MANUFACTURERS' SHIPMENTS, INVENTORIES AND ORDERS, 1964-70

LES EXPÉDITIONS, LES STOCKS ET LES COMMANDES DES FABRICANTS, 1964-1970

(SEASONALLY ADJUSTED—CHIFFRES DÉSAISONNALISÉS)

TREND SUMMARY

A slight increase in the seasonally adjusted estimate of manufacturers' new orders received in May failed to counter a fractional decline to \$3,695.6 million in the value of shipments that month or a decreasing \$3,898.7 million orders backlog which, at the end of May, was lower for the fifth consecutive month. Because inventories also dropped slightly, the ratio of total owned inventories to total shipments remained constant over the period at 2.03.

Shipments

Shipments of machinery and equipment producers, seasonally-adjusted at \$346.4 million in May were estimated to be off \$15.8 million from their April levels, but still \$10 million higher than in March. There was an \$11.2 million increase to \$1,048.7 million in the shipments of producers of manufacturers' intermediate goods and supplies, the second consecutive increase from the March low of \$1,016.2 million. Producers of consumer non-durables with shipments at a seasonally-adjusted estimate of \$1,036.2 million enjoyed the highest total value of sales since the series was commenced in 1961. The \$30.0 million increase in this group was only partially offset by a \$9.0 million decrease in the value of shipments estimated for producers of consumer durables. There were decreases in May shipments of export-based industries and of the producers of construction materials and components of \$15.0 million and \$13.1 million respectively.

Inventories

Total inventories owned, seasonally adjusted at \$7,483.6 million, were slightly lower in five of the six groups of industries classified according to the economic or end use of their products. The exception was in the stocks of construction materials and supplies producers where a slight increase reflected a build up of raw materials. Stocks of finished products of consumer durables goods manufacturers at \$252.4 million were at their lowest level since December 1968, while the finished products stocks of producers of non-durable consumer goods, seasonally-adjusted, were down fractionally at \$1,568.3 million. The total inventories of export based industries declined slightly for the second consecutive month but remained relatively high on a seasonally adjusted basis at \$1,176.5 million.

Orders

Although total new orders received by manufacturers in May had an estimated value after seasonal adjustment of \$3,668.9 million, fractionally higher than in the previous month, the increase was concentrated in industries producing construction materials and components. There was a slight increase in the new orders for consumer non-durables as well, but the demand for consumer durables, machinery and equipment, intermediate goods and supplies and exports was slightly off.

The estimated backlog in industries producing machinery and equipment, at \$1,988.7 million was at its lowest level in 12 months and that in intermediate

RÉSUMÉ DES TENDANCES

D'après les estimations corrigées des variations saisonnières, les nouvelles commandes enregistrées en mai dans l'industrie manufacturière ont légèrement augmenté, sans pour autant compenser un recul minime de la valeur des expéditions, qui s'établissent à 3,695.6 millions de dollars, ni la diminution des commandes en carnet, qui portent sur 3,898.7 millions de dollars, et avaient à la fin du mois de mai baissé pour la cinquième fois de suite. Du fait que les stocks ont également légèrement diminué, le rapport entre l'ensemble des stocks détenus et l'ensemble des expéditions s'est constamment maintenu à 2.03 pendant toute la période.

Expéditions

Les expéditions des constructeurs de machines et de matériel, qui s'établissent à 346.4 millions de dollars en mai après correction des variations saisonnières, se situaient, d'après les estimations, à 15.8 millions au-dessous du niveau atteint en avril mais encore à 10 millions au-dessus de leur niveau de mars. Il s'est produit une augmentation de 11.2 millions de dollars dans les expéditions des fabricants de produits intermédiaires manufacturés, qui ont atteint 1,048.7 millions de dollars. Les expéditions mensuelles dans ce secteur ont augmenté pour la deuxième fois consécutive depuis mars, où elles avaient atteint leur point minimum, soit 1,016.2 millions. Les producteurs de biens de consommation non durables, dont les expéditions désaisonnalisées sont estimées à 1,036.2 millions de dollars, bénéficient ainsi du chiffre d'affaires le plus élevé qui ait été constaté depuis que paraît la présente série en 1961. L'augmentation de 30.0 millions de dollars dans ce secteur n'a été que partiellement contrebalancée par une diminution de 9.0 millions de la valeur estimative des expéditions des producteurs de biens de consommation durables. En mai, les expéditions des industries orientées vers l'exportation et celles des fabricants de matériaux et d'éléments pour la construction ont diminué respectivement de 15.0 millions et de 13.1 millions de dollars.

Stocks

La valeur désaisonnalisée des stocks propres, totalisant 7,483.6 millions de dollars, était légèrement en baisse dans cinq des six groupes d'industries classées selon l'utilisation économique ou finale de leurs produits. L'exception était constituée par les stocks des producteurs de matériaux et de fournitures pour la construction, où une légère augmentation traduisait une accumulation de matières premières. Les stocks de produits finis des producteurs de biens de consommation durables, avec 252.4 millions de dollars, étaient à leur plus bas niveau depuis décembre 1968, alors que les stocks de produits finis des fabricants de produits de consommation non durables, en valeur désaisonnalisée, avaient diminué d'une manière infime et s'établissaient à 1,568.3 millions de dollars. L'ensemble des stocks des industries orientées vers l'exportation a légèrement diminué pour la deuxième fois en deux mois, mais se maintient à un niveau relativement élevé, avec une valeur désaisonnalisée de 1,176.5 millions de dollars.

Commandes

Bien qu'au total, la valeur estimative désaisonnalisée des commandes enregistrées par l'industrie manufacturière en mai se soit établie à 3,668.9 millions de dollars, soit à peine plus qu'au cours du mois précédent, l'augmentation a surtout porté sur les industries productrices de matériaux et d'éléments pour la construction. Il s'est également produit une légère augmentation dans les nouvelles commandes de biens de consommation non durables, mais la demande de biens de consommation durables, de machines et de matériel, de produits et de fournitures intermédiaires et de biens d'exportation était légèrement en retrait.

A 1,988.7 millions de dollars, la valeur estimative des commandes en carnet des producteurs de machines et de matériel étais à son niveau le plus bas depuis 12 mois, et chez les

goods producers, whose products supply other manufacturers, after a brief build up in April, dropped to its lowest level since September, 1969.

Unfilled orders for consumer durable goods, while estimated to be 7.6 per cent higher at the end of May than a month earlier, were, at \$83.9 million, considerably lower than the year's high level of \$95.4 million in January and well below the estimate for May, 1969, when the backlog for this group of producers was valued at \$91.1 million.

fabriquants de produits intermédiaires, fournisseurs à d'autres producteurs de biens manufacturés, cette valeur est tombée à son plus bas niveau depuis septembre 1969, après une brève reprise en avril.

A la fin du mois de mai, les commandes en carnet de biens de consommation durables, tout en étant, selon les estimations, supérieures de 7.6 pour cent à celles du mois précédent, étaient sensiblement inférieures en valeur (83.9 millions de dollars) au sommet atteint cette année au mois de janvier (95.4 millions de dollars), et bien en-dessous de l'estimation pour mai 1969, mois où les commandes en carnet dans ce groupe de producteurs étaient évaluées à 91.1 millions de dollars.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a representative sample of manufacturing establishments. The July 1968 data are the first to be based on the 1965 census. Values for years prior to and including 1965 are derived directly from the census and the aggregate of monthly shipments in those years should equal published census values. Because the monthly values subsequent to 1965 are projections, these totals are subject to adjustment when more recent census data become available. Year end inventory values published here are for December and differ from year end census values to the extent that fiscal year census reports show inventory values at dates other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting records.

Monthly reports are sought from establishments whose shipments in total represent about 75 per cent of the aggregate shipments in each industry. For adequate estimation of total shipments by province, the sample is further strengthened by reports from representative establishments in each industry in each province. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. About two-thirds of the 8,000 firms now included in the sample report inventory values and about one-third report orders.

The estimates of shipments are calculated each month by multiplying the sum of the values in the current sample in each industry in each province by the ratio of similarly defined census aggregates to the sum of the values reported by the sample in the census year. Ratios of calculated December 31 values in the census year to the sum of the sample values of the same date are derived for inventories by component (i.e. raw materials and components, goods in process and finished products) and for unfilled orders. These ratios are applied to the current sample aggregates of the same items.

Inventory values are published for both total inventory owned and total inventory held by establishments. The difference between these values is the amount of inventory financed by progress payments as work proceeds on goods being produced. Because some goods are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up. To the extent that this has been covered by payments received, it will be higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers are of economic interest. It is also useful for derivation of production values in many industries and for other economic studies to measure the value of inventory held by the degree of fabrication that has taken place. Consequently firms are asked to report their stocks and estimates are made of the values by level of fabrication: raw materials and components, goods in progress and finished products.

Most establishments that maintain orders books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No

CONCEPTS ET MÉTHODES

Les valeurs des stocks, des expéditions et des commandes qui figurent dans la présente publication sont des extrapolations mensuelles des valeurs du recensement annuel des manufactures établies à partir des déclarations d'un échantillon représentatif des établissements manufacturiers. Les données sur juillet 1968 sont les premières qui soient fondées sur le recensement de 1965. Les valeurs pour les années jusqu'à 1965 inclusivement découlent directement du recensement, et la somme des expéditions mensuelles de ces années devrait équivaloir aux résultats publiés du recensement. Vu que les valeurs mensuelles postérieures à 1965 sont des extrapolations, elles pourront être rectifiées lorsqu'on disposera de données de recensement plus récentes. Les valeurs des stocks de fin d'année publiées ici sont celles de décembre, et diffèrent de celles du recensement de fin d'exercice dans la mesure où les déclarations pour le recensement de l'exercice financier donnent la valeur des stocks à d'autres dates que le 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité comprend les commandes.

On demande des déclarations mensuelles aux établissements dont les expéditions totales représentent environ 75% de l'ensemble des expéditions de chaque industrie. Afin d'obtenir une juste évaluation des expéditions totales par province, on renforce l'échantillon en obtenant des déclarations d'établissements représentatifs de chaque industrie, dans chaque province. Cet échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, le Bureau accepte des rapports combinés des sociétés ayant plus d'un établissement et des estimations des valeurs courantes des établissements dont les stocks et les commandes en carnets ne sont pas recensés à la fin de chaque exercice comptable. Les deux-tiers environ des 8,000 sociétés actuellement comprises dans l'échantillon déclarent la valeur des stocks et environ un tiers, celle des commandes.

L'estimation mensuelle des expéditions est la production de la multiplication de la somme des chiffres recueillis sur chaque industrie et pour chaque province lors de l'échantillon régulier, par le rapport des agrégats du recensement des mêmes industries aux chiffres des échantillons mensuels exécutés au cours de l'année du recensement. Les rapports des valeurs calculées au 31 décembre de l'année du recensement à la somme des valeurs de l'échantillon à la même date sont calculés pour les stocks par élément, c'est-à-dire, les matières premières et éléments, les marchandises en voie de transformation et les produits finis, et pour les commandes en carnet. Ces rapports sont appliqués aux agrégats courants de l'échantillon des mêmes articles.

On publie la valeur des stocks propres globaux et des stocks globaux détenus par les établissements. La différence entre ces deux montants est le volume des stocks financés par des acomptes versés au cours de la fabrication des produits. Vu que certains articles sont détenus pendant un temps considérable comme produits en cours de fabrication, la valeur comptable des stocks des fabricants peut s'accroître et, dans la mesure où ces produits sont couverts par des acomptes, dépasser les sommes immobilisées en stocks par les fabricants. Le montant de l'investissement en stocks et le volume des stocks détenus par les fabricants présentent tous deux un intérêt économique. En vue d'établir la valeur de la production dans de nombreuses industries, et pour d'autres études économiques, il est également nécessaire d'évaluer les stocks détenus suivant le degré de fabrication atteint. On demande donc aux sociétés de déclarer leurs stocks, et l'estimation des valeurs se fait par degré de fabrication: matières premières et éléments, marchandises en voie de transformation et produits finis.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est désignée comme étant les commandes reçues mais non encore considérées comme des ventes, que des travaux aient été effectués ou non à leur égard ou

estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders are calculated to provide an indication of the rate at which new business is being received. The series, which is of considerable interest to economists and marketing people, is derived by adjusting current shipments by the changes between the opening and closing backlogs.

Because a constant sample is used between census revisions, values must be estimated for each establishment when response has not been received at compilation time. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. Values received currently for months earlier than that for which revised figures have been published are used when all series are adjusted to new census benchmarks.

At the time of adjustments to census benchmarks, there may be substantial changes in the series. These may be caused by changes in the industrial classification of firms when their activity has been analysed for census purposes after preliminary estimates of industry totals have been made for this series; by inclusion of month-by-month responses received too late for use in calculating preliminary or revised data and by changes in accounting and, therefore, reporting methods by multi-establishment companies.

Definitions, classifications and groupings are taken from the census of manufacturers.

que les stocks existants puissent servir à les exécuter. Cette valeur n'est pas estimée dans le cas des industries où, d'ordinaire, on remplit les commandes dès réception à même les stocks et où, par conséquent, on ne tient pas de carnets de commandes.

On évalue les nouvelles commandes afin de fournir une indication du rythme d'arrivée des nouvelles affaires. Cette série, qui présente un immense intérêt aux économistes et aux spécialistes de la commercialisation est établie en rectifiant les expéditions courantes d'après les changements survenus dans les commandes en carnet entre le début et la fin de l'exercice.

Etant donné qu'un échantillon constant est utilisé entre les révisions censitaires fondées sur les recensements, il faut estimer la valeur pour chaque établissement dont on n'a pas reçu la déclaration au moment de la compilation des données. Le calcul des estimations révisées relatives au mois précédent et des estimations provisoires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Les données reçues pour les mois antérieurs à celui pour lequel on a publié les chiffres rectifiés sont utilisées lorsque toutes les séries sont rectifiées suivant les nouvelles données de référence du recensement.

Les séries peuvent subir des modifications importantes lors de la rectification fondée sur les données de référence du recensement. Ces modifications peuvent être causées par des changements dans la classification industrielle des sociétés suite d'une étude de leurs activités aux fins du recensement, faite après l'estimation des totaux provisoires pour les industries comprises dans la série en cause, par l'inclusion des déclarations mensuelles reçues trop tard pour être utilisées dans le calcul des données provisoires ou rectifiées et par des changements apportés à la comptabilité et, par conséquent, au mode de déclaration des sociétés à établissements multiples.

Les définitions, la classification et la répartition par groupes sont celles du Recensement des manufactures.

FOOTNOTESRENOVISTABLEAU 1

- (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLEAU 3

- (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

Note: Figures may not add due to rounding.

TABLEAU 4

- (1) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned.

Note: Figures may not add due to rounding.

TABLEAU 1

- (1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

TABLEAU 3

- (1) Pour ce qui est des industries comprises dans les groupes I, 2, 6, 8, 9, 10, 17, 18 et 19, la valeur des commandes en carnet et, par conséquent, celle des nouvelles commandes est faible. La portée restreinte de l'échantillon ne permet pas de faire des estimations distinctes dans ces deux cas.
- (2) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Note: Les chiffres ne totalisent peut-être pas en raison de l'arrondissement.

TABLEAU 4

- (1) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.
