ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

The preliminary estimate of manufacturers' shipments in April rose 3.0 per cent from \$3,171 million in March to \$3,265 million bringing the total shipments for the first four months in 1968 to \$12,422 million, 4.3 per cent higher than the corresponding period of last year. The increase in the shipments estimate for the same four month period in 1967 over 1966 was only 1.7 per cent.

New orders received by manufacturers during April reached \$3,257 million, 0.9 per cent ahead of the previous month but slightly below the shipments for the month. Consequently, backlog of unfilled orders for April was slightly down from the level in March. At the preliminary estimate of \$6,688 million, manufacturers owned inventories at the end of April dropped 0.6 per cent from the end of March.

Seasonally adjusted estimates of both shipments and new orders in April showed increases of 3.9 per cent and 4.3 per cent respectively from March after declining for the previous two months from January. The value of unfilled orders, seasonally adjusted, dropped fractionally from its March level, while total manufacturing inventory held in April, without seasonal influence, was also slightly down by 0.7 per cent with decreases occurring in raw materials and goods in process.

Shipments of durable goods in April reached a record high this year at \$1,503 million, a rise of 5.4 per cent over the month before and 7.4 per cent higher than April of last year. This gain in April was chiefly due to the substantial advances in shipments of the motor vehicle and the motor vehicle and parts and accessories industries in the transportation equipment group (+20.5 per cent) as they recovered from labour disputes in the previous two months. Among other major industry groups in durables, a relatively large increase was recorded in non-metallic mineral products (+10.2 per cent) and a noticeable decrease shown in electrical products (-4.9 per cent). Non-durable goods manufacturers reported only a small increase in April shipments from March (1.0 per cent). More significant increases in tobacco products and chemical and chemical products in this category were greatly offset by decreases in clothing and petroleum and coal products.

New orders for durable manufacturing goods in April at \$1,488 million were 1.5 higher than March and 9.0 per cent higher than April a year earlier. Unfilled orders of durable goods at the end of April were down slightly to \$3,297 million from the end of March.

The value of stocks owned by durable goods industries in April was 0.6 per cent higher than in March with the build-up mainly in finished products. The decrease in goods in process inventory held in the month reflected mainly the drop in inventory held but not owned. Owned stocks of non-durable goods, on the other hand, declined rather substantially from \$3,424 million in March to \$3,366 million in April (-1.7 per cent). This decrease was attributable largely to the drop in raw materials of tobacco products and paper and allied products and in finished products of foods and beverages.

In April the ratios of the value of owned inventory to shipments and finished products to shipments were down to 2.05 and 0.76 respectively from 2.12 and 0.78 in March and 2.16 and 0.80 in April 1967. Based on the seasonally adjusted estimates, both ratios in April dropped from 2.15 and 0.78 to 2.06 and 0.76.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
