MANUFACTURERS' SHIPMENTS, INVENTORIES AND ORDERS, 1969-1973
 LES LIVRAISONS, LES STOCKS ET LES COMMANDES DES FABRICANTS, 1969-1973

(SEASONALLY ADJUSTED—CHIFFRES DÉSAISONNALISÉS)
 (MILLIONS OF/DE DOLLARS)

DECEMBER - 1973 - DÉCEMBRE

(Unless otherwise noted, all values referred to here have been adjusted for seasonal variation. The estimates of the current month are revised and are the last to be published according to the 1960 Standard Industrial Classification and projected from 1970 Census of Manufactures values.)

- The estimate of shipments of all Canadian manufacturing industries was up 0.4% or \$24.4 million to \$5,914.2 million for December. At \$3,144.8 million, the estimate of shipments of non-durable goods industries increased 1.9% or \$58.4 million and offset the decline of 1.2% or \$34.0 million recorded for durable goods industries.
- In December, the shipments of transportation equipment industries were off 11.5% to \$707.7 million from \$799.8 million a month earlier; this drop was the largest among the manufacturing industries and reflected a sharp decline in automobile output.
- The total value of shipments of construction materials and component industries (according to the economic use classification) was \$588.0 million, 6.3% or \$34.7 million higher than the previous month.
- The total value of Canadian shipments for 1973, not adjusted for seasonal variation, was estimated at \$65,253.3 million, an increase of 17.9% over that for 1972. The largest increase in shipments from 1972 to 1973 among the provinces was 26.1% in British Columbia.
- New orders in durable goods industries rose 2.9% or \$89.2 million to \$3,189.6 million in December.
- Unfilled orders of Canadian manufacturing industries were estimated at \$8,003.6 million at the end of December, an increase of 5.9% over the value at the end of the previous month.
- The total value of inventory held by Canadian manufacturers moved up 1.8% to \$11,038.5 million at the end of December from \$10,845.5 million at the end of November.
- The raw materials inventory of petroleum and coal products was 12.7% higher at the end of December.
- The ratio of total inventory owned to shipments was 1.78, this level is the same as the average level for 1973. The ratio of finished products inventory to shipments increased to 0.59 in December from 0.58 in November; the average level for 1973 was 0.61.

(Sauf indication contraire, toutes les valeurs citées ici ont été corrigées des variations saisonnières. Les estimations du mois courant sont révisées et sont les dernières à être publiées selon la Classification type des Industries et extrapolées en fonction du Recensement des Manufactures de 1970.)

- L'estimation des livraisons de tout le secteur manufacturier canadien s'est accrue de 0.4 % ou 24.4 millions de dollars en passant à 5,914.2 millions de dollars en décembre. A 3,144.8 millions de dollars, l'estimation des livraisons de biens non durables a augmenté de 1.9 % ou 58.4 millions de dollars et a ainsi compensé la baisse de 1.2 % ou 34.0 millions de dollars enregistrée par les industries de biens durables.
- En décembre, la baisse la plus appréciable des livraisons a été enregistrée par l'industrie du matériel de transport et a été occasionnée par le déclin marqué de la production automobile; en effet, les livraisons de cette industrie se sont abaissées de 11.5 % en passant à 707.7 millions de dollars comparativement à 799.8 millions de dollars le mois précédent.
- La valeur totale des livraisons des industries des matériaux et des éléments de construction (d'après la classification économique spéciale) est passée à 588.0 millions de dollars, soit une augmentation de 6.3 % ou 34.7 millions de dollars par rapport au mois précédent.
- La valeur totale des livraisons canadiennes pour l'année 1973, avant désaisonnalisation, s'est chiffrée à 65,253.3 millions de dollars, soit une augmentation de 17.9 % comparativement à l'année 1972. L'accroissement des livraisons le plus élevé de 1972 à 1973 parmi les provinces a été enregistré par la province de la Colombie-Britannique, soit 26.1 %.
- Les nouvelles commandes des industries de biens durables ont progressé de 2.9 % ou 89.2 millions de dollars en parvenant à 3,189.6 millions de dollars en décembre.
- Les commandes en carnet des industries manufacturières canadiennes se sont chiffrées à 8,003.6 millions de dollars à la fin de décembre, soit un accroissement de 5.9 % comparativement à la fin du mois précédent.
- La valeur totale des stocks détenus par les manufacturiers canadiens est passée à 11,038.5 millions de dollars à la fin de décembre comparativement à 10,845.5 millions de dollars à la fin de novembre, soit une hausse de 1.8 %.
- Les stocks de produits finis de l'industrie du pétrole, du charbon et leurs dérivés se sont gonflés de 12.7 % à la fin de décembre.
- Le rapport des stocks possédés sur les livraisons en décembre a été de 1.78, soit le même niveau que la moyenne des rapports pour l'année 1973. Le rapport des produits finis sur les livraisons est passé de 0.58 en novembre à 0.59 en décembre; le rapport moyen pour 1973 a été de 0.61.

CONCEPTS AND METHODS

CONCEPTS ET MÉTHODES

Inventories, shipments and orders:
values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January, 1973 publication are the first to be adjusted to the 1970 census. Values for years prior to and including 1970 have been benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1970 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1973 sont les premières qui soient ajustées en fonction du recensement de 1970. Les chiffres pour les années jusqu'à 1970 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats des recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1970 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiés dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 9,000 establishments in the reporting panel.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 9,000 établissements qui produisent des déclarations.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Il est important d'isoler les chiffres des éléments des stocks selon le stade de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valeur. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance or progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bateaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants. De même, en tenant compte des

time, by reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because a constant sample is used between census revisions, values must be inputted for each establishment if no response has been received by compilation time. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than that of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January, 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réception, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Étant donné qu'un échantillon constant est utilisé entre les révisions censitaires, il faut imputer des données pour chaque établissement lorsqu'on n'a pas les déclarations au moment de l'exploitation des données. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations révisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Months for Cyclical Dominance

The MCD or Months for Cyclical Dominance values at the head of each column of seasonally adjusted values indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrence du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du U.S. Bureau of the Census.

Mois de dominance cyclique

Les valeurs M.D.C. (mois de dominance cyclique) en tête de chaque colonne de valeurs désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de 1 pour les séries les plus régulières et de 6 pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

TABLE 1

- (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLEAU 1

- (1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

TABLE 3

- (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

Note: Figures may not add due to rounding.

TABLEAU 3

- (1) Pour ce qui est des industries comprises dans les groupes 1, 2, 6, 8, 9, 10, 17, 18 et 19, la valeur des commandes en carnet et, par conséquent, celle des nouvelles commandes est faible. La portée restreinte de l'échantillon ne permet pas de faire des estimations distinctes dans ces deux cas.
- (2) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Nota: Les chiffres ne totalisent peut-être pas en raison de l'arrondissement.

TABLE 4

- (1) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned.

Note: Figures may not add due to rounding.
