ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

MILLIONS OF DOLLARS

MILLIONS OF DOLLARS

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in January of \$1,954.3 million were 0.8 percent below the December value of \$1,970.6 million and 12.6 percent above the January 1961 value of \$1,735.2 million. Shipments in 1961, revised to include late returns, are estimated at \$23,884.8 million up 2.4 percent from \$23,326.7 million in 1960 and up 2.5 percent from \$23,306.4 million in 1959.

Although the shipments increase in 1961 over 1960 was only a relatively modest 2.4 percent the fact that shipments were higher is in itself something of an achievement since, after a low first quarter, all the margin in 1961 over 1960 was accumulated in the last five months. Of the groups of the Standard Industrial Classification nearly all made some advance during the year as compared with 1960 and most ended 1961 higher than in 1960. The groups, tobacco and tobacco products and transportation equipment, were the only groups with lower shipments in 1961 than in 1960, but while transportation equipment showed considerable advance during 1961 over comparable 1960 totals, tobacco and tobacco products showed little change during 1961 from 1960 totals. The durable goods group made the larger advance during the year. The first quarter total of 1961 was 9.3 percent or \$228.2 million below the first quarter of 1960 while the annual total was 1.0 percent or \$101.3 million above 1960. Non durable goods first quarter total was 1.4 percent or \$43.4 million above the 1960 first quarter and the annual total was 3.4 percent or \$456.7 million above 1960.

A longer-term comparison of annual shipments totals of the two groups, durable and non-durable, show non durable shipments advancing each year since 1957 over the previous year with 1961 shipments 12.7 percent (or \$1.6 billion) above 1957. The increase in each year was between three and five percent except in 1960 when shipments were only slightly higher (less than one percent) than shipments in 1959. Durable goods show erratic changes since 1957 with 1961 shipments only 1.5 percent (or \$0.14 billion) above 1957. The manufacturing groups most affecting the durable goods group are transportation equipment which in 1961 was 12.6 percent (or \$285.3 million) below 1957 shipments and iron and steel products which was only 1.8 percent or \$51.3 million above 1957. Together these two groups constituted 52.5 percent of durable goods shipments in 1957 and 49.4 percent in 1961.

January 1962 shipments are, by a good margin, the highest ever recorded for this month evidently continuing the forceful expansion of shipments that started last year. Even more interesting is the 17.9 percent increase this January over last in durable goods shipments, as compared to the 9.0 percent increase in non durable goods this January from last. Three of the six groups constituting durable goods, wood products, iron and steel, and non metallic minerals, each showed close to ten percent increase this January from last. Non-ferrous metals, and electrical apparatus both show about twenty-one percent increase. Transportation equipment showed a 34 percent or \$50 million increase this January from last.

INVENTORIES: Inventories owned by manufacturers at the end of January of \$4,455.2 million were 0.5 percent above the December value of \$4,431.6 million and 3.7 percent above the January 1961 value of \$4,296.5 million. Inventories held by manufacturers at the end of January of \$4,670.6 million were 0.5 percent above the December value of \$4,646.0 million and 3.1 percent above the January 1961 value of \$4,528.2 million. Inventories held under progress payment arrangements of \$215.4 million at the end of January were 0.5 percent above \$214.4 million in December and 7.0 percent below the \$231.6 million in January 1961

Raw materials declined fractionally in January but goods in process increased 0.5 percent and finished products increased 2.0 percent. All components showed increases this January from last and were: raw materials 1.9 percent, goods in process 7.1 percent, and finished products 1.9 percent.

The ratio of total inventory owned to shipments was 2.28 in January, 2.25 in December and 2.48 in January 1961. The ratio of finished products to shipments was 0.73 in January, 0.71 in December and 0.81 in January 1961.

The present rebuilding of inventories which started in the third quarter of 1961 is continuing through January with both seasonally adjusted and unadjusted data showing increases. The preliminary January value unadjusted is 2.4 percent above the previous cyclical peak of \$4,350.6 million in May 1960 and 6.9 percent above the earlier cyclical peak of \$4,166.6 million in October 1957. Adjusted data for the same comparison shows the percentage increases as 3.0 and 6.1 respectively.

While the level already reached is above previous highs the lead does not appear excessive. The ratios of inventories owned to shipments, driven down quite sharply since the first quarter of 1961 by the considerable strength of shipments, remain at quite moderate values. Moreover, the accumulation, insofar as it can be examined without seasonally adjusted data at the major-group level, appears to be

largely the result of seasonal forces. The foods and beverages group shows a January value \$55.8 million (or 8.6 percent) above last January and the accumulation during the latter half of 1961 leading up to that level appears greater than usual especially in the fruit and vegetable preparations and flour mills industries. The tobacco and tobacco products group, while somewhat lower (\$7 million) this January from last, has had a higher level of inventories for over a year since the bumper crop of 1960. Seasonal accumulations in other groups (electrical apparatus and supplies for example which is \$15.9 million or 5.6 percent higher this January than last) are not easily identified as more or less than usual. Some accumulation has also occurred in the transportation equipment group. The large accumulation in non-ferrous metal products from January 1961 to January 1962 of \$44.4 million is part of the long-term accumulation continuing since December 1959 to date.

Preliminary January data show most changes among groups of the S.I.C. as quite small in percentage terms, the largest being increases of 7.6 percent and 6.1 percent in rubber products and tobacco products. In the Economic Use classification the consumers' sector is 0.7 percent higher in January from December and 1.9 percent higher from last January. The capital goods sector is down 0.6 percent from December to January and up 1.5 percent from last January to this.

ORDERS: The preliminary estimate of unfilled orders at the end of January of \$2,030.4 million was up 4.9 percent from the December estimate of \$1,934.9 million and up 7.1 percent from the January 1961 estimate of \$1,896.3 million. The January increase is the third consecutive increase in unfilled orders achieved despite the very high level of shipments. The present value is 10.1 percent above the most recent low of \$1,843.9 million set in October 1961.

While decreases from December to January were very small in percentage terms several increases were substantial. The largest were in industries producing largely for export of 30.8 percent, unclassifiable industries of 6.1 percent, and semi-durable consumers' goods of 5.5 percent. Most of the increase in the first named groups results from the placement of annual orders in the pulp and paper industry which are reduced throughout the year; in addition, however, the present January value is 16.0 percent above last January. Other large percentage changes over the year reflect, and perhaps anticipate, increasing activity in durable goods groups.

The total consumers' sector is down from last January to this by 1.5 percent. The capital goods sector is up by 3.1 percent. Construction goods are up 11.4 percent, motor vehicles and related industries up by 22.4 percent and intermediate goods and supplies up by 18.3 percent.

New orders received in January of \$2,049.8 million were 2.7 percent above the December value of \$1,996.1 million and 13.5 percent above the January 1961 value of \$1,805.7 million.

TRADING OUTLETS: Sales through manufacturers' trading outlets in January of \$223.2 million were 13.7 percent below the December value of \$258.5 million and 0.7 percent above the January 1961 value of \$221.6 million.

Inventories held at manufacturers' trading outlets of \$281.9 million at the end of January were 8.9 percent below the December value of \$309.6 million and 4.3 percent below the January 1961 value of \$294.6 million.

The decline in both sales and inventories in trading outlets this year will to some extent reflect the change in the accounting boundaries of the manufacturing plant which is being affected for the 1961 census. If a manufacturer can report realistically only on a combined basis both the manufacturing and distributing activities of the company total sales will be shown in the manufacturers' shipments. (The specific adjustments will be noted as they are incorporated in the totals.)

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.
(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.
(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.
