# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

SHIPMENTS: Manufacturers' shipments in June were valued at \$2,271.4 million which is 1.2 per cent less than shipments in May of \$2,298.3 million. This value adjusted for seasonal variation also registered a decline of 2.2 per cent from the May value.

This is not the first month this year to show a decline from the previous month as, in fact, every alternative month this year has been below the proceeding one, nor does the decline appear significant when the series is smoothed by the simple use of a three month moving average. This adjustment has some comparative interest in that it shows up the low point of the year from 1959 to the present in the three months ending in February each year with a peak in the three months period ending in June. The rise from trough to peak was higher this year, approximately 16 per cent, than in either 1961, 14 per cent, or 1960, 10 per cent but very comparable with the 1959 rise of 17 per cent. In both 1959 and 1960 this peak was followed immediately by a decline in the summer months whereas in 1961 only a very slight decline was shown and that not until the end of the summer quarter. A comparatively greater decline in the seasonally adjusted series for June again does not yet appear significant in the trend which has been a steadily upward one since June 1961. The rate of increase has been slackening it is true but it would be difficult to point to the June decline as the beginning of a downward trend in view of the level of shipments in the second quarter as a whole.

Looking at the durable and non-durable manufacturing industries separately the upward movement in the non-durable goods group is somewhat obscured by the strong seasonal movement in this group which is less characteristic of the durable goods group as a whole. The upward movement in the latter has been strong for the past year. Separating three durable goods groups, durable consumer goods, capital goods and the construction industries and looking at shipments in these groups in the seasonally adjusted series there is a considerable similarity in the pattern of shipments in the construction industry and the durable consumer goods industries which differs from the movement of shipments in the capital goods industries. In the former, the decline in 1959 and early 1960 was followed by fairly stable shipments from the summer of 1960 to the summer of 1961 with a strongly upward trend this past year. The capital goods industries however continue to decline until mid 1961 and altho' shipments rose sharply and were high in the fall of 1961 and at the year's end it is too soon to tell whether the increases in May and June have reversed the decline which began this year in January.

INVENTORIES: The level of inventories owned in manufacturing was down slightly at the end of June, 0.6 per cent, from the previous month and was valued at \$4,482.9 million. Inventory held declined slightly less, by 0.4 per cent since inventory held under progress payments arrangements increased by 3 per cent during June.

Altho' the changes in levels of inventory in total were really too small to be used for anything but the broadest indication of business conditions it should perhaps be pointed out that the largest change in the month was the decline in finished goods inventories. Since the ratio of finished products to shipments rose from 0.65 in May to 0.66 and since shipments in June were lower than in the previous month it may indicate some degree of slackening in manufacturing activity. On the other hand goods in process inventory was slightly higher which to some degree points to increased activity. The decline in raw materials activity can result equally well from an increase in manufacturing activity, a decline in purchases or simply a slow up in deliveries.

The changes from the end of June 1961 would indicate considerably increased activity this year as compared with last as goods in process inventory was 12 per cent higher and raw materials were up 4.3 per cent. Finished goods inventories were only 3.4 per cent higher and in relation to shipments, (shipments-inventory ratio) were lower than the year before at 0.66 compared to 0.68.

ORDERS: New orders received in June were valued at \$2,259.0 million, 1.3 per cent below the revised May total of \$2,288.0 million but 6.9 per cent above the June 1961 value of \$2,113.3 million. Unfilled orders at the end of June were estimated at \$2,094.8 million, down 0.6 per cent from the revised May value of \$2,107.2 million but up 8.3 per cent from last year's June level of \$1,934.5 million.

Unfilled orders have shown a slow but steady decline since March following a rise through the fourth quarter of 1961 and the first quarter of this year. The downward movement is more pronounced than the decline in the second quarter of last year but it also follows a sharper upward movement.

The decline in unfilled orders in June is concentrated in the transportation industries, both in the heavy transportation and the automotive industries. This is not, however, to imply that there is any similarity in the unfilled orders in these two industry groups as the level of unfilled orders in the automotive industries is higher this year than last whereas in the heavy transportation industries the level of unfilled orders has fallen steadily since 1959. Although the level of unfilled orders in the heavy transportation industries is 8 per cent below the level at the end of June 1961 it has remained fairly stable at this level during the past year.

Unfilled orders in the construction industries and in the export industries are higher, substantially so in construction goods, than they were a year ago and the decline in June as compared with May is insignificant.

TRADING OUTLETS: Sales through manufacturers' trading outlets in June were valued at \$240.0 million 2.6 per cent down from the revised May value of \$246.4 million and up 1.8 per cent from the June 1961 value of \$235.7 million.

Inventories held at trading outlets in June were valued at \$279.2 million 3.1 per cent up from the revised May estimate of \$270.8 million but 7.3 per cent down from the June 1961 value of \$301.2 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.
