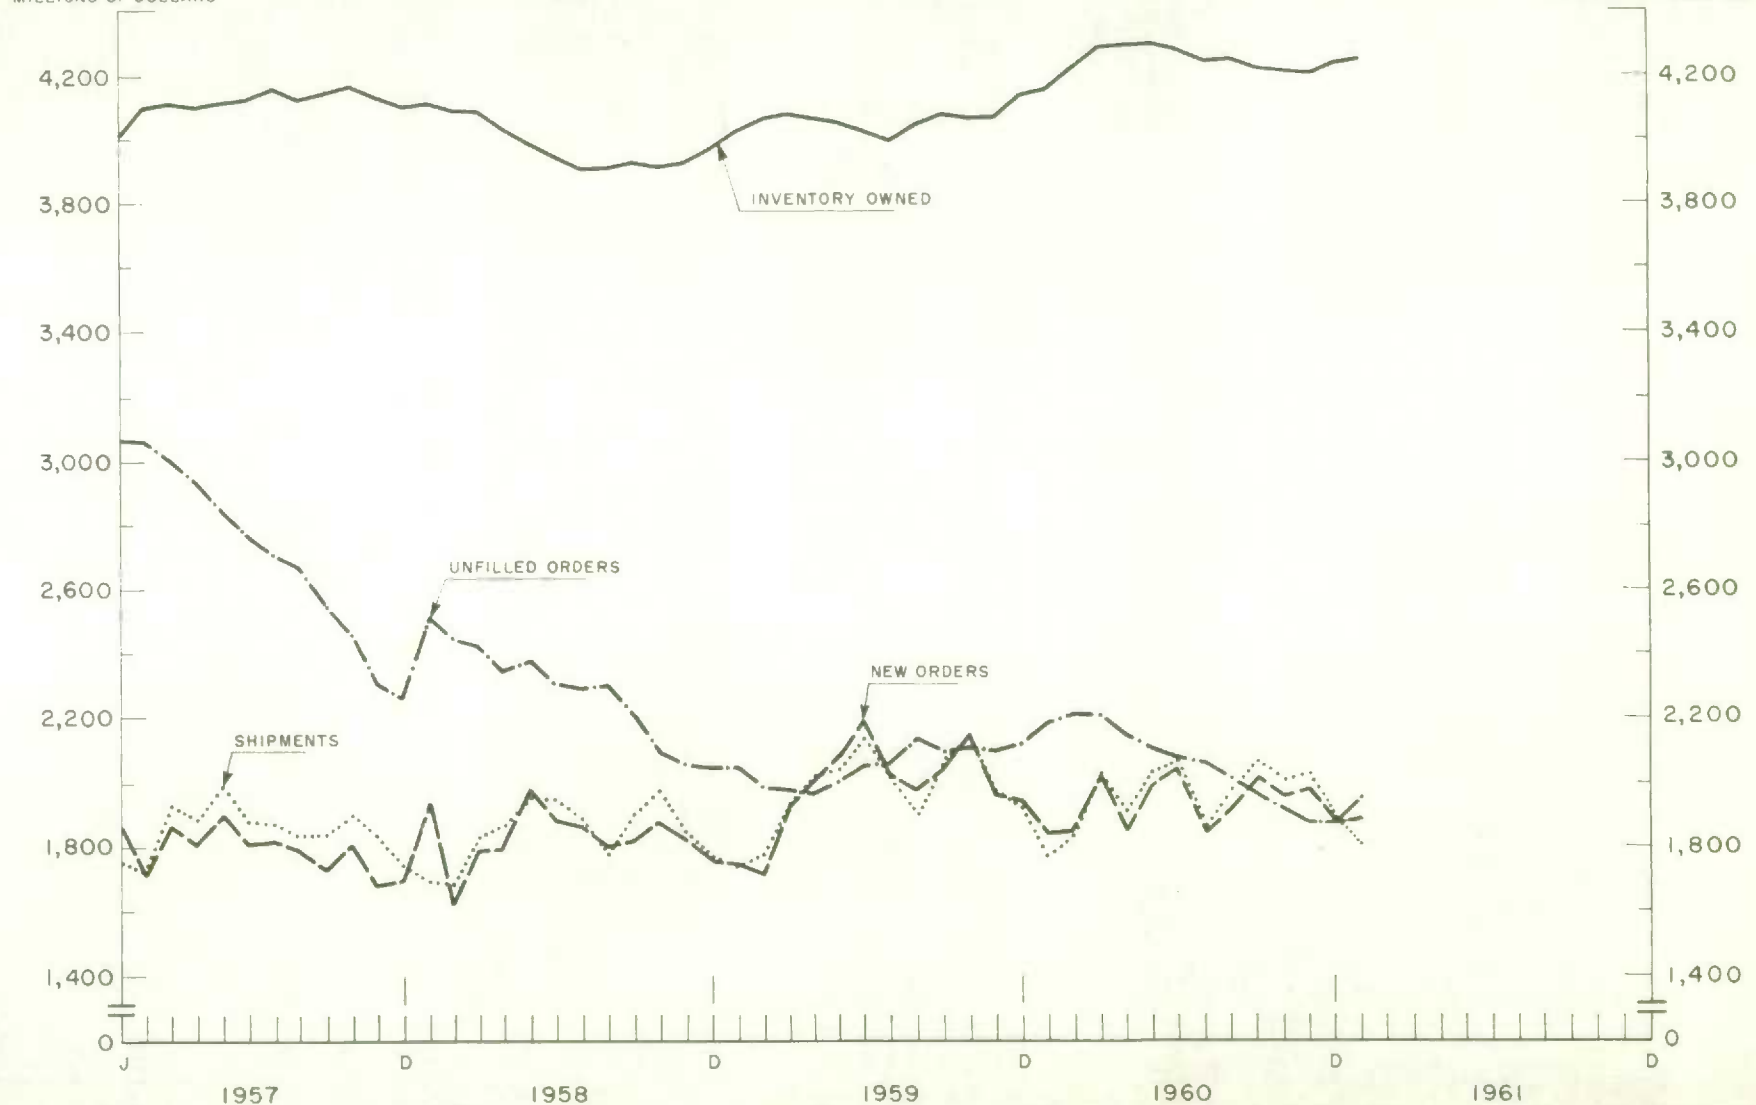

- 6) A weighted fifteen term moving average is run through the preliminary seasonally adjusted series. It gives a better estimate of the trend cycle than the centered twelve term moving average in Round I.
- 7) The ratios of original observations to the fifteen-month moving average are computed.
- 8) Extreme ratios are eliminated by methods similar to Round I.
- 9) Moving averages are run through these ratios to obtain the final seasonal factors.
- 10) The final seasonal factors are divided into the original data to give the final seasonally adjusted series.

Many other tables are printed out in the complete program. They provide information on the signs of the various components and various checks and tests on the basic computations.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

MILLIONS OF DOLLARS

MILLIONS OF DOLLARS

TREND SUMMARY

SHIPMENTS: - The value of manufacturers' shipments for January, estimated at \$1,808 million, was down three percent from the revised December value of \$1,877 million but up two per cent from the January 1960 value of \$1,769 million. Revised cumulative shipments for 1960 at \$23,444 million were up slightly from the 1959 value of \$23,353 million.

Most of the industry groups of the Standard Industrial Classification shared in the shipments decline in January of \$69 million. Transportation equipment industries were lower in January by \$26 million (or 13.7 percent), foods and beverages were lower by \$25 million (or 6.4 percent) and nine of the remaining S.I.C. groups were lower by a total of \$42 million. Increases in shipments in January of \$24 million were shared by five industry groups of which groups chemical products showed \$12 million (or 12.4 percent increase). Of the industry groups classified according to the economic use classification all groups except two declined in January. The exceptions were semi-durable consumers' goods and industries producing intermediate goods and supplies. However, nearly all these changes conformed to the changes experienced in most previous years.

Reference to the deseasonalized data for December 1960 and January 1961 will show that shipments increased rather than decreased as shown by the raw data and as described above. The obvious interpretation is that the decline shown by the raw data is less than could be anticipated from seasonal influences alone and after making due allowance for seasonal influences, January sales indicate a higher level of activity than that indicated by December's seasonally adjusted sales.

INVENTORY: - The preliminary estimate of total inventory owned by manufacturers' at the end of January of \$4,247 million was up 0.1 percent from the revised December value of \$4,241 million and up 2.1 percent from the January 1960 value of \$4,160 million.

Total inventory held at the end of January was estimated at a preliminary \$4,482 million and was up 0.1 percent from \$4,476 million at the end of December but virtually unchanged from January 1960. Inventory held under long-term contracts (progress payments) at \$235 million in January was down 0.4 percent from the revised December value of \$236 million and down 27.2 percent from January 1960.

Inventory components showed the following shifts in January from December: raw materials down 0.3 percent, goods in process down 0.6 percent, finished products up 1.3 percent and goods in process minus progress payments down 0.7 percent. Finished products inventory usually increases in the first months (and in the final months) of the year and the increase from December to January this year of 1.3 percent is less than the usual increase of about three percent. A major part of the increase this year can be seen in the industries producing largely for export and the motor vehicles and related industries group. Shifts in goods in process inventory and raw materials inventory tend to be more erratic and it is difficult to provide a rationale for any particular movement. However, goods in process changes tied in with other series will yield more readily to analysis.

Inventories owned by manufacturers, as shown by the raw data, moved somewhat more erratically in 1960 than in most other recent years. Usually, one trend dominates throughout the year whether of accumulation or liquidation although the trend may be reversed during the year. In 1960, heavy accumulation in the first quarter eased considerably in the second and gave way to moderate liquidation in the third. In the final quarter, accumulation once more started and continued into January 1961. Inventories owned stood higher at the end of 1960 by \$101 million (or \$111 million in the deseasonalized data) from the end of 1959. Much of this increase occurred in non-ferrous metal products with lesser increases in wood products, paper products, tobacco and tobacco products and chemical products. A notable decline occurred in iron and steel products. The increases in tobacco and tobacco products, and in paper products were almost entirely in raw materials. In wood products and chemical products most of the increases were in finished products. Non ferrous metal products showed equal increases in both raw materials and finished products. Generally, goods in process inventory declined in total over the year. Further, altho' the month to month fluctuations in goods in process in 1959 showed considerable similarity to those of 1960, the decline in total in 1960 was more extensive than in 1959.

Changes in inventory owned from December 1960 to January were minor in percentage terms in most of the industry groups of the Standard Industrial Classification. The exceptions were: tobacco and tobacco products of plus 12 percent and wood products of plus 3 percent. Among the industry groups of the economic use classification the larger changes were: heavy transportation equipment industries of minus 5 percent, and motor vehicles and related industries of plus 3 percent. It is worth noting that the divergent movements of the latter two groups largely cancelled each other so that the transportation equipment group of the S.I.C. showed no change. These two groups however are not identical to the S.I.C. group.

The ratio, inventory owned to shipments, was in January 2.35, in December 2.26 and in January 1960 also 2.35. The ratio, finished products to shipments, was in January 0.78, in December 0.74, and in January 1960 0.76.

ORDERS: - The preliminary value of new orders received in January of \$1,890 million was up 1 percent from December and up 3 percent from January 1960. The value of unfilled orders at the end of January of \$1,957 million was up 4 percent from December but down 11 percent from January 1960.

The largest percentage declines from January 1960 in unfilled orders among the industry groups of the economic use classification were: motor vehicles and related industries of 26 percent, heavy transportation equipment industries of 15 percent, construction goods industries of 15 percent and industries producing intermediate goods and supplies of 19 percent. From January 1960 to January 1961 the one large percentage increase (13 percent) was in industries producing largely for export. This industry group showed a 45 percent increase over December and this increase reflects the annual placement of orders in the pulp and paper industry. Further, the level of unfilled orders in this industry is about 40 percent higher this January than last. In the durable consumers' goods industries, an increase in unfilled orders from January 1960 to this January of \$5 million (or 3.3 percent) was largely responsible for the total consumers' group showing a slight (0.1 percent) increase over last year.

Changes in unfilled orders from December were varied. The increase next largest to the export group mentioned above was seven percent and was in the intermediate goods and supplies industries. Other changes were lesser in percentage terms while the total consumers' goods group, and the total capital goods group were both down by 0.2 percent.

TRADING OUTLETS: - Sales through manufacturers' trading outlets in January of \$222 million were 13 percent below the revised December value of \$255 million but 4 percent above January 1960 sales of \$213 million. Inventories held at outlets at the end of January of \$297 million were 1 percent below the revised December value of \$300 million but 1 percent above the January 1960 value of \$294 million.

The largest declines in sales in percentage terms were in foods and beverages (15%), rubber industries (26%), electrical apparatus industries (own 7%, other 25%), and petroleum and coal (16%).

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 8) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 8, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 7) will be found on page 54 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.
(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.
(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.
(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.
(3) See footnote (2), table 2.
(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.
(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.
(3) This grouping does not include trucks and buses.
(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.
(2) See footnote (2), table 2.
(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
