REVISION TO PREVIOUSLY PUBLISHED SERIES

This publication contains monthly data on shipments, inventories and orders for manufacturers classified according to the new standard industrial classification from January 1958 to December 1962. The change in the total annual estimates for 1958 and 1959 (the values are 0.4% lower in each year from the previously published values) is the result of transferring the salt industry and the gas absorption plants from manufacturing to the mining industry and the deletion of non-commercial periodicals from the publishing industry. The change in the 1960 total partly reflects the adjustment to the actual census of manufactures value for this year, (as the census figures become available each year the values projected from the previous census base year are replaced by the census values) and partly the inclusion in the census estimate for 1960 for two new industries: poultry processors and dental laboratories; and the addition of two groups of establishments, electro-plating and book publishers, as manufacturers. The total value of shipments for these new additions in 1960 was \$162 million out of the estimated change of \$381 million; thus the estimated total for 1960 excluding these new additions was only some \$219 million lower than the census values, a difference of 0.5 percent. The changes in 1961 and 1962 from the previously published values reflect the shift to the higher base with the new additions included.

Since it has been decided to re-run 1960 values excluding these new additions in order to bring these changes into the series in 1961 in combination with the changes resulting from the re-definition of the manufacturing establishment the values included for 1960 in this publication will differ from the revised 1960 values which will be published by the census of manufactures later this year. To some extent also the estimates shown anticipate the changes which will take place in manufacturing statistics when the new establishment definition is implemented in the census for 1961. The manufacturing establishment is now defined as the smallest manufacturing unit in a company which is a separate accounting entity capable of reporting the full range of principle statistics. The former definition also required a full range of statistics but the essential consideration was the attempt to break out manufacturing activity separate from other activity and to obtain separate reports if major groups of commodities produced in the same plant were classifiable to different industries. In changing the emphasis many companies which formerly prepared two or more census reports for the same manufacturing location will now prepare only one and in many cases the value of shipments will reflect final sales rather than values at the manufacturing level as in the past. The firms participating in the monthly survey have fairly generally adjusted their monthly reporting to the new definition during 1962 as the 1961 census reports came in or were revised on the new basis. It should be added that as the new definition of the establishment is designed to obtain the most meaningful values from firms on the basis in which their records are set up many firms were already reporting monthly on this basis as the detailed adjustments required to report on the old definition were often only possible for the annual report. Thus, while the use of data from different reporting units is not a new problem the adjustment and calculation of trends from reports which were changing during the year has certainly resulted in less reliable estimates.

The change in the standard industrial classification not only changed the definition and content of the individual industries but also the grouping of industries into major groups. These changes will be outlined here, although in this publication, data for the major groups only are being published; individual industry values will be added to the regular monthly bulletin as soon as possible. No grouping of industries according to economic use is included at this time; the economic use groups will be revised and published when the monthly series is revised to the 1961 census base as this will complete the Census of Manufactures revision to the new establishment concept.

In revising the classification of manufacturing industries, twenty groups were set up to replace the former seventeen; a list of these groups and the component industries is included in the appendix. Basically the revision shifts the emphasis from grouping by raw material content to grouping by the similarity of the end product and the similarity of the process being carried on. Thus in the foods and beverages industries in addition to adding poultry processing to manufacturing, (it had formerly been considered wholesaling,) the only adjustment was to bring in vegetable oil mills from the chemical industry.

In textiles the former basis of separation by cotton, wool and synthetic fibres has been revised to consider all fibre preparing mills as a separate industry, also felt mills and thread mills as separate industries without regard to the raw material. The cloth mills however remain separated according to the material, cotton, wool, or synthetic fibres. The clothing industries, already classified by end product, remain unchanged.

A new group was set up called the furniture and fixtures industries including wooden furniture, formerly in the wood industries, and those establishments manufacturing furniture formerly included in the metal and the miscellaneous industries group. It is divided into separate industries for household

furniture, office furniture, other furniture and the electric lamp and shade industry.

The printing and publishing industries group has been adjusted to exclude non-commercial periodicals and to include the book publishers.

The electrical products industries are now broken down into eight industries instead of the five former ones by separating the household radio and television receivers industries from communications equipment manufacturers and by adding telephone equipment manufacturers to this latter group, a transfer from the miscellaneous electrical products industry. The former electrical appliances industry has been divided into two groups: major appliances (electric and non-electric) and small electric appliances; washing machines, sewing machines and stoves are included in the major appliances group. Electric wire and cable has been set up as a separate industry. Battery manufacture and the electrical industrial equipment industry are essentially unchanged.

The non-metallic mineral products industries have been adjusted by the transfer of the salt industry to mining. The petroleum and coal products industries have been adjusted by the abolition of the coke and gas industry. The coke plants which were mainly operated as divisions of the integrated steel mills are now included with these mills. The gas plants have been transferred to the electric power, gas and water utilities group.

The two former groups, iron and steel products and non-ferrous metal products, have been replaced by three, in effect splitting up a combination of the two groups into three divisions: primary metals, metal fabricating industries and machinery industries. Under the primary metals group separate industries have been set up by type of activity and end product so that in this group there are iron and steel mills, steel pipe and tube mills and iron foundries as well as smelting and refining mills and a separate industry for rolling, casting and extruding mills for each of aluminium, copper and its alloys, and other metals.

In the metal fabricating industries boiler and plate works have been defined to cover manufacturing where the products are completed in the plant; the fabricated structural metal industry covers the former structural steel industries plus tanks and such products which are erected on site.

The architectural metal industry has been largely taken out of the former miscellaneous metal groups to include such things as metal doors and windows which has become increasingly important during the past ten years. Plants largely producing metal fasteners have been transferred from the hardware industry to the wire and wire products industry.

In the machinery industries the major change is the removal of all household machines to the appliances industries and separating commercial refrigeration and air-conditioning equipment manufactures as a separate industry.

Considerable revision was made in the separate industries comprising the chemical industries group but the only change outside the group was the transfer of vegetable oil mills to the food and beverage industries group. The new industry manufactures of industrial chemicals includes all plants manufacturing basic chemicals such as synthetic rubber, fertilizer materials such as ammonium nitrate and ammonium phosphate and compressed gases. The fertilizer industry will cover mixed fertilizer manufactures including the manufacture of superphosphates. Printing inks and explosives are now to be covered in separate industries. The formerly separate industries covering coal tar distillation, adhesives and polishes and dressings will now be included in other chemical industries which will also include the manufacture of writing inks.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

The publication of five years data in the monthly series of manufacturing statistics of shipments, inventories and orders and the omission in the first bulletin of any data later than December 1962, makes it possible to look at these five years again without the usual preoccupation with the current values.

The shipments series, in total, shows very clearly the inertia in the economy from the spring of 1959 to the fall of 1961. Separating industries into the durable and non-durable groups, even without the benefit of a seasonally adjusted series, shows up the differences between them. There was a steady but very slow upward movement in shipments in the non-durable goods industries in the three years 1958 to 1960 with an acceleration of the upward trend in 1961 and 1962. Shipments in the durable goods industries show a definite downward trend from the fourth quarter of 1959 to the end of the second quarter of 1961. The movement from May 1961 to the end of December 1962 was strongly upward.

Total inventories owned rose steadily and sharply from the middle of 1958 to March 1959 when they fell off for four months to rise again, first slowly from August to November 1959 and sharply from December to March of 1960. Liquidation set in in May of 1960 and stocks fell from then until the end of the year. The rise during the winter of 1960-61 was not spectacular and stocks were allowed to run down again in the second quarter of 1961. From October 1961 to the end of March 1962 the accumulation was very large; the subsequent decline in the second quarter of 1962 was small and during the second half of 1962 stocks were again accumulated.

The decline in inventories which began in 1959 set in first in January of that year in the non-durable group; the seasonal decline in these industries doesn't usually show up until April and although the decline in these industries in the first three months was not large the decline was unusual. Durable goods inventories continued to be accumulated until May of that year and the heavy decline did not set in until June of 1960. The decline in durable goods inventories was very sharp from June 1960 through to January 1961 and although stocks rose from October 1961 until the end of 1962, with the exception of June and July last year, the rise has been less rapid than the rise in the non-durable industries. In fact, ignoring seasonal swings the basic trend in the non-durable industries stocks was steadily upward from July 1959 to the end of last year. The underlying trend in the durable goods industries appears to have been an upward swing from October 1958 to May 1960 and a downward movement from June 1960 to September 1961 with an upward movement again, but at a lower rate, from October 1961 until the end of 1962.

The ratio of inventories to shipments brings out the contrast in the slower moving inventory series with the shipments series; for manufactures in total, the average ratio in 1962 of 2.03 was the lowest in the five years with the lowest estimate in the entire period, 1.86, occurring three times during this year - in May, June and October 1962.

The foods and beverages industries, which account for approximately 20 percent of total shipments and 15 percent of inventories show very little change during the period. The ratio of inventories to shipments varies considerably during the year as the seasonal influence in these industries is great but the annual average varied from 1.57 in 1960, the lowest in the five year period, to 1.65 in 1962.

Most of the other non-durable industries show ratios low in 1961 or 1962 as compared with the previous years but with little variation from year to year.

The textile industries and knitting mills show steadily lower ratios each year, with the exception of textiles in 1960, with the lowest ratios in 1962 in any of the previous five years.

The clothing industries, on the other hand, reached a peak in 1960 and have been higher in 1961 and 1962 than in the earlier years, 1958 and 1959.

The decline in total shipments in the durable goods industries between 1959 and 1961 is somewhat misleading since shipments in most of the durable goods industries were slightly higher in these years than in 1958 although they remained fairly stable during the following three years. The rise which shows up in 1962 actually began in the summer of 1961 but moving up from a low first quarter, annual totals were very little higher than the previous years. The decline which shows up in the total reflects the decline in the transportation equipment industries in this period and it appears as if the sharp rise in shipments in 1962 was led by the sharp and continued advance in the automobile industry. All the durable goods industries has higher shipments in 1962 however.

Although inventories were declining in the durable goods industries through 1960 and 1961, the ratio of inventories to shipments stayed fairly level during these years and although inventories also began to rise at the end of 1961 the upturn in shipments brought the 1962 ratios, with the exception of the electrical products industries group to very low levels. The transportation equipment industries showed a ratio of 1.48 in 1962 as compared with the year before of 1.74 and with 1958 of 1.61. The electrical products industries show up in contrast to the other durable goods industries here as the ratio of 3.18 was higher than in 1961 and very comparable with 1959 and 1960 ratios.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

STANDARD INDUSTRIAL CLASSIFICATION

Industrial Groupings shown in Tables 3 and 4

Major Group 1. Foods and Beverages

Slaughtering and Meat Packing Plants (s)(i)
 Animal Oils and Fats Plants (s)
 Sausage and Sausage Casing Manufacturers (s)
 Poultry Processors
 Butter and Cheese Plants (s)(i)
 Pasteurizing Plants (s)(i)
 Condenseries (s)(i)
 Ice Cream Manufacturers (s)(i)
 Process Cheese Manufacturers (s)
 Fish Products Industry (s)(i)
 Fruit and Vegetable Canners and Preservers (s)(i)(o)
 Feed Manufacturers (s)(i)
 Flour Mills (s)(i)(o)
 Breakfast Cereal Manufacturers (s)(i)
 Biscuit Manufacturers (s)(i)
 Bakeries (s)
 Confectionery Manufacturers (s)(i)
 Sugar Refineries (s)(i)
 Vegetable Oil Mills (s)(i)(o)
 Macaroni Manufacturers (s)(i)
 Miscellaneous Food Manufacturers (s)(i)
 Soft Drink Manufacturers (s)
 Distilleries (s)(i)
 Breweries (s)(i)
 Wineries (s)(i)

Major Group 2. Tobacco Products Industries

Leaf Tobacco Processing (s)(i)
 Tobacco Products Manufacturers (s)(i)

Major Group 3. Rubber Industries

Rubber Footwear Manufacturers (s)(i)(o)
 Rubber Tire and Tube Manufacturers (s)(i)(o)
 Other Rubber Industries (s)(i)(o)

Major Group 4. Leather Industries

Leather Tanneries (s)(i)(o)
 Shoe Factories (s)(i)(o)
 Leather Glove Factories (s)
 Leather Belting Manufacturers (s)
 Boot and Shoe Findings Manufacturers (s)
 Miscellaneous Leather Products Manufacturers (s)

Major Group 5. Textile Industries

Cotton Yarn and Cloth Mills (s)(i)(o)
 Wool Yarn Mills (s)(i)(o)
 Wool Cloth Mills (s)(i)(o)
 Synthetic Textile Mills (s)(i)(o)
 Fibre Preparing Mills (s)(i)(o)

Major Group 5. Textile Industries - Concluded

Thread Mills (s)(i)
 Cordage and Twine Industry (s)(i)
 Narrow Fabric Mills (s)(i)(o)
 Pressed and Punched Felt Mills (s)(i)(o)
 Carpet, Mat and Rug Industry (s)(i)(o)
 Textile Dyeing and Finishing Plants (s)(i)(o)
 Linoleum and Coated Fabrics Industry (s)(i)(o)
 Canvas Products Industry (s)(i)(o)
 Cotton and Jute Bag Industry (s)(i)(o)
 Automobile Fabric Accessory Manufacturers (s)(i)
 Embroidery, Pleating, Hemstitching Manufacturers (s)
 Miscellaneous Textiles (n.e.s.) Industry (s)(i)(o)

Major Group 6. Knitting Mills

Hosiery Mills (s)(i)(o)
 Other Knitting Mills (s)(i)(o)

Major Group 7. Clothing Industries

Men's Clothing Factories (s)(i)(o)
 Men's Clothing Contractors (s)
 Women's Clothing Factories (s)(i)(o)
 Women's Clothing Contractors (s)
 Children's Clothing Industry (s)(i)(o)
 Fur Goods Industry (s)(i)
 Hat and Cap Industry (s)(i)(o)
 Foundation Garment Industry (s)(i)(o)
 Fabric Glove Manufacturers (s)
 Miscellaneous Clothing (n.e.s.) Industry (s)

Major Group 8. Wood Industries

Shingle Mills (s)
 Sawmills except Shingle Mills (s)(i)(o)
 Veneer and Plywood Mills (s)(i)(o)
 Sash and Door and Planing Mills (excluding hardwood flooring) (s)(i)(o)
 Hardwood Flooring (s)(i)(o)
 Wooden Box Factories (s)(i)
 Coffin and Casket Industries (s)
 Wood preservation (s)(i)
 Wood Handles and Turning (s)(i)(o)
 Woodenware (s)(i)
 Cooperage (s)(i)
 Miscellaneous Wood Industries, n.e.s. (s)(i)(o)

Major Group 9. Furniture and Fixture Industries

Household Furniture Industry (s)(i)(o)
 Office Furniture Industry (s)(i)(o)
 Other Furniture Industries (s)(i)(o)
 Electric Lamp and Shade Industry (s)

Major Group 10. Paper and Allied Industries

Pulp and Paper Mills (s)(i)(o)
 Asphalt Roofing Manufacturers (s)(i)(o)
 Folding Box and Set-up Box Manufacturers (s)(i)(o)
 Corrugated Box Manufacturers (s)(i)(o)
 Paper Bag Manufacturers (s)(i)(o)
 Other Paper Converters (s)(i)(o)

Major Group 11. Printing, Publishing and Allied Industries

Printing and Bookbinding (s)
 Lithographing (s)
 Engraving and duplicate plates (s)
 Trade Composition or typesetting (s)
 Publishing Only (s)
 Printing and Publishing (s)

Major Group 12. Primary Metal Industries

Iron and Steel Mills (s)(i)(o)
 Steel Pipe and Tube Mills (s)(i)(o)
 Iron Foundries (s)(i)(o)
 Smelting and Refining (s)(i)(o)
 Aluminum Rolling, Casting and Extruding (s)(i)(o)
 Copper and Alloy Rolling, Casting and Extruding (s)(i)(o)
 Metal Rolling, Casting and Extruding, n.e.s. (s)(i)(o)

Major Group 13. Metal Fabricating Industries (except Machinery and Transportation Equipment Industries)

Boiler and Plate Works (s)(i)(o)
 Fabricated Structural Metal Industry (s)(i)(o)
 Ornamental and Architectural Metal Industry (s)(i)(o)
 Metal Stamping, Pressing and Coating Industry (s)(i)(o)
 Wire and Wire Products Manufacturers (s)(i)(o)
 Hardware, Tool and Cutlery Manufacturers (s)(i)(o)
 Heating Equipment Manufacturers (s)(i)(o)
 Machine Shops
 Miscellaneous Metal Fabricating Industries (s)(i)(o)

Major Group 14. Machinery Industries (except electrical machinery)

Agricultural Implement Industry (s)(i)(o)
 Miscellaneous Machinery and Equipment Manufacturers (s)(i)(o)
 Commercial Refrigeration and Air Conditioning Equipment Manufacturers (s)(i)(o)
 Office and Store Machinery Manufacturers (s)(i)(o)

Major Group 15. Transportation Equipment Industries

Aircraft and Parts Manufacturers (s)(i)(o)
 Motor Vehicle Manufacturers (s)(i)(o)
 Truck Body and Trailer Manufacturers (s)(i)(o)
 Motor Vehicle Parts and Accessories Manufacturers (s)(i)(o)
 Railroad Rolling Stock Industry (s)(i)(o)
 Shipbuilding and Repair (s)(i)(o)
 Boatbuilding and Repair (s)
 Miscellaneous Vehicle Manufacturers (s)

Major Group 16. Electrical Products Industries

Manufacturers of Small Electrical Appliances (s)(i)(o)
 Manufacturers of Major Appliances (electric and non-electric) (s)(i)(o)
 Manufacturers of Household Radio and Television Receivers (s)(i)(o)
 Communications Equipment Manufacturers (s)(i)(o)

Major Group 16. Electrical Products Industries - Concluded

Manufacturers of Electrical Industrial Equipment (s)(i)(o)
 Battery Manufacturers (s)(i)(o)
 Manufacturers of Electric Wire and Cable (s)(i)(o)
 Manufacturers of Miscellaneous Electrical Products (s)(i)(o)

Major Group 17. Non-Metallic Mineral Products Industries

Cement Manufacturers (s)(i)(o)
 Lime Manufacturers (s)
 Gypsum Products Manufacturers (s)
 Concrete Products Manufacturers (s)(i)(o)
 Ready-Mix Concrete Manufacturers (s)(i)
 Clay Products Manufacturers (from domestic clays) (s)(i)
 Clay Products Manufacturers (from imported clays) (s)(i)(o)
 Refractories Manufacturers (s)(i)
 Stone Products Manufacturers (s)
 Mineral Wool Manufacturers (s)(i)(o)
 Asbestos Products Manufacturers (s)(i)(o)
 Glass Manufacturers (s)(i)(o)
 Glass Products Manufacturers (s)(i)(o)
 Abrasives Manufacturers (s)(i)(o)
 Other Non-Metallic Mineral Products Industries (s)(i)

Major Group 18. Petroleum and Coal Products Industries

Petroleum Refining (s)(i)
 Manufacturers of Lubricating Oils and Greases (s)(i)
 Other Petroleum and Coal Products Industries (s)(i)

Major Group 19. Chemical and Chemical Products Industry

Explosives and Ammunition Manufacturers (s)(i)(o)
 Manufacturers of Mixed Fertilizers (s)(i)
 Manufacturers of Plastics and Synthetic Resins (s)(i)(o)
 Manufacturers of Pharmaceuticals and Medicines (s)(i)(o)
 Paint and Varnish Manufacturers (s)(i)(o)
 Manufacturers of Soap and Cleaning Compounds (s)(i)(o)
 Manufacturers of Toilet Preparations (s)(i)
 Manufacturers of Industrial Chemicals (s)(i)(o)
 Manufacturers of Printing Inks (s)(i)
 Other Chemical Industries, n.e.s. (s)(i)(o)

Major Group 20. Miscellaneous Manufacturing Industries

Instrument and Related Products Manufacturers (s)(i)(o)
 Clock and Watch Manufacturers (s)(i)(o)
 Orthopedic and Surgical Appliance Manufacturers (s)(i)(o)
 Ophthalmic Goods Manufacturers (s)(i)
 Dental Laboratories
 Jewellery and Silverware Manufacturers (s)(i)(o)
 Broom, Brush and Mop Industry (s)(i)(o)
 Venetian Blind Manufacturers (s)
 Plastic Fabricators, n.e.s. (s)(i)
 Sporting Goods Industry (s)(i)
 Toys and Games Industry (s)
 Fur Dressing and Dyeing Industry
 Signs and Displays Industry (s)
 Button, Buckle and Fastener Industry (s)
 Candle Manufacturers (s)
 Hair Goods Manufacturers (s)
 Artificial Flowers and Feathers Manufacturers (s)
 Model and Pattern Manufacturers (s)
 Musical Instruments Industry (s)(i)(o)
 Sound Recording Industry (s)(i)(o)
 Typewriter Supplies Manufacturers (s)
 Fountain Pen and Pencil Manufacturers (s)(i)(o)
 Smokers' Supplies Manufacturers (s)
 Stamp and Stencil (Rubber and Metal) Manufacturers (s)
 Statuary, Art Goods, Regalia and Novelty Manufacturers (s)
 Umbrella Manufacturers (s)
 Artificial Ice Manufacturers (s)
 Other Miscellaneous Industries (s)(i)(o)

CONCEPTS, METHODS AND LIMITATIONS

CONCEPTS

SHIPMENTS, ORDERS AND INVENTORIES (Tables 1, 2, 3 and 4):

Shipments - represent an estimated projection, on a monthly basis, of the latest available Gross Value of Factory Shipments from the annual Census of Manufactures. In the majority of cases, Census of Manufactures values include (a) sales from manufacturing plant of products made at the plant, (b) amounts received for repairs or custom work, (c) shipments of goods manufactured in the plant for further processing in another unit of the same company, and (d) shipments of finished products to manufacturers' sales branches for sale, for each establishment included. The value level used is defined as "factory selling value". Goods purchased for re-sale without further processing are not included.(1)

New Orders - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - are defined as estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled. (Since progress payments are treated for this survey as sales in the month received, total unfilled orders reported each month by firms operating on a progress payments basis are reduced by the total of progress accounts for these firms.) This definition of Unfilled Orders is therefore an expression in terms of future shipments values.

Total Inventory Owned - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of:

- (a) raw materials;
- (b) goods in process;
- (c) finished goods of own manufacture at plant and warehouse;

less (d) value of inventory held but not owned. This item cannot be assigned to specific components.

Since the series relates to manufacturing inventory only, the value of inventory of goods purchased for re-sale without further processing is not included.

Inventory Held but Not Owned - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory - some firms treat progress receipts as sales and reduce book value of inventory as payments are received; in some of these cases they no longer have records of actual holdings above the book value level. Wherever estimates are available, these have been included, but the estimated value of inventory under this heading must be considered, to some extent, incomplete.

Total Inventory Held - represents the estimated total book value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from total inventory owned because of the inclusion of inventory held under progress payments arrangements. It includes items (a) to (c) as shown above under total inventory owned.

Inventory Components: Raw Materials, Goods in Process, and Finished Products, are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to make definitions of components appropriate to each industry.

(1) There are a few exceptions to the definition of Census of Manufactures values given above:

- (i) In two industries, Sawmills, and Slaughtering and Meat Packing, custom work is valued at the estimated selling value of the product rather than by the amounts received for such work.
- (ii) In four industries, Fabricated Structural Metal, Aircraft, Railroad Rolling Stock and Shipbuilding, the Census of Manufactures value is for "work done during the year", i.e. production of finished goods plus change in goods-in-process inventory during the year, rather than shipments. For these industries, the Census of Manufactures values are also adjusted by change in finished products inventory before projection for the monthly series.

There are three industries apart from those listed under (ii) above, for which adjustments to Census of Manufactures values are made before projection for the monthly series. In the Flour Mills, Breweries and Fruit and Vegetable Cannery and Preservers industries, all of which are characterized by large seasonal variations, many large firms operate on fiscal year periods (which are used in Census of Manufactures compilations) differing from the calendar year. In unusual years the projection of Census of Manufactures values for these industries, as if they represent calendar year values, could cause considerable distortion in the estimates. To avoid this, the Census of Manufactures values have been adjusted to estimated calendar year values before projection. This adjustment is based on values reported to the monthly survey.

Firms operating on long-term contracts represent a special problem for the monthly series. The value levels projected are those of the Census of Manufactures as described in the first paragraph (except for the four industries described under (ii) above). However, for the monthly series, all progress receipts on long-term contracts are included as sales in the month received, instead of the total sale being included in the month the sale is finalized. It is felt that this treatment gives a better indication of monthly activity but it does allow possible distortion of value levels in that, for the Census of Manufactures value which is being projected, any final sale will be recorded in one specific year, while the monthly series may have spread this sale over more than one calendar year. Since the bulk of the value of long-term contract work falls in the four industries noted (in (ii) above), for which adjustments for work done are made in compiling the Census of Manufactures value, this inconsistency does not affect the all-industry or group totals to any great extent.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Table 3, are defined according to the Standard Industrial Classification Manual.

METHODS

(a) Current Estimates -

For six series (plant shipments, raw materials, goods in process, plant finished products, inventory held but not owned and unfilled orders) current value estimates for each industry covered are made by applying the monthly percentage changes shown by the unweighted group of reporting firms in each industry to the latest available benchmark values for the same industries. Industries not covered are carried at the latest available benchmark levels.

(The above is subject to a few exceptions. In one industry, reporting firms are treated as a stratum sample, rather than as an unweighted group. In three industries, available physical data on stocks and shipments are valued using price indexes. In three industries, shipments estimates are based on employment data and price indexes.)

Total inventory held in each industry is the sum of the estimated values for raw materials, goods in process, and finished products. Total inventory owned in each industry is calculated by deducting the estimated value for inventory held but not owned from estimated total inventory held. Value of new orders in each industry is derived from estimated shipments and unfilled orders using the formula "Unfilled Orders at end of previous month plus Net New Orders during month less Shipments during month equals Unfilled Orders at end of Current month".

(b) Benchmark Revisions -

As new benchmarks become available, estimates for the year to which the benchmarks apply are revised as follows:

For the plant shipments series, the Census of Manufactures value for the year for each industry is spread by months according to the trend shown by reporting forms in the original estimate for that year.

For the four basic inventory series (raw materials, goods in process, plant finished products and inventory held but not owned) and the unfilled orders series, where the benchmark values apply to the Year-End rather than to the entire year as in the shipments series, the error in the original estimate for the year-end for each industry is assumed to have accumulated equally over all twelve months of the year (i.e., one-twelfth of the amount of the error is added to the original estimate for January; two-twelfths is added to the original estimate for February; three-twelfths to March and so on).

The three derived series (total inventory held, total inventory owned, and new orders) are re-calculated on the basis of the revised data for the other six series.

LIMITATIONS TO THE USES OF THE DATA IN THIS REPORT

- (1) Data for individual industries should not be interpreted as commodity data, since very few industries produce only one commodity or only one class of commodities.
- (2) Since the series are in terms of current values, changes over time may be the result of both price and volume changes. Some indication of the extent to which changes in value are due to price changes, thus isolating the physical change which has taken place, can be obtained by reference to the wholesale price index. This procedure is, however, inadequate for anything more than a general indication of trends. The main problem is that the wholesale price index is a commodity price index, while the shipments, orders, and inventory series are industry series with the possibility of changes in commodity content over time. These changes in commodity content could seriously affect the weighting pattern to be applied to price indexes considered applicable for any specific industry. In considering inventory values turnover rates and valuation methods are other important variables which should be taken into consideration but for which adequate data are seldom available.
- (3) Shipments data do not necessarily represent market sales for the manufacturing universe. (a) Apart from the few exceptions as noted under (b) below they are defined (see page 28) to include total movement of goods out of manufacturing plants (or, in some cases, divisions of plants); shipments of goods for further processing by other plants of multiple-unit companies are, therefore, included as well as shipments for sale. (b) In a few special cases, the Census of Manufactures values include goods in-process change, and for these cases progress receipts on long-term contracts are included as shipments as they occur, rather than at the time sales are finalized. (c) Many manufacturers re-sell purchased goods, in addition to sales of their own products and these re-sale items are not included.
- (4) The component breakdown for inventories is on an establishment, not a commodity, basis. Since each manufacturer reports inventories as on his own books, both for the monthly and annual surveys, and since a number of industries contain plants at various stages of processing, the finished products for one plant might represent commodities which would be considered raw materials or goods in process for another plant in the same industry. The composition of each industry must be studied before attempting to use the component breakdown as applicable to the industry as such, rather than to the firms in the industry.

(5) For Unfilled Orders, the following reservations apply:

- (a) The series, by definition, excludes plants producing entirely for stock. Since approximately 40% of manufacturing is done by such plants the trends shown are not necessarily applicable to manufacturing in general.
- (b) Since the series is defined as "unshipped" orders, rather than "unproduced" orders, there is always the probability that some of the Unfilled Orders are accounted for in inventory holdings. The reduction of unfilled orders by progress receipts eliminates to a considerable extent the effect of large goods-in-process holdings in connection with long-term contracts, but the amount of the remaining inventory, either goods-in-process or finished products, which is held in connection with existing unfilled orders would be difficult to evaluate.
- (c) The series includes total orders, not just those considered as "binding", so estimates of future shipments trends based on these may be overstated due to the possibility of cancellations.
- (d) Unfilled Orders for all industries include to some extent a duplication due to the fact that orders for final products in one industry may result in orders to firms at secondary or primary stages of processing. Since the total gross value of shipments will contain the same duplication, this does not invalidate the series for purposes of analysis. However, the total impact of any one order on future shipments levels will not necessarily be shown in the Unfilled Orders series since at any stage an order may be filled from stock rather than added to existing backlogs.

FOOTNOTES TO TABLES

- TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.
(2) Yukon and the Northwest Territories combined with British Columbia.
- TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.
- TABLE 3. - (1) See footnote (1), table 2.
(2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
(3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.
- TABLE 4. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.
