NOTICE TO USERS

The estimated values of shipments, not adjusted for seasonal variation, published on page 7 of this issue for the year 1971, do not agree in total with the similar 1971 values on page 8. This is because of errors in responses to the survey from New Brunswick for which a correction has been made in the series on page 7. Because the effect of the correction on other 1971 series is of minimum relative significance, further revisions to such series as a result of this correction will be undertaken at a later date when all series are re-benchmarked to the census of manufactures data.

NOTE AUX UTILISATEURS

Le total des estimations brutes des livraisons, à la page 7 de ce numéro pour l'année 1971, ne concorde pas avec les valeurs correspondantes de 1971 à la page 8. Cela est attribuable à des erreurs de réponse dans le cas du Nouveau-Brunswick, erreurs qui ont été corrigées dans la série de la page 7. Étant donné que l'effet de la correction sur les autres séries de 1971 est négligeable, les autres corrections nécessaires se feront à une date ultérieure, soit quand toutes les séries seront corrigées suivant les données du recensement des manufactures.

MANUFACTURERS' SHIPMENTS, INVENTORIES AND ORDERS, 1968-1972
 LES EXPÉDITIONS, LES STOCKS ET LES COMMANDES DES FABRICANTS, 1968-1972

(SEASONALLY ADJUSTED—CHIFFRES DÉSAISONNALISÉS)

(MILLIONS OF DOLLARS—MILLIONS DE DOLLARS)

(Unless otherwise noted, all values referred to in the trend summary have been adjusted for seasonal variation. Estimates for the current month are preliminary and for the preceding month, revised.)

Canadian manufacturers' shipments in March were down for the third consecutive month. At \$4,195.4 million, the preliminary estimate of shipments was \$97.0 million or 2.3 % lower than in February. New orders received, valued at \$4,215.1 million, were about the same level as in the previous month. At the month end, the total value of unfilled orders, after decreasing for three consecutive months, was up \$19.7 million or 0.4 % to \$4,660.6 million. The total value of owned inventory at the end of March was \$8,131.4 million, virtually the same level as at the end of the previous month, and the highest level ever recorded.

Shipments

The decrease of Canadian shipments was attributable to durable goods industries where the estimated value of shipments fell by \$103.4 million or 5.0 % to \$1,985.1 million. Transportation equipment industries were largely responsible for the drop in shipments; in these industries, shipments were off \$94.2 million or 14.3 % to \$566.4 million. Shipments of primary metal industries decreased by \$19.3 million or 5.6 %. Among the remaining durable goods industries, the variations did not exceed 4.0 %. Shipments in non-durable goods industries increased by \$6.4 million or 0.3 % to reach \$2,210.3 million. No change in shipments values in non-durable goods industries exceeded the \$4.2 million increases both in paper and allied industries and in printing, publishing and allied industries. There were slight decreases in the rubber, mining mills, clothing and petroleum industries.

In the aggregation of the industries according to the economic use of their product, there were considerable decreases of \$68.0 million or 11.8 % and of \$92.2 million or 11.7 %, respectively, in the shipments in durable consumer goods industries and in the supplementary group of automobiles and automobile parts and supplies. Only two groups of industries were higher in March; the shipments in non-durable consumer goods industries rose \$1.4 million to \$1,165.2 million and the shipments in other intermediate goods and supplies industries moved from \$1,196.7 million to \$1,232.6 million.

The total value of shipments for the first three months of 1972, not adjusted for seasonal variation, was \$12,865.1 million, an increase of 9.5 % over the comparable value for 1971.

Orders

A decrease in new orders in non-durable goods industries was offset by higher new orders for durable goods industries to hold the total estimate at almost the same level as in the previous month. At \$2,193.3 million, new orders in non-durable goods industries were \$61.9 million or 1.9 % lower, while

(au contraire, toutes les valeurs citées dans cet exposé des tendances ont été corrigées des variations saisonnières. Les estimations pour le mois courant sont provisoires et celles du mois précédent, révisées).

Les expéditions des producteurs canadiens en mars ont été à la baisse pour un troisième mois consécutif. A 4,195.4 millions de dollars, l'estimation préliminaire des expéditions a décliné de 97.0 millions de dollars ou de 2.3 %. Les nouvelles commandes reçues, évaluées à 4,215.1 millions de dollars, sont demeurées sensiblement au même niveau que le mois précédent. Après trois mois successifs à la baisse, les commandes en carnet sont parvenues à hausser leur total à 4,660.6 millions de dollars, soit une augmentation de 19.7 millions de dollars ou de 0.4 %. La valeur des stocks possédés à la fin de mars s'est maintenue au même niveau que le mois précédent, et à 8,131.4 millions de dollars, cette valeur constitue le niveau le plus élevé jamais enregistré.

Expéditions

La baisse des expéditions canadiennes est attribuable aux industries de biens durables qui ont vu leurs expéditions passer à 1,985.1 millions de dollars, soit une diminution de 103.4 millions de dollars ou de 5.0 %. L'industrie du matériel de transport a été en grande partie responsable de la chute des expéditions; en effet, les expéditions de cette industrie sont passées à 566.4 millions de dollars, déclinant ainsi de 94.2 millions de dollars ou de 14.3 %. L'industrie des métaux primaires a aussi connu une diminution de ses expéditions estimée à 19.3 millions de dollars ou de 5.6 %. Parmi les autres industries de biens durables, les changements n'ont pas dépassé 4.0 %. Les expéditions des industries de biens non durables ont légèrement haussé; en passant à 2,210.3 millions de dollars, cette hausse s'est chiffrée à 6.4 millions de dollars ou à 0.3 %. Aucune hausse des expéditions des industries de biens non durables n'a dépassé 4.2 millions de dollars et celle-ci se retrouve dans l'industrie du papier et produits connexes ainsi que dans l'industrie de l'imprimerie, de l'édition et industries connexes.

Dans l'aggrégation des industries conçue selon l'usage économique de leurs produits, des baisses appréciables de 68.0 millions de dollars ou de 11.8 % et de 92.2 millions de dollars ou de 11.7 % se sont produites dans les industries de biens de consommation durables et dans les industries connexes de l'automobile. Seulement deux groupes d'industries ont progressé en mars; les expéditions des industries de biens de consommation non durables en passant à 1,165.2 millions de dollars ont augmenté de 1.4 millions de dollars et celles des industries des autres produits et fourniture intermédiaire sont passées de 1,196.7 à 1,232.6 millions de dollars.

La valeur totale des expéditions pour les trois premiers mois de 1972, chiffres non-désaisonnalisés, s'est établie à 12,865.1 millions de dollars, avec un accroissement de 9.5 % comparativement à 1971.

Commandes

Des nouvelles commandes des industries de biens non durables à la baisse et des nouvelles commandes des industries de biens durables à la hausse ont maintenu le total canadien sensiblement au même niveau que le mois précédent. A 2,193.3 millions de dollars, les nouvelles commandes de biens non durables ont perdu 61.9 millions de dollars, tandis que les

new orders in durable goods industries moved up to \$2,021.8 million, an increase of \$43.6 million or 2.2 %. The \$19.7 million increase in the overall total of unfilled orders at the end of March to \$4,660.6 million was a result of the higher backlog in durable goods industries. Unfilled orders in this group increased by \$36.7 million to reach \$4,047.2 million, whereas the backlog in non-durable goods industries was \$17.0 million or 2.7 % lower at \$613.4 million.

Inventory

The total value of inventory owned at the end of the month showed a slight increase and, among the components of inventory, stocks of raw materials were down \$4.0 million to \$3,361.6 million, stocks of goods in process grew \$11.7 million to \$2,251.2 million and stocks of finished products remained the same at \$3,050.3 million.

The ratio of total inventory owned to shipments in March was 1.96 compared with 1.91 a month earlier and that of finished products inventory to shipments rose from 0.71 to 0.73 during the period.

nouvelles commandes de biens durables haussaient à 2,021.8 millions de dollars soit un accroissement de 43.6 millions de dollars ou de 2.2 %. Les commandes en carnet à la fin de mars, en passant à 4,660.6 millions de dollars, se sont accrues de 19.7 millions de dollars, résultat de l'accroissement de 36.7 millions de dollars des commandes en carnet des industries de biens durables qui ont ainsi atteint 4,047.2 millions de dollars. Pour leur part, les commandes en carnet de biens non durables ont subi une baisse de 17.0 millions de dollars ou de 2.7 % en déclinant à 613.4 millions de dollars.

Stocks

La valeur des stocks possédés à la fin du mois de mars a progressé et parmi les composantes des stocks, les stocks de matières premières sont passés à 3,361.6 millions de dollars, soit une baisse de 4.0 millions de dollars, les stocks de produits en cours en atteignant 2,251.2 millions de dollars ont progressé de 11.7 millions de dollars tandis que les stocks de produits finis sont demeurés sensiblement au même niveau, soit à 3,050.3 millions de dollars.

Le rapport des stocks possédés sur les livraisons en mars a été de 1.96 comparativement à 1.91 le mois précédent. Celui des produits finis sur les livraisons est passé de 0.71 à 0.73 pendant la même période.

CONCEPTS AND METHODSCONCEPTS ET MÉTHODES

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a representative sample of manufacturing establishments. The data in the October 1971 publication are the first to be adjusted to the 1969 census. Values for years prior to and including 1969 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should equal published census values. Because the monthly estimates subsequent to 1969 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

Monthly reports are sought from establishments whose shipments in total represent about 75 % of the aggregate shipments in each industry. For adequate estimation of total shipments by province, the sample is further strengthened by reports from representative establishments in each industry in each province. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. About two-thirds of the 8,000 firms now included in the sample report inventory values and about one-third report orders.

For each industry in the benchmark year, a December 31 census universe value is compiled for unfilled orders and for each component of inventory (i.e. raw materials and supplies, goods in process, finished products and inventory held but not owned). Ratios of these universes to sample totals at December 31 of the benchmark year are used to inflate current sample totals to universe levels for each industry.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers are of economic interest. It is also useful for derivation of production values in many industries and for other economic studies to measure the value of inventory held by the degree of fabrication that has taken place. Consequently firms are asked to report their stocks and estimates are made of the values

Les chiffres sur les stocks, les expéditions et les commandes qui figurent dans la présente publication sont des extrapolations mensuelles des résultats du recensement annuel des manufactures établis à partir des déclarations d'un échantillon représentatif d'établissements manufacturiers. Les données que contient la publication d'octobre 1971 sont les premières qui soient ajustées en fonction du recensement de 1969. Les chiffres pour les années jusqu'à 1969 inclusivement sont basés sur le recensement pertinent, et la somme des expéditions mensuelles de ces années doit équivaloir aux résultats du recensement qui ont été publiés. Vu que les estimations mensuelles postérieures à 1969 sont des extrapolations, elles pourront être rectifiées lorsqu'on disposera de données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la tenue d'un compte suivi de la valeur des commandes en souffrance de l'établissement fait normalement partie de la comptabilité.

On demande des déclarations mensuelles aux établissements dont les expéditions totales représentent environ 75 % de l'ensemble des livraisons de chaque branche d'activité. Afin d'obtenir une juste évaluation des expéditions totales par province, on renforce l'échantillon en demandant une déclaration à des établissements représentatifs de chaque secteur d'activité, dans chaque province. Cet échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. Les deux-tiers environ des 8,000 sociétés actuellement comprises dans l'échantillon déclarent la valeur des stocks et environ un tiers d'entre elles, celle des commandes.

Pour chaque branche d'activité observée au cours de l'année de référence, on calcule par recensement la valeur des commandes en carnet et de chaque élément du stock (c'est-à-dire les matières premières et les fournitures, les marchandises en voie de transformation, les produits finis et les stocks détenus mais non possédés de l'univers au 31 décembre. Le rapport entre l'univers et l'échantillon au 31 décembre de l'année de référence sert à calculer la valeur courante globale au niveau de l'univers, pour chaque branche d'activité, en gonflant les chiffres correspondant à l'échantillon.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des articles dont la fabrication n'est qu'en partie achevée comme les avions, les bateaux ou les charpentes métalliques. À mesure que la fabrication de ces articles avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes versés inscrits dans les livres des fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants. De même, en tenant compte des acomptes versés dans les expéditions mensuelles, on peut réduire la distortion qui surviendrait dans les séries en cause lorsque les sociétés observées considèrent en fin de compte des articles d'une valeur relativement grande comme des ventes achevées.

La somme investie par des fabricants dans les stocks et le volume des stocks qu'ils détiennent présentent de l'intérêt du point de vue économique. En vue d'établir la valeur de la production dans de nombreuses branches d'activité et aux fins d'autres études économiques, il est également utile d'évaluer les stocks détenus suivant le degré de fabrication atteint. On demande donc aux sociétés de déclarer leurs stocks et l'estimation de la valeur des stocks se fait par degré de fabrication:

by level of fabrication: raw materials and components, goods in progress and finished products.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the total of unfilled orders at the end of the month, less the total of unfilled orders at the start of the month.

Because a constant sample is used between census revisions, values must be estimated for each establishment when response has not been received at compilation time. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than that of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio to moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Months for Cyclical Dominance

The MCD or Months for Cyclical Dominance values at the head of each column of seasonally adjusted values indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

matières premières et éléments, marchandises en voie de transformation et produits finis.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non pas encore expédiées même si des travaux ont été effectués ou non à leur égard ou même si elles sont faites à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réception, à même les stocks et qui par conséquent, ne tiennent pas de carnets de commandes.

La série sur les nouvelles commandes, qui présente beaucoup d'intérêt du point de vue économique, donne la valeur résiduelle établie à partir des expéditions et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des expéditions au cours d'un mois donné plus le total des commandes en carnet à la fin du mois en question, moins le total des commandes en carnet au début du mois.

Étant donné qu'un échantillon constant est utilisé entre les révisions censitaires, il faut faire une estimation pour chaque établissement dont on n'a pas reçu la déclaration au moment de la compilation des données. Le calcul des estimations révisées relatives au mois précédent et des estimations provisoires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondant aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données de base du recensement.

Les définitions, la classification et les groupes sont ceux du recensement des manufactures.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire s'adresser au:

Désaisonnalisation

On désaisonnalise les séries en calculant par ordinateur le rapport à la moyenne mobile, suivant la méthode utilisée à Statistique Canada. C'est le programme habituel qui sert à appliquer la version X-11 de la méthode II du U.S. Bureau of the Census.

Mois de dominance cyclique

Les valeurs M.D.C. (mois de dominance cyclique) en tête de chaque colonne de valeurs désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur irrégulier. Le M.D.C. est de 1 pour les séries les plus régulières et de 6 pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à ajuster les mouvements irréguliers qui pourraient obscurcir la tendance-cycle sous-jacente.

FOOTNOTESRENOVISTABLE 1

- (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3

- (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

Note: Figures may not add due to rounding.

TABLE 4

- (1) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned.

Note: Figures may not add due to rounding.

TABLEAU 1

- (1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

TABLEAU 3

- (1) Pour ce qui est des industries comprises dans les groupes 1, 2, 6, 8, 9, 10, 17, 18 et 19, la valeur des commandes en carnet et, par conséquent, celle des nouvelles commandes est faible. La portée restreinte de l'échantillon ne permet pas de faire des estimations distinctes dans ces deux cas.
- (2) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Nota: Les chiffres ne totalisent peut-être pas en raison de l'arrondissement.

TABLEAU 4

- (1) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.
