ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS
IN ALL MANUFACTURING INDUSTRIES

The preliminary estimate of manufacturers' shipments in January 1965 totalled \$2,491 million, lower than the revised December value of \$2,642 million by 5.7 per cent, but higher than the value of \$2,427 million in January 1964 by 2.6 per cent. However, after adjustment for seasonal variation, shipments in January were 1.6 per cent higher than in December 1964. Without seasonal adjustment, both the durable and the non-durable industry groups showed declines in shipments of 7.0 per cent and 4.6 per cent respectively in January as compared with December.

Considering shipments by the major industry groups all except five showed decreases in January over December. The groups which recorded increased shipments were the clothing industries of 16.9 per cent, the leather industries of 3.8 per cent, the wood industries of 2.9 per cent, the transportation equipment industries of 1.6 per cent, and the knitting mills of 1.3 per cent; only three of these, however, showed increases over January 1964, as shipments in the transportation equipment industries were 7.2 per cent lower and in the leather industries 2.6 per cent lower than in January 1964. Relatively large decreases of shipments in January as compared with the previous month were reported by the machinery industries which decreased by 21.1 per cent, and the non-metallic products industries which dropped by 20.2 per cent. The tobacco industries whose shipments in January were lower than in December by 2.7 per cent had in fact advanced by 37.7 per cent over the corresponding month in 1964. Of the remaining groups six showed declines in January of 6 per cent or more: the metal fabricating industries, the electrical products industries, the food beverage industries, the rubber industries, the primary metal industries, and the petroleum and coal products industries.

Inventory owned by manufacturers at the end of January was valued at a preliminary estimate of \$5,170 million which indicated only a slight increase of 0.3 per cent over \$5,153 million in December, but also represented an increase of 4.1 per cent as compared with its corresponding month in 1964. Inventory owned in the non-durable goods industries in January was maintained at about the same level as in December 1964 but was higher than in the same month a year ago by 1.4 per cent. Inventory owned in the durable goods industries on the other hand rose slightly at 0.7 per cent over December, and was 7.4 per cent higher as compared with January 1964. Seasonally adjusted estimates showed that all inventory components had increases in January with 1.4 per cent for goods in process, 0.6 per cent for finished products, and 0.2 per cent for raw materials.

Unfilled orders at the end of January 1965 were estimated to have increased by 3.4 per cent over December and 10.3 per cent over January 1964; but adjusted for seasonal variation they dropped by 2.8 per cent from December 1964. A brief review of unfilled orders for 1964 shows that they increased substantially throughout the year from the high level of the last quarter of 1963, with an average monthly increase of 12.8 per cent over 1963. Seasonally adjusted estimates indicated a higher rate of increase during the last quarter of the year. Generally speaking, unfilled orders in the durable goods industry group were about four times that of the non-durables. In 1964, unfilled orders in the durable goods industries conformed very much with the upward pattern of the whole manufacturing industries; while the non-durable group showed a high increase in January and then declined considerably during the last five months.

Among the major industry groups, primary metal industries registered the highest increase. As a group, it rose sharply to 32.7 per cent higher in January 1964 than in December 1963; and though dropping to a lower level during the second and the third quarters, its monthly average was 22.8 per cent over the preceding year. Metal

fabricating industries also increased remarkably during the year to a high of 47.6 per cent in December 1964 over the corresponding month in 1963, and at a monthly average of 23.0 per cent over the previous year. The electrical products industry group rose considerably except in the last quarter, and was estimated at a monthly average increase of 12.8 per cent; the transportation equipment industry group with a monthly average increase of 11.6 per cent over 1963 also advanced steadily during the year. All other major industry groups showed a certain amount of increases in unfilled orders in 1964, except for the miscellaneous manufacturing industries whose monthly average decreased by 5.4 per cent from the previous year.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.

TABLE 3. - (1) See footnote (1), table 2.

- (2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.
