# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

The values of manufacturers' shipments and new orders in March amounted to \$3,180 million and \$3,248 million respectively, 12.5 per cent and 16.6 per cent higher than the low levels of February but 2.0 per cent and 3.0 per cent lower than the estimates in March last year. The level of unfilled orders at the end of March was also up 1.8 per cent from the previous month and 11.2 per cent from March 1966 to a preliminary estimate of \$3,879 million. After adjustments for trading-day and seasonal variation, manufacturers' shipments were substantially down again from February to March, registering the fourth month of decline since December 1966. Manufacturers' new orders and unfilled orders, seasonally adjusted, also decreased for the third consecutive month in March. Total inventory held by manufacturing industries in March continued its steady and gradual rise to a preliminary estimate of \$7,039 million. The increase of total inventory held, seasonally adjusted, was 0.7 per cent with gains showing in all inventory components.

Manufacturers' shipments in the first quarter of 1967 totalled \$8,839 million, a small gain of 1.6 per cent over the same quarter of last year. At the preliminary estimate of \$1,468 million, March shipments of durable goods industries were 16.2 per cent seasonally higher than the estimate in February, but 3.2 per cent below the estimate in March 1966. Non-durable goods producers also reported a rise (9.6 per cent) from February to March and a drop of 0.9 per cent from March last year. All major industry groups reported advances, mostly seasonal, in March shipments, with relatively substantial increases shown in the transportation equipment industries (23.7 per cent) and the primary metal industries (20.9 per cent). March shipments in the leather industries and the clothing industries did not increase as much over the previous month as their seasonal patterns showed in the previous years; the values of shipments were below the corresponding estimates of last year by 15.9 per cent and 24.3 per cent respectively. On the other hand, the tobacco industries had an increase of 17.4 per cent over February and a 12.9 per cent increase over March 1966.

New orders received by durable goods industries during March were seasonally up by 25.4 per cent from the low level of February; an increase of 9.6 per cent was also shown by the non-durable goods industries. However, both the estimates of March new orders in durable and in non-durable goods industry categories were below the estimates of the corresponding month of 1966. Durable goods manufacturers' backlog of unfilled orders, estimated at \$3,390 million at the end of March, was 2.4 per cent above the February level and 13.7 per cent higher than March of last year.

The increase in the March manufacturers' total inventory held was contributed entirely by durable goods producers which reported an increase of 1.1 per cent from \$3,683 million in February to \$3,724 million in March with the largest build-up occurring in goods in process. A decline in the non-durable goods industries raw materials caused a slight drop in the total value of stocks held by that group in March. Estimates of manufacturers' owned inventories at the end of March were 0.4 per cent higher than the level at the end of February. Relatively significant increases in owned inventories were reported in the tobacco industries (6.2 per cent), the wood industries (3.1 per cent), the metal fabricating industries (2.8 per cent) and the machinery industries (2.7 per cent). Food and beverage industries and primary metal industries owned inventories showed the largest declines in March.

Both the ratios of manufacturers' inventory owned to shipments and finished products to shipments declined to their seasonal low of 2.09 and 0.77 respectively in March from 2.34 and 0.86 in February.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

- TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.
- TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.
- TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
