# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in December valued at \$2,018.5 million were down 6.1 percent from \$2,149.3 million in November and up 9.3 percent from \$1,846.8 million in December 1960. Shipments for 1961 valued at \$23,932.7 million were up 2.6 percent from \$23,326.7 million in 1960.

Shipments invariably decline in December and the decline this month was also, as usual, common to nearly all manufacturing groups. The heavy transportation group of the Economic Use classification was the only group in this classification to show an increase over November and, although this occurs fairly consistently in December, this year it was less than usual. The shipments concept is distorted by progress payments in some of the industries classified to the heavy transportation group. The increase in shipments most Decembers, in part, represents end-of-year write-offs to sales rather than a physical shipment of goods and is also reflected in the declines in inventory owned and unfilled orders. The largest value declines from November to December in the Economic Use groups were: semi-durable consumer's goods \$30.0 million, construction goods \$24.6 million, and intermediate goods and supplies \$22.9 million.

Only two groups of the Standard Industrial Classification showed increases in December—tobacco and tobacco products of \$5.8 million and petroleum products of \$2.3 million. Iron and steel products had the largest value decline (\$24.9 million): other declines were knitting mills and clothing (\$21.0 million), paper products (\$16.5 million), foods and beverages (\$16.5 million) and chemical products (\$13.7 million).

Although the shipments increase in 1961 over the previous year is only a relatively modest 2.6 percent the fact that shipments were higher is in itself something of an achievement since all of the margin in 1961 was achieved in the last seven months. Although the increase in this period was fairly evenly distributed over the groups of the S.I.C. in terms of the percentage margin over 1960 shipments, the durable goods group made the larger advance during the year. The first quarter of 1961 saw durable goods 9.3 percent or 228.2 million below the first quarter of 1960 while the annual total saw this group 1.1 percent or \$108.4 million above 1960. Non-durable goods first quarter total was 1.4 percent or \$43.4 million above the 1960 first quarter and the annual total was 3.7 percent or \$497.4 million above 1960.

A longer-term comparison of annual shipments totals of the two groups, durable and non-durable, show non durable shipments advancing each year since 1957 over the previous year with 1961 shipments 13.0 percent (or \$1.6 billion) above 1957. The increase in each year was between three and five percent except in 1960 when shipments were only slightly higher (less than one percent) than shipments in 1959. Durable goods show erratic changes since 1957 with 1961 shipments only 1.5 percent (or \$0.15 billion) above 1957. The manufacturing groups most affecting the durable goods group are transportation equipment which in 1961 was 13.2 percent (or \$299.1 million) below 1957 shipments and iron and steel products which was only 2.0 percent or \$57.2 million above 1957. Together these two groups constituted 52.5 percent of durable goods shipments in 1957 and 49.3 percent in 1961.

**INVENTORIES:** Inventories owned by manufacturers at the end of December valued at \$4,392.6 million were 0.4 percent above the November value of \$4,376.3 million and 2.3 percent above the December 1960 value of \$4,294.2 million. Inventories held by manufacturers at the end of December valued at \$4,593.9 million were 0.3 percent above the November value of \$4,577.9 million and 1.4 percent above the December 1960 value of \$4,532.7 million. Inventories held under progress payments arrangements of \$201.3 million at the end of December were 0.2 percent below the November value of \$201.6 million and 15.6 percent below the December 1960 value of \$238.5 million.

Raw materials declined fractionally in December but goods in process increased 0.4 percent and finished products increased 0.9 percent. All components showed increases from last December to this and were: raw materials 1.0 percent, goods in process 3.3 percent, and finished products 0.3 percent.

The ratio of total inventory owned to shipments was 2.18 in December, 2.04 in November and 2.33 in December 1960. The ratio of finished products to shipments was 0.69 in December 0.64 in November and 0.75 in December 1960.

The December increase in manufacturers' owned inventories was shared by all except three groups of the Standard Industrial Classification and all except four groups of the Economic Use classification. The foods and beverages group of the S.I.C. showed a \$17.3 million decrease and the declines in the industries of this group were almost entirely responsible for a \$14.5 million decline in the perishable consumers group of the E.U. classification.

The petroleum products group of the S.I.C. showed a decline of \$3.1 million or 1.3 percent. The above-noted changes conform generally to usual seasonal influences. The one noticeable departure from usual was a small decline (1.0 million or 0.3 percent) in paper products. This group frequently shows an increase in December possibly from the accumulation in the pulp and paper industry of logs at mill as raw material inventory. (A similar movement is noticeable in wood products.) This December, the decline reflects chiefly the liquidation of finished products and an unusual dip in raw materials. The decline noted above in perishable consumers' goods of the Economic Use classification was responsible for the lower level from November to December in the consumers' sector. Lower values in both heavy transportation and other capital goods brought a lower level to the capital goods sector while construction goods and all groups of the miscellaneous sector showed increases.

The present rebuilding of inventories which started in the third quarter of 1961 has continued and although the preliminary (seasonally adjusted) value for December of owned inventory is down from November it is still at the very high level reached in the closing months. The December 1961 value of \$4,410.2 million was 1.8 percent above the cyclical peak of \$4,332.0 million reached in July 1960 and 4.9 percent above the earlier cyclical peak of \$4,202.3 million in October 1957.

While the level already reached is above previous highs the total inventories owned - shipments ratio (using seasonally adjusted figures for both series) is showing very low values. The considerable strength of shipments after the first quarter of 1961 drove the ratio down sharply despite rising inventory levels. A brief rise to higher values in September, October and November gave way to the very low figure in December. The movement of the ratio of finished products to shipments (using seasonally adjusted figures for both series) follows the total inventory-shipments ratio very closely and is also showing a similar downward trend in 1961.

**ORDERS:** The preliminary estimate of the level of unfilled orders on the books of manufacturers' at the end of December was \$1,913.1 million up 0.2 percent from the November value of \$1,909.5 million and up 4.8 percent from \$1,825.9 million at the end of December 1960.

November figures, revised to include late or delinquent returns, have changed considerably from the preliminary figures. The revised November value shows an increase of \$65.6 million, or 3.6 percent, from October reflecting the \$58.9 million dollar increase in unfilled orders in the heavy transportation equipment group of the Economic Use Classification as well as scattered increases in other groups. From November to December unfilled orders in the heavy transportation group were reduced by \$5.4 million to \$395.1 million which is, however, considerably (\$24.5 million) below the December 1960 value of \$419.6 million.

Several groups of the Economic Use Classification however, did show considerable increases in unfilled orders this December as compared with last. The groups and percentages are: perishable consumers' goods 9.4, other capital goods, 14.3, industries producing largely for export 25.2, motor vehicles and related industries 14.2 and intermediate goods and supplies 13.9. The level of unfilled orders in no group is more than six percent below the December 1960 level.

The rise in unfilled orders in November and December has brought the level 4.8 percent higher at the end of this December than last. The increase in December can be identified as largely seasonal in character but November more usually shows a decline rather than the increase shown this year.

New orders, reflecting the decline in December shipments, were down 8.7 percent from \$2,214.9 million in November to \$2,022.1 million in December. The December value is 7.5 percent above the December 1960 value of \$1,880.3 million and reflects the strength of the shipments value which remains high despite the decline from November.

**TRADING OUTLETS:** Sales through manufacturers' trading outlets in December of \$258.3 million were 1.3 percent above the November value of \$255.1 million and 2.3 percent above the December 1960 value of \$252.5 million. Sales for 1961 of \$2,864.3 million were 1.5 percent above the 1960 total of \$2,822.8 million.

Inventories held by manufacturers at trading outlets at the end of December of \$304.5 million were 3.4 percent below the November value of \$315.1 million and 1.7 percent above the December 1960 value of \$299.3 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October 1961 report, page 82.

### C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
