ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS
IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in August of a preliminary \$2,037.8 million were up 4.0 percent from the revised July estimate of \$1,958.8 million and up 3.1 percent from the August 1960 estimate of \$1,976.2 million. Shipments in the January-August period of \$15,514.1 million were higher by 0.2 percent than \$15,477.0 million for the like 1960 period.

Shipments in August cling to no firm pattern with the last ten years showing five declines and five increases although the data adjusted for seasonal variation apparently interpret the increase this August as less than that expected from seasonal influences and actually show a decline. In very general terms, shipments reach a low point in the late summer and rise to a peak in the late fall: a lowpoint in July is usually correlated with a fall peak in September and a low point in August is usually correlated with a fall peak in October although this experience is by no means invariable and the past ten years are a narrow base for wide generalization.

The increase this August was shared by most groups of the Standard Industrial Classification. Three groups showed declines, the largest in both value and percentage terms was in the transportation equipment group of \$28 million or 22 percent. Reference to the two transportation groups of the economic use grouping will show that the motor vehicles and related industries was responsible for a decline of \$35 million (or 34%) while the heavy transportation group recorded an increase (of \$7 million) in shipments. It should be noted that the two groups of the economic use grouping are not identical to the one transportation group of the S.I.C. Three groups of the S.I.C. showing the largest value increases were knitting mills and clothing (\$30 million) paper products (\$19 million) and foods and beverages (\$14 million). Of these increases, that of knitting mills and clothing is a fairly typical seasonal movement and that of paper products is unusual in its size. The increase in foods and beverages is rather unusual for August and the increases that have been recorded in past years were much smaller than the current increase. Half the present increase of the foods and beverages group is in the beverage industries and may in part be accounted for by the higher than average August temperatures throughout Canada.

From the data available it appears that shipments are making a strong recovery in the second and third quarters after a rather weak period earlier in the year. Cumulative shipments were running for most of this year to date somewhat below the comparative totals for last year but a latterly rising trend has now brought this year's totals ahead of last. While the unadjusted shipments data shows the movement well enough the adjusted data clearly indicates the sharp upward movement as well as giving July and August extremely high values well above any previous peak. This resurgence has been reflected to some degree through most groups of the S.I.C. but with some expected - or nearly expected-exceptions. Foods and beverages has maintained a fairly consistent 3 percent margin over last year's values; tobacco and tobacco products, with some variation is holding to last year's values. Rubber products and wood products while showing some tendency to inch upward vis a vis 1960, are still at lower values than last year's.

INVENTORIES: The preliminary estimate of the value of inventories owned by manufacturers at the end of August of \$4,203.9 million was 0.3 percent above the revised July estimate of \$4,191.2 million and 1.1 percent below the August 1960 estimate of \$4,249.7 million. The preliminary estimate of the value of inventories held by manufacturers at the end of August of \$4,400.8 million was higher by 0.2 percent than the revised \$4,393.6 million at the end of July but lower by 3.1 percent than the August 1960 value of \$4,541.0 million. The preliminary value of inventory held under long-term contracts (progress payments) of \$196.9 million for August was 2.7 percent below the revised July value of \$202.4 million and 32.4 percent below the August 1960 value of \$291.4 million.

Changes in components for August were as follows: raw materials up 0.6 percent, goods in process up 2.0 percent, finished products down 1.8 percent, and goods in process less the value of progress payments up 3.1 percent.

The ratio of total inventory owned to shipments was 2.06 in August, 2.14 in July and 2.15 in August 1960. The ratio of finished products to shipments was 0.68 in August, 0.72 in July and 0.71 in August 1960.

The most noticeable feature of August inventories is the very large increase of \$26.5 million in the motor vehicles and related industries group of the economic use classification. This increase is several times the increase that usually occurs in this month and reflects the earlier-than-usual and intensive activity in the automobile industry. Production increased significantly in the middle of the month and affects the goods in process component chiefly.

In previous years the effect of annual model changes was usually masked because the shutdowns of some firms occurred while other firms were starting production on the new models. The result was a more modest increase in inventories spread through two or three months. This year, it appears that most firms shut down in July giving a very low inventory total for that month, and started manufacturing again in August causing the considerable increase for that month.

The increase in inventories in August may well mark the end of the liquidation of the last several months. The liquidation saw the levels of inventory held move down to the lowest since November 1956. The movement, while mostly seasonal in character was accentuated by the long-standing and extensive decline in inventory held but not owned (progress payments). The liquidation of this component has been almost continuous since the fall of 1958. From the high in March 1961 to the low last month, raw materials declined \$40.4 million or 2.0 percent, goods in process declined \$58.7 million or 5.4 percent and finished products declined \$57.2 million or 3.9 percent. The value of inventory held but not owned with a decline of \$39.1 million or 16.2 percent represents a large part of the decline in goods in process. In the same period inventory owned moved down \$117.2 million to a level similar to that obtaining at the end of 1959. Not only has the liquidation eased the level of inventories but it has also achieved a proportionally greater decline in finished products although this component remains a higher percentage of inventory owned than that obtained in previous years.

The outlook for inventories for September favours further accumulation although the marked increase of the motor vehicles and related industries in August indicate that the usual September increase of this group will not occur.

ORDERS: The preliminary value of new orders received by manufacturers in August of \$2,023.7 million was up 3.5 percent from the revised \$1,955.6 million in July and up 5.4 percent from \$1,920.4 million in August 1960.

The preliminary value of unfilled orders at the end of August of \$1,960.4 million was 0.7 percent lower than the revised \$1,974.5 million at the end of July and 2.5 percent below \$2,010.8 million at the end of August 1960.

Unfilled orders in the non-durable grouping of industries has been maintained at a higher level this year than last and at the end of this August was 14.8 percent above last August. Durable goods, however, hold the major portion of unfilled orders and the level here has recently fallen to the lowest yet recorded. The value at the end of this August at \$1,493.0 million was 6.9 percent below \$1,603.7 million last August.

TRADING OUTLETS: Sales through manufacturers' trading outlets in August were estimated at a preliminary \$243.3 million up 7.3 percent from the revised July value of \$226.6 million and down slightly from \$243.0 million in August 1960.

Inventories held at manufacturers' trading outlets at a preliminary \$303.6 million were down 1.7 percent from the revised \$308.8 million at the end of July and down 0.5 percent from \$305.2 million at the end of August 1960.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the December 1960 report, page 81.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see December, 1960 report, page 81.

C O N C E P T S

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

S O U R C E S

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

TABLE 7. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 8. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.
