TREND SUMMARY

Manufacturers' shipments in September were valued at an estimated \$2,700.8 million, up 8.9 per cent from the revised August estimate of \$2,480.2 million and 7.3 per cent from the September 1963 estimate of \$2,516.4 million. The increase in September was, however, less than the usual seasonal increase as compared with August, as the seasonally adjusted estimate of \$2,535.8 million shows a decline of just over 2%.

The largest increase resulted from the seasonal upswing in the automotive industry where shipments in September at \$105.8 million were nearly five times as large as the yearly low value of shipments of \$21.5 million in August. The shipments in both August and September this year were considerably higher than last year's shipments. Shipments in the transportation industry group in total reflected the increase in the shipments in the automotive parts and accessories industry as well as shipments in this industry doubled in September as compared with August; in the transportation group shipments were up by 93 per cent to maintain a 16 per cent advance over last year during the entire third quarter. This seasonal increase in shipments in the automotive industry dwarfs changes in other industries this month but quite impressive increases were recorded in the rubber industries group and in the electrical products group both of which increased by 19 per cent. The increase in the rubber products industries includes the increase of 25 per cent in tire and tube shipments which is directly connected with the increase in automobiles.

Shipments in the textile industries and the furniture industries all rose in September and although the comparison with the previous year shows a declining trend cumulative shipments are running over ten per cent and five per cent respectively above shipments as compared with shipments in the first three quarters of last year. The largest increases in the textile industries group were in the synthetic textile industry and in the carpet, mat and rug industry.

The cloth mills in the textile industry group and the knitting mills industries all showed increases in September of between 6 and 9 per cent. The decline in shipments in the clothing industries in September is small and follows the very large increase in August. Shipments in the third quarter this year however are slightly below shipments in the third quarter of last year although for the first three quarters are, in total, slightly higher.

Two other industry groups in the durable goods industries also contributed to the considerable increase this month; shipments in the metal fabricating industries rose by 9 per cent and in the machinery industries by 5 per cent. The increase in the durable goods group as a whole was nearly 17 per cent in September as compared with August. For the first three quarters of this year shipments in the durable goods group are running 11 per cent higher than last year.

In the non-durable goods group as a whole the increase in September over August is just over 3 per cent and for the first three quarters of the year is running just over 6 per cent above last year. This increase reflects a fairly strong upward movement in September in some of the smaller industry groups industries as shipments in the two largest groups, the foods and beverages industries and the paper and allied products industries each rose by just over 1 per cent. Shipments in both these groups however are running at 8 and 10 per cent above last year at the end of the third quarter this year. The largest increase in the non-durable goods industries this month has already been mentioned, the rubber industries, as well as the increases in the textiles and knitting mills industries. In addition to these, shipments in the tobacco industries rose by 10 per cent this month and in the chemical products industries by 11 per cent. Shipments in the chemical products industries to the end of September were running at 8 per cent above last year although like so many of the manufacturing industries the comparison with last year indicates a fairly steady decline from the beginning of the year.

Total inventory owned by manufacturers in September was estimated at \$5,087.7 million, an increase of 0.7 per cent from the revised August estimate of \$5,050.4 million and of 5.5 per cent from the September 1963 estimate of \$4,824.4 million. Total inventory held by manufacturers, estimated at \$5,357.6 million, was 0.5 per cent higher than the revised August estimate of \$5,328.3 million and 4.8 per cent higher than the September 1963 estimate of \$5,111.1 million. The increase in total inventory held in September was only slightly greater than expected from the seasonal movement as the seasonally adjusted estimate at \$5,387.5 million was only 0.6 per cent greater than the August estimate. Inventory of goods in process was fractionally lower while inventories of raw materials were just over 1 per cent higher and those of finished products 0.8 per cent higher than in August.

Although the total change in inventories is not large there is considerable contrast in the change in the inventory components between the durable and non-durable groups. Total inventory held rose by \$15 million in the non-durable goods industries and by \$14.3 million in the durable goods. In the non-durable goods industries stocks of finished goods rose by \$17.4 million with an increase of just less than a million in raw materials and a decline of \$3.3 million in goods in process. In the durable goods group raw materials stocks rose by nearly \$10 million and goods in process by \$5.3 million

while finished products declined by just less than a million dollars.

The increase in finished products inventory was almost entirely concentrated in the foods and beverages industries where the seasonal increase begins in late July and August each year and continues into December although in many years the peak appears to be reached by the end of November. The ratio of finished products inventory to shipments in the food and beverages group rose to 0.45 in September from 0.41 in August and 0.38 in July the low point this year. Last year the peak was reached in December when the ratio was 0.56.

Finished products inventory rose in the tobacco industries group and in knitting mills and fell in all the other non-durable groups; the largest decline both in value and proportionally being in the paper and allied products industries where the decline of \$3.7 million represented a decline of 4 per cent and brought the ratio of finished products stocks to shipments down to 0.40.

The largest movement in inventories in the durable goods industries was in the transportation group both in total and in the components. The increase in total inventory held of just over \$14 million reflected an increase of \$21.7 million in the transportation industries group and increases of \$2.8 million in the wood industries and \$2.1 million in the primary metal industries; at the same time inventories of metal fabricating industries dropped by \$7.9 million and of the electrical products industries by \$3.7 million. Of the total increase of nearly \$10 million in raw materials stocks the transportation equipment industries rose by \$6 million, the primary metal industries by \$4.6 million and the non-metallic mineral industries by \$1 million with raw materials stocks in the metal fabricating industries declining by \$1.7 million. In goods in process inventory again the largest proportion of the total increase of \$5.3 million was the increase of \$8.2 million in the transportation equipment industries which with the increase of \$1.6 million in the machinery industries was reduced in total by a decline of \$4.5 million in goods in process in the metal fabricating industries. Finished goods stocks in the durable group in total shows a decline of \$0.8 million which reflects a substantial increase in stocks in the transportation industries of \$7.4 million and an increase of \$2.4 million in the wood industries offset by declines in all other groups. Finished products stocks in the primary metal industries fell by \$3.2 million, in the electrical products industries by \$2.6 million and by \$1.7 million each in the metal fabricating and machinery industries and by \$1.1 million in the non-metallic minerals industries.

New orders in September were estimated at \$2,683.0 million, an increase of 9.5 per cent from the revised August estimate of \$2,449.3 million, and a rise of 6.7 per cent from the September 1963 estimate of \$2,515.6 million. Unfilled orders for September, estimated at \$2,622.7 million, were 0.7 per cent lower than the revised August estimate of \$2,640.4 million but 12.5 per cent higher than the September 1963 estimate of \$2,330.2 million. The decline in unfilled orders for September was, however, less than expected seasonally as the seasonally adjusted estimate, at \$2,673.0 million, was 1.7 per cent higher than the August estimate.

Again in the unfilled orders series the largest change and the dominant one was the \$17.9 million decline in the transportation industries group a percentage decline of 2.7. Proportionally the change in the level of unfilled orders in the metal fabricating industries was greater at 3 per cent and in the opposite direction; the value of the increase was \$9.6 million.

N.B. Since there has been a revision to the estimated shipments in Shoe Factories for Ontario from January to July 1964, all values for shipments and for new orders have been adjusted on pages 1, 2, 3, 4, 9, 27, 38 and 39. TREND SUMMARY

Manufacturers' shipments in September were valued at an estimated \$2,700.8 million, up 8.9 per cent from the revised August estimate of \$2,480.2 million and 7.3 per cent from the September 1963 estimate of \$2,516.4 million. #### INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

### INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (1) in the inventory series; and (0) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

#### CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for thit type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of operation; it differs from inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Rew Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to progress accounts are maintained.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Means. A file of the fadestries included in the Scandard industrial Classification recover will be found on page 40 of the ballacin.

# SQUECES

Morely (5, in a lex cases, quartist) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventor, attention.

### CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. # FOOTNOTES TO TABLES

- TABLE 1. (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.
- TABLE 2. (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.
- TABLE 3. (1) See footnote (1), table 2.
  - (2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
  - (3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.
- TABLE 5. (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.
