# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFULFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Manufacturers' shipments, new orders and unfilled orders in March increased less than seasonally from February by 6.3 per cent, 9.5 per cent and 0.9 per cent to the preliminary estimates of \$3,167 million, \$3,202 million and \$3,771 million respectively. All three series were below those for March last year. After seasonal adjustment, March shipments were down 2.1 per cent and new orders and unfilled orders both dropped 1.1 per cent from the month before. The end-of-March level of manufacturers' owned inventories was fractionally down, but after seasonal adjustment, the estimate showed a slight rise, reflecting a small build-up in raw materials.

Both the ratios of owned inventories to shipments and finished products to shipments in March were seasonally down to 2.12 and 0.78 from 2.26 and 0.83 respectively in February. Based on seasonally adjusted estimates these ratios were higher in February.

Cumulative shipments for the first three months of 1968 totalled \$9,153 million, 3.4 per cent above the estimate of \$8,848 million of last year. The seasonally adjusted estimate of manufacturers' shipments for the first quarter of this year was off 0.3 per cent from the last quarter of 1967. The relatively low level of manufacturers' shipments in the quarter was due partly to the effects of labour disputes in some major industries.

Shipments of durable goods in March reached \$1,421 million, 7.5 per cent higher than in February but 3.1 per cent lower than in March, 1967. March shipments in non-durable goods industries also showed a 5.3 per cent rise from the month before and were 1.3 per cent up from the corresponding month a year ago. All but one durable goods major industry group reported increases in March shipments ranging from 1.4 per cent in the primary metal industries to 12.7 per cent in the wood industries. The only decrease was in the furniture and fixtures industries which dropped 1.4 per cent. In the transportation equipment industry group, shipments for March reached \$378 million, showing a below seasonal increase of \$34 million from February and a decline of \$37 million from March of last year, reflecting largely the effects of strikes in the motor vehicle and the motor vehicle parts and accessories industries. Within the non-durable goods category, foods and beverages, tobacco, and chemical and chemical products industry groups contributed substantially to the increase in March.

New orders received by durable goods manufacturers during March rose from \$1,279 million in February to \$1,446 million which was however, lower than that in the corresponding month in any of the preceding three years. At the preliminary estimate of \$3,299 million, unfilled orders for durable goods at the end of March were 0.8 per cent up from February but 3.1 per cent down from March of last year.

Owned inventories in durable goods manufacturing industries dropped 0.7 per cent from February to March, while non-durable producers reported a rise of 0.4 per cent. More significant decreases in March inventories occurred in raw materials owned by the industry groups of furniture and fixtures (-9.1 per cent), primary metal (-7.0 per cent) and paper and allied products (-5.8 per cent). Tobacco manufacturers on the other hand, reported the most substantial build-up in owned stock, also in the form of raw materials, from \$236 million in February to a record high of \$263 million in March.

The first part of the report deals with the general situation in the country at the end of the war. It describes the economic and social conditions, the state of the economy, and the impact of the war on the population. The author notes that the country has suffered from a long period of economic stagnation and that the war has further exacerbated these problems. The population has been severely affected, with many people displaced and a significant loss of life and property.

The second part of the report discusses the political situation and the role of the government. It examines the policies of the government and the impact of these policies on the economy and society. The author argues that the government has failed to implement effective policies to address the economic and social challenges facing the country. He calls for a more active role for the government in the economy and for a more democratic political system.

The third part of the report focuses on the social and cultural aspects of the country. It discusses the state of education, the role of the family, and the impact of the war on social and cultural life. The author notes that the war has had a profound impact on the social and cultural fabric of the country. Education has been disrupted, and the family has become a source of instability. The war has also led to a loss of cultural values and traditions.

The fourth part of the report discusses the future of the country and the role of the population. It examines the challenges facing the country and the opportunities for development. The author argues that the country has a bright future if the population is united and if the government is committed to reform. He calls for a more active role for the population in the development of the country and for a more democratic political system.

The report concludes with a summary of the main findings and a call for action. The author emphasizes the need for a more active role for the government and the population in the development of the country. He calls for a more democratic political system and for a more active role for the population in the development of the country.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed herein.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
