ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Manufacturers' shipments, new orders and unfilled orders for November were estimated at \$3,229 million, \$3,256 million and \$3,533 million, showing increases of 0.8 per cent, 2.8 per cent and 0.8 per cent respectively over the revised estimates for October. After factors of seasonal variation were removed, the estimate of shipments was off 0.7 per cent and new orders dropped 0.1 per cent in comparison with the October estimates, while unfilled orders showed the same increase of 0.8 per cent as the unadjusted estimate. Inventories owned by manufacturers at the end of November moved up 0.6 per cent to \$6,256 million from \$6,219 million in October and were up 0.2 per cent on the basis of the seasonally adjusted estimates.

Total shipments for the first eleven months amounted to \$33,643 million, 8.4 per cent higher than for the comparable period in 1965 of \$31,049 million. The small increase in manufacturers' shipments in November occurred entirely in the durable goods manufacturing industries where shipments were 1.9 per cent higher than in October and 3.7 per cent higher than in November of last year. At the preliminary estimate of \$1,697 million, November shipments in the non-durable goods industries showed practically no change from October but were 5.6 per cent above the November value a year ago.

The most significant increase in November shipments appeared again in the transportation equipment industries. The 21.3 per cent advance in shipments from \$355 million in October to \$431 million in November was again attributable mainly to the seasonal increase in the motor vehicle and parts industries. Shipments in the tobacco industries were also seasonally higher in November by 20.0 per cent from the low level in the preceding month. More substantial declines were recorded in the wood industries (-10.4 per cent), the clothing industries (-10.0 per cent), the non-metallic minerals industries (-8.8 per cent), the electrical products industries (-7.0 per cent) and the metal fabricating industries (-5.0 per cent).

For the month of November, durable goods manufacturers reported an increase of 4.9 per cent in new orders from the estimate of \$1,484 million in October to \$1,557 million. The backlog of unfilled orders at the end of November reached \$3,025 million, 0.8 per cent higher than the revised estimate of \$3,000 million in the previous month and 13.9 per cent above the level at the end of November 1965.

Manufacturers' inventories held at the end of November were 0.7 per cent higher than the level of the previous month. This increase of stocks from \$6,527 million in October to \$6,576 million in November occurred mostly in raw materials and finished products. The seasonally adjusted estimate of November inventories held, however, showed a rise of only 0.3 per cent with the gain largely centered in finished products.

Inventories owned by durable goods producers at the end of November dropped fractionally to the level of \$3,137 million from \$3,150 million in October but were 14.4 per cent higher than in November 1965. Transportation equipment industries and the primary metal industries recorded greater reductions in owned stocks than other major industry groups in November. At the preliminary November estimate of \$3,119 million, non-durable goods manufacturers' owned stocks were up 1.6 per cent from the month before. Food and beverage industries reported a substantial build-up in owned inventories in November, partly seasonal, from \$915 million to \$950 million. This increase was responsible for most of the gain in total manufacturers' owned stocks in November.

Both ratios of total inventories owned to shipments and finished products to shipments remained the same at 1.94 and 0.67 respectively as the preceding month, but indicated increases when compared with the ratios of 1.82 and 0.63 in November last year.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly; (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
