# INVENTORIES, SHIPMENTS AND ORDERS IN MANUFACTURING INDUSTRIES 

$$
\text { JULY } 1967
$$

## TABLE OF CONTENTS

Trend Summary (Charts and Text)iv
TABLE 1. Estimated Value of Shipments in all Manufacturing Industries, by Province of Origin, Monthly - 1963 to date, by months ..... 1
TABLE 2A. Estimated Value of Shipments, Orders and Inventory in all Manufac- turing Industries, 1963 to date, by months ..... 2
TABLE 2B. Estimated Value of Shipments, Orders and Inventory in all Manufac- turing Industries, 1963 to date, by months - Adjusted for Seasonal Variation ..... 3
TABLE 3. Estimated Value of Shipments, Orders and Inventory in Manufacturing Industries, 1963 to date, by months, grouped according to the Standard Totustras Classiticacion
How-Durable - Majur Groups 1, 2, 3, 4, 5, 5, 7, 10, 11, 18, 19and 204
Durable - Major Groups 8, 9, 12, 13, 14, 15, 16 and 17 ..... 5
Major Group 1 - Food and Beverage Industries ..... 6
Major Group 2 - Tobacco Products Industries ..... 7
Major Group 3 - Rubber Industries ..... 8
Major Group 4 - Leather Industries ..... 9
Major Group 5 - Textile Industries ..... 10
Major Group 6 - Knitting Mills ..... 11
Major Group 7 - Clothing Industries ..... 12
Major Group 8 - Wood Industries ..... 13
Major Group 9 - Furniture \& Fixture Industries ..... 14
Major Group 10 - Paper \& Allied Industries ..... 15
Major Group 11 - Printing, Publishing and Allied Industries (not published separately, values included in Table 2)
Major Group 12 - Primary Metal Industries ..... 16
Major Group 13 - Metal Fabricating Industries (except Machinery and Transportation Equipment Industries) ..... 17
Major Group 14 - Machinery Industries ..... 18
Major Group 15 - Transportation Equipment Industries ..... 19
Major Group 16 - Electrical Products Industries ..... 20
Major Group 17 - Non-Metallic Mineral Products Industries ..... 21
Major Group 18 - Petroleum and Coal Products Industries ..... 22
Major Group 19 - Chemical and Chemical Products Industries ..... 23
Major Group 20 - Miscellaneous Manufacturing Industries ..... 24
Table 4. Statistics for selected individual industries, current and 12 previous months ..... 25
Table 5. Ratios of Value of Inventory Owned to Value of Shipments, 1963 to date, by months:
Industries grouped according to the Standard Industrial Classifi- cation Total inventory ..... 38
Finished products inventory ..... 39
Industrial Grouping -
Industries included in groups of the Standard Industrial Classification, Tables 3 and 5 ..... 40
Congepts and sources ..... 42
Footnotes to tables ..... 43

## SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:

P Preliminary figures.
r Revised figures.
. Figures not available.
.. Figures not appropriate or not applicable.

- Nil or zero.

The preliminary estimates of manufacturers ${ }^{\text {' }}$ shipments and new orders in July Jere less than seasonally down to $\$ 2,913$ million and $\$ 2,972$ milifon respectively from the revised estimates of $\$ 3,314$ million and $\$ 3,319$ million in June. After allowance for seasonal influence, July shipments showed a significant increase of 2.0 per cent uver the previous month while new orders advanced sharply by 4.7 per cent. The backlog of unfilled orders at the end of July, seasonally adjusted, also rose substantially by 3.3 per cent to a record high of $\$ 3,877 \mathrm{million}$ in the year. At the preliminary estimate of $\$ 7,058$ million, total inventory held by manufacturers at the end of July, was slightly higher than at the end of June. Seasonally adjusted the estimate of inventories held in July was up 1.5 per cent with the largest accumulation occurring in goods in process.

Total manufacturing shipments for the January - July period amounted to $\$ 21,405 \mathrm{million}$, a gain of 2.1 per cent over the same period of last year. Shipments of non-durable goods for the first seven months also rose 3.8 per cent while durable goods industries recorded very little change.

All major manufacturing industry groups reported decreases in July shipments except the knitting mills, the clothing industries and the petroleum and coal products industries, reflecting chiefly the pattern of seasonal variation. Both durable and non-durable goods manufacturing groups showed seasonal declines of 18.1 per cent and 7.0 per cent respectively. The most substantial decrease in July shipments was shown in the transportation equipment industries where a drop of 33.1 per cent can be attributed almost entirely to the seasonally low shipments in the motor vehicle and the parts and accessories industry groups. Other relatively large dacreases were shown in the machinery industries ( -18.2 per cent), the textile xalustries ( -16.3 per cent), the chemical and chemical products industries ( -15.7 par cent) and the electrical products industries ( -14.9 per cent).

New orders received by both durable and non-durable goods manufacturers in July were 13.3 per cent and 8.1 per cent lower than in the previous month but 7.7 per cent and 6.8 per cent above the July estimates of last year. A sharp rise in the backlog of orders in the transportation equipment industries was mainly responsible for a 2.0 per cent increase in total unfilled orders in durable goods industries, and the higher backlog in durable goods industries accounted for the increase in the estimated backlog for all manufacturing.

The level of total inventory owned by manufacturers at the end of July rose slightly by 0.1 per cent, and by 1.2 per cent after seasonal adjustment. Substantial increases in owned inventories in the paper and allied products industries ( 6.8 per cent) and in primary metal industries ( 2.9 per cent) were greatly offset by reductions in the inventory levels in other major industry groups, particularly in the machinery industries ( -2.3 per cent), the transportation equipment ( -1.5 per cent) and the tobacco industries ( -2.1 per cent).

Stocks held and owned by non-durable goods producers were up 0.6 per cent in July; a 1.7 per cent gain in raw materials outweighed small decreases in goods in process and finished products. Inventory holdings of durable goods industries in July were 0.2 per cent higher than in June. After deduction of stocks held but not owned in the month, owned inventories of durable goods showed a drop of 0.3 per cent.

In July, both manufacturers' ratios of inventories owned to shipments and finished products to shipments increased seasonally to 2.28 and 0.85 respectively from 2.00 and 0.75 in June. On a seasonally adjusted basis, the ratios for July were slightly lower at 2.15 and 0.79 compared with 2.17 and 0.80 for June.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are 1 boted batow
A single asterisk (*) preceding the individual industry title indicates that the indiatry is show separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.
The four digit number preceding the individual industry title indicates the S.I. C. sub group code.
The bracketed letters following the individual industry titles indicate the statistical series - shipments, inven tories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (1) in the inventory series; and ( 0 ) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## STANDARD INDUSTRIAL CLASSIFICATION

## Industrial Groupings shown in Tables 3 and 5

## S.I.C.

TWCETUS AM SOURES
 monthly shipments and inventorios and unilifed orders on the books at the end of the montl estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not avallable. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list ia kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sun of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written $1 n$. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compliation is begun and late returns: for the month will be used one month later in the revised estimate. Returrs recufved after beginaik the compllation for the next month (i.e. January returns received after sho peondery ecwpilacion is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the density of afziblakmoncs between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeda on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders recefved but not yet shipped, or treated as a sale, frrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

## FOOTNOTES TO TABLES

IABLE 1. - (1) Prince Edward Isiand, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3.- (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - $1,2,6,8,9,10,17,18$ and 19 is small and sample coverage is not adequate to provide separate estimates for them.
(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
